CALIFORNIA FARMER AND JOURNAL OF USEFUL SCIENCES.

VOLUME XXI. SAN FRANCISCO, CALIFORNIA: FRIDAY MORNING, FEBRUARY 5, 1864. NUMBER 1.

The California Farmer.

AND JOURNAL OF USEFUL SCIENCES.

COLONEL WARREN, Editor.

PUBLISHED EVERY FRIDAY MORNING.

BY J. E. PHILLIPS & CO.

Office—No. 220 Clay street (up stairs), below Battery.

SAN FRANCISCO

TERMS.—By mail, for one year, $4; for six months, 250. For a club of five new subscribers, a sixth copy will be sent gratis To City subscribers, delivered by carrier, 12½ cents a number, or $5 a year in advance.

☞ Advertisements and Subscriptions must be paid or in advance.

JOB-WORK—Of every description, done with promptness, at fair rates; orders will be faithfully attended to.

☞ All letters on business connected with the office should be addressed to PUBLISHER CALIFORNIA FARMER, San Francisco, Cal.

Want of Rain.

Farmers have complained long and loud against the dry season. Want of rain they say has ruined their prospects because they *could not plow!* Who knows best what is good for the earth? *He* that made it or we poor finite mortals? "There shall be the early and the latter rain." "There shall be seed time and harvest." But this promise is made for a *state of nature;* if man *increases his wants* and demands of God extraordinary supplies, then *extra labor* must be given to this end. So in California; if the farmer demands of the earth a crop of grain when that earth should naturally be at rest, then extraordinary means must be used, and the experience of thousands of farmers has proved that *summer fallowed land* is that extraordinary means, for this prepares the land for even a dry season, and enables the farmer to put in his grain even if the rains do not come when his finite will would seem to demand them.

Let farmers see the fields of grain now in a prosperous condition, that had it not been for this wise labor, would now be left untilled and waste, and let those *poor* farmers who lose their crops this year draw a lesson for the future that shall make them wiser and better men. Will our farmers, who practice "*summer fallow*," give us the condition of these crops at the present time?

The Fence Law.

San Jose, January 29th, 1863.

Editor California Farmer:

I have so much work that I can not find a moment to write, although wishing to write to you for some time. A few weeks ago I saw in one of your numbers an article from some one in Shasta, in favor of the "Law of Robbery," called the Fence Law, as it is now; and it surprised me to see that your remarks were somewhat in favor of that article, as I have always found you on the right side, I was somewhat surprised to see you speak that way. But I am now very glad to see in Number 23, another article in favor of a change; and as one of those devoted to everything that may benefit our State, I thank you. The best article in favor of that important reform, you published in No. 18, June 26, 1863, from the Prairie Farmer. If our legislators would do something of a great benefit to our State, they would change that law; if they do it I would say with the writer of the Prairie Farmer: "If California would make it the Law of the State, that each man should keep his stock from trespassing on his neighbor's crops, instead of enacting that the farmer should 'fence' to keep his crops from running over his neighbors' stock, as the law now is—I will guarantee that it shall settle up all waste lands and they will come into cultivation three times faster than ever before, in this or any other State." I hope that all your efforts will be in favor of this good and great cause.

We have now a nice rain, I wish it would keep a few days so, it would be of great value to the farming interest. With compliments,

L. Prevost.

[Our correspondent misapprehends us slightly. We copied an article, to show the views entertained in some sections; and if there are counties where the farmers think it would not be for their interest to make a change we are in favor of allowing them to suit their convenience.]

San Francisco papers speak of new potatoes and green peas as among the extraordinary luxuries now afforded in that market. They have also a limited supply of fresh tomatoes, which command the fearful price of two dollars per pound.—[Marysville Appeal, January 28th.

The San Francisco papers that call the above "extraordinary luxuries," are not well posted, and hence not very good authority. New potatoes are brought in, successively, almost all the year round, and have been in market all winter, selling at 6 to 8 cents a pound, as our retail prices current has shown; so of green peas, except that their price has lately advanced to 75 cents; but tomatoes have continued in market with scarcely any advance, and our weekly report shows that the price has been only 6 to 8 cents a pound.

The Bank of England has raised the rate of interest to eight per cent.

The Humboldt Mining Region, N. T.

Editor California Farmer:

The amount of ignorance which prevails over the greater portion of this State, respecting the successive discoveries of rich mineral districts in the adjoining territories, furnishes proof that we do not yet realize how materially these discoveries will benefit every interest in California, especially the mercantile and agricultural interests. While some of these mineral regions are so sterile and destitute of every attribute of comfort that they have to draw their firewood, and even their water, from other districts, thereby, of course, extending the demand for labor, teams, etc, there are other regions, equally prolific in mineral riches, where most of the means of comfort, incident to new settlements, are to be found. Some of these districts afford excellent opportunities for persons of small means to invest, or enable farmers, and others, having teams, etc, to improve their finances. For these purposes, one of the most eligible districts, unquestionably, is the region near to the Humboldt River, which is just now forcing itself into general notice after lying in abeyance for nearly three years. It possesses extensive agricultural, as well as rich mineral resources, beside other incidental inducements, among which may be mentioned trading with the emigrants as they arrive over the plains.

This mining region embraces several ranges of mountains, principally on the south and east side of the river, and running nearly parallel toward the sink of the Carson and Humboldt rivers. All along the banks of the Humboldt, there are extensive meadows and cultivable land, where an abundance of hay and grain can be raised, while the mountain ranges are full of fertile valleys which will produce vegetables and cereals. The hill sides are covered with rich bunch-grass on which stock will keep for the year round. But the extraordinary mineral developments which are occurring in this region, almost every day, are its main sources of wealth, and they must induce a large migration this spring.

Towards the end of last summer, some new towns were laid out in what is called the East Range, and one of them, Dunglen, in Sierra District, at the northern extremity of this range, has been rapidly settled with a permanent population; it now contains about 300 inhabitants, and there are upwards of 20 families, with stores, hotels, restaurants, schoolhouse, etc. The emigrant road now passes through this town, and there will no doubt be a lively business with them, this being their first stopping place after their long journey. There are also several other towns in this county, containing from about 50 to 400 inhabitants each, besides several mining camps. There are more families in proportion to the inhabitants than in most mining regions. The small mountain ranches produced, last year, an abundance of excellent vegetables, and very superior potatoes.

The stage, with Wells, Fargo & Co's express, which ran from Virginia tri-weekly, last summer, will this year run daily, and the route will be extended to Dunglen. There will also be other stages from Chico, and Red Bluff, and a telegraph line will connect the mines with the Overland Telegraph, so that there will be abundant means of communication, but all will be needed. Teams will be in great demand, not only for hauling machinery and supplies, but for supplying lumber from Carson, Honey Lake, etc, and for local purposes.

The mines in all the ranges are rich, but the richest recent developments have been in the East Range in the neighborhood of the town of Dunglen. Near this town are the Badger, Gem of Sierra, Champion series, Humboldt, Frost, Auld Lang Syne, Eclipse series, Independence, the Tallulah, and a number of other rich claims. In the Tallulah claim, some of the richest rock ever found in the territory has been struck in a lead four feet wide, and 200 feet beneath the surface, from which ore is being taken out that will yield $300 to the ton, at the mill.

The Independence is one of the ledges of the Great Basin Company, and is a large and well defined ledge of rich gold and silver-bearing quartz. A considerable quantity of rock, from this district, has been crushed at Fall's mill, at Unionville, and has generally yielded from $200 to $350 to the ton. The ore from this region is easily worked, and contains no base metal of any consequence.

The mines in Star, Buena Vista, Echo, Humboldt, and other districts, in the first range of mountains, are also very rich, some yielding as high as $400 to the ton. The richness of the Sheba is well known, though speculators, by their bulling and bearing, have well nigh ruined its reputation. Altogether this region is one of the most promising in Nevada Territory, and it well deserves the very emphatic commendation of Governor Nye, as it appears in his last annual message to the Legislature.

The country abounds with the precious metals, and other reducing agents, necessary to their extraction, which the Governor very properly designates as "providential." Estimating all its resources, and considering the fact that Humboldt has been settled, and is being developed, mainly, by hard-working men, who have no means to create a sensation if they desired to, it is certainly the most desirable locality for the investment o. small means to be eked out by industry and thrift. Capital, however, is moving rapidly in that direction. Some of the richest capitalists in San Francisco own the Tallulah and the Great Basin claims, and the Auld Lang Syne and Sheba are also owned, to a great extent, by capitalists. There is, however, no lack of opportunities for investing more limited means, while the demand for labor, teams, etc, must be very great.

Palmer.

Letters from an Old Californian at the East.

NUMBER ELEVEN.

New York, Dec. 21st, 1863.

Editor California Farmer:

Misery and its Cause.—Thrifty Dutch.

When I speak of the misery of the New York poor, I only mentioned what is the fact. These barefooted children you can see supplicating for alms of the sabled lady who descends from her carriage in front of the Fifth Avenue Hotel, at any hour in the day; but lest your readers should suppose there are no efforts made to alleviate the condition of the poor, let me say that on the contrary there are societies attached to each church, besides a general association that is headed by the best citizens, whose practical usefulness is said to be eminently deserving of praise; but the amount of misery in New York has always been greater than can be reached even by the widest efforts of these societies. I am told that the poor are infinitely better provided for than was the case formerly, but still any one can see every day that there is yet much to do.

The greatest enemy of rich and poor is King Alcohol; but the poor suffer from his power far more than the rich. A gentleman took one of these little miserables in his store, the other day, and gave him clothes and shoes and stockings; the next day the child was met with bare feet and shivering with the cold. Of course the gentleman questioned the child and learned that the parents had taken away the clothes and shoes to buy gin with and then compelled the little creature to go back to Broadway and beg. At the present time, when workmen are scarce and wages are high, there should be few beggars, but so many of the laboring men are such slaves to liquor that they work a few days in each week and then spend what they have made, in the liquor store, leaving their wretched families to provide the means of life as best they may.

I met, the other evening, a lady who is employed as a Home Missionary, and she verified all the facts I have stated. She says that in most cases the advance of wages has produced extravagance and drunkenness instead of thrift and industry, and that the sufferers are, as usual, the women and children. I am sure that if she could go into the Dutch quarters, she would find a different result. I was startled at reading the amount of money in the Savings' Banks, and it is a significant fact that most of the depositors are Dutchmen. The field for another Father Matthew, is ready, in New York. Changing the subject—

The Great Excitement,

Among the musical classes is the production of Faust, and among the artists is the sale of the pictures belonging to John Wolf. As to the first: Faust is the master-piece of Gounaud, a Frenchman. If it could be shortened it would be a rival of Il Trovatore. The music is of a higher order, but there are some solos and choruses that will please the popular ear, while the melo-dramatic effects, hightened as they are, by masterly instrumentation, will at once make the Opera popular everywhere. But it is dreadfully long, taking from 7½ to 12 o'clock.

The sale of Paintings, drew a large attendance of artists, people of taste, and dealers. The collection embraced gems of American, French, English, Belgian, and Dutch Art. The names of the artists embraced such distinguished ones as Cole, Gignoux, Leutze, Stuart, Cooper, Turner, Maclise, Lessing, Achenbach, Wrappers, Verboeckhoven, Dupré, Troyon, Delaroche and Brian. A number of Californians were present, S. P. Dewey, Capt. Churchill, Mr. Brewster, Col. Selover, and others.

Let me say to Californians,

Visiting New York, that if they wish to see the finest gallery of pictures on the Continent, they can obtain permission to visit the Aspinwall Collection. If they wish to hear the finest Mass, out of Rome, they must manage to go some Sunday morning to St. Stephen's Church on Twenty-eighth Street near Fourth Avenue. After all, a critic alone could decide between the one just mentioned and a Mass, by Mozart, performed on Christmas Day, in St. Mary's, in San Francisco. Dr. Bell, of Oakland, is making himself very popular here. I understand that the rich merchant, Mr. Agnew, is to present the Church, in which Dr. Bell preaches, to the congregation, of which he is a member, as a New Year's present.

California and the Currency.

Your article on the misfortune of California rejecting the United States currency, I have read very carefully. The effect, if it had been decided otherwise, would have been to make prices higher and money plenty, and it would have encouraged immigration. Now I know positively that a number of well to do people, who had made up their minds to settle in California, have been compelled to give up the project, for the present. The moneyless, to be sure, will flock to California, if they can rake up means enough to buy a steerage ticket, but a host of these shiftless ones cannot compensate for the loss of substantial farmers who intended to make a permanent home in California. The papers you have sent east have done much good and it gives me pleasure to tell you this. Here, where the currency is nominally at par, the farmers have made money faster than ever before, and as they buy more land with it and use it to make improvements they assuredly *are* benefited by paper money, let the advocates of gold theorize as they will. Prices are higher, true, but when the *surplus* is greater than ever before, it *looks* like prosperity, and if it *is* misfortune, it is so welcome that the farmers hope it will last forever.

M. A. S.

Bee Keeping

A Writer in the Prairie Farmer says: So much has been said in the Ag. journals East and West relative to bees not doing well in honey making the past summer, that I am tempted to give my little doings in the matter. Not of course for the benefit of our friends Langstroth and Baldridge, but with the hope that every farmer West will get a few bees, and find them a source of as much pleasure and profit as I have done in this my first experience. Except for having been frequently stung, and having a special liking for honey, I never had anything to do with bees: and so great has been the pain and swelling resulting from their sting, that I hardly think I should have owned one, had I not, last winter, read Mr. Langstroths fascinating (to me) book. I at once bought four stands, two tolerable good, the others very poor. I kept them till spring in a cool dry cellar, and put them out in the spring, in thoroughly painted, well made, ten rack, hives. In due time I divided them, making seven of the four, afterwards killing the embryo queens; my method of dividing being to allow all the old comb to remain in the old hives, removing it from its place and putting a new hive on the old stand. Then brush with a chicken wing all the old bees from the old comb on a sheet, so they can crawl into the new hive, queen and all. After a little the old hive must be set back on the old stand until it recovers bees enough to cover the brood-comb. As the young bees hatch, it soon becomes populous. I repeat this method of Mr. Langstroth's as it infinately better than putting a part of the comb in each hive. A piece of guide comb should be put in the new hive. Now for results. I put on some boxes twelve inches long, and six inches wide, in harvest. The last of August we had plenty of honey, and our plenty has continued, using it as freely in quite a large family, as sorghum molasses. The honey received at 12½ cents would more than pay the first cost of the bees. The seven hives are now in the cellar healthy, and each one crowded to its utmost capacity with bees and honey.

Wild Cats.—The Virginia Union says: On the south shore of Lake Carson, about sixty miles below Dayton, on a high bluff that rises perpendicularly about one hundred feet, is the home of the wild cats of Washoe—we don't mean the wild cats that figure in stock reports—but the real genuine wild cat of the genus felis, at least so say a party of men who have located a ranch in the neighborhood, who assure us that they saw them by thousands, attracted no doubt by the myriads of mice who have their burrows on the face of the bluff. The noise made by these cats, the gentleman assures us is terrific when they hold "indignation meetings," and they make night hideous by their caterwauling.

Glass Manufacture.—The shipment of sand for the use of glass manufactories in San Francisco has been going on from Monterey for some time past. Along the shores of Point Cypress and the Pescadero are found immense quantities of a peculiar sand, not obtainable elsewhere, and necessary in the fabrication of many descriptions of glass-ware. How much longer it will be freighted abroad, says the Monterey Gazette, of January 15th, rather than in the manufactured state, will depend upon the energy of our citizens.

The Tuolumne Courier says a vein of rich gold-bearing quartz was a short time since discovered near Columbia, by a party out hunting cattle. One of the party accidentally broke off a piece of the rock, which he found full of gold, and on examination of the ledge for 60 feet, where it cropped out of the ground, it was found to contain similar stuff. It is estimated that sixty or seventy thousand dollars is in sight, and it is pronounced one of the richest quartz discoveries ever made in the country.

Monterey Bay swarms with herring, immense quantities being taken out every day. Seals are abundant and shot from the wharves of the town. Large quantities of rock and red fish, cod and turbot are being salted down.

New York Wool Market.

Walter Brown's Monthly Wool Circular, issued January 1, 1864, says: The month of December is usually quiet in most branches of business, and the Domestic Wool trade has not been an exception in the present instance. The market, however, has been firm and prices well maintained; no reduction in rates occurring, except in a few cases where slight concessions were made by owners who were anxious to close accounts before the expiration of the year. If dealers had been willing to make but a small abatement from prices, large sales could have been effected. Instead, however, of any disposition to such a course, there has been much confidence felt by holders, that the consumer must soon come into market for large supplies, and that an advance in prices will follow. Should a disposition to speculate be manifested, a material advance in rates may be looked for within the next sixty days. Some dealers predict higher prices than were realized at any time in last winter.

There is certainly good reason for expecting a healthy demand for regular consumption, and as manufacturers are working up more Wool than ever before, and much new machinery is being started, there is no doubt but that the late increased clip will be all required, before that of the coming season can be made available.

One year ago we published a carefully prepared Table, showing the market prices for Domestic Wool for each month through a period of ten years. We give the table, to this time, and from it we learn that the average price of Domestic Wool in the United States from 1827 to 1861, has been—for fine, 50 3-10c.; for medium, 42 8-10c.; and for coarse, 35 5-10c.

Pulled Wools have continued in fair request, with no change in price, except a slight reduction made in some cases, from our last monthly quotations.

There have been some sales of California Wools, and we may look forward to a more active trade in them during the present month.

We note but little change in the price of Foreign Wools, trade in all descriptions have been quite moderate, with, however, an increasing demand towards the end of the month. The stock on hand is light, of the good qualities and of the strictly coarse; but there is a better supply of the medium grades, a portion of which only is of a desirable character. Some good lots of fine clothing Wool are reported to be on the way here.

By our late advices we learn that, notwithstanding the high rate of discount in England, there has been but little change in prices of Wools. Stocks are reported moderate, with a good demand for consumers.

We have reported the following sales during the past month: Fleeces, 825,000 lbs, 75@85c; Pulled, 150,000 lbs, 70@78c; 160,000 lbs California, 25@50c; 650 bales Cape, 38@45c; 60,000 lbs Morocco; 60,000 lbs Constantine, 34c; 20,000 lbs German; 70,000 lbs Mexican; 157 bales Cordova, 42@43c; 150 bales South American; 23 bales Santa Fee, 25c; 90 bales African; 494 bales Mestizo, 31@35c; 117 bales Mediterranean, 25c; 467 bales Smyrna, 25@28c; 1,112 bales Donskoi, 40@45c; 300lbs Provence; 100 bales Australian.

At Auction.—719,256 lbs Damaged Cape, sold at 4½@39c.

In Boston, 935,000 lbs Fleeces and Pulled, 75@85c; 550 bales Cape, 44½@45c; 360 bales Mestizo; 723 bales Mediterranean; 27,000 lbs Canada, 67½@80c. At Auction.—292 bales unwashed Salonica, 25½@28c; 110 bales Unwashed Morocco, 33@34c; 198 bales Caraissar, 20½@45½c; 120 bales Unwashed Saffi, 24@26; 85 bales Donskoi, 34@37½c; 100 bales Udigria, 29½@31½c; 118 bales Unwashed Volo, 23@25c; 149 bales Kaissar, 39@42½c; 193 bales East India; 300 bales Washed and Unwashed Smyrna, etc., etc.

In Philadelphia, 421,000 lbs Fleeces, 75@85c; 3,000 lbs Pulled, 73c; 100 bales African, 35c; 20,000 lbs Foreign.

In Providence, 43,500 lbs Fleeces, 62½@85c; 24,700 lbs Foreign.

The imports of the past month, as published, are: From Liverpool, 1,409 bales; London, 119; Marseilles, 340; Algoa Bay, 713; Leghorn, 225; Morocco, 358; Odessa, 1,058; Constantinople, 831; Havre, 46; Buenos Ayres, 70; Aspinwall, 94; Bremen, 36; Rio Grande, 4; Hamburg, 50; Taganrog, 922 bales. Total, 6,275.

PRICES CURRENT OF CALIFORNIA WOOL.

California, Unwashed Fleeces, in grades, 35@55c.
California Washed Pulled, 45@65.
California Common Washed Pulled, 35@40.
California Washed Fall Clip, in grades, 35@45.

Tobacco and Cigars.—Houffler & Bender have established a house in Marysville for the manufacture of cigars, plug and smoking tobacco. The Appeal says they commenced working four hands at cigars, and will soon employ four more. They expect to turn out some 1,200 cigars daily. We had the pleasure of smoking a cigar of their manufacture and pronounce it as fine as any imported article. Their smoking tobacco is superior to most tobacco in the market, being free from sand and dirt with all the flavor of new tobacco. They are also manufacturing cigarettas by the thousands. The proprietors have on hand, of their own raising, some 15,000 lbs of fine California tobacco.

Removing Iron.—At Marysville, lately, the iron was being taken up on the line of the Northern California Railroad between the depot and the steamboat landing. The Appeal says this over a mile in length, and the Superintendent is forced for a lack of iron to transfer it to the Oroville terminus. This is an unfortunate necessity—but as Jeff Davis had appropriated a ship load of the iron of the company to the use of his railroad at the bottom of the ocean, there was no other recourse. The road is being rapidly completed to Oroville, the fine weather contributing to this end.

MINERALOGY.

[Published from California Farmer of December 25th, 1863.]

Copper.

VARIEGATED COPPER PYRITES.

Monometric. Cleavage octahedral, in traces. Occurs in cubes and octahedrons. Also massive. Color between copper-red and pinchbeck-brown. Tarnishes rapidly on exposure. Streak pale grayish-black and but slightly shining. Brittle. H=3. Gr=5.

Composition: specimen from Bristol, Conn., sulphur 25·7, copper 26·8, iron 11·6. Fuses before the blow-pipe to a globule attractable by the magnet. On charcoal affords fumes of sulphur. Mostly dissolved in nitric acid.

Difference.—This ore is distinguished from the preceding by its pale reddish-yellow color.

Observation.—Occurs with other copper ores, in granitic and allied rocks, and also in secondary formations. The mines of Cornwall have afforded crystallized specimens, and it is there called from its color "horse-flesh ore." Other foreign localities of massive varieties are Ross Island, Killarney, Ireland; Norway, Hessia, Silesia, Siberia and the Bannat.

Fine crystallizations occur at the Bristol copper mine, Conn., in granite; and also in red sandstone, at Cheshire, in the same state, with malachite and heavy spar. Massive varieties occur at the New Jersey mines and in Pennsylvania.

GRAY COPPER ORE.

Monometric. Occurs in modified tetrahedrons, and also in compound crystals. Cleavage octahedral in traces. Color between steel-gray and iron-black. Streak nearly as the color. Rather brittle. H=3—4. Gr=4·75—5·1.

Composition: sulphur 26·3, copper 38·6, antimony 16·5, arsenic 7·2, along with some iron, zinc, and silver, amounting to 15 per cent. It sometimes contains 30 per cent of silver in place of part of the copper, and is then called argentiferous gray copper ore, or silver fahlerz. The amount of arsenic varies from 0 to 10 per cent One variety from Spain included 10 per cent of platinum, and another from Hohenstein some gold; another from Tuscany 2·7 per cent of mercury.

These varieties give off, before the blowpipe, fumes of arsenic and antimony, and after roasting yield a globule of copper. Dissolve, when pulverized, in nitric acid, affording a brownish-green solution.

Dif.—Its copper reactions before the blow-pipe and in solution in nitric acid, distinguish it from the gray silver ores.

Obs.—The Cornish mines, Andreasberg in the Hartz, Kremnitz in Hungary, Freiberg in Saxony, Kapnik in Transylvania, and Dillenberg in Nassau, afford fine crystallizations of this ore. It is a common ore in the Chilian mines, and it is worked there and elsewhere for copper, and often also for silver.

RED COPPER ORE.

Monometric. In regular octahedrons, and modified forms of the same. Cleavage octahedral. Also massive, and sometimes earthy. Color deep red, of various shades. Streak brownish-red. Luster adamantine or submetallic; also earthy. Subtransparent to nearly opaque. Brittle. H=3·5—4. Gr=6.

Composition: copper 88·88, oxygen 12. Before the blow-pipe, on charcoal, it yields a globule of copper. Dissolves in nitric acid. The earthy varieties have been called *tile ore*, from the color.

Dif.—From cinnabar it differs in not being volatile before the blow-pipe, and from red iron ore, in yielding a bead of copper on charcoal, and copper reactions.

Obs.—Occurs with other copper ores in the Bannat, Thuringia, Cornwall, at Chessy near Lyons, in Siberia, and Brazil. The octahedrons are often green, from a coating of malachite.

In the United States, it has been observed crystallized and massive, at Schuyler's, Somerville, and the Flemington copper mines, N. J.; also near New Brunswick, N. J.; at Bristol, Ct.; also near Ladenton, Rockland county, N. Y.

Black Copper. Tenorite. An oxyd of copper, occurring as a black powder and in dull black masses, and botryoidal concretions, in veins or along with other copper ores. From Cornwall, and also the Vesuvian lavas. It is an abundant ore in some of the copper mines of the Mississippi valley, and yields 60 to 70 per cent of copper. But part of what was considered black copper in the west is an ore of cobalt. If absolutely pure, it contains 80 per cent of copper. It is also found of excellent quality in large veins, in the Lake Superior copper region.

The oxyds of copper are easily smelted by heating with the aid of charcoal alone. They may be converted directly into the sulphate or blue vitriol, by means of sulphuric acid, but are more valuable for the copper they afford.

BLUE VITRIOL.—*Sulphate of Copper.*

Triclinate. In oblique rhomboidal prisms. Also as an efflorescence or incrustation.

Color deep sky-blue. Streak uncolored. Subtransparent to translucent. Luster vitreous. Soluble, taste nauseous and metallic. H=2—2·5. Gr=2·21.

Composition: sulphuric acid 31·7, oxyd of copper, 32·1, water 36·2. A polished plate of iron in a solution becomes covered with copper.

Obs.—Occurs with the sulphurets of copper as a result of their decomposition, and is often in solution in the waters flowing from copper mines. Occurs in the Hartz, at Fahlun in Sweden, and in many other copper regions.

Uses.—Blue vitriol is much used in dyeing operations and in the printing of cotton and linen; also for various other purposes in the arts. It has been employed to prevent dry rot, by steeping wood in its solution: and it is a powerful preservative of animal substances; when imbued with it and dried, they remain unaltered. It is afforded by the decomposition of copper pyrites, in the same manner as green vitriol from iron pyrites. It is manufactured for the arts from old sheathing copper, copper turnings, and copper refinery scales. The scales are readily dissolved in dilute sulphuric acid at the temperature of ebullition; the solution obtained is evaporated to the point where crystallization will take place on cooling. Metallic copper is exposed in hot rooms to the atmosphere after it has been wet in weak sulphuric acid. By alternate wetting and exposure, it is rapidly corroded, and affords a solution which is evaporated for crystals. 400,000 lbs is the annual consumption of blue vitriol in the United States. In Frederick county, Maryland, blue vitriol is made from a black earth which is an impure oxyd of copper with copper pyrites. The black oxyd of copper, which is abundant in the Lake Superior copper region, may be directly converted into blue vitriol.

In some mines, the solution of sulphate of copper is so abundant as to afford considerable copper, which is obtained by immersing clean iron in it, and is called *copper of cementation*. At the copper springs of Wicklow, Ireland, about 500 tuns of iron were laid at one time in the pits; in about 12 months the bars were dissolved, and every tun of iron yielded a tun and a half, and sometimes nearly two tuns of a precipitated reddish mud, each tun of which produced 16 cwt of pure copper. The Rio Tinto Mine in Spain, is another instance of working the sulphate in solution. These waters yield annually 18 cwt of copper, and consume 2400 cwt of iron.

GREEN MALACHITE.—*Green Carbonate of Copper.*

Monoclinate. Usual in incrustations, with a smooth tube-rose, botryoidal or stalactitic surface; structure finely and firmly fibrous. Also earthy.

Color light green, streak paler. Usually nearly opaque; crystals translucent. Luster of crystals adamantine inclining to vitreous; but fibrous incrustations silky on a cross fracture. Earthy varieties dull. H=3·5—4. Gr=4.

Composition: carbonic acid 18, oxyd of copper 70·5, water 11·5. Dissolves with effervescence in nitric acid. Decrepitates and blackens before the blowpipe, and becomes partly a black scoria. With borax it fuses to a deep green globule, and ultimately affords a bead of copper.

Dif.—Readily distinguished by its copper-green color and its association with copper ores. It resembles a siliceous ore of copper, chrysocolla, a common ore in the mines of the Mississippi valley; but it is distinguished by its complete solution and effervescence in nitric acid. The color is also not the bluish-green of chrysocolla.

Obs.—Green malachite usually accompanies other ores of copper, and forms incrustations, which when thick, have the colors banded and extremely delicate in their shades and blending. Perfect cyrstals are quite rare. The mines of Siberia, at Nischne Tagilsk, have afforded great quantities of this ore. A mass partly disclosed, measured at top 9 feet by 18; and the portion uncovered contained at least half a million pounds of pure malachite. Other noted foreign localities are Chessy in France, Sandlodge in Shetland, Schwartz in Tyrol, Cornwall, and the Island of Cuba.

The copper mine of Cheshire, Conn, has afforded handsome specimens; also Morgantown, and the Perkiomen Lead Mine, Penn; Schuyler's mine, and the New Brunswick copper mine. N. J: it occurs also in Maryland, between Newmarket and Taneytown, and in the Catoctin mountains; in the Blue Ridge, Penn, near Nicholson's Gap, and it is found more or less sparingly with all kinds of copper ores.

At Mineral Point, Wisconsin, a bluish silico-carbonate of copper occurs, which is for the most part chrysocolla, or a mixture of this mineral with the carbonate. An analysis of the rough ore afforded Mr. D. D. Owen, copper 35·7, carbonic acid 10·0, water 10·0, iron 15·7, oxygen 7, sulphur 8, silex 13·0. Specific gravity 3·69—3·87. The vein appears also to the northwest on Blue River, and southeast on the Peccatonica. This ore is abundant; it has been smelted on the spot and also exported to England.

Uses.—This mineral receives a high polish and is used for inlaid work, and also ear-rings, snuff boxes, and various ornamental articles. It is not much prized in jewelry. Very large masses are occasionally obtained in Russia, which are worked into slabs for tables, mantel pieces, parlor furniture and handsome vases, which are of exquisite beauty, owing to the delicate shadings of the radiations and zones of color. At Versailles, there is a room furnished with tables, vases and other articles of this kind, and similar rooms are to be found in many European palaces. At Nischne Tagilsk, a block of malachite was obtained weighing 40 tons.

Malachite is sometimes passed off in jewelry as turquois, though easily distinguished by its shade of color and much inferior hardness. It is a valuable ore when abundant; but it is seldom smelted alone, because the metal is liable to escape with the liberated volatile ingredient—carbonic acid.

AZURITE.—*Blue Carbonate of Copper.*

Monoclinate. In modified oblique rhombic prisms, the crystals rather short and stout; the lateral cleavage is perfect. Also massive. Often earthy. Color deep blue, azure or Berlin-blue. Transparent to nearly opaque. Streak bluish. Luster vitreous, almost adamantine. Brittle. H=3·5—4·5. Gr=3·5—3·85.

Composition: carbonic acid 25·5, oxyd of copper 69·1, water 5·5. Before the blowpipe and in acids, it acts like the preceding.

Obs.—Azurite accompanies other ores of copper. At Chessy, France, its crystallizations are very splendid. It is found also in Siberia, in the Bannat, and near Redruth in Cornwall.

As incrustations and rarely as crystals, it occurs near Singsing, N. Y.; near New Brunswick, N. J. Also near Nicholson's Gap, in the Blue Ridge, Pa.

Uses.—When abundant it is a valuable ore of copper. It makes a poor pigment, as it is liable to turn green.

CHRYSOCOLLA.—*Silicate of Copper.*

Usually as incrustations; botryoidal and massive. Also in thin seams and stains; no fibrous structure apparent, nor any appearance of crystallization.

Color bright green, bluish-green. Luster of surface of incrustations smoothly shining; also earthy. Translucent to opaque. H=2—3. Gr=2—2·3.

The mineral varies much in the proportion of its constituents, as it is not crystallized. It blackens in the inner flame of the blow-pipe without melting. With borax it is partly reduced. No effervescence nor complete solution in nitric acid, cold or heated.

Dif.—Distinguished from green malachite as stated under that species.

Obs.—Accompanies other copper ores in Cornwall, Hungary, the Tyrol, Siberia, Thuringia, etc. In Chili it is abundant at the various mines. In Wisconsin and Missouri it is so abundant as to be worked for copper. It was formerly taken for green malachite. It also occurs at the Somerville and Schuyler's mine, N. J., at Morgantown, Pa., and Wolcottville, Conn.

Uses.—This ore in the pure state affords 30 per cent of copper; but as it occurs in the rock will hardly yield one-third this amount. Still when abundant, as it appears to be in the Mississippi valley, it is a valuable ore. It is easy of reduction by means of limestone as a flux.

[TO BE CONTINUED.]

How to Manufacture Cow Leather into Uppers of a Superior Quality.

BY VIAL MATHESIAS, MASTER TANNER AT HALLE.

In order to be good, upper leather should have the following properties, 1st: the pores should be very close, constituting its solidity. 2d, the leather should remain pliant, and not break easily, in use. 3d, the leather should be water-proof, so that the feet may be kept dry in the dampest weather.

The following instructions should be observed in manufacturing cow leather uppers possessing the above named properties. In choosing the hide such skins only should be selected as are of light weight, and whose exterior promises leather of a superior quality. In the selection, attention should be given, above all things, to the hair; if it is fine and glossy, it is an evidence that the animal was well fed. The next point is the horns; if they are short and sharp-pointed, then the animal was young. With regard to the flesh side, it should be as even as glass and devoid of the bites of cattle worms. If otherwise the skins are fine and thin they may be considered in a suitable condition to be transformed into fine upper leather.

In places where this sort of cow skins accumulate it is advisable to work them while they are still fresh. It is true that it is necessary to pare them before putting them in water; still the drying operation is gained by this, and the leather made from them is as good and even more heavy than that produced from milled hides.

But, as the tanner does not receive many fresh hides, he is obliged either to buy dry hides or to have them dried himself. In the drying operation, great care must be taken, especially in summer and autumn, that the hides, while suspended on poles, do not rot or lose their hair, which unfortunately happens very often.

In order to avoid rotten spots one should proceed as follows: When the hide is laid on the table, first remove all the fat; then stretch it well out and sprinkle it with about one-half a kilo (a little over a pound) of salt, and as soon as it has been rubbed in hang the hide up. It is not then necessary to stretch it so carefully. Then this advantage is gained, that the hides being dry, they are seldom attacked by moths or worms. Another advantage is that they are much easier to refreshen than hides which are not salted. In my opinion there is no need to give heed to the fresh, especially when one is able to use block or ground fossil salt.

It is not advisable to put more than from 20 to 24 hides in water at a time, even where upper leather tanning is carried on on a large scale; still in the spring season the number may be double, for this reason that the vats can be filled in several stages.

The first day, the skins to be refreshened should be hung in running water, and in places where this is not practicable stretch them out and pour water upon them time and time again.

After the hides have become softened by this operation, they should be placed in the vat, and if possible add spring water until the hides are entirely submerged. The next day raise them and put them back. This is necessary to make the tanning uniform.

The fourth day raise them again—this should be done often if the weather be warm, and also if the water in which the hides are soaked be hard; then they may be stretched on the apparatus for that purpose, but before doing this it should be ascertained that they are soft to the touch. Then they are to be cleaned in order that they may be stretched lengthwise on the table covered with one hide.

When hides have been salted before drying, or when they have not been salted at all, providing that they have not been dried too much, the stretching operation is easy. But there are cases, especially if the skins have been dried in the sun, when this operation requires much force, especially when the skins known as *kips* are concerned. We will revert to this at another time. After having properly stretched the skins they should be put back in the same water from which they have been taken. The next day raise them and examine whether they have become well soaked. If you find any that do not appear to give satisfaction in this respect, put them back; but if there should be any that are still very hard, these should be stretched again. It is absolutely necessary that the hides should be completely refreshened before being placed in the lime pit. If they are placed in it in a hard state, they will remain hard even after they have become converted into leather.

Therefore we may look upon the refreshening as the first basis of the tanning of pliant leather.

East India kips (little ox hides with humps) which for many years past have been tanned in Germany into upper leather, require a special mode of treatment for the refreshening. In India they are first stretched and dried by the heat of a burning sun; then in order to protect them against worms, while they remain in store, and during their long voyage they are sprinkled with lime or nitre dissolved in water, or with arsenic. They are, therefore, often very difficult to soak; some of them even cannot possibly be well refreshened, as they are half burned. This species of hard hides is tanned for the purpose of making inner soles. At least this is the best purpose to which they can be put.

SUBSTITUTE FOR COTTON.—The Commissioners appointed by the Department of Agriculture for making investigations to test the practicability of cultivating and preparing flax and hemp as a substitute for cotton, will hold their adjourned meeting on the 24th of February. In the meantime all persons anxious to develop this subject are requested to forward samples of hemp and flax in different stages of preparation of the fibers and fabrics prepared by them, accompanied by statements of the various processes used, and the cost of production in each case; also descriptions of the kinds and cost of machinery used, were made, etc., together with any and all information which may be useful to the Commission.

Farming in Colusa County.

Colusa county seems to be subject to peculiar droughts, so that some season crops cannot be raised without artificial means. When there is not sufficient rain to thoroughly soak the ground at least once in a season, crops fail, and it is proposed to remedy this by irrigation, which it appears can be availed of to a large extent. On this subject, the Colusa Sun says:

"Ever since the first year of the failure of crops in this valley from drought, we have been an advocate of some general system of irrigation. The absolute cost of flooding the river lands would amount to but a few cents per acre. All admit the advantage of Winter flooding—all admit that it would cost but little if everybody would unite and inaugurate a system. Some people are so situated that they can easily flood their land without reference to what their neighbor does. If any such fail in a crop, he is not to be pitied. Then there are neighborhoods that can have a system of their own, but they do not do it. Wherever there is concert of action required it is next to impossible to get any number of men to agree, but the farmers in the Sacramento Valley will be starved into some agreement, if they can be brought to terms in no other way. The farmers in the vicinity of Sycamore Slough have more natural advantage for irrigation than almost any in the county. Here are some fifty or sixty farmers that could make permanent works for irrigation with the profits that two or three of them would make from the water in one year. We gave our plan for this work in a communication to this paper about one year ago. We proposed to build some four or five locks or floodgates on the slough, so that when the river was a few feet below the top of the bank the people down the slough could still be flooding their land. Now the slough rises and falls with the river, and when the river is three feet below the banks they have to stop irrigating all along the slough, but if they had the locks, the lower ones could be flooding when the river was eight or ten feet below the banks."

Salt not a Necessity of Food.

Dr. Hoffman, U. S. A., in a communication from San Diego Barracks, where he is now stationed, to the January number of the San Francisco Medical Press, says: I see that Headland, in his work on the Action of Medicines, says that salt is actually necessary as an article of food to the human economy. I am constrained, very much against my will, to doubt the high authority in this respect, from the following circumstance: While I was on my route across the Plains, in the summer of 1849, it frequently so happened that the wild Indians of that country visited us in camp. On many occasions, I myself have offered them some surplus article of food left by us after our meals. Soups and meats, cooked in our usual way and seasoned with salt, they would invariably refuse, after tasting, saying, in their own language, that it was not good. Of the same kind of meats, cooked without salt, they would also eat heartily and with a gusto. Bread, hard bread, crackers, etc., they would also eat. But anything they could taste salt in, they invariably refused. There can be no mistake about this, for I have tried them myself—frequently when they looked furiously hungary—and they would never partake of the least thing that had salt in it in sufficient quantity to be tasted. It may be necessary to civilized races, from habit or custom; but that it is actually required for health, or that the omission of it from the food, causes bad consequences, and vitiates the blood, etc., is, I think, erroneous. A more athletic, hearty, stout, and robust class of men cannot be found in the world than these very Indians of whom I am writing, who never use this article in any shape. Many of them are more than six feet high, others of medium size, and they will endure more hardship, stand more fatigue, have better lungs, suffer less from sickness, live longer, on a general average, than the white race, who have all conveniences. I may be mistaken, but I am of the opinion that salt is not a necessary requisite to a good natural state of health, *i, e.* such a state of health as a farmer, who "eats to live," should have. Should this matter ever be thoroughly investigated, I think it will be found that the real cause of this necessity for salt is from our unhealthiness rather than from our healthiness. In other lands that we saw, it is an article of medicine rather than an article of food.

PRESERVING SWEET POTATOES.—The following mode of preserving sweet potatoes is given in the last report of the Agricultural Department at Washington, by J. C. Thompson, of Tompkinsville, Staten Island:—"For winter use, after the first frost select a dry, clear day. Cut the vines with a scythe, leaving the stem to which the potatoes are attached, three or four inches long, to lift them by. The vines are readily eaten by cattle. Use a fork for raising the potatoes; lift them by the stem, and lay on the ridge to dry. In a few hours they will be ready to pack. Prepare plenty of dry cut straw (old straw is preferable), and take straw and barrels or boxes to the field. Select the best potatoes, handling them carefully without bruising them. Put a layer of straw at the bottom of the barrel and then alternate layers of potatoes and straw until it is filled. The potatoes should be placed close to each other, one at a time, and handled as carefully as eggs. The barrels are then to be moved to a dry room or cellar, where there will be no frost. If they are placed in a cellar they must be raised from the floor, and must not touch the wall. Keeping warm and dry is the secret of their preservation. They will keep six or eight months and improve in quality. From one plot of ground 39 by 100 feet, I gathered, in October last, 43½ bushels."

COAL has been discovered about twenty miles from Colusa, and it is said can be worked very cheap.

A Sanitary ball was given in Mariposa, January 8th, which realized the sum of $1,294.

SEED WAREHOUSE.

(ESTABLISHED IN 1850.)

S. W. MOORE,

IMPORTER

... AND....

WHOLESALE AND RETAIL DEALER IN

ALL KINDS OF

GARDEN, FLOWER, FRUIT,

Agricultural

....AND....

Ornamental Tree and Shrub

SEEDS,

NO. 408 CALIFORNIA STREET,

Old Number 110,

Between Sansome and Montgomery streets,

SAN FRANCISCO, CAL.

THE UNDERSIGNED HAS ESTABLISHED SUCH a correspondence and business in Europe as to enable him to secure from the very best sources—the most skillful growers—their choicest seeds grown, of which he will always be in receipt and in endless variety, imported directly from France and England, from well known and responsible houses; some of the most prominent are named in our catalogues.

It has been the experience of our best gardeners and growers, and all others who plant seed, that seeds raised in California are not fully reliable and cannot be for a series of year, until more capital, experience and scientific knowledge shall be given to the business.

HAS FOR SALE

Alfalfa or Chile Clover; Hungarian Grass;
Kentucky Blue-grass; Orchard Grass;
Red-top Grass; Spinfoin Grass;
English Rye-grass, Timothy Grass;
Red Clover; White Dutch Clover;
Crimson Clover, Lucerne, &c. &c. &c.

With many entire new varieties of Grass Seeds and prepared Lawn Grasses never before offered.

EVERY VARIETY OF

BEET, CABBAGE, CARROT, RADISH, TURNIP, CUCUMBER, MELONS, LETTUCE, ONIONS, TOMATO, EARLY AND LATE PEAS, BEANS, &c., &c., &c.

Tobacco Seed.

HAVANA, VIRGINIA, CONNECTICUT SEED-LEAF, AND MARYLAND TOBACCO SEED.

COTTON SEED.

Guano from Johnston's Island.

FLOWER SEEDS (300 Varieties)

BULBS:

LILIES, Amaryllis, Narcissus, TULIPS, Anemones, Tuberoses, Gladiolus, HYACINTHS, Ranunculus, Peony-roots, Iris.

and in endless variety, imported direct from FRANCE and GERMANY.

From his long experience in the Seed Business (over thirteen years), and his very extensive stock of goods appertaining to an establishment of this kind, he is confident of his ability to satisfy his patrons.

Native California Evergreen

TREE AND SHRUB SEEDS,

FOR EXPORTATION.

THE UNDERSIGNED, FROM HIS EXTENSIVE facilities and

Large Stock of Every Variety of Seed,

Can offer unusual inducements to

MERCHANTS IN THE TRADE, FARMERS AND LARGE RANCH OWNERS,

Who wish to be supplied in his line.

And would recommend that ORDERS FOR SEED be sent DIRECT to the undersigned, through the Express or by Mail, otherwise parties run GREAT RISK of being imposed upon, in case their Orders should be filled at some IRRESPONSIBLE ESTABLISHMENT.

☞ The Agents of Wells, Fargo & Co.'s Express are hereby authorized to act as Agents for the undersigned, in taking Orders for Seeds and receipting for the same.

The undersigned is also permitted to refer to Col. Warren, editor of California Farmer, who has had an experience of twenty years in the Seed and Nursery business, and is conversant with the high value of imported seeds, and their superiority to all other seeds.

☞ Send for a Catalogue.

S. W. MOORE,

SEED WAREHOUSE,

408 (old No. 110) California street,

11 SAN FRANCISCO.

THE "GOLDEN HARP,"

....AND....

THE "LEADER,"

TWO SPLENDID NEW AND IMPROVED STOVES just received, to which attention of purchasers is invited,

....ALSO....

The BAY STATE and other Stoves,

With a large assortment of

Plain and Fancy TIN-WARE, Enameled and Tinned IRON-WARE, COFFEE-MILLS, BAKE-OVENS, SAD-IRONS, &c. &c. &c.

For sale by—

B. C. AUSTIN,

Pacific Tin-Works, 13 324 Clay street, below Battery SAN FRANCISCO.

[For the California Farmer.]

THE PARTING.

Upon the apple trees shifting blooms
They stood—a frail girl, an ardent youth,
His bright eyes tearless—hers full of glooms
All unspoken by the word of mouth—
Asleep in her heart. Language was not
For him to tell the story to her,
O, shame burning cheeks, O, hearts grown hot,
Ye've told the tale, he came to woo her.

Gold, dusted down from the purpled sunset
Lit her hair, and broidered the meadow,
Till the dandelions paled at her feet,
And a ship at sea grew a shadow
E're she answered—soft, like the wind-flower
When its tremulous bells speak in tones
Of angels—the hymn was not lower
On the beach with its wave-washed stones.

Then afraid and shy of each other,
They looked down where the reeds ran to sea:
"O, dearer to me than a brother,
That I might go to the war with thee;
O, the sky seems dripping red with blood,
And the ominously, booming sea
Broweth a storm that bodeth no good,—
How my heart fears, my soldier, for thee!"

E're the sun spread out her cloth of gold
On the meadow, the youth departed.—
Weep maid; and speechless forever fold
Thy pledge ring to thy lips. Braver hearted
Than thee have broken under the rod—
"He shall never come again"—I know
'Tis hard to face the love of that God
Who hides violets under his snow.

C. FRENCH RICHARDS.

An Incident of Travel.

EDITOR CALIFORNIA FARMER:

Although you publish a strictly agricultural paper, I notice that you occasionally find space for a miscellaneous article, and therefore venture to send you the following sketch; especially as I know you to be an ardent lover of California, and do not object to a compliment, occasionally, when merited, to her boys, as well as to her bears, bulls, beets, and butter.

On my return from the New Almaden mines, in the early morning of the 16th inst, I was packed on the top of a stage coach with part of a military company from the mountains at the head of the San José valley. The inside was full, and there were seventeen of us on the outside, arms and equipments included.

My good friend Mr. Day, superintendent of the mines (whose acquaintance, by the way, was only that of a *day*), came up to see that I was "all right," and perceiving the exalted station, and the close quarters assigned me, suggested, very kindly, by way of substitute, a seat in his private carriage, saying that he was going in with his wife. But my "sack was aboard," I had caught sight of the "pretty soldiers," felt a strong inclination to make their acquaintance, and on the whole, begging pardon of Mrs. D, whose company I am sure I should have enjoyed vastly, on the ride, although I never had the pleasure of meeting her, I chose the elevation, the uniforms, and the music.

We were preceded by the officers of the company, and one or two others, five in all, mounted on spirited horses; and followed by an omnibus, stretched and stuffed equal to a New York india-rubber one. The boys were a jolly, lively, witty set, full of fun and frolic, "out on a spree," and "in for a good time generally;" going to participate in the grand opening ceremonies of the San José railroad. And yet, during that whole ride of twelve miles, I can truly say that no song was sung, no tune played or whistled, no story told, no joke cracked, no word uttered or thought expressed, in my hearing (and I was in the very midst of them), which would not have been perfectly proper in the presence of my wife or daughter. Now where on all God's earth can such a company of young men be found, who, under such circumstances, with no female present, would not have given expression to some profane, vulgar, or immodest sentiment? I seek no higher proof that California society can be kept from the taint of immorality, and only wish that her pure fresh air and sweet wholesome waters might impart to *all* who imbibe them, as high a degree of purity of language, and of heart, for out of the heart the mouth speaketh, as to those noble citizen soldiers.

As a sample of the singing, I will mention my wife's favorite, "Lily Dale,"—the words and tune just as she so often sings it at home, and I never so fully realized its force and beauty, as when thus sung by twelve or fifteen strong rough men, in their military uniforms, in the open air, modulating their voices in connection with the tones of the bugle, to the soft, tender, pathetic strains, appropriate to that darling hymn.

Do you wish for a better compliment to your California boys? Then I will try to give it. Their loyalty to the Union was a deep, warm, heart-felt sentiment, delicately, but decidedly and constantly expressed. Once, in passing the residence of a man of known secession proclivities, every bayonet was silently pointed towards it, with only the low muttered "death to all traitors." Then, by way of contrast, came one of our glorious Union songs. Again, as we passed the house of one whose disloyalty was, at least, strongly suspected, every gun was once more aimed, and the whispered "poor ore," "base metal," "wont stand fire," passed the rounds. The word "fire" was used, not in a military, but in the mining sense, as I suppose the purity of most of your metals is tested by fire.

Twice on approaching the modest home of poor families, the father, mother, and three or four small children, came out to see the "pretty sight," and all made their obeisance very respectfully, and in each case the response was a pleasant song accompanied by the bugle, the men all suspending whatever had occupied their attention to return the salutation.

Once more—as we passed a Spanish "hacienda," situated on a beautiful swell, at a little distance from the road, the proprietor of which, known to have "the true ring," was standing in his grounds; he eyed us inquiringly for a moment, then, being too far off for conversation, picked up an ax left by a workman, it being the most convenient article at hand for the purpose, and wiping the blade, held it up in the sunshine, turning the edge from us, then quickly bringing it to a horizontal position, presented the handle to us, thus saying in their beautiful symbolic language: "I see you are pure metal; so am I. My weapons, which are always kept bright, and are only turned upon my country's foes, are at your service." For their response my cane was selected, and its large ivory head of clear white was presented to him. Quick as thought, he read the reply, which, in the same touching language, was: "We acknowledge the purity of your heart and life; and in response to your offer of services, we tender you ours; but assure you that you are so strongly entrenched in the heart's affections of the people, that no weapons of war will be needed in your behalf, while you continue the avocations of peace"—and throwing his ax from him with one hand, and his hat in the air with the other, he sent us a right hearty hurrah, which was responded to by all our party, with a cheer so loud and long as made the "José Valley" "ring again," and which echoed from the hills on either side right merrily. Now let the Sumter come; let England "bluster;" let France "pitch in;" do you doubt that California will be safe with such men to defend her?

WYMAN.

FORMATION OF THE FATTY MATTER IN OLIVES.—M. de Luca has reported to the Academy of Sciences at Paris, the results of his elaborate researches on this subject. From the figures given in his table of observations, ranging from June to December, it appears that the weight of the olive increases with the progress of vegetation until the month of November; but that the stone is the first to be developed, the growth of which takes place in the early part of vegetation, during the months of July and August, after which it remains stationary; there being, in fact, in successive months no sensible variation of its weight. The pulp, on the contrary, increases in weight continually until the complete maturity of the fruit. The quantity of water found in olives diminishes progressively at their maturity. Thus it is about 60 or 70 per cent in the first phases of vegetation, while it is only about 25 per cent at the last period of the growth and maturity of the fruit. The sulphuret of carbon takes from olives several substances of a different nature; among which are coloring matters, especially chlorophyl, which gradually diminishes as the fruit approaches maturity. The fatty matter, on the contrary, which is found only in small quantity at the beginning of vegetation, increases as the plant grows, and is at its maximum when the olives are ripe, and have completely lost all trace of their greenish tint. It is also remarkable that when the stone ceases to increase in weight the fatty matter in the fruit accumulates in greater proportion.

EXPLOSION OF NAPHTHA.—At an inquest lately held in England, a grocer testified that while he was pouring coal-oil from a barrel into another vessel, a lighted candle being within three feet, he saw a small blue flame run along the outside of the barrel to the bung-hole. Of what followed he was ignorant. But it appears that a terrible explosion ensued, for the grocer was pitched up into the street insensible; his house was set on fire, the upper apartments quickly filled with a dense black smoke, by which three of his children were suffocated, while his wife and three other little ones barely escaped with their lives. This explosive stuff was found to be a very light coal-oil, or naphtha, the vapor from which is highly explosive.

NAVAL PROTECTION WANTED FOR MONTEREY.—Says the Monterey Gazette: The recent military occupation of the Island of Santa Catalina opposite the roadstead of San Pedro, following upon the heels of the measures taken to place San Diego in a condition to defy a foreign foe, shows that the Government is alive to the necessity of providing for the safety of the Pacific Coast. The next movement should be in this direction. If San Francisco is ever threatened, it will not be by an attempted enterance at the Golden Gate. Its vulnerability lies here at Monterey. An army possessed of this port as a naval depot and base of supplies, would make wild work through the rich valleys that would invite them northward.

Wrecks of Humanity.

WHY SHOULD THEY SINK?—The excitement of "the chase" has always been supposed to have a healthful tendency; but there is a kind of chase which breaks down the constitution, debilitates the frame, and shortens life. We mean the headlong, unintermitting hunt after the "almighty dollar," which is the great business characteristic of the present day. It begets other evils (unnecessary to name) which precipitate the fate of thousands. There is, however, a possibility of recovery from the prostration produced by these causes, long after their victim has ceased to hope for it. If we are rightly informed, the most astonishing cures of what is called general weakness and debility, which have ever been known in this country, have been effected through the agency of Doctor HOLLOWAY'S inestimable remedies. Mere skeletons of men, out of whom the very principle of vitality seemed to have been drained, have been restored to health and vigor by the operation of the Pills; and of the Ointment, in case of paralysis, rheumatism, etc, we hear an equally favorable account. If men will break down their energies by over exertion—if, in their anxiety in "go ahead," they will override the most precious of God's blessings, health—it is well they should know how to repair the mischief, when they come at last to realize the fact of their premature decay. The wrecks of humanity, who, without any particular disease, appear to be sinking from mere exhaustion, would find, without doubt, immediate relief from Doctor HOLLOWAY'S remedies.—[Phil Tribune.

A correspondent of the Siecle Paris, the government organ of France writes from Tunis, Algiers, as follows: "Our college of philosophers at home, may, and probably do, accomplish a great deal for the cause of science, but the Americans are the people to turn these discoveries to practical account. Many of the modern inventions in use here, are American, and one American chemist, Dr. J. C. Ayer of Lowell, supplies much of the medicine consumed in this country. His Cherry Pectoral, Pills, Sarsaparilla, and Ague Cure, constitute the staple remedies here, because they are of easy application, sure in their results, and have the confidence of the people. While the science of medicine is carried to a higher perfection in our own country (France) than any other, it strikes a Frenchman as a little singular that an American Physician should furnish the medical skill and remedies for our Principal Provinces.

We are happy to inform our readers that these superior medicines which the Emperor's principal Provinces is obliged to get from America may be had by our neighbors of Crane & Brigham, corner of Front and Clay streets, San Francisco.

The Piano Question Again.

Letter of Jacob Zech in Answer to Mr. I. N. Hoag, S. S. A. S.

I wish to say that every letter of this gentleman (Mr. Hoag), gives me positive evidence that the affair, of *defrauding* me of the first premium, at the late State Fair at Sacramento, was made up.

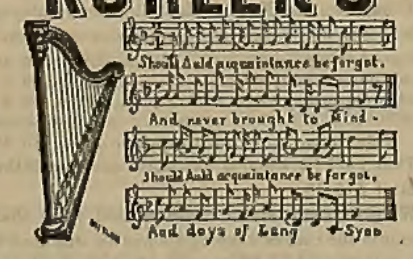
1. When the committee came up to examine the pianos, I asked the Rev. Mr. Starr King whether the said committee would look at the mechanism and interior construction of my instruments, as I would take them apart for their examination, and put them together again to be tried. Rev. Mr. Starr King answered that it was not necessary, as he himself was notified only an hour previous, and that he would not act on said committee, because he did not understand anything about pianos, and would like to do justice to every person; yet his name is used on the committee, with what right I do not know; for, if Mr. King did not sign his name to the Report, there would have been only two judges, and their Report of course not complete.

2. When, at the close of the Fair, the list of awards was read at the Pavilion, nothing of a "liberal special diploma" to Jacob Zech was said or heard by any one. Nay, more, the printed list of awards have nothing of it! How can it therefore, be otherwise than a made-up case by the Society?

3. On the 3d and 23d Oct., I published a letter or card, in the papers of Sacramento and of this city, stating the wrong that was done to me. Mr. I. N. Hoag, S. S. A. S, had not a word to say. To my formal protest to the President of the Society, of late date, published in the FARMER, said gentleman answered, that a 'special diploma" was ready for me. Now, in his letter of Jan. 6th, he says, that a "liberal special diploma" was awarded to me. All I demand is justice, not favors. I shall not accept a special diploma. That would be admitting my unworthiness of the first premium. The Society say a Grand Piano is not on the Schedule, and consequently ruled out. I ask the Secretary, is not a Grand Piano a Pianoforte? and why do the Board of Officers not accept my offer, made Dec. 18th, if they wish to do me justice? I will submit my Square Piano again before a committee of musicians, against the same Piano to which they awarded the premiums, and leave the result to their decision as a final test.

As for the proposition which Mr. Hoag makes, for the next State Fair, I must say that, for my part, I had enough of their justice, at the State Fair at Sacramento, the past year, and, unless they manage differently, I will leave it to others to exhibit there in future, and be similarly wronged, if they so desire. JACOB ZECH.

SAN FRANCISCO, Jan. 14th, 1864.



HOME COMFORTS.—Every working man needs good things to eat; and we hope every man is a working man, whether he be a merchant, a professional man, a manufacturer, a mechanic, or a farmer. Farmers we know are working men; for if they don't work in season, and out of season, they cannot harvest. Every body should work! Work, labor is honorable; and they that will not work should not eat! Drones should not be permitted in the hive of humanity. The "busy bees" kill the drones when they cease to work, and clear them out of the hive; and we go for driving out all drones, and then there would be more food for workers. Bowen & Brother believe this doctrine, and act upon it. They are working men. See the lots of eatables they are sending to every part of our State—hardly a county where they have not lots of customers. Lately they have been receiving fresh goods. They call them

SPECIALTIES

We call them "goodies"—all kinds of nice things, such as nice dried and fresh fruits preserved. Goshen cheese and butter extra, Boston butter and water crackers, Bordeaux salad oil, very extra, teas, the imperial brand, coffee, chocolate, reliable. The family wines from this house are just what they should be, very superior; and these luxuries are for those who labor. "They shall eat the fat of the land."

SUPERB VASES.—The vases and statuette recently opened by Messrs Haynes & Lawton, are the most beautiful ever yet exhibited on our coast. Lovers of the exquisite in art should look at them. This must induce their possession

HORACE WATERS, Ag't,
No. 481 Broadway, N. Y

THE DAY SCHOOL BELL.

40,000 copies issued. A new Singing Book for Schools and Seminaries, called the Day-School Bell, is now ready. It contains about 200 choice songs, rounds, duets, trios, quartetts, and choruses, many of them written expressly for this work, besides 32 pages of the Elements of Music, which are easy and progressive.

Among the large number of beautiful pieces may be found, "Uncle Sam's School," "Don't you hear the children coming," "Always look on the sunny side," "The little lass," and "Little Lad," "Oh, if I were a little bird," "Bird of beauty," "Pretty pair true," "Anvil Chorus," "Meet me by the running brook," etc. It is compiled by Horace Waters, author of "Sabbath School Bell," Nos. 1 and 2, which have had the enormous sales of 825,000 copies. Prices—paper covers, 25 cents, $20 per 100; bound 30 cents, $25 per 100; cloth bound, embossed gilt, 40 cents, $35 per 100. 25 copies furnished at the 100 price. Mailed at the retail price.

SABBATH SCHOOL BELL, NO. 1,

contains 144 pages, and nearly 200 tunes and hymns, and is the most popular S. S. Book ever issued. Among the most popular pieces are "Kind Words," "Eden Above," "Christian Hero," "Beautiful Zion," "I ought to love my Mother," "The Angels told me so," "In the Light," "Rest for the Weary," etc. Prices—paper covers, 20 cents each; $15 per 100; bound 25 cents, $20 per 100: clothbound, embossed gilt, 30 cents, $25 per 100.

SABBATH SCHOOL BELL, NO. 2,

is an entire new work of 192 pages, and nearly two hundred and twenty-five tunes and hymns. One million of these Bells have been issued and are now ringing through this and other countries. Among the many choice pieces may be found, "Shall we meet beyond the River?" "There is a Beautiful World," "Sorrow shall come again no more," "Don't you hear the Angels coming?" "Thou, God, seest me," "Sabbath Bells chime on," etc. Prices of Bell No. 2, are same as Bell No. 1. Both numbers can be obtained in one volume, price, bound copy, 40 cents, $35 per 100; cloth bound, embossed gilt, 50 cents, $45 per 100. 25 copies furnished at the 100 prices. Mailed at the retail price.

WATER'S CHORAL HARP.

A new Sunday School Book of 160 pages of beautiful hymns and tunes. It contains many gems, such as "Shall we know each other there?" "Suffer little children to come unto me," "The Beautiful Shore," "Oh, 'tis glorious," "Leave me with my mother," "He leadeth me beside still waters," etc. Price, papers covers, 20 cents; $15 per 100. Bound, 25 cents, $20 per 100. Cloth bound, embossed gilt 35 cents, $30 per 100. Mailed at the retail price. It is edited by HORACE WATERS, author of "Sunday School Bells," Nos 1 and 2, which have had the enormous sale of over 800,000 copies.

Just published by HORACE WATERS,
No. 481 Broadway, New York.

THE NEW PATRIOTIC SONG BOOK

contains 96 pages of songs, duets, and choruses, both sacred and secular, including 14 pages of prayers for sick and dying soldiers, and soldiers' Scripture Manual. It is well suited for social singing, as well as Sabbath worship. Among the many beautiful pieces may be found, "Where liberty dwells is my country," "The Christian Hero," "Three cheers for our Banner," "Come sing to me of Heaven," Columbia, the Gem of the Ocean," "Freeman's Gathering," "Columbia's King forever," "Marching Along," etc. Prices—paper covers, cents, $10 per 100. Mailed at retail prices.

THE HARP OF FREEDOM

contains 32 pages of songs, duets, and choruses for Freedom. Among the choice pieces we would name, "Fair Freedom's morn," "O let my people go," "Over the mountain," "They worked me all the day," etc. Price 5 cents single, 50 cents per dozen, $3 per 100; postage 1 cent each.

RUTH: A SACRED CANTATA

contains 126 pages. Words by Rev. Sidney Dyer, music by Prof. Call. This is an excellent book for concerts for the young. Prices—paper covers, 20 cents, $15 per 100; bound 25 cents, $20 per 100.

THE REVIVAL MUSIC BOOK

contains 73 pages of tunes and hymns, designed for revival, prayer, and conference meetings. Price in paper covers single copies 10 cents, $8 per 100. Mailed at the retail price

THE ATHENÆUM COLLECTION

contains 312 pages of tunes and hymns, new and old of the choicest kinds, for church, Sunday school, revival, missionary, temperance, prayer, and conference, and all kinds of sacred and social meetings. The music in this book has life and animation in it, like "Shining Shore," "Rest for the Weary," "Shall we know each other there?" "Shall we meet beyond the River?" "There is a Beautiful World," "Kind Words," "Sweet Hour of Prayer," "There is a Land of Love," "Suffer little children to come unto me," "God save the Nation," etc. Prices—single copies, bound, 65 cents, $55 per 100; cloth bound, embossed gilt, 75 cents, $65 per 100 Mailed at the retail price.

HORACE WATERS, Ag't
481 Broadway, New York,
Publisher of the above Books.

NEW INSTRUMENTAL MUSIC,

The California Farmer.

SAN FRANCISCO:

FRIDAY .....FEB. 5, 1864.

☞ Those who receive a number of the FARMER with this paragraph marked, may understand that it is sent to them for their examination, hoping it will meet their approval and induce them to subscribe, and ask their neighbors to do so.

Postmasters and others, who may receive the paper, will oblige us by soliciting subscriptions, or putting it in the hands of those that will. Subscriptions may commence at any time.

Send for Sample Papers and get up a club. Address, PUBLISHER CALIFORNIA FARMER, San Francisco.

IMMIGRATION OFFICE.

NEW COMERS TO CALIFORNIA can always obtain all needed information about Land, Farms, etc., at the *Farmer's Reading-Room*, 320 Clay street. j7tf

FARMER'S READING-ROOM.

FARMERS AND MECHANICS, from the country, who visit San Francisco, should visit the *Free Reading-Room and Museum* at the FARMER OFFICE, No. 320 Clay street, up stairs. j7tf

The Farmer's Headquarters.

THE Editorial Rooms and Museum of the Farmer Office is always open, and an attendant ready, to make a visit an instructive one to those who take an interest in the productions of our State. Samples of all productions—grains, grasses, fruits, models, inventions, minerals, and specimens in Natural History innumerable, are constantly being added. Rooms free to all. tf

TO READERS AND CORRESPONDENTS.

We feel confident the readers of the FARMER will find this issue, No. 1, of the New Volume, a most acceptable visitor to them, at least so we hope it will be received.

Our Special Correspondent, W. G. W., long familiar to the readers of the Country Gentleman, Genesee Farmer and the Agricultural Journals of good old Massachusetts, will now converse familiarly with our readers, the Farmers of California, through the columns of this Journal. This we know will gratify our many patrons.

This number will give our readers another happy letter from our valued New York correspondent, whose letters are always so welcome, and we are glad to have him sustain us in the position which we take on the "Currency Question," to which we call special attention.

Our readers will hail with pleasure our accomplished correspondent, "Rena," whose pen has been silent, "grief-laden," for some three years, but who now comes to us again to tell us of "*The Beautiful.*" May her pathway, for the future, be not only Beautiful but brightly beaming with joy and happiness.

With pleasure we invite attention to the article on "Female Dress," by our earnest correspondent, M. J. U. It will be read with interest.

Miners of California, and all interested in the mineral wealth and its development, will find a vast amount of practical information in our journal, which we commend to their notice. We ask their influence and coöperation.

Wm. A., Sierra Valley.—We shall endeavor to satisfy you on the "Land Warrant" subject, soon.

We have a deeply interesting communication from "St. Aubyn," upon the Demoralization of our Youth. We are glad the lady has taken up this subject. The letter is a most excellent one, and will awaken a wide interest in the cause of Youth.

We welcome our new correspondent, "Miriam," who sends us her thoughts on "Friendship," which we accept—will appear in our next. She would rescue *Friendship* from danger and death as did Miriam the lovely child, Moses, from the waters of Egypt and the fearful edict of Pharaoh.

The "Prayer," by Agnes, received, and will appear. It is indeed a beautiful Prayer.

M. J. U., appears this week, and other MSS delayed to future numbers. "Man's Destination," received.

We have another very valuable letter from our esteemed corresondent, M. A. S., of New York, giving us the Christmas Festivals of that city, we shall give in our next.

An interesting letter from R. W., in reply to "Carrie," and a letter full of spirit and interest from A. B. C., to "Cherrie," also to "Carrie." These letters are on the subject of "Happy Homes," and awaken many pleasing incidents, and draw out many good and noble thoughts.

ARTICLES RECEIVED AT THE CALIFORNIA FARMER EXHIBITION ROOMS, No. 320 Clay Street.

Samples of wine made by B. Kamp, Esq., of San Jose. By the examination of this wine we find it far superior to the great mass of imported wines, forced upon our markets, much to the injury of our home-made wines.

A parcel of magnificent Oranges, whose golden hue was only rivaled by their fragrant odor. They will be pronounced as beautiful and perfect fruit as ever was grown, and these are the product of our distinguished skillful Horticulturist, Dr. Strentzel, of the Garden of the Alhambra, near Martinez. The samples were from a quantity grown in the open air. We hope those who appreciate the beautiful will call and see them. Had we enough to give all our friends a sample, we would scatter bushels of the delicious fruit; but such gems we must keep to show to the world what our noble State can do. As they lay in our case they look like—

"Apples of gold, in pictures of silver."

Very fine samples of copper ore, and copper, silver and gold, we have received from Mountain Meadow Copper Ledge Company, Plumas county. We regret the donor did not send his name.

For all these favors we are very grateful.

THE MANGEL BEAN.—We would esteem it a great favor if any one to whom we furnished the "Mangel Bean," last season, gratis, will now furnish us a small quantity at any price, to meet the wishes of a friend or two at the east.

Our New Volume.

Words are weapons, made with tongue and pen,
We utter, write and print them. What then?

TEN years since, in 1854, this journal sent forth its first Number to the world. On its first editorial page words were printed, that were made into *promises*, as the pledges of what the CALIFORNIA FARMER intended to do and be. Steadily, fearlessly, and faithfully, yet independently and boldly, it has kept in view the one great object; and that the noble band of our patrons who gave us their names for that first volume, and who are still our worthy patrons, may re-read and answer for us, we re-print the promises made in that first number:

"That which contributes most directly to the substantial happiness of mankind, that which really advances and elevates the science of Husbandry, of all pursuits the most productive; that which holds in constant revelation the purest commingings of life and nature; that which is the most honest and unaffected in its teachings, is the kind of information, the kind of literature or science, which is received and cherished by a competent farmer. And this is the kind of information which we desire to communicate. To collect and present in agreeable portraiture the ever varying suggestions of science; to record the progressive developments of Agriculture, and submit them to the consideration of our California Farmers, is, or should be, the peculiar object of our work. This is at any rate the course we shall adopt. Eschewing all partyisms in politics, all the affectations of society, and all the cant of religion, we shall devote ourselves to the improvement of Agriculture, to the embellishment of Homes, and to the elevation of Human Character.

"But to redeem such a pledge, we must receive the liberal support of those who feel an interest in any of the departments of the science of Agriculture. In no country are there more intelligent farmers than in California, and it is from these that we expect a most essential support; not from subscriptions and advertisements alone, but from the innumerable and thrilling sources of information which are opened to individuals, and which when recorded and published, become of invaluable benefit to the masses.

"If the votaries of farming will take a little trouble upon themselves in affording this kind of support, we will engage to furnish a weekly journal that will be a credit to the cause, and an interesting visitant to every household in the Commonwealth.

"As long as we control its columns, so long shall it be devoted to the useful and sublime office of elevating the husbandry of the Eureka State, of improvement in morals, and to the rational and sound entertainments of pure and living literature."

The first paragraph was the pledge made. How well we have kept that promise, we appeal to every citizen of this State, and to thousands in the old States and Europe, who have been the readers of the FARMER; we leave it for them to answer, have we kept our pledge? To the second paragraph we appeal as the hope we entertained of a just and liberal support. In a measure we have not been disappointed, for over these ten years, which we have given to this work, we can recall as many solid evidences, as many cordial welcomes, as many cheering words and tokens of esteem, as has fallen to the lot of editors and publishers, we think.

It would not be in our power, nor have we space, to speak all our heart would dictate, but we have lived to see numberless journals start forth into being, with vastly better prospects, and yet seen them sink, die, and pass away; and when we recall several that were advocates of the same cause, starting into life and yet are not, we promptly, cheerfully, and gratefully acknowledge that we have been sustained by "troops of friends" who will ever live in the heart's best and richest gratitude.

What journal on the Pacific coast can boast of TEN YEARS steady onward course, until its pages are read in every part of the civilized world? We make no vain boast. We speak of this more for the honor and glory of our State and its mighty interests, than from any personal consideration. Our glory has ever been, to herald the *progress of California Industry*, and we know we have conscientiously, earnestly, and faithfully done this.

It is not our purpose in this number to report the sum total of our labor for ten years in this cause. We have laid upon the altar of Agriculture and its kindred interest, our all. We have worshiped, successfully, and sincerely, and constantly. We now begin a new decade of labor, we begin with renewed hopes, renewed zeal, and renewed confidence that friends will sustain us. If shadows gather, we heed them not, for they shall flee away as the clouds of early day. Onward is our motto; onward and upward, we will try the pass, and trusting in God, we hope to reach the goal of victory. For the generous support we have received in these ten long years, we tender the grateful heart.

To the Press throughout our State, and abroad, we express the most grateful acknowledgment, and ask their continued kindness. We wish all, success. That we may still have the support of friends, and a host of them, we shall labor to deserve, and hope at the end of another ten years to feel we have kept the pledge as well as we know we have the past ten years. Wishing *health, peace* and *prosperity* to all, we greet you with Number 1.

Agricultural Annual Meeting.

We regret that we were prevented from attending the Annual Meeting of the State Society, by circumstances over which we had no control. We regret, too, that we have not received from the Secretary of the Society a report of the doings of that meeting, as we requested, which we would gladly have published in our present number.

PACIFIC ACCOMMODATION LOAN CO.—This is a new institution on our coast for the safe deposit and use of moneys of those, who, having no immediate use, wish to invest it safely and prefer a small interest with capital safe to a large interest and risk. From the character and standing of the managers, depositors can feel safe. Mark Bromagim, Esq, long known to our citizens as a banker, is the financial agent and manager. Parties having money to loan should call and examine the principles of this society and they will become interested in it.

The Pacific Railroad.

THIS is one of the most important questions now at issue before our people. The upbuilding of our State; the developement of its resources; the outlet for its productions; the means to secure a large immigration; the impetus needed for our mechanics and manufactures, our farmers, and laboring men of every class—these are all merged in this very question: Shall we, or shall we not have a Pacific Railroad? More than this, the Nation has pledged its faith and means to aid it, our State has offered a bounty to it, counties and cities have given the pledge of bonds to build, and it will be built. It may be hindered, aye, seriously hindered by the delay of some counties in the fulfillment of their pledge. Shall the metropolis of our State, shall San Francisco county, by her voice, delay this great work? We trust not. San Francisco will be the greatest beneficiary in this work, and it would be a suicidal policy for her to retard this work. Surely, when serious reflection comes, she can no longer delay to respond to the vote of her people. If those who hold the power prevent the will of the people who voted this aid, then the people must speak out in a voice not to be misunderstood, for the people all over the State have said the Pacific Railroad shall be built, and it will be accomplished.

The Currency.

THE "Specific Contract Law" was not made for poor men, and it affords them no protection; it is for the benefit of the rich money-lender. But by custom at present under this law all contracts and engagements are made upon a gold basis; yet the poor mechanic and laboring man is liable at any time to have his wages paid in greenbacks (which is often the case), and he has no remedy. Debts of all kinds are contracted on the gold basis, and yet a United States Law makes it legal to discharge these debts in a different currency, the attempted working of the two systems resulting in confusion and loss, if not holding out to "weak human nature" an actual premium for dishonesty. How much better to come down to the legitimate basis, and conform to the system in use in all the other States of the Union with which we are associated and of which we form a very small part, rather than endeavor to keep up a system in antagonism with the policy of our supreme Government. Let us come down to the Government currency at once, as we eventually must, and then we will know where we stand. All transactions being based on the currency, there can be no chance for evasion, and no premium on dishonesty. The present system benefits the few at the expense of the many. That we must conform, sooner or later, to the general policy of our Government, is inevitable, and the sooner we give up our factious opposition, and repeal our nullification laws, the better it will be for us.

Our City Railroads.

We see that a committee has been appointed by the Legislature to examine the books and accounts of the various railroad companies of this city, and report thereon. We would like to call the attention of that committee to the following calculations, based upon the reports of the companies, as published. There is, evidently, a serious mistake somewhere. The O. R. R. Co. show their expense for keeping 213 horses 12 months to be:

Hostlers, and shoeing horses	$23,712 07
Feed	37,613 12
Rent of stables	3,414 57
Total	$64,739 76

Thus, they pay for keeping one horse one month the sum of $25 33.

It has cost the N. B. & M. R. R., who employed 170 horses, and have been running eleven months:

Horse-shoeing	$ 3,890 48
Feed, barley, hay, etc	16,269 13
Stable expenses, wages of hostlers	10,106 81
Total	$30,176 42

They paid for keeping one horse one month the sum of $16 13.

We give their stable expenses, and from that compute the cost of keeping a horse for one month by each company. They are both doing business in this city, buy grain from the same market, hire men at the same rates, rent buildings near the same localities, in fact, their expenses are incurred in the same manner, yet the N. B. & M. R. R., by their showing, could keep the 213 horses of the other company for one year, for $41,228 28, being $23,511 48 less than (they say) it costs them. But we see in the statement, that the O. R. R. Co. have lost, during the year, $4,036 02: Are we to suppose that this company will pay out over $20,000 more than another company, for the same article? By no means. It is not a supposable case. Then how did these extraordinary expenses occur in one company and not in the other? Does it not look as though the statement was "cooked" for the Legislature? No, there is a mistake somewhere, and if one company will make a mistake, will not the actions of other companies, striving for the same object, bear a little watching?

But there is another thing to be noticed: they have three items, showing the depreciation of stock, footing up $56,409 05, which have no business in the list of expenses. To make a proper showing, the amount overpaid ($23,511 53) for keeping their horses, as well as the depreciation ($56,409 05) in stock, should be deducted from the list of expenses, which would show a clear gain of $79,920 58. This, we know, is a *small profit* on the amount actually invested, but it will do for the first year, as the price of their stock in market, is much higher than any other (not even excepting the S. F. Gas Co.), and considered the "best thing out" shows.

THE ten mile trot for $2,000, between Barney Rice's "George" and J. L. Eoff's "Oregon John" over the Pioneer Race Course, San Francisco, on 23d ult, resulted in favor of the first-named: Time, 31 minutes 30 seconds.

PLANT THE VINE.—Let every one that can plant a Vineyard, do so at once. The Vines will grow while you sleep, and good wine will always keep.

Anniversary of the Protestant Asylum.

THIS Godlike institution held its Thirteenth Anniversary at Platt's Hall, on Tuesday evening last. It was a most interesting occasion, and a large audience of our best citizens, by being present, proved how deeply this noble Institution is fixed in the hearts of our citizens. Well may the managers of this noble charity be proud of their work. One hundred little children were present at the meeting in neat and pretty dress, singing their sweet songs, giving evidence of the work begun by these "Mothers in Israel," who are gathering up Orphaned ones to make them valuable members of society in coming years. We rejoice at the triumphant success of this institution; it is one of the pillars of our State, upon whose front is written in golden letters "Charity," Godlike Charity, and whatever may be the wealth and fame of our State, without this redeeming and humanizing character, noble charity for "Orphan Children," all else of name fame or power would be as "sounding brass and a tinkling cymbal." The following are the officers of the coming year: President, Mrs. Ira P. Rankin; Vice President, Mrs. R. J. Vandewater; Secretary, Mrs. Fred'k MacCrellish; Treasurer, Mrs. S. R. Throckmorton; Managers—Mrs. D. B. Cheney, Mrs. A. J. Downer, Mrs. C. O. Geberding, Mrs. C. T. Gillespie, Mrs. Henry Haight, Mrs. Annis Merrill, Mrs. John Middleton, Mrs. Isaac Swain, Mrs. J. B. Thomas, Mrs. R. H. Waller, Mrs. A. C. Wakeman, and Mrs. Albert Williams. Let the noble and generous go with feeling hearts and contribute, and their gifts will be blessed of Heaven.

Treadwell & Co.'s Agricultural Warehouse.

THIS is the earliest Agricultural Warehouse established on the Pacific Coast, and not only the earliest but the largest and most extensive and complete, and equal to any in the United States. Messrs. Treadwell have a large Warehouse in Sacramento, another in Marysville, the goods are mostly made to their own order and in many departments they control the sale of certain kinds of goods and certain improvements, receiving all that is manufactured of the kind. The establishment of Treadwell & Co. was opened August 3d, 1849, on Kearney street, San Francisco, in an iron building, brought out expressly by Mr. T., who came in the good ship Sweden, Capt. Cotting, in 152 days from Boston. Treadwell & Co., erected their present Spacious Warehouse, in 1852, corner Battery and California, where since that date they have sold more Agricultural Goods than has probably been by any other three houses on this coast. We call especial attention to their "New Advertisements," which embrace every kind of Reaper, Mower, Harvester, Thrasher, or any kind of Agricultural Implement, known. Suffice it for us to say, now, that we know that such has been the preparations for a supply for our Farmers in every department, that all they need is to call, examine, purchase, and they will be satisfied.

The Wheeler & Wilson Sewing Machine.

WE take pleasure in calling attention to the *New Card* of this Triumphant Establishment. For many years the Wheeler & Wilson has had competitors of considerable power and influence. Several of the leading machines, by their agencies, created quite an impression upon the public mind, and the competition at all our Fairs and in the sales of the machines was one of notoriety, each claiming the victory. But it is not the fastest or most showy horse that always wins the race; they may run well for a "quarter," but put the mettle to the trial of a "mile" or a "three mile" track, and they "break down" or "fly the track," leaving the staunch, strong and best horse, one that can go over the course be it longer or shorter, to take the prize. So it has proved with the *Wheeler & Wilson Sewing Machine*. This admirable machine has been tried on every track, and in every one came out first best—it has done its "three mile" heat and its "ten mile heat," and repeated it—thus for as many years in competition with every machine known it is now TRIUMPHANTLY proclaimed the *Best Sewing Machine in the World*. The best evidence of this is sales of the machines which now outnumber all other machines made throughout the United States. With this brief statement of facts, we can invite all, confidentially, to visit the rooms of the Agency, J. H. HAYDEN, ESQ., and view the machines, many of them new and beautiful specimens of art. Ladies always in attendance to show and give instruction. Mr. Hayden, the Agent, has the evidence to convince all of the superiority of these over all others known. Call and see.

GOLD MERCHANDISE.—All those hard money men and importers who contend for a gold currency here, and for making greenbacks merchandise, do in fact themselves use all this gold as merchandise. All their purchases are made at the East on the basis of greenbacks, and they sell their gold here every steamer day, or in New York, at whatever price it brings, to get greenbacks to pay their bills with. The higher or lower gold is, the more or less bills it will pay, or the more or less gold it will take to pay a certain amount. Thus it is plain to be seen, that it is the gold that is fluctuating, up and down. The consumer under the present system, does not get the full benefit of the gold premium, for the reason that the importer so fixes his prices as to allow a large margin, at best, to cover the fluctuations in the price of gold. This is where his extra profits come in, and a few are getting rich, at the expense of the many. Why should gold be merchandise in the hands of one class, and not another? Why not have a general and uniform system, that all may be equally benefited?

THE COMANCHE.—Over two hundred tons of iron, to be used in constructing the Comanche, have already been discharged from the sunken Aquila. The wreckers are managing things properly now, and the work is progressing as rapidly and satisfactorily as could be expected. At the ship yard, on South Beach, near Third Street, workmen are landing the iron and machinery, erecting buildings and hastily preparing the ground to lay the keel of the noble vessel. In a few days her proud proportions will assume a majestic appearance.

Books Received.

We have received most appropriately at this time, a series of volumes which we shall especially prize. We have ever advocated the building up and the beautifying of our homes, that being one of the great principles we espoused at the issuing of our first number in 1854. We as firmly advocated its importance now, for we feel the value of a *good* and *pure home*.

Messrs. Roman & Co., the Corner Stone of Literature, have sent us some very valuable works, which we are happy to receive:

"*Hymns for Mothers and Children*," compiled by the author of Violet, Daisey, &c., published by Walker, Wise & Co. This work contains simple and beautiful songs for children, such as true mothers should sing—banishing the many trashy songs too long the music of the nursery.

"*Book of Common Prayers*," for the "Family Altar," containing special prayers, and all that is needed in the family circle.

"*The Star of Home*," being a second series of readings for the social circle of home. A valuable work.

"*Thoughts*," by Channing—being selections from the life and writings of this distinguished divine. A gem of sacred literature. These works are all by Walker, Wise & Co.

The Great Store Book of Nature—the Author, David Thomas Anstead, Esq., M. A. This is a new and rare book, with cuts illustrating the works of nature, literally illustrating "books in running brooks, sermons in stones, and good in everything." It is really a book telling us in beautiful language the true meaning and purpose of the "stones" in our pathway of life, from "chalk" to granite, and from the "pebble" to the "hills of granite," from the coarse, uncouth bowlder of common rock to the sparkling diamond. This "Stone Book" makes the heart soft as it reveals the beautiful mysteries of nature.

These are all good books.

The Fourth Annual Report of the San Joaquin District Agricultural Society, compiled by Rev. R. Happersett. This is a work of 120 pp, very neatly got up and containing full account of the Society's Transactions for the year, with list of Officers, Managers, etc., from 1860 to the present year; the President's Address, the Annual Address of the year and the exercises connected therewith; a full report of the Annual Fair and the Committees' Reports. These all combined form a valuable history of the agriculture of the Valley of the San Joaquin highly creditable to this flourishing Society.

We have No. 8, "California Teacher." This valuable aid to the cause of Education is now a most acceptable Periodical. Friends rally to make its columns interesting; this is one of the good signs of the times.

The "Ladies' Friend," a new Monthly Magazine of Literature and Fashion, of near 100 pp, issued by Deacon & Peterson, of Philadelphia, and edited by Mrs. Henry Peterson. This magazine is embellished with a fine steel engraving and is full of colored plates and illustrations of the Fashions. The literary part of the magazine is of an excellent character, and if the future numbers keep up the same tone, the work will prove a valuable Gift Book, and worthy of public patronage.

The "Medical Press," of San Francisco. This important Text Book of Health, and other matters relative to Life, has had its controlling influence changed, and Dr. Beverly Cole and Dr. Henry Gibbons have now the management and editorial charge of it. This will be most acceptable to the public at large; the new editors being gentlemen of known worthand standing and *Family* men, they will give to the Journal a moral power and character which will carry its weight and influence among families.

Harvesting Machines.

"There shall be seed time and harvest."

We give the following letter from a well-known gentleman of Benicia in regard to the excellence of the "Wood's Mower." The letter speaks for itself, and the gentleman's recommendation is best understood when we see it indorsed by his purchasing largely of this kind of mowers.

There are several points in this mower that demand the special attention of all who desire a valuable improvement. "Wood's Mower" comes within the reach of everybody, being placed at a minimum price in order to secure large sales. It is of light draught, yet strongly made, stronger than ever before, with several improvements peculiarly adapted to California usage. It has taken prizes everywhere, as we see recorded in the reports of the several States, and in numerous districts of each State, making it, in fact, a very popular Mower. It comes with so many proofs of excellence that we can most heartily recommend it to the farmers of California.

BENICIA, Jan. 29, 1864.

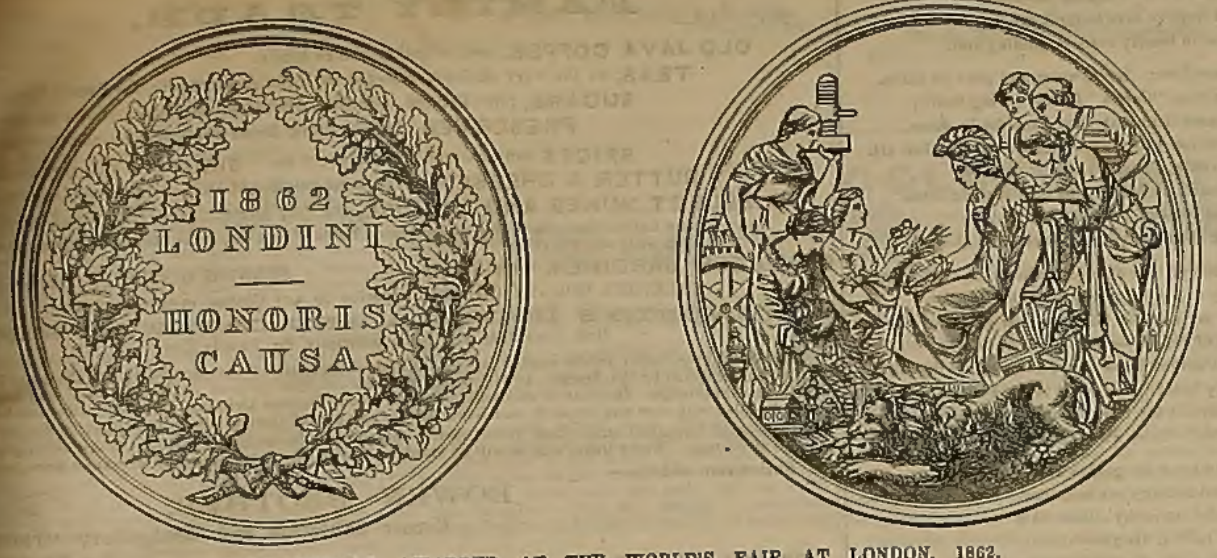
MESSRS. TREADWELL & CO: My attention has been called in regard to the relative merits of the Wood's and Buckeye machines as mowers, and having some experience in the working of machines, I have become satisfied that the Wood's machine is the best. It is of a lighter draught, cuts closer, less liable to get out of order, and no danger if it strikes a rock or stone, which all machines are liable to do, and I am satisfied the Wood's machine will wear out two Buckeyes.

I am yours, truly, D. H. HASTINGS.

CHRONIC ERRORS.—In the Annual Report of the San Joaquin Agricultural Society, just published (which presents a very good typographical appearance, generally), we notice some errors which should not be found in a work of this character. Some one ought to know better than to print *blooded* stock, or animal, instead of "blood" stock; the former means *bled* or that the animal has been deprived of its blood; the latter, that it is thoroughbred, or is of a certain line or blood. Bouquet (pronounced boo-ka) should not be spelled "boquet." As we find one of the first mentioned errors in the preface of the compiler, we presume he is as culpable as the printer. More care should be taken to avoid these as well as errors in names, etc., which we notice in the book.

WORLD'S FAIR MEDALS!!!

OF

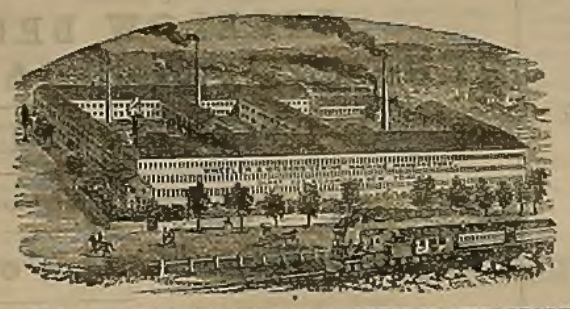


ENGLAND AND FRANCE,

Awarded to the

WHEELER & WILSON SEWING MACHINE,

....AT....



The London Fair, and at the Paris Fair.

Purchasers of Farms.

We shall now keep a complete record of *Farms, Ranches, Orchards and Vineyards*, for sale, and make it a speciality from this date. A "Bulletin Board," in our Reading Room, will contain numerous Farms, etc., on sale, and to which we invite special attention of both *Buyers and Sellers*.

☞ MANUFACTURERS OF MACHINERY, AGRICULTURAL *Warehouses, Seedsmen and Florists*—All such who desire to make their business known over the entire State of California, should send their business advertisements to us, and we can spread the news for them.

TERMS OF ADVERTISING.

THE charge for Advertising in the CALIFORNIA FARMER (payable in advance), is **One Dollar** for five lines, or less of space, in nonpareil type, for one insertion, and ten cents a line for any larger space. Each subsequent insertion half these rates. This it is believed affords the cheapest and best medium of reaching the Agricultural community on this coast. As heretofore, the right is reserved to reject any advertisements deemed objectionable.

Wood's Prize Mower!

AS NOW IMPROVED AND STRENGTHENED, and adapted to the Pacific Coast, will beat all other Mowers in use, and has so been awarded at all Exhibitions in the world.

CHEAPEST AND BEST Mower in Market.

TREADWELL & CO.,
Sole Agents for the Pacific Coast.

Can be had at our Stores in San Francisco, Sacramento, and Marysville. 1

The "Mabury Header."

THIS SPLENDID HEADER HAS COMPLETELY eclipsed all others in use in the Western States. The advantages are, EASE OF WORKING, and the facility with which it TURNS ON ITS OWN GROUND, enabling the operator to keep the corners of his field square. Other Machines are being laid aside in order to avail of the advantages of the MABURY HEADER.

For sale by

TREADWELL & CO.,
1 San Francisco, Sacramento, and Marysville.

"Kirby" Combined Mower & Reaper

THIS COMBINED MACHINE HAS A GREAT reputation and is bound to supercede all other combined Machines,

Low in price, and splendid in performance.

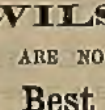
1 Sole Agents for the Pacific Coast.

BALL'S Ohio Mower and Reaper.

THE ORIGINAL



Buckeye Machine!

For sale by

TREADWELL & CO.,
San Francisco,
Sacramento,
and Marysville.

A Fine Ranch

IN MENDOCINO COUNTY.

A FINE GRAIN AND STOCK RANCH of 900 acres under fence, in Mendocino County, will be offered at a bargain if applied for soon. Together with this is a Stock Ranch of some thousand acres of mountain land which goes with this Ranch, being Uncle Sam's land.

The Ranch is about 80 miles from Petaluma and on the great mill road to the Navarro, Albion, and Mendico & Noye's mills.

The location is pleasant, having the Redwood Hills for a back ground, with a fine valley tract—one hundred and sixty acres valley land, mostly under cultivation—yielding fine Barley, Oats, Wheat, Hay, Corn, etc. The crop of Hay is fine.

This Farm will sustain a herd of 300 Cattle, and is a grand Ranch for raising Stock, Horses Mules, or Hogs, and a good place to raise Poultry. There is an orchard of two acres of bearing Trees. Vegetables grow well.

There is on the place a fine two-story frame Building, in which was put 30,000 feet of lumber, also Granary, Smokehouse, and Barn. The vicinity to the Redwoods gives an opportunity to improve, as Lumber is cheap and Timber handy.

There are, at present, good Tools, Implements, Harvesters, Plows, etc, on the place; also some furniture. The House has been used as a Hotel and Store, and is also the Stage House. Hay, Grain, and Produce can always be sold at good prices.

There is also a herd of 100 head of Stock which will be sold at a bargain.

This is a rare chance, and worthy the attention of those who wish a good Home, a good Farm, and a profitable business. Prices reasonable. For particulars inquire of Editor Farmer. 21-1

Opinions of Professors of Music on Jacob Zech's Pianos.

SAN FRANCISCO, December 29, 1863.

JACOB ZECH, ESQ:

Dear Sir: We, the undersigned, musicians of the City of San Francisco, do hereby give our unbiased opinion as to the workmanship, purity, power, and brilliancy of tone, and perfectness and durability of action, of the Grand Piano manufactured and exhibited by you. We have no hesitation in pronouncing them far superior to any piano, ever placed before us for inspection. At the late exhibition of the State Agricultural Society, the Committee saw fit to denounce your instrument and award the first prize for an inferior *square piano*, which we pronounce a great injustice to you, and we do hereby give our names, and warrant your pianos to be superior to any in the State. With the greatest esteem, and the most fervent desire for your success, and a wish that the people of California may give you justice, and not be controlled by money or the opinion of any body of men who are not qualified to judge of the merits of a Piano.

We are truly yours, etc,

R. HEROLD, Professor of Music,
GEO. T. EVANS, Pianist and Organist,
GEO. F. PETTINOS, Pianist and Organist,
LOUIS SCHMIDT, Pianist and Organist,
CHAS. STADERMAN, Pianist,
STEPHEN W. LEACH, Artist,
L. T. PLANEL, Professor of Music,
A. LAPFGER, Pianist,
ALBERT STOHR, Musician,
JOSEPH B. SCHMITZ, Musician,
EMILE TOUSSIN, Pianist,
CHAS. SCHULTZ, Pianist and Organist,
J. D. KNELL, Pianist, and Organist at Cathedral,
H. HOLZHAUER, Pianist,
WM. CROOKER, Pianist.

Letter to Jacob Zech.

[The following notice of my Pianos was received by me from the gentlemen named, professors of music at Sacramento, and approving, in very flattering terms, my instrument.—J. ZECH.]

Your Grand Piano was an excellent and beautiful instrument, full and rich and tone, in with all the excellencies that are desired in a Grand Piano.

Your Square Piano was one of extraordinary excellence, and beyond question the best on exhibition, having a full and powerful tone, yet, with that soft and delicate expression so desirable to an artistic ear. We feel gratified to know of your success in this art, and hope your efforts will be duly appreciated.

Wishing you all success, we are your friends,
CHARLES WINTER, Pianist,
CHAS. STADDERMAN, Pianist.
CHRISTIAN STATFIELD, Pianist,
GEORGE GREINER, Piano Maker.

THE BEAUTIFUL.

Walk with the Beautiful and the Grand,
Let nothing on the earth thy feet deter,
Sorrow may lead thee weeping by the hand,
But give not all thy bosom's thoughts to her,
Walk with the Beautiful.

To hear thee say, "the Beautiful, what is it?"
Oh thou art darkly ignorant, be sure,
'Tis no long weary road its form to visit,
For thou canst make it smile beside thy door,
Then *love* the Beautiful.

Aye love it, 'tis a sister that will bless,
And teach thee patience when the heart is lonely,
The angels love it, for they wear its dress,
And thou art made a little lower only,
Then love the *Beautiful*.

Sigh for it, clasp it, when 'tis in thy way,
Be its idolator, as of a maiden,
Thy parents bent to it, and more than they,
Be thou its worshipper, another Eden
Comes with the Beautiful.

RENA.

[Welcome, welcome, fair "Rena" again to our columns, like some beautiful star upon which the vision had been fixed when clouds had suddenly obscured it. So, like the star, brighter, and more beautiful thou comest now, leaving the darkness, that had obscured thee, far, far away. May thy teachings ever be with us to illumine with thy radiance "The Love of the Beautiful."]

[For the California Farmer.]

SILENT MOMENTS.

Ye silent moments, how ye glide along;
So stealthily moving, ye go marching on;
Printing new scenes on memory's page,
Filling up the measure of our time and age.

How dull the picture, of each joy or grief,
As memory's pencil, paints them all too brief,
And searching through the page, for some bright spot,
On which we love to linger, at the happy lot.

Moments of time! your march is onward ever,
Towards the ocean of Eternity, a river
Flowing onward, ever onward, never to return,
But silently sweeping all within thy bourne.

Then moments, bring us something from your silent shore,
To make our voyage pleasant, as we pass the evermore,
Something from out thy page of golden light,
Some glorious vision for our enraptured sight.

For shall we not remember all these moments past,
As fresh in Heaven, as on Earth they were cast?
Then paint the landscape with bright pictures fair,
To be remembered when we are free from care.

NAPA, Dec. 25, 1863. M. J. U.

[For the California Farmer.]

Female Dress.

Much has been said in regard to female apparel. And perhaps the public does not wish a dissertation on the subject at this time. But as every one does not see alike, we would advance a few ideas that may not be received amiss. In the first place look around you, what do you see? Healthy rosy women, with elastic step, buoyant hopes, and sparkling eyes, with joy and hope depicted in every feature? Or do you behold pale, emaciated and trembling forms on every side, with sunken eyes, whose light has almost died out, for want of health and happiness. What, I ask, has caused these? Is it for want of the comforts of life, that could not be afforded in a country flowing with milk and honey? Or is it abuse of these precious gifts? I answer, it is an abuse of these blessings, which God has given us. Showing our disregard of His wisdom and goodness, by disfiguring ourselves and converting ourselves into every uncouth shape, thereby marring the beautiful structure which God has given, and by him pronounced good. "Thou shalt have no other Gods but me." But still forgetting that command we are wildly worshipping the god of fashion with all the strength and ardor worthy a better cause, taking great pride in our wonderful improvement, in disfiguring our bodies and ruining our health, which is the greatest boon of an earthly existence. What will not fashion do? It will cause bodies who are so delicate, they cannot enter the kitchen, for fear of the unpleasant odor affecting their sensibilities, to girdle their waist, until their lungs are compressed into one-half the space they require, while they expand and lengthen their dress, to such dimensions, as to completely impede their walk, causing them to elevate the front of the dress, while the back of it is trailing at least a foot on the ground, giving them the appearance of pulling themselves out of the mud or dust. Yet they laugh at the absurdity of crippling Chinese women, considering that a heathenish custom. I think they have the advantage over us, as only their feet are crippled, while ours is a complete deformity, physically and mentally. The Chinese dress is simple, and adapted to give freedom to the limbs. Would it not be much better to inquire, what we can do to introduce a style of dress to be worn by women, that will be consistent with reason and health? Something to assist nature, rather than injure her beautiful works; something to be worn, that will enable us to walk, ride or work unincumbered by such articles of torture, as destroys our health and happiness, causing so much suffering? Has it become a sin to be healthy, an indelicacy not to be delicate and listless, and under the Physician's care? If the ladies only knew how simple they appeared, to send for a Physician, for every whim of the moment, expecting him to cure the ills, which they are constantly bringing upon themselves, for fashion's sake, and how little there is extended to their follies they would not be so anxious to complain. The Doctor knows too well the cause, and also knows better than to tell you, as that would spoil his business. Dressmakers and milliners would not advise you, they too live by your folly. When women become what God designed them, mothers, sisters, wives, equal with men in her own capacity, not required to fill his place, but her own with its fullness of health and happiness, a blessing to the world, an ornament to society, not by her dress but by her worth as a sensible and reasonable companion, and friend. What is it that has caused woman to become so feeble and incapable of taking her part in life. Nature is as bountiful in her gifts to her as to man; if she had not deviated so far from the laws of health, by her imprudent follies in dress, trying to become unnatural, she might yet stand forth in that perfectness, which was given her by God. Woman's perceptions of right is clear enough when not enslaved by fashion. What will she not do to satisfy its demands! Why sacrifice her darling child, causing it to go half clad, exposing its young life to the cold blast of winter, until the delicate flower is cut off in early bloom, by the unnatural exposure of its little tender limbs. Then the poor mother mourns her child, but sees not the cause of its early flight to more congenial climes. Mothers, you have a great work to do, to remove this great evil, for many a dear one will yet be laid in the silent tomb, which might have lived to be an ornament and a blessing to the world. It is the fairest that go soonest, as they are more petted and clad the thinnest, to show off their beauty, and are therefore hurried away. Why is it that the most important things of life are passed by as trifles? Is it that we have become heathens in the true sense of the word, worshipping idols and sacrificing ourselves and children to the god of fashion? The heathen are more honest than we, for their sacrifices are to win them an inheritance in another world, while ours is to enslave the mind and torture the body here, without any hope of future reward; are we then not guilty of a great sin, for which we have to suffer here, and our posterity for generations to come, and retarding our spiritual growth. As sinners say: "What can I do to be saved?" First commence to study self, and the natural laws which govern you; study how best to clothe and protect for comfort and health, giving elasticity to the limbs, free action and circulation, causing a healthy glow to mantle your cheeks, your eyes to sparkle with the light of health. Let your movements be light, and not impeded by trailing skirts. How would a man look with his pants hanging six or eight inches below his boots, and the skirt of his coat trailing behind, while he was trying to hold up his pants? You would consider that a ridiculous sight, and yet that would not be half so bad as the present fashion of female apparel. O, fashion, thou art a cruel torture to inflict poor beings in such ridiculous costumes. There are many kinds of slavery, but none so willingly submissive to their masters as the votaries at the shrine of fashion.

NAPA, January 4th, 1864. M. J. U.

[For the California Farmer.]

A Mother's Love.

There is nothing so strong and enduring as a mother's love. Do what we may, conduct ourselves as we will, a true mother's love will cling to us forever and ever. My young friends, have you ever pondered seriously on this? Have you ever noticed the sad face of her you ought to love and cherish as long as you live, grow sorrowful and sad, when in answer to some wish of hers you reply "I shant." Have you ever seen her upon her bended knees, pouring out her full heart in a prayer to the Dispenser of All Good, to teach her darling, and perhaps only child, the great sin he is committing in so acting, and to bring her to a premature grave. Yes, there is nothing that wears out a mother's heart so surely as such conduct. Think well upon this that you may not have it upon your mind when you stand at your mother's grave, "I was the chief cause of my mother's death, ingrate that I am." W. R. C.

Advice to young men.—A lady who signs herself "A Martyr to Late Hours" offers the following sensible suggestions to young men: Dear gentlemen between the ages of "eighteen and forty-five," listen to a few words of gratuitous remarks. When you make a social call of an evening on a young lady, go away at a reasonable hour. Say you come at eight o'clock, an hour and a half is certainly as long as the most fascinating of you in conversation can, or rather ought, to desire to us his charms. Two hours, indeed, can be pleasantly spent with music, chess or other games, to add variety; but, kind sirs, by no means stay longer. Make shorter calls and come oftener. A girl, *i. e.* a sensible true hearted girl, will enjoy it better and really value your acquaintance more. Just conceive the agony of one who, well knowing the feelings of father and mother upon the subject, hears the clock strike ten and yet must sit upon the edge of the chair in moral terror lest papa should put his oft repeated threat into execution, that of coming down and inviting the gentleman to breakfast. Ah! we girls understand it all by experience, and know what it is to dread the prognostic of displeasure. In such cases a sigh of relief generally accompanies the closing of the door behind the gallant, and one don't get over the feeling of trouble till safe in the arms of Morpheus. Even then sometimes the dreams are troubled with some phantom of angry father and distressed (for all parties) mother, and all because a young man will make a longer call than he ought to. Now, young gentlemen friends, I'll tell you what we girls will do. For an hour and a half we will be most irresistibly charming and graciously fascinating; then, beware. Monosyllabic responses will be all you need expect, and if, when the limits shall have been passed, a startling query shall be heard coming down stairs: "Isn't it time to close up?"—you must consider it a righteous punishment, and taking your hat, meekly depart, a sadder, and it is to be hoped a wiser man. Do not get angry, but the next time you come be careful to keep within just bounds. We want to rise early these pleasant mornings and improve the "shining hours;" but when forced to be up at such unseasonable hours at night, exhausted nature will speak, and as a natural consequence, with the utmost speed in dressing, we can hardly get down to breakfast in time to escape a reprimand from papa, who don't believe in beaux—as though he never was young—and a mild, reproving glance from mamma, who understands a little better poor daughter's feelings, but must still disapprove outwardly, to keep up appearances. And now, young man, think about these things, and don't for pity's sake, don't throw down your paper with a "pshaw"—but remember the safe side of ten.

TO "CARRIE."

Sweetly, as some mid-summer chime of bells,
Falleth thy pretty name upon my ear;
And with its melody my heart no swells—
Each throb a hope—each pulse a prayer sincere;
For thou art all for love! no sordid thought
Of gold, or rank, dwells in thy pure young mind;
But in affection's home thy heaven's sought,
And, in my heart is all that thou would'st find.

A score and seven of earth's years I've seen
Dark Winter's away, and laughing summer's reign
Change to deep brown the oak-tree's leaves of green,
And bid the flowers gem the earth again.
Unloved, yet loving, have I drifted on,
Alone, out on life's stormy sea afar;
No ray of hope or love to light my way,
Till thou in beauty rose—a guiding star.

Thou askest love: Love, warm and pure as thine,
I'll give thee, "Carrie," for thy loving heart;
I ask no more than that thou shouldst be mine,
Nor care how poor in this world's wealth thou art.
A golden chain, though costly it may be,
Binds hearts no firmer with its glittering zone,
Than finest woof of silk, if wove by love,
Can link them, from that simple fact alone.

I've dreamed of thee at night such sweet, fond dreams,
And day so brightly calls them back to me,
That near my side thy fair face ever gleams,
A thing of beauty—ne'er forgot to be.
And would'st thou know how Fancy paints thy form
Upon my heart? read what below I write,
And wonder not my lines should glow so warm
With love for thee, when ne'er thou'st blest my sight:

Upon thy brow the golden sun
Has blended many a kiss in one,
And smiled amid thy silken hair
'Till left half of its glory there;
And in thy eye a witching light
Sheens, through its blue depths, dazzling bright;
Thy rose-leaf lips thrill with the bliss
They long to yield in one wild kiss,
And blushes on thy cheeks disclose
The blended blooms of peach and rose;
Thy white neck, through the dark, tressed hair,
Gleams like Italia's marble rare;
Thy voice trills from its jail of pearl
Like music, when thy lips unfurl;
A being made for love thou art,
Love, such as warms a poet's heart;
Young, loving, fair—no more I ask
Than 'neath thy smiles of love to bask,
And consecrate my life to thee,
As thou wouldst give thy soul to me.
Such, "Carrie," has my soul's wild dreams
Pictured thee 'neath its fancy's gleams.

RED BLUFF, Jan. 19, 1864. D. W. R.

FRENCH PLATE GLASS.

THE UNDERSIGNED IS HAPPY TO INFORM his Friends and the Trade that he has established himself in this city as an

IMPORTER AND DEALER IN

PLATE-GLASS, MIRRORS,

STAINED GLASS, ETC,

Direct from Europe, of the

BEST WHITE QUALITY,

Of all thicknesses and dimensions. Large invoices of Plate-glass now opened—sizes varying from 24x48 to 132x78, and larger sizes will be imported to order.

He has received the agency of

Messrs. Aug. Nyssens & Co's

PATENT FRENCH PLATE-GLASS,

Silvered, for Mirrors,

A New Article to the trade, now almost entirely used in the Atlantic States and Europe, being much whiter in appearance and superior to the old style of Quicksilvering, not being liable to stain from heat, moisture or dampness, nor injury by handling or in packing for transportation. I would invite a call of examination to the sample invoice just received. Having the sole agency for California, I am now prepared to receive orders, and can sell as low as can be imported from New York.

I am also constantly receiving large invoices of

CRYSTAL, SHEET, STAINED, ENAMELED,
CUT AND GROUND WINDOW GLASS,
ROSETTES, ROUGH PLATE-GLASS
FOR SIDEWALKS, ETC, ETC.

Orders received for CHURCH WINDOWS, Ornamented and Plain, in any style or of any dimensions. Designs can be seen at the office. Any Society furnishing dimensions for Windows, or Glass, can have their patterns or designs made to order. All styles and sizes of

Glass for Conservatories,

GREEN-HOUSES,

and

GARDEN BUILDINGS,

To order. Also a large invoice of

SUPERIOR MIRRORS,

Framed, of an Entire New Pattern,

Suitable for Hotels, Parlors, Saloons, etc. These goods can offer on the most favorable terms.

By keeping constantly a full assorted stock of the above goods, I hope to merit a share of your patronage.

Fr. H. Rosenbaum,

221 Sacramento street,
13 SAN FRANCISCO.

Valuable Seed---Agricultural Books.

SUGAR BEET-SEED OF VERY SUPERIOR QUALITY, and YELLOW ONION SEED of Extra quality, received at the Farmer Office, for sale low.

An Invoice of Agricultural Books, of select character, just received.

BOWEN BROTHER,

Denn & Manrow's Combined Power WINE PRESS.

THIS NEW PATENT PRESS IS NOW OFFERED TO the Grape Growers of this State as a California Invention. It has been designed and finished with reference to the saving of labor and expense, while the work done is more speedily accomplished and with greater results.

It is the FIRST COMPLETE WINE PRESS in the country. The power of the machine is almost unlimited. With the crank alone the power of this press is as 500 pounds to one pound of strength applied. After the crank has been worked by hand to a certain point a lever of eight feet is attached, by placing weights at the end of this lever a new power is given equal to 1,000 pounds for one. This power is continuous, a self-working power—no supervision needed.

This Press is made of solid timber, yet neat, compact, and very powerful; the wheels and gearing simple but sure; the whole weighing about 800 pounds, easily put up or taken down and easily transported; so simple yet carefully constructed that it cannot get out of order unless by extraordinary results. The cost of this machine will be less than the ordinary Screw Press; it will save the labor of six or eight men usually required, as ONE MAN can do all the work.

The quantity pressed is only governed by the size of the machine, each pressing being from 400 to 4000 pounds as the size of the machine may be, and from four to six pressings a day, thus yielding from 400 to 2,000 gallons per day.

Machines will be constructed to order, of any size. For any further information address the undersigned,

DENN & MANROW,
Patentees and Proprietors, Sacramento.

P. S.—The Editor of the Farmer having thoroughly examined this Wine Press, we are permitted to refer to him for capability and perfection, or any other information. 9

$5! Delaware Grape-Vines! $5!

PROPAGATED FROM VINES received in 1851, from Dr C. W. Grant, of Iona Island, near Peekskill, N. Y One and two year-old Vines, from $1 00 to $2 00 each! The superiority of the Delaware as a Wine Grape, will doubtless induce unprincipled Dealers to flood the Market with a Spurious Article; and as mistakes sometimes UNINTENTIONALLY occur, which cause delay and trouble to the Purchaser—

☞ I WILL PAY IN GOLD COIN $5.

(or the same amount in Lincoln, Lenoir, Union Village, Anna, or Diana Vines, at 50c each, or the IONA at $2 00 each) for each Vine purchased f om me, for the DELAWARE, which proves untrue to name.

I have a few IONA VINES, one year old, propagated from a Vine presented to me from Dr. Grant, the Originator of the same, which except upon the above conditions, I do not intend to offer in Market without his permission

Catawba Vines and Cuttings by the Hundred or Thousand, CHEAP!

C A CRAIG,
24-3m* Rattlesnake P O., Placer County

"MENLO PARK,"

San Mateo County.

Beautiful Sites for Homes in the Country.

THE UNDERSIGNED OFFER FOR SALE THE SALE, unsold, of the choice tract There are few, if any, places within one hundred miles of this large and growing metropolis, which combine so many natural advantages for a country residence; the soil is excellent; it is wooded with large, splendid live oaks, and other evergreen shade trees The climate is unsurpassed, the extremes of heat and cold are never felt and the harsh summer winds and fogs don't reach here Good well water can be obtained here at thirty feet, independent of which, there is a Company already formed, in San Mateo County, for introducing an abundant supply of the best spring water, for this and adjacent tracts, and Redwood City; it will have a head of about sixty feet at the point. The cars of the S. F. & S. J. R. R. land passengers at their depot, at this point, in about an hour and a quarte , thus enabling business men to live here and transact their business in town, without interruption. A first class school is about being established here, with educational ability second to none in the State. There will also be a first class family hotel opened in the Spring.

Those who are alive to the importance of a home in the country, with all the advantages for health, education, etc; are earnestly requested to go and look at this lovely spot. AS AN INVESTMENT, it is worthy the attention of every one who wishes to invest SAFELY AND PROFITABLY, as it is rapidly enhancing in value. The title is unquestionable, it being a portion of the PULGAS RANCHO, the first Spanish grant finally confirmed, and the patent issued.

About thirty heads of families have already purchased, with a view of building, in the Spring.

As to the merits of this choice tract, we refer to the following gentlemen, some of whom are now living in the neighborhood, and others have purchased with a view of doing so

AUTOCRAT OF THE KITCHEN.

THE ORIGINAL P. P. STEWART.

Fuel Saving and Comfort Producing

LARGE OVEN

SUMMER AND WINTER AIR-TIGHT,

COOKING-STOVE

....FOR....

Wood and Anthracite, or Bituminous Coal.

IMPROVED IN 1850,

With New and Extra Large Flues, and by the addition of the *Celebrated Patent Double-Shell Bottom Flue.*

Attention is invited to the following points of superiority:

1st, DURABILITY—Lasting, with proper care, at least 30 years. Stoves are now in use that were set up in 1833.

2d, MANUFACTURE—Every portion of the Stove is thoroughly constructed. Each Stove is submitted to a critical test, and none leave our works unless completely and perfectly finished.

3d, CAPACITY—Baking, boiling, broiling, roasting, and all other culinary operations performed at the same time.

4th, ECONOMY—Saving the cost of the Stove in one year in the item of fuel.

5th, VENTILATION OF HEAT.—In the Stewart Stove alone, the front doors open directly into the oven (protected by letters patent), securing a direct draft through the top of the oven, by means of holes perforated in the doors and back flues. It will be borne in mind that, as the heated air always rises, this method of ventilation is the only one of any value whatever

6th, ENTIRE CONTROL OF HEAT—The heat generated by the Stove may be held therein, and used or thrown into the room at pleasure

7th, THE DOUBLE-SHELL BOTTOM FLUE—By which a compressed and inverting action of heat is obtained, and the oven more evenly and efficiently heated than by any other known invention

8th, BROILING—Performed on the top, and without the possibility of smoke entering the room

9th HOT WATER RESERVOIR AND WARMING CLOSET—Both useful and convenient, supplied by the waste heat and without extra fuel.

10th, WATER RACK—An arrangement for supplying hot water for the bath-room, equal to any range.

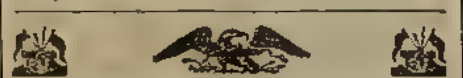
☞ Beware of the numerous imitations in the market, many of which resemble the Stewart only in appearance, and none of them possess any of its peculiar qualities. See that the name of P. P STEWART, and of the Manufacturers are on each stove None other are genuine For sale by

CALEB M. SICKLER,
422 Kearny street, bet. California and Pine, San Francisco.
v20-6

Purify the Blood.

NOT A FEW OF THE WORST DISORDERS THAT afflict mankind arise from the corruption that accumulates in the blood. Of all the discoveries that have been made to purge it out, none have been found which could equal in effect AYER'S COMPOUND EXTRACT OF SARSAPARILLA. It cleanses and renovates the blood, instils the vigor of health into the system and purges out the humors which make disease. It stimulates the healthy functions of the body, and expels the disorders that grow and rankle in the blood. Its extraordinary virtues are not yet widely known, but, when they are, it will no longer be a question what remedy to employ in the great variety of afflicting diseases that require an alterative remedy. Such a remedy, that could be relied on, has long been sought for, and now, for the first time, the public have something on which they can depend. Our space here does not admit certificates to show its effects But the trial of a single bottle will show to the sick that it has virtues surpassing anything they have ever taken. Sufferers from Scrofula, Scrofulous Swellings and Sores, try it and see the rapidity with which it cures. Skin Diseases, Pimples, Pustules, Blotches, Eruptions, etc, are soon cleansed out of the system.

St. Anthony's Fire, Rose or Erysipelas, Tetter or Salt Rheum, Scald Head, Ringworm, etc, should not be borne while they can be so speedily cured by AYER'S SARSAPARILLA.



Syphilis, or Venereal Disease, is expelled from the system by the continued use of this SARSAPARILLA.

Female Diseases are caused by scrofula in the blood, and are generally soon cured by this EXTRACT OF SARSAPARILLA. Price $1 per bottle, or 6 bottles for $5.

For all purposes of a family physic, take AYER'S CATHARTIC PILLS, which are everywhere known to be the best purgative that is offered to the American people. Price, 25 cents per box; or 5 boxes for $1.

Prepared by Dr. J. C. AYER & CO., Lowell, Mass.

Price 25 cents per box. Five boxes for $1. Sold by Crane & Brigham, San Francisco; R. H. McDonald & Co., Sacramento, and all dealers in medicine. 21ea6m

Literary Shrubbery.

Hans Enlists for a Soldier.

"Buck," of a La Crosse, Wisconsin, paper, is an inhuman joker, and lately witnessed a scene in Milwaukee, that we transfer to our columns. The reader must picture a stout, big bellied, short-haired recruiting officer, with a blue cap, broad, stiff, frontispiece—a short sword—blue uniform, size too small, and a raw customer from "faderland," with wooden shoes and long-tail gray coat. The officer was after recruits for a German regiment, and thus went for his susceptible countryman; "Lo! dere, Hans! he dat you?"

"Yaw."

"Come mit me to be a sojer man,"

"Nein!"

"Yaw! Come! It be so nice."

"Nein! I gets shoot!"

"Nix! Py dam it is better as goot. It be foon all de vile. You enlist mit me, you gets ein hundred dollars bountish!"

"So?"

"Yaw! And you gets such nice clothes ash never vos! Shust look mit me!"

"So?"

"Yaw. And in ter morning von der trum peets dat is de gurnel's compliments to come an' git some schnapps mit him!"

"So?"

"Yaw. And purty soon, bime by de trum peets agin and dat ish de gurnel's compliments to come eat some sour-krout un sausage mit him, py tam!"

"So, mynheer?"

"Yaw, dat ish so. Den purty soon bime by, der trum peets, and dat ish de gurnel's compliments to ride mit him in der carriage to see your vrow or your Katrina. And den you rides all over de city mit him and it no costs you one tam cent! And bime by der trum peets and dat ish der gurnel's compliments to come and schmoke a bipe mit him! And den, bime by, purty soon, right away, der trum peets, like ter tuysel, and dat ish der gurnel's compliments to come and git ein hundred tollars bountish, I tinks, but I guess not, py tam!"

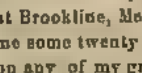
"Yaw! So goot!"

"Yaw. And den der gurnel and der Bresident shake hands mit you, and you eat krout mit der Bresident, s vrow and you shust live like one fighting rooster, py tam! And den in a little vile you say der Bresident he one nice man, and you gets anoder hundred tollars bountish, and der Bresident makes us grand general mit you, purty soon, I guess, but I tinks not! You go mit me?"

"Yaw!"

A NEW INVENTION.—A friend informs the Red Bluff Beacon, that he saw on the other side of the river a rather sagacious contrivance for sowing grain. It consisted of a small lumber wagon, drawn by two horses, and driven by a woman. Across the vehicle boards were laid constituting a platform, upon which a tub full of grain was placed. Before it sat a man whose business it was to scatter the grain on either side with his hands, which he did with great regularity. Sacks of the seed were carried in the front of the wagon, to replenish the tub when empty. This manner of seeding undoubtedly is a great saving of both leather and human exertion, but it is death to those who keep agricultural implements for sale.

RAILROAD Superintendent Twitchell, in a speech at Brookline, Mass., last week, said: "I see before me some twenty men, who, were there a vacancy on any of my gravel trains, would rush to get it; but the chance of death there is far greater than on the battle-field, while it is all gravel and no glory."



IT is said that some of the vermin in the camps at the South thrive so wonderfully and have grown so large that the letters "U. F. W." are plainly to be seen on their backs, like the creases in the shell of an old-fashioned mud-turtle. The soldiers say it means "U for the war."

ATTENTION FARMERS!—10,000 lb "TOP ONIO S' WANTED.—Farmers having *Top Onions*, of best quality, can find a purchaser by communicating with the Editor of this paper.

Jebb's Patent Churn.—We invite those who want a churn to call at the FARMER office and see the best churn ever made. One that gives them butter from cream in five minutes, or butter from new milk in ten to fifteen minutes. Seeing is believing, and the trials furnish facts that are not to be gainsayed. Patent rights for counties for sale, from which a fortune can be made. Single churns can be purchased also.

The Markets.

Wholesale Produce Report.

This represents the prices paid by the dealer to the producer.

Corrected weekly, by A. H. Todd & Co., corner of Clay and Drumm Streets.] Feb. 4.

The improvement in prices of some Cereals observed in our last report has been not only sustained, but a further advance is asked. Barley and Oats are in favor, a good demand existing, both for exports and consumption. There is an opinion that the interior requirements will be heavy, and that our crop of Feed-Grains will scarcely supply the demand for consumption. In view of this, many holders refuse to sell at present, prefering to hold for a larger price than now rules. The Wheat market knows no change, prices continue low. The late favorable rains and the present growing weather have quieted the fears of many relative to the prospects of the ingoing crops, and all think now, with our ordinary weather, our crops will be abundant. Hay, Potatoes, and Beans remain without change. There is a speculative tendency as regards Beans, the present price of which is very low, and they promise almost a sure profit on the investment. Corn and Rye are offered in very sparing quantities. Buckwheat is very abundant and dull.

Our Exports have been as follows: Ex the British bark Sancta Bega for Liverpool, 14,214 sks Wheat, 386 sks Copper-ore, etc. Ex ship Zouave 33,214 sks Wheat, 68 pkgs Tallow, etc. Ex brig Shoet Anchor, to Victoria, 397 sks Barley, 100 sks, Beans 280 bf-sks 4436 qr-sks Flour, etc.

Our receipts of Produce from around the Bay since our last report have been as follows: Wheat 11,295 sks, Barley 6305 sks, Oats 372 sks, Potatoes 3115 sks, Bran 696 sks, Flour 4260 qr-sks, Beans 712 sks, Hay 190 tons.

Also, Coastwise: Potatoes 4400 sks, Oats 1179 sks, Barley 1685 sks, Wheat 1304 sks, Rye 52 sks.

Prices at Pacific Fruit Market—Feb. 4.

Messrs. Gould, Martin & Co., report to us the following prices as the ruling rates for fruit:

Apples 5@8c ₱lb. Pears 6@15c ₱lb. Dried Plums 15@20c ₱lb. Dried Peaches 12@17c ₱lb. Dried Figs 20@33c ₱lb. Lemons $7@13 ₱box, retail 50@75c ₱ doz. Oranges $4@6 ₱100, retail 75c@$1 25 ₱ doz.

Nothing of interest in the Fruit Market this week.

BY CONTINENTAL TELEGRAPH.

DATES TO FEB. 3.

The Little Rock Democrat, of the 23d, says 800 rebels, under Col Shelby, were encountered and defeated on the 19th, 20 miles below Pine Bluff, by Federals under Colonel Clayton. The fight lasted half an hour. The rebels were badly beaten, and driven seven miles. Another fight took place on the 14th between 40 Federals and 100 rebels, dressed in Federal uniforms. Six of the latter were killed and six wounded. The Federal loss was eight killed and wounded.

Memphis advices state that the Sixteenth Army Corps were preparing for a movement to attack the rebels in Mississippi, and secure a large stock of grain and forage on the way to Mobile. It is stated that some 12,000 cavalry are concentrated at Corinth to take part in this movement.

Richmond papers state that two Yankee gunboats ascended the Chowan river as far as Harrellsville, Hartford county, N C, and landed 300 men, who burned several houses and destroyed 10,000 pounds of Government bacon. Several of them are reported killed by our cavalry [rebel] while returning to their boats. The health of Vice President Stevens is improving. The Examiner, in a leader, says "the time has passed for offensive military operations on the part of the Southern armies, and we are now beyond the recovery of our lost territory The true policy now is to risk nothing, as our means of subsistence are too far exhausted to admit of any other than defensive tactics. It has become with us simply a question of endurance, and the duration of the war is simply a question of continued supplies of food for the people. If the army of the South can hold out indefinitely; if at the eleventh hour, the people do not go mad from the great want in food and clothing, it is the first duty of the Government to provide these supplies, and if they cannot be provided except by weakening our strength, any alternative must be adopted of resisting with smaller armies, and using the tactics of Fabius and the strategy of defense."

A guard of one company of infantry at Patterson Creek bridge, eight miles east of Cumberland, Md, were attacked by 500 rebels, Feb. 2, and mostly captured. Fire was set to the bridge, but extinguished by the employes. Gen. Averill, from Martinsburg, pursued and overtook the rebels, killed and captured a large number, and recovered their prisoners.

Intercepted letters from rebel ladies show that of the 3,000 cavalry sent into the valley during the recent cold, not over 500 have returned. Many were frozen to death, and the others who had been frost-bitten, sought refuge in farm houses and villages. The entire movement was a total failure. At last accounts Early's force was resting on the Middle river, near Mount Crawford, having abandoned the enterprise. Deserters continue to arrive from the front, and report a great scarcity of provisions, forage, and clothing; also a large number waiting for a proper opportunity to avail themselves of the President's amnesty proclamation. The enrollment of civilians, white and colored, within the lines of the army, is nearly complete.

A New Orleans letter says that troops are being towed over Lake Ponchatrain and landed at Madisonville. All agree that Mobile is to be attacked by land and water.

The Richmond papers have a dispatch dated Pascagoula, Jan. 25th, which says: "The enemy's (Federal) gunboats, with six transports, have entered the mouth of the river, taking possession of Madisonville, and four mills which our forces neglected to burn. They threw out pickets on the Covington road, within two miles of the town, also on the Madisonville road on the east side of the river. They are engaged in raising the hulls of several vessels sunk in the river by our authorities. Our (rebel) forces have withdrawn towards Franklinton. Four gunboats were in sight yesterday. Three are off Round Island. The others have proceeded towards Ship Island."

The call for troops will necessitate the additional appropriation of two hundred millions of dollars. The Army Appropriation bill approximates to five hundred and forty millions.

The Court of Inquiry in the case of Generals Crittenden and McCook has commenced its session. Maj Gen. Hunter is President of the Court.

Draft Ordered.—It is hereby ordered that a draft for five hundred thousand men, to serve for three years, or during the war, be made on the 10th of March next, for the military service of the United States, crediting and deducting therefrom so many as may have been enlisted or drafted into the service prior to the first of March, and not heretofore selected. Abraham Lincoln.

Under the call of October for three hundred thousand men, about half has been filled by volunteers and reenlistments The call now made for half a million is interpreted, by gentlemen acquainted with military affairs, to include the above mentioned call, being, in effect, an additional call for two hundred thousand. Volunteering is supposed to furnish at present an average of two thousand per day.

A correspondent of the Boston Journal, writing under date of Ship Island, the 18th, says: "Last night, a small boat came down the Sound, with intelligence that the rebels at Fort Morgan had revolted. During the difficulty, the rebel gunboats in Mobile bay attempted to arrest the garrison The whole Fort being in revolt, with the American (Federal) flag flying, opened on the gunboats with every gun of the Fort, and succeeded in driving the gunboats off, but were not on guard and that night a large force from Mobile captured the whole garrison, excepting four men who escaped in the darkness, and came to Ship Island in a small boat. From them we heard the first intelligence, and the revolters were condemned to be shot to-day in Mobile. We also learn from deserters that on Hora Island, up the Sound, there were a number of other deserters from the rebel army in and around Mobile. These deserters also bring the important intelligence that the rebel army in and around Mobile had organized secret societies, determined to fight no longer. It is said that the movement has started among the soldiers and is growing stronger. Many officers are engaged in the movement, and the correspondent adds he is confident the news is true.

The Philadelphia Inquirer says twelve hundred rebels, who had taken the oath of allegiance, arrived yesterday afternoon from the West. The majority of them were immediately placed in service as sailors.

The dissatisfaction in Lee's army, in consequence of the reduction of rations, has reached to such a pitch as required the commander to issue an order appealing to their patriotism and religion to prevent mutiny. Recent intelligence from Lee's army states that they are executing the tithe tax—one-tenth of all forage and supplies—on the inhabitants thereabout, and that the horses of the army receive I only four ears of corn a day. [The animals are] not allowed to be used except on an extraordinary emergency.

A Hilton Head letter says operations against Charleston have virtually ceased. Gen. Gilmore goes to Washington to represent affairs between himself and Admiral Dahlgren.

The steamer Western Metropolis, from New Orleans, when 50 miles from Tortugas captured the blockade runner Rosita, of Havana, and took her into Key West.

The Senate Finance Committee, in their report on the Internal Revenue bill, drop the tax on whisky on hand, but increase the tax to sixty cents on all manufactured after the passage of the bill to May 1st, and seventy cents on all manufactured from May 1st to July 1st, and eighty cents on all manufactured thereafter.

The trade restrictions on Western Virginia have been removed by order of the Treasury Department.

From Nashville, the 2d, Gen. Dodge reports that on the 24th our forces under Col Phillips, drove Roddy to the south side of the Tennessee, captured all his trains—in all, over 20 mule-teams—200 head of cattle, 600 sheep, and 100 horses and mules. They destroyed the factory and mill which had largely supplied him.

The Senate, in executive session, Feb. 2 confirmed Jas. Doane Doty, Governor of Utah; John N. Goodwin, Governor of Arizona; Amos Reed, Secretary of Utah; O. H Irish, Superintendent of Indian Affairs of Utah; and D. D Porter, Rear Admiral, from July 4th, 1863. R. F. Perkins has been confirmed as Postmaster of San Francisco

Five hundred of the rebel prisoners at Point Lookout have been enlisted in the United States service, and about 3,000 more have petitioned to be allowed to take the oath under the Amnesty Proclamation.

The Times of January 24th has a report that Denmark has offered to suspend the obnoxious constitution and address. If such an offer has been made, it will for a time avert the imminent danger of a European war.

Fort Smith, Ark., Feb. 3d.—A terrific storm swept over the entire Southwest on Sunday. About 11 o'clock A. M. it rose to a tornado, which raged for twenty minutes, doing immense damage in a portion of the Indian territory and down the Arkansas Valley.

The Eagle is Flying Still—Collins the hatter—one of our good old pioneers—the proprietor of the "Eagle Hat Store," San Francisco, and Sacramento of the "times that tried men's souls," lifts up the "Eagle" again, and opens his doors at 650 Clay street, one door below Montgomery, so that his friends may know "he still lives," and if they will but call on him often their heads will feel better, they will make a better appearance on the street when they leave him, and their friends will recognize them quicker when they "tip the beaver" to them Collins deserves well for his industry.

Stained Glass, Plate Glass, Splendid Mirrors, Etc.—Those who may be planning new homes, beautifying their pleasure grounds with temples and summer houses, or who may be desirous of finding splendid mirrors, can be happily supplied by calling on F. Rosenbaum on Sacramento street, whose importations now are large and of the richest kind. Those who are building conservatories, can always be supplied to order with any size glass, any size or design in colored or stained can always be had to order, Mr Rosenbaum having such arrangements as to supply to any extent.

That Piano—We mean that "Grand Piano" that Zech made We have listened to its melody till its notes echoed on our brain for hours, and we must confess that we have never seen or heard a superior instrument. Zech is winning fame with his superior work.

Those New Lamps—Reader have you seen those new and beautiful lamps received by Stanford Brothers? To the student, the professional man, all who read, sew, or use a lamp, we say, by all means, go and provide a lamp, and the fluid that will not only be clear and brilliant but protect and preserve the eyes.

New Sugar Refinery.—A large two-story brick warehouse, on Battery street, corner of Union, near the Union Warehouse, has been purchased by an incorporated company, called the Bay Sugar Refining Company, unroofed and built up into a seven-story building, suitable to the purposes of the company. The tall chimney is now nearly up, and the building will be completed, ready for occupation within a few weeks. The capital stock of the company is $250,000 in 1,000 shares of $250 each. The trustees of the company are Claus Spreckles, Louis Meyer, Claus Mangels, Herman Meese, and Peter Spreckles.

☞Holloway's Pills and Ointment.—Neuralgia—Tic Doloureux. The doctrine that quinine and carbonate of iron were the only remedies for the doloreux and nervous disorders is now exploded. Holloway's Ointment will procure the speediest alleviation of pain, and a few applications suffice for a permanent cure. Thousands who have experienced a radical benefit from its use are prepared to vouch for the correctness of this statement. In gout, rheumatism, lumbago, and sciatica, it is equally efficacious.

Sold by all Druggists, at 25c, 62c, and $1 per box or pot. 194

HOLLOWAY'S PILLS and OINTMENT may be always obtained of Messrs. CRANE & BRIGHAM, cor. Clay and Front streets, San Francisco, Cal.

☞The People have been so much imposed upon by several worthless Sarsaparillas, that we are glad to be able to recommend a preparation which can be depended on as containing the virtues of that invaluable medicine, and is worthy of the public confidence. Doctor AYER'S SARSAPARILLA cures when anything can cure the diseases that require an alterative medicine.

Farmers and Immigrants.

LAND FOR SALE OR TO RENT.

THE ANTELOPE RANCH,

(FORMERLY JOB F. DYE'S) on the East side of the Sacramento River, embraces many very superior Farms of

100 to 500 Acres each; also Vineyards, Gardens and Orchards,

above all overflows, Fenced, having Dwellings, Barns, etc., and throughout the year, large running streams, and Irrigating ditches.

The soil is from 3 to 10 feet deep, very rich, and adapted to Wheat, Barley, Oats, Tobacco, Chinese Sugar-Cane, Fruits, etc.

The best market in the State is at Red Bluff, two miles above; at Tehama, three miles below the Ranch, and on the Ranch itself, for consumption in the northern portion of the State, Oregon, and the Humboldt Mines. The new Wagon Road from Red Bluff to the Humboldt Mines is within three miles of this Ranch.

Good Farmers (with families preferred) can hire these farms at low rates, or conduct them on shares, with privilege of purchase. Cash loans will be made, if desired, to assist in cultivating or holding crops, and every facility will be given.

Mowers, Headers, Threshers, etc, are on the Ranch—"The Antelope Flour Mill," of large capacity, and high reputation, is on the Ranch, owned by the same proprietors

☞ The "Job Dye Farm," of 250 acres—with Orchard, Vineyard, and Garden, with irrigating water, large Adobe House, and numerous out-buildings—will be rented to a satisfactory tenant

Apply to GEO CHAMPLIN, Red Bluff P. O, or on the Ranch, or to

E. F. NORTHAM and R. B. WOODWARD, San Francisco.

A California Land Decision.

The Washington correspondent of the Evening Journal, writes: It will be remembered by many people in California, particularly by those in the town of Red Bluff, that one Doll located school land warrants on the site of that place some time about the year 1855, over the claims of those who held simply as proprietors under the United States. Thus Doll had a paper title, obtained out of the five-hundred-acre-school-grant to California, for which warrants were sold to individuals by authority of the Legislature of the State. On this paper title he commenced action against those who had previously settled upon it as Government land, but were unable to obtain their patents from the Government, because the land had not been brought into market on account of a bogus title having been set up, pretending that it was covered by a Mexican grant. I believe the history of the case in the State courts was, that Doll obtained a judgment against the settler simply on the grounds that he brought forward a *quasi* paper title, while the settlers could produce none. However, after it was declared to be Government land, the Commissioner of the Land Office ordered the Registrar of the Land Office at Marysville to take testimony in proof of the rights in the priority of settlement. The testimony taken was voluminous, and went fully into the merits of the case. After the examination, Judge Edmonds, the Commissioner of the General Land Office, decided adversely to the claims of Doll and in favor of the preemptors, solely on the merits of prior possession. The decision was ready for announcement more than one year since, but Congressman Phelps requested that it be withheld from being made public, and it has slept in the *débris* of that department until a short time since, when Mr. Conness, having been applied to by Doll to get the Latham bill passed, which was designed to grant this to him by an act of Congress, had occasion to look into the matter, and at once discovered that the decision had been made in the case, but was withheld for the reasons stated. Application has been made by Doll to get a further delay in having that adverse decision announced, which it is needless to state led to having the Commission at once make it public. The former friends of Mr. Phelps will be pained to learn that when he got the decision in this case withheld from being given, that he was a member of the lower House and a candidate for the United States Senate; and that Mr. Doll was a State Senator, and continued to vote for him as long as he was an available candidate. This delay of over a year gave Mr. Doll time to attempt to get through Congress a title to a large property which he had no legal title to, as would have been shown by the publication of the decision of the Commissioner of the Land Office; and failing in this, to attempt to compromise with the settlers to whom the legal right had been awarded, so as to obtain in money or land that to which he had no shadow of a right.

It has been announced that this decision of the Commissioner of the Land Office is adverse to all of those locations made under the five-hundred-thousand-acre-school-grant, but such in reality is not the fact. This decision is only against Doll simply, on the question of prior possession. This is but one of the many attempts to defraud the *bona fide* settlers on the public lands in California, where those delegated with public trusts have prostituted their official influence to promote their political ambition, if they were not governed entirely bymercenary considerations.

The apple trade of Western New York was very extensive for the year 1863—a paper of Lyons says: "The price paid for fall fruit is about one dollar per barrel, the purchaser furnishing the barrel. Winter fruit will bring a higher price, probably. It is believed that more barrels of apples will be shipped from Wayne county this year than ever before, although the crop is considerable smaller than that of last year. West of the Genessee River, however, the yield was astonishingly large, and Monroe, Orleans, and Niagara counties sent out thousands upon thousands of barrels of fruit."

In Russia the candles used in the mines are made of tallow mixed with powdered charcoal, which is found to increase the intensity of light.

[For the California Farmer.]

Matters and Things About Napa.

Murder, Arrest and Trial of the Murderer.—A more atrocious murder, than that lately committed by P. G. Jenkins on the person of Patrick O'Brien, is not to be found in the annals of crime. This fiend in human form became a partner of O'Brien's, was received into his family as a friend, he gained the affections of the little girl, only fourteen years old, and very small of her age, and completed an engagement of marriage, which was to take place on the first day of July next. The father, a quiet inoffensive, well-meaning man, opposed the union on account of the extreme youth of his daughter, while the mother favored it. If the father was out of the way, all opposition to his wishes would be removed, and Jenkins resolved to remove them. He went to a neighboring house, borrowed a rifle on pretense of wanting to kill a deer, crept up behind his victim as he was engaged at his daily, honest toil, and when within fifty or sixty yards of him, shot him, and the poor man fell dead; assassinated within a few rods of his own dear home, all because he wished to protect his little girl from a life of misery, and guide her a little while in paths of peace and purity. This worse than savage Apache has been arrested, tried and convicted, and on Tuesday at one o'clock, p. m., will receive the sentence his crime demands. Wild-Horse Valley, the scene of this tragedy, has become noted, this being the third act of the kind committed there, and circumstances point to this man as knowing something of the blood that has before drenched that soil. Be this as it may, the chances are, that no more blood will be shed by his hands, and that ere the day arrives upon which he had hoped to see his wishes crowned with success, and he had taken to himself a wife in the form of a little girl, his guilty soul will be in eternity.

Want of Rain.—The farmers are all wondering and surmising what is going to be the result of the crops the coming season; rain is thought of and talked of on all occasions, wished for, asked for, and prayed for, yet it don't make its appearance, and many are beginning to comfort themselves with the consoling fact that if we do not get much of a crop in this valley, there are many portions of the State that will not yield anything; I believe that it is something of a consolation to know that one is not the worst used being in the world; "misery loves company." I think that low prices, short crops—anything that makes the times harder—will eventually add to the prosperity of our State. We must cultivate fewer acres, and do it better, put the same labor in one-half or one-fourth the ground, and then we can depend on fair crops and defy the dry winters. About the usual amount of wheat and other small grain has been sown, it has germinated well, and should we have rain pretty soon, there is no doubt but what the yield will come fully up to the usual average.

Variety of Crops.—Some of our citizens are turning their attention to other than grain crops. Messrs. Cornwell are going to put out several acres of tobacco, near the city, and I hear of others who are intending to plant considerable. Cotton and flax will be grown to some extent, or at least experimented with. I think upland rice has not been tried here, and I hope our farmers may be induced to try that also. Sugar-cane will not be grown to any extent, it is almost impossible to get a stalk of it to grow upright, its tendencies to *sucker* are so great; were it not for this, I think it would be the best-paying crop that could be raised.

A cigar factory has lately commenced operations here, and the novelty of it, or the sign that says "4 for 25 cents" attracts the smokers thereto, and regular dealers are likely to run a slim business until curiosity is satisfied, at least. Clio.

Big Trees Road.—The Stockton Independent says that the report of the Big Tree and Carson Turnpike Company makes the following exhibit of its operations to January 1st: The cash expenditure have been $58,278. This has built 25½ miles of new road— wide, solid and of easy grade—beside putting in as good condition 17 miles of the old road; making a total of 42½ miles of road completed for $56,278. The road is now finished to a point within 3½ miles of Silver Mountain. The company have on hand $5,712 worth of tools, teams and provisions, beside 25,000 in bonds of Calaveras county, worth perhaps $18,000 in cash, making a capital to recommence operations within the Spring of $21,712. But from this must be deducted $10,000 borrowed on the Calaveras bonds, and expended, which leaves them $11,712. They propose next Summer to levy light tolls on travel, and appropriate the same to the completion and improvement of the road. There is no doubt, therefore that it will be finished next season, at least as far as the silver mines around Silver Mountain, and probably to the junction with the Virginia and Aurora stage road; thus giving us an excellent wagon road to Aurora, via the rich and thickly settled districts on Carson river. The report makes the entire distance by this route but 189 miles from Stockton to Aurora. The distance from this place to Aurora, by way of Sonora, is 195 miles.

Letters from an Old Californian at the East.

NUMBER ELEVEN.

New York, Dec. 31st, 1863.

Editor California Farmer:

Skating on Central Park.

The most picturesque scene I have witnessed in my life is the skating carnival at the Central Park. The pictures cannot give you an idea of the grace of most of the skaters, but particulary the sylph-like movements of the young girls, the brilliant colors, the splendid costumes, the exhilarating character of the sport, nor the curious effect of witnessing, at a distance, so many people skimming over a mirror-like surface without noise. I say without noise, but you distinguish besides the sighing of the wind a musical sound like the humming of thousands of children, but exquisitely soft and fairy-like. If you venture upon the ice you can contrast the masculine energy of the men with the ease and delicacy of the women. I shall hereafter think that the next attractive picture, to a graceful horse-woman, is an accomplished skater. One young girl particularly attracted my attention not only by the poetry of every movement, but by the appropriateness of her costume. She was dressed in a black cloth skirt that came to the top of her Balmorals. Her coat fitted perfectly and was made of black velvet trimmed with fur, her cap was of sable skin with a white feather, and she held in her hand one of the new-fashioned wands that she managed with infinite grace. She was attended by a number of young ladies and gentlemen, and upon inquiry I learned that she was the daughter of an eminent merchant in Park Place. Skating is not only popular with the masses, but is very fashionable with the upper classes. A line of private carriages waited the pleasure of the skaters that must have extended quarter of a mile. I visited the Park the first time during the early part of the afternoon and was charmed at the good nature and quiet behavior of the five thousand people collected. Occasionally an awkward couple would come in collision when a collapse would exhibit a great show of legs, that would provoke a laugh, but it was taken good naturedly and seemed to be a legitimate part of the fun. In the evening there are a number of "roughs," but they seem to be softened down considerably. I was one of a large number of spectators who were delighted by the skating of a young fellow who wore an ornamented belt and is said to belong to the Bowery Theater. He is, says an old gentleman at my elbow, "a Daniel Webster in his heels."

Holiday Festivities—Church Ornaments and Music.

The festivities of the Holiday Week, have apparently been thoroughly enjoyed by all classes, and the three representative streets, Broadway, Bowery, and the Eighth Avenue, have exhibited a brilliant appearance and have been thronged by purchasers day and night. I went to Trinity Church, on Christmas morning, and with difficulty forced myself into a standing place where I could see and hear. The music was perfect; I have never heard anything so delightful as the effect of the boys' voices in Mozart's "Gloria in Excelsis." For the benefit of your musical readers I send you a Programme of the Christmas music:

CHRISTMAS SERVICES AT TRINITY CHURCH.

The interior appearance of the grand old edifice was most brilliant, and it would be found very difficult to excel any of the evergreen adornments which bloomed everywhere. Some of the young pine trees were of rare beauty, and there was no stint to them. The columns of the church were festooned with fine pines, intermingled with holly and laurel. The aisles were arched with splendid hemlocks of large growth. The organ loft was splendidly decorated with great masses of green boughs, with occasional jets of gas glimmering between. In the apsidal chancel the designs were very fine. A huge gothic arch formed the center piece, resting on four columns, bordered with laurel and hemlock. A large golden star—emblematic of the Star of Bethlehem—shone forth from the green festoons with dazzling luster and brilliancy. On purple laurels over the comunion is the inscription, "Unto us a child is born—unto us a Son is given." The inside of the communion is also splendidly dressed with laurels and pine leaves. On the table is the representation of a lamb bearing a cross, formed of white immortelles, encircled with green and gold. The services were very interesting, though they did not differ materially from the usual even-song of the Reformed Church. A new carol, written for the occasion, was sung with great energy by the boys of the choir. The address to the children was simple and instructive, being meant merely to amuse the children of the congregation. The Christmas tree was an exquisite one; in fact we have never seen a more beautiful tree. The tables were loaded with all kinds of presents for the children, and the little ones were not neglected.

The children marched down the chancel, while the organ pealed forth its music all singing—

Our Christmas tree is decked once more;
In joy we meet around.
It tells of brighter things in store;
Let songs of praise resound.

Chorus—The Christmas tree is an evergreen:
It blooms when the frost and snow are seen,
The Christmas tree is forever bright;
It shines with everlasting light.

Our Christmas tree is fresh and green,
While skies are cold and drear;
Its harvest store of fruit is seen
When winter blights the year.
&c., &c., &c.

The following melodies were rung on Trinity bells, commencing at half past two o'clock in the afternoon:—

1. Fantasia. Composed by G. F. Bristow, for Trinity chimes.
2. Christmas Carol—"Silent night, holy night."
3. Evening Bells.
4. Christmas Carol.
5. Christmas Carol—"The Christmas Tree."
6. Vesper Hymn.

CHRISTMAS DAY AT TRINITY CHURCH.

The following programme of chimes was rung at Trinity Church, commencing at 10½ o'clock:

1. Ringing the changes on eight bells.
2. Christmas Carol—"Bright, bright in silver light."
3. Christmas Carol—"Once in Royal David's City."
4. Rondo with variations, in major and minor keys, composed for Trinity Church chimes by George F. Bristow.
5. Christmas Carol—"The Christmas Tree."
6. Christmas Carol—"The Children in the Temple."

GRACE CHURCH.

The following programme of musical services was held at morning prayers in this church:

Venite exultemus Domino, composed by.....G. W. Morgan
Gloria Patri .....J. Mosenthal
Jubilate Deo.....Wm. Berge
Psalm 85.....Mosenthal
Hymn 45, from King, arranged by.....King

After the sermon an anthem was sung by Mrs. Bodstein.

CHRIST CHURCH.

The programme of sacred music composed and arranged for the occasion was as follows:

Opening anthem—"The Lord will comfort Zion."
Soprano, solo and chorus.
Venite exultemus.
Psalms of the day—chanted.
Te Deum—anthem.
Jubilate—anthem.
"For unto us a child is born"—anthem, soprano solo.
"O praise the Lord"—alto, solo and chorus.
The forty fifth hymn—"Hark, the herald angels."
Handel's Hallelujah Chorus—arranged for organ solo.

ST. BARTHOLEMEW'S CHURCH.

The musical exercises, was as follows:

1. Voluntary and Hymn—"Shout the Glad Tidings."
2. Venite, double chant.....Dr. Beames
3. Gloria Patri.....Dr. Beames
4. Gloria in Excelsis, with solos.....Weber
5. Grand Te Deum.....Hommann
6. Benedictus, newly arranged anthem by.....Dr. Beames
7. "Pastoral Symphony." Organ. Recitatives—"There were shepherds," Miss Brainerd. Chorus "Glory to God," from the Messiah.....Handel
8. Hymn 45—"Hark! the herald angels sing."....Mozart
9. After the sermon, solo—"At midnight, Christmas," by Miss Brainerd.....Adam
10. Communion service.

At St. Ann's Roman Catholic Church, in Eighth street, near Broadway, a new mass was sung in a splendid manner by the admirable corps of artists composing the choir. This church has always been celebrated for its music. Musical festivals were also held, on the occasion, at St. Stephen's Catholic Church, in Twenty-eighth street, at St. Boniface's Church, in Forty-second street, near Second avenue, and at St. Francis Xavier's Church, where the musical exercises were of a high order.

New Year's Day—Disgraceful Conduct.

New Year's Day seemed to be universally celebrated. I made a number of calls and participated in the carnival of pleasure which is so well known to all New Yorkers. I regret to say that I do not recollect to have seen on any former occasion so many intoxicated people; they made the principal streets disagreeable by their boisterous conduct, and their yells would have better suited the lower regions than a respectable city. It carried me back to the dark days of San Francisco, and when I come back to California I shall be a more earnest advocate of the Peoples' party than ever. In my recent letters I have spoken seldom of the political sentiments of those about me, because the brilliant victories of Gen. Grant, the significant letters to the English papers from Richmond and the unparalleled premium on gold at the South seem to have confounded the secessionists and copperheads alike. M. A. S.

Col. Black, with the three companies of his regiment, already organized, the Sixth Cal. Inf't, has been ordered to Humboldt county, to join the troops already there, and proceed against the Indians in that section, who have been committing depredations. Col. Black will command the whole force.

Col. O. M. Brown, with Company F, Capt. T. Stombs, First Reg't Cavalry, Vol's, will leave for San Pedro about the latter part of next week, to be followed on the next trip of the steamer, by Company H, Capt. Campbell, of the same Reg't. The troops will travel to Arizona via Los Angeles, El Monte, San Bernardino and Fort Yuma.

By a vote of 62 to 6, the Assembly has concurred in the Senate resolutions condemnatory of the course of J. A. McDougall, as one of the U. S. Senators from California. Those voting in the negative all sympathizers with the Confederate cause, are Brown of Tulare, Dickinson, Kendrick, Sepulvada, Smith of Sonoma, and Whallon.

The Governor has sent to the Senate the appointment of John Heuston, Jr., as Brigadier General of Second Brigade, California Militia, vice John S. Ellis, resigned—said appointment to take effect on the 23d of the present month. He also asks the Senate, to confirm John Bidwell, Brigadier General of Fifth Brigade, California Militia, appointed by his predecessor during the recess, with business.

The Red Bluff Beacon has "collapsed its flue," given up the ghost, died dead—Cause: Copper on the brain, technically called Copperheadism, and consequently, want of the "mineral" to proceed

Rules of Crossing Breeds of Sheep.

Dr. Randall, in his Practical Shepherd, closes his chapter upon this subject with the following recapitulation:

I. That it is wholly inexpedient to cross Merino sheep with any other breed to improve the Merino in any of the characteristics now sought in that breed.

II. That while an infusion of Merino blood is highly beneficial to unimproved coarse families, to increase the fineness and quality of their wool, it injures the improved mutton races more in size, early maturity, propensity to fatten and prolificacy in breeding than it benefits them in respect to the fleece or otherwise.

III. That no valuable intermediate family of permanent hereditary character has yet been formed, or is likely to be formed, by crossing between Merinos and coarse sheep; and that the only successful *continuous* cross between them is when the object is to merge a coarse-wooled family wholly in the Merino, and when the breeding is steadily continued toward the Merino (i. e., when no ram is ever used but the full-blood Merino).

IV. That an infusion of the blood of one coarse-wooled breed has been supposed, in a very few instances, to benefit another coarse-wooled breed, but that as a general thing it is much safer to avoid all crossing between *distinct breeds*.

V. That crossing between different *families of the same breed*, for the purpose of obtaining permanent sub-families, has, both among the Merinos and English sheep, resulted highly favorable in many instances; but that, nevertheless, the instances of failure have been much more numerous; that it is not expedient to cross even different families of the same breed for this object, except in pursuance of a well-digested and definite plan, founded on some experimental knowledge of the subject; and finally that such crosses (like all others) should only be made when the necessary materials for the desired improvement cannot be found within one of the families (in other cases breeds) which it is proposed to cross together.

VI. That crossing between different families of the same breed for the purpose of *merging one family in another* is still more likely to prove successful; but that in attaining either this or the preceding object, it is desirable to unite families presenting the fewest differences, and to limit the cross to as few families as the circumstances admit of.

VII. That for the *purposes of mutton production* it is highly expedient to breed rams of the best mutton families with ewes of hardier and more easily kept local families—but that in such cases, it is almost uniformly advisable to stop with the first cross. That such a system to produce early lambs for the butcher on sterile and exposed situations of the mutton region proper, or to produce earlier and better mutton on the natural pastures and corn-producing soils of the West, where its production as a leading object is *preferred* to the production of wool, would redound enormously to individual profit and to public utility.

VIII. That with all breeds and families, crossing for the sake of crossing, without the definite and well understood object—under the vague impression that it is in itself beneficial to health or thrift, or that some benefit, the character of which cannot be anticipated, is likely to spring from it—is in the highest degree improper and absurd. That in using rams of the same breed and family taken from different and not directly related flocks, the utmost care should be used to select such only as conform as nearly as practicable to a uniform standard of qualities, which the owner should have previously adopted as the settled one of his flock.

Postmaster Parker's Removal.—It is said the failure of Mr. Parker to carry into effect a necessary law of Congress in the matter of places for the deposit of mail matter and a penny-post delivery, with the irregularities in the mail service as complained of by himself, and which are open to a remedy by the joint action of himself and the Postal Agent, were the main reasons of his removal, which was accomplished by a quick, sudden, bold dash of Congress. To facilitate the public convenience, and economize the postal service, Congress provided by law for the establishment of the penny-post system. This law is not intended to be discretionary with the postmasters of large places, either to put it into operation or let it remain a dead letter. It is mandatory. Another provision of the postal law is, that places of deposit for letters for city delivery and to be mailed, shall be established at convenient localities in all large towns, neither of which will Mr. Parker pretend that he has attempted to put in operation, as is expressly required of him by a law of Congress.

Rain.—As our last issue went to press we noticed that rain had commenced falling. It continued but very sparingly, on Saturday and Sunday, and then ceased altogether. The grass and the grain already in the ground have undoubtedly received much benefit, but the moisture penetrated only a short distance below the surface, and further plowing is still out of the question at present.—[Contra Costa Gazette, Feb. 6th.

Attention Farmers!—10,000 lb "Top Onions" Wanted.—Farmers having *Top Onions*, of best quality, can find a purchaser by communicating with the Editor of this paper.

MINERALOGY.

[Continued from California Farmer of February 5th, 1863.]

Copper.

GENERAL REMARKS ON COPPER AND ITS ORES.

The metal copper has been known since the earliest periods. It is obtained for the arts mostly from pyritous copper, the gray sulphurets, and the carbonate; also to some extent from the black oxyd, and from solutions of the sulphate.

Assay of Ores. For the assay of copper ores by the *dry way*, the following is a common method. A portion of the prepared ore, roasted in a closed tube, will show by the garlic or sulphurous smell of the fumes, and by the depositions on the tube, whether arsenic, sulphur, or both, be the mineralizers. If this last is the case, which often happens, 100 or 1000 grains of the ore are to be mixed with one-half of its weight of sawdust, then imbued with oil, and heated moderately in a crucible till all the arsenical fumes be dissipated. The residuum, being cooled and triturated, is to be exposed in a shallow earthen dish, made of refractory material, to a slow roasting heat, and stirred till the sulphur and charcoal be burned away; what remains being ground and mixed with half its wight of calcined borax, or carbonate of soda, one-twelfth its weight of lamp-black (finely pulverized charcoal will answer), and next, made into a dough with a few drops of oil, is then to be pressed down into a crucible, which is to be covered with a luted lid, and subjected in a powerful air furnace, first to a dull red heat, then to vivid ignition for fifty or twenty minutes. On cooling and breaking the crucible, a button of metallic copper will be obtained, which may be refined by melting again with borax in an open crucible. Its color and malleability indicate pretty well the quality, as does its weight the relative value, of the ore. It may be cupelled with lead to ascertain if it contain silver or gold; or it may be treated for the same purpose with nitric acid.

If the blowpipe trial show no arsenic, the first calcination may be omitted; and if neither sulphur nor arsenic are present, a portion of the pulverized ore should be dried and treated directly with borax, lamp-black, and oil.

The ores of copper (the sulphuret as well as the oxyds, carbonates, etc), may be reduced in the *wet way*, by solution in strong nitric acid. The solution, if made from the sulphuret, will contain sulphuric acid and free sulphur, as well as all the bases (iron, nickel, cobalt, lead, silver, etc), which may have been present in the original ore. If silver is present it will be found as a heavy white curdy precipitate, at the bottom, if the nitric acid employed contained any hydrochloric acid; and if the addition of this acid to the solution occasions no such precipitate, no silver is present. If the solution is free from lead, antimony, arsenic, and other metals precipitable by sulphureted hydrogen, the copper may be thrown down as sulphuret by means of a current of this gas, the black precipitate, collected on a filter washed with water, and redissolved in aqua regia, largely diluted, and finally precipitated by caustic potash, which throws down the black oxyd of copper. This dried and weighed will yield the true value of the ore in metallic copper. If only iron and copper are present (which may be previously determined by the blowpipe), they may be separated from their solutions in nitric acid by ammonia, which throws down the iron as hydrated peroxyd, but redissolves the copper precipitated by the first additions of ammonia. The determination of the weight of the iron may then give the amount of copper by the difference of weight, or the copper may again be thrown down by potash as before directed.

Reduction of Ores. Copper ores are reduced in England in a reverberatory furnace, and the process consists in alternate calcinations and fusions. The volatile ingredients are carried off by the calcinations, and any metals in combination with the copper are oxydized. The fusions serve to get rid of the various impurities, and finally bring out the pure metal.

The calcinations or roastings are performed either in a furnace, or by making piles in the open air. In this latter mode, which is in use on the continent of Europe, the ore, after being pounded and assorted, is piled up in high pyramidal mounds, which mounds are covered with mortar, sod, etc, and have a chimney at the center. Hemispherical cavities are dug in the upper surface for the purpose or receiving the sulphur during the roasting, which arrives liquified at the surface. This process lasts about six months. In England, at Swansea, where the ores are carried for reduction, the calcinations are performed more rapidly in a reverberatory furnace; and this is especially necessary when the ores do not contain a sufficient proportion of iron pyrites to furnish enough sulphur to sustain the combustion. After calcination, the ore is black and powdery. In the Swansea establishments, the calcined ore is introduced into the furnace (a reverberatory smaller than that used for calcination), and is spread over the bottom; 1 cwt at a time. The heat is raised, and the furnace closed. When fusion has taken place, the liquid mass is well rabbled or stirred, so as to allow of the complete separation of the slags from the metal; afterwards the slags are skimmed off. Then a second charge is added, and after a similar process, a third charge, if the furnace is deep enough to receive it without the metal's flowing from the door. After the last charge is reduced also, the tap-hole is opened, and the metal flows out into water, where it is granulated. The slags if not free from metal are again returned to the furnace, when other charges are put in. This granulated metal is usually about one-third copper; it contains sulphur, copper, and iron.

This coarse metal is next calcined, just as the ore was first calcined; by which the iron is oxydized. The charge remains in the furnace 24 hours, and is repeatedly stirred and turned.

It is then transferred to the furnace for melting, and there melted along with some slags from the previous fusion. The sulphur reduces any oxyd and the whole fuses down. The slags are skimmed off and the furnace tapped: the metal is again drawn off into water. In this state it contains about 60 per cent of copper, and it is called fine metal. The fine metal is then calcined like fine metal. The fine metal is then calcined like the coarse metal; and next it is melted as before. It results in a coarse copper containing 80 to 90 per cent of pure metal.

The coarse copper is then roasted in the melting furnace; the air drawing in large quantities over the copper in incipient fusion, oxydizes the iron and the volatile substances are driven off. The metal is fused toward the end of the operation, which is continued from 12 to 24 hours, and is then tapped into sand beds. The pigs formed are covered with black blisters and they are cellular within. The copper is then remelted in a melting furnace; it is heated slowly to allow of any farther oxydizing that may be necessary. The slag is removed and the metal is examined from time to time, by taking out some of it, and when it is in the right condition, it is next subjected to the process of toughening. It is now brittle, of a deep red color inclining to purple, with an open grain and a crystalline structure; the copper in this state is what is termed *dry*. The surface of the melted metal is first covered with charcoal; a pole, commonly of birch, is held in the liquid matter, causing considerable ebullition; and this poling is continued, with occasional additions of charcoal, till it is found in the assays taken out that the crystalline grain has disappeared, and the copper when cut through has a silky polished appearance, and the color is light red. It is then ladled out into moulds, usually 12 inches in width by 18 inches long. Lead is sometimes added in the purification, to aid by its own oxydation in the oxydation of the iron present.

The process of melting copper on the continent is done by blast furnaces instead of the reverberatory, and they are said to be more economical in fuel, and produce a less waste of copper in the slags. This mode is used at the works at Boston, while the Swansea mode has been adopted at the Baltimore furnaces, Maryland. At the Ha'ford works, South Wales, a furnace of three tiers of hearths has been introduced, which answers the double purpose of calcination and fusion at the same time.

Galvanism has been turned to account in the reduction of copper ores. The ore is converted into a sulphate by roasting with the free access of the atmosphere. From this sulphate the copper is deposited in a pure state by galvanic decomposition. See on this subject American Journal of Science, ii ser., volume iv, p. 276, or Franklin Journal, volume xi, p. 128.

Copper Mines. The principal mines of copper in the world are those of Cornwall and Devon, England; of the island of Cuba; Copiapo, and other copper mines, in the Andes, at places in Chili; Chessy, near Lyons, in France; in the Erzgebirge, Saxony; at Eisleben and Sangerhausen, in Prussia; at Goslar, in the Lower Hartz; at Schemnitz, Kremnitz, Kapnik, and the Bannat, in Hungary; at Fahlun, in Sweden; at Turinsk and Nischni-Tagilsk, and other places in the Urals; also in China and Japan. Lately extensive mines have been opened in Southern Australia.

In the United States, considerable quantities have been raised from the mines of New Jersey, and those of Simsbury, Conn. At Bristol, Conn, is a fine vein of vitreous copper, now under exploration. Strafford, Vermont, affords some tuns of pyritous copper at the present time for the Boston furnace.

The most extensive deposits are those of Northern Michigan and Wisconsin. The Michigan mines are vertical veins mostly in the trap rock which intersects a red sandstone, probably identical in age with the red sandstone of Connecticut and New Jersey. The first discoveries of copper ore in this place were made at Copper harbor, where the chrysocolla and carbonate occur. Near Fort Wilkins the black oxyd was afterwards found in a large deposit, and 40,000 pounds of this ore were shipped to Boston. On further exploration in the trap, the Cliff mine, 25 miles to the westward, was laid open, where the largest masses of native copper have been found, and which still proves to be highly productive. Other veins have since been opened in various parts of the region, at Eagle harbor, Eagle river, Grand Marais, Lac La Belle, Agate Harbor, Torch Lake, on the Ontonagon, in the Porcupine mountains, and elsewhere. At Mineral Point, Wisconsin, a blue silicious carbonate is abundant. Other mines are opened in Missouri. The country north of Lake Superior and Huron, also abounds in copper ores.

In Lake Superior Region, Michigan, the amount of ores and metals raised and shipped during the year ending September 30, 1847, was 10,214,200 pounds, of which amount 1,693,805 was shipped.

The amount of copper produced by different mining countries in Europe, is as follows:

Gr't Britain,	300,000 cwt	Denmark,	8,500 cwt
Russia,	50,000 "	Prussia,	6,400 "
Austria,	50,000 "	France,	1,000 "
Germany,	25,000 "	Spain,	300 "
Sweden,	30,000 "		

Large quantities of ore are now imported from Southern Australia into England; and Cuba and Cuba have long furnished copper ores to England, and to some extent, to this country. What will be ultimately the proceeds of the copper region of Lake Superior [and California], cannot now be fully determined. But there is every prospect that the country will prove boundless in its resources.

Uses. The metal copper was known in the earliest periods and was used mostly alloyed with tin, forming *bronze*. The mines of Nubia and Ethiopia are believed to have produced a great part of the copper of the early Egyptians. Eubœa and Cyprus are also mentioned as affording this metal to the Greeks. It was employed for cutting instruments and weapons, as well as for utensils; and bronze chisels are at this day found at the Egyptian stone-quarries, that were once employed in quarrying. This bronze (*chalkos* of the Greeks, and *æs* of the Romans), consisted of about 5 parts of copper to 1 of tin, a proportion which produces an alloy of maximum hardness. Nearly the same material was used in early times over Europe; and weapons and tools have been found consisting of copper, edged with iron, indicating the scarcity of the latter metal. Similar weapons have also been found in Britain; yet it is certain that iron and steel were well known to the Romans and later Greeks, and to some extent used for warlike weapons and cutlery.

Copper at the present day is very various in its applications in the arts. It is largely employed for utensils, for the sheathing of ships, and for coinage. Alloyed with zinc it constitutes brass, and with tin it forms bell-metal as well as bronze.

The best *brass* contains 2 parts of copper to 1 of zinc; the proportion of 4 of copper to 1 of zinc, makes a good brass. *Pinchbeck* contains 5 of copper to 1 of zinc; and *tombac* and *Dutch gold*, are other allied compounds. *Bath metal* consists of 9 of zinc to 32 of brass. A whitish metal used by the button-makers of Birmingham, and called *plating*, is made of 5 pounds of zinc to 8 of brass.

Bronze is an alloy of copper with 7 to 10 per cent of tin. This is the material used for cannon. With 8 per cent of tin, it is the bronze for metals. With 20 of tin, the material for cymbals. With 30 to 33 parts of tin, it forms *speculum metal*, of which the mirrors for optical instruments are made. Lord Rosse used for the speculum of his great telescope, 126 parts of copper to 57½ parts of tin.

The brothers Keller, celebrated for their *statute castings*, used a metal consisting of 91·4 per cent of copper, 5·53 of zinc, 1·7 of tin, and 1·37 of lead. An equestrian statue of Louis XIV, 21 feet high, and weighing 53,263 French pounds, was cast by them in 1699, at a single jet.

Bell-metal is made of copper with a third to a fifth as much tin by weight, the proportion of tin varying according to the size of the bell and sound required. The *Chinese gong* contains 80 parts of copper to 20 or 25 of tin; to give it its full sonorousness, it must be heated and suddenly cooled in cold water.

Sheet copper is made by heating the copper in a furnace and rolling it between iron rollers. Copper is also worked by forging and casting. In casting, it will not bear over a red heat without burning.

[TO BE CONTINUED.]

The White Pine For Sandy or poor Soils.

We clip the following from the Mass. Plowman, and think it deserves a wide circulation. That the true does splendidly as an ornamental tree, in the poor sandy soil on the shores of Lake Michigan, there is abundant evidence. When young and plenty of room to expand its lower branches, it also forms a handsome tree, and will grow finely where the Norway spruce will scarcely exist. The true way to obtain good thrifty trees on poor soils, is to plant them quite small. Especially is this true of those taken from the woods, or where they have not been recently transplanted. "In a recent journey through some parts of Plymouth county, Mass. we observed numerous lots of thrifty white pines, of recent growth, which have "come" in upon pastures that were old and worn out by neglect and over-stocking twenty or thirty years ago. Too poor to pay for keeping the fences in repair as a range for cattle, their owners have ceased to use them for that purpose, and nature has resumed her primeval sway to good purpose. In a few years these lands will be of great value for the wood and timber which can be taken from them, and they are paying now the rapid growth which they make annually, a profit to the farmer if not as great as his best lands, at least one that is far greater than which he half starved his cattle by pasturing them, or wasted his manure by attempts to raise corn, rye and potatoes. "Nature is a good schoolmaster, and if those whose life brings them into daily communion with her would pay more heed to her suggestions and teachings, there would be many a barren spot made beautiful and productive, which now yields nothing of any value, and is only a blemish to the landscape. The lesson taught by these growing pines upon the sandy plains of the old colony, is full of instruction, and contains a hint by which all the possessors of such lands may realize rich returns of pleasure and profit. Occasional bare spots indicate, that though able and and willing to work, Nature is sometimes, like other good husbandmen short up for seed, and it becomes those who can appreciate the advantages of a growing plantation of good timber, upon lands that are now utterly useless for ordinary farming purposes, to furnish a supply. The present is a suitable time for planting the seeds of all the coniferous family of the forest trees; but as the white pine ripens in August, they can only be obtained now at the seed stores. A very slight preparation of the soil with the plow, or even with the harrow alone, will reward the husbandman most abundantly for his labor. Some of the enterprising farmers in that vicinity have already tried the experiment of giving Nature a lift, by sowing plantations of pines, and have met with gratifying success, and we hope there are more who will be encouraged by their example, to co-operate with her in clothing the waste places of the earth with beauty and abundance."

A Good Sorghum Crop For 1863.

H. & D. McWilliams, near Pontiac, Ills., report to us (says the Prairie Farmer) that they harvested last fall three acres of sugar-cane, which yielded 14½ barrels of a fine quality of sirup, the barrels averaging from 40 to 44 gallons each, which gives say, 600 gallons or 200 gallons per acre. This is the best yield we have yet learned of the past season. The ground was common rich prairie, considerable distance from timber. It was plowed early in spring to a depth of at least six inches, and well harrowed. The seed was well sprouted before planting, which latter was done early in May, with a Brown's Planter, 3x4 feet. The plants were hoed once, and cultivated with a wheel cultivator (we forget whose) four times. This as will be seen constitutes *good* cultivation, and from it arose the fine crop. The cane was not injured by the first frost, and was out of the way of the second. A useful hint can be learned from their success.

LOSS OF AN IRON-CLAD.—The Weehawken recently went down at her anchorage in Charleston harbor. This was caused by great neglect on the part of those in charge of the battery. The Weehawken was very low in the water, so much so that her deck was submerged continually by the seas; during a severe gale the forward hatch was left off the hatchway, and the water poured down in a continuous stream, without those on board being aware of the fact until it was too late. There were some thirty persons, engineers and others, lost in the Weehawken; she was a monitor battery, and quite new. The accident is very much regretted; it was one that might have been avoided by proper care, as all the other monitors in the vicinity rode out the gale unharmed.

Influenza Among Horses.

The disease known as Influenza, is now quite prevalent in Chicago; it first made its appearance about three months ago, and exhibits all the phenomena of an enzootic affection, appearing here and there in isolated spots within, and around the city. It appears to show no particular partiality for either age, sex, or condition; yet I have noticed that horses when out of condition and others brought from the country are apt to be the first subjects. In well ventilated stables the disease is of a milder form than when appearing among animals located where the principles of ventilation are almost entirely disregarded. It is very eccentric in its character, sometimes affecting the throat, in the form of suppurative laryngitis, accompanied by a profuse discharge from both nostrils; and for a time the animal is unable to eat or drink, and is sometimes in danger of choking. In a majority of cases the throat seems to be the seat of soreness and suffering; the disease thence, in some, creeping down the bronchial tubes and alighting on the thoracic membranes, ending in pneumonia, pleurisy or occasionally, in dropsy of the chest. In a few cases the disease vents its violence chiefly in the head, either through continuous profuse discharges from the nose, or a critical outburst of an abscess between the angles of the jaw or in the throat; now and then it assumes the form of strangles, and in some instances, a troublesome nasal gleet remains; in a majority of cases irritable cough remains, and in fact cough is a persistent feature malady all through its course. In short the disease does not differ in its type and tendency from similar visitations in this country in former years. One of the most characteristic and observable features of influenza however, is weakness and debility, for so soon as the animal becomes the subject of the same, he is said to be *"weak as a rat,"* and it is dangerous to compel him to move from the stall.

Treatment of Influenza.—The fact that the disease is characterized by weakness or debility, would seem to indicate what the treatment should be; we must neither bleed nor purge, for by so doing we augment the prostration of the system, and to my certain knowledge many animals in this city, that have been thus treated, have died, victims of a misguided notion of medication; hence, we must resort to the use of such medicines as are calculated to give tone and vigor to the system.—[G. H. Dadd, in Prairie Farmer.

Coal Tar, Or Tar Paint.

But very few people appreciate the value of this substance as a preservative of wood and iron, when it is used as paint. It possesses wonderful antiseptic properties, and there is no kind of oil paint that will preserve wood or iron from decay, when it is exposed to the influences of the weather, equal to coal tar. It is the refuse of gas works, and can always be obtained, where gas is made, at about $1 per barrel. It is less durable when it is exposed to sunshine than when it is always in the shade, or in wet and damp places. This peculiarity makes it one of the most valuable substances that can be used for painting the ends of fence posts that are in the ground. No other substance is equal to it. Gas companies, who were accustomed to use iron pipe are now using wooden pipes, which have been saturated in coal tar, and their is no doubt that such wooden pipes will last for one hundred years. One of the members of the Gas Company in Ithaca told me that they had examined wooden pipes which were saturated with gas tar, which had been under ground for twenty-two years, and they showed no decay.—[Rural Register.

Blue Glass For Seed Bed.

R. Hunt, Secretary of the Royal Polytechnic Society, says that "The light which permeates colored glass partakes to some considerable extent of the character of the ray, which corresponds with the glass in color. Thus, blue glass admits the chemical rays, to the exclusion, or nearly so, of all the others. Yellow admits only the permeation of the luminous rays, while red glass cuts off all but the heating rays—which pass it freely. This affords us a very easy method of growing plants under the influence of any particular light which may be desired. The fact to which I would particularly call attention is, that the yellow and red rays are destructive to germination, whereas, under the influence of violet, indigo or blue, the process is quickened to a most extraordinary manner. The plants will grow most luxuriantly beneath glass of a blue character, but beneath the yellow and red glasses the natural process is entirely checked. Indeed, it will be found that at any period during the early life of a plant, its growth may be checked by exposing it to the action of red or yellow light."

COAL AND STEAM-POWER.—In a paper read before the British Association on the Coal and Coke Trade of the North of England, Mr. Nicholas Wood said that it had been calculated that an acre of coal four feet in thickness produced as much carbon as 115 acres of full-grown forest, and that a bushel (84 pounds) of coal consumed carefully, was capable of raising 70,000,000 pounds one foot high, and that the combustion of 21 pounds of coal gave out sufficient power to raise a man to the summit of Mont Blanc. The aggregate steam-power of Great Britain he sets down at 83,035,214 horse-power, or equal to 400,000,000 of men.

STATE AGRICULTURAL SOCIETY.—At the annual meeting of the State Agricultural Society at Sacramento, on the 28th ult, the Board of Directors presented a lengthy report, which was adopted. Among other suggestions, they recommend that Country Assessors report statistical information to the State Board of Agriculture, under heavy penalties of neglect, instead of to the Surveyor General. The cost of membership was reduced from ten to five dollars. Charles F. Reed of Yolo was chosen President, and T. L. Chamberlain of Placer, J. H. Culver of Sacramento, and J. J. Owen of Santa Clara, were chosen Directors.

SEED WAREHOUSE.

(ESTABLISHED IN 1850.)

S. W. MOORE,

IMPORTER

... AND....

WHOLESALE AND RETAIL DEALER IN

ALL KINDS OF

GARDEN, FLOWER, FRUIT,

Agricultural

....AND....

Ornamental Tree and Shrub

SEEDS,

NO. 408 CALIFORNIA STREET,

Old Number 110,

Between Sansome and Montgomery streets,

SAN FRANCISCO, CAL.

THE UNDERSIGNED HAS ESTABLISHED SUCH a correspondence and business in Europe as to enable him to secure from the very best source—the most skilful growers—their choicest seeds grown, of which he will always be in receipt, and in addition variety, imported directly from France and England, from well known and responsible houses; some of the most prominent are named in our catalogues

It has been the experience of our best gardeners and growers, and all others who plant seed, that seeds raised in California are not fully reliable and cannot be for a series of year, until more capital experience and scientific knowledge shall be given to the business.

HAS FOR SALE

Alfalfa or Chile Clover;	Hungarian Grass;
Kentucky Blue-grass;	Orchard Grass;
Red-top Grass;	Sainfoin Grass;
English Rye-grass,	Timothy Grass;
Red Clover;	White Dutch Clover;
Crimson Clover,	Lucerne, &c. &c. &c.

With many entire new varieties of Grass Seeds and prepared Lawn Grasses never before offered.

EVERY VARIETY OF

BEET, CABBAGE, CARROT, RADISH, TURNIP, CUCUMBER, MELONS, LETTUCE, ONIONS, TOMATO, EARLY AND LATE PEAS, BEANS, &c., &c., &c.

Tobacco Seed.

HAVANA, VIRGINIA, CONNECTICUT SEED-LEAF, AND MARYLAND TOBACCO SEED.

COTTON SEED.

Guano from Johnston's Island.

FLOWER SEEDS (300 Varieties)

BULBS:

LILIES,	TULIPS,	HYACINTHS,
Amaryllis,	Anemones,	Ranunculus,
Narcissus,	Tuberoses,	Peony-roots,
	Gladiolus,	Iris,

and in endless variety, imported direct from FRANCE and GERMANY.

From his long experience in the Seed Business (over thirteen years), and his very extensive stock of goods appertaining to an establishment of this kind, he is confident of his ability to satisfy his patrons.

Native California Evergreen

TREE AND SHRUB SEEDS,

FOR EXPORTATION.

THE UNDERSIGNED, FROM HIS EXTENSIVE facilities and

Large Stock of Every Variety of Seed,

Can offer unusual inducements to

MERCHANTS IN THE TRADE, FARMERS AND LARGE RANCH OWNERS,

Who wish to be supplied in his line.

And would recommend that ORDERS FOR SEED be sent DIRECT to the undersigned, through the Express or by Mail, otherwise parties run GREAT RISK of being imposed upon, in case their Orders should be filled at some IRRESPONSIBLE ESTABLISHMENT.

☞ The Agents of Wells, Fargo & Co.'s Express are hereby authorized to act as Agents for the undersigned, in taking Orders for Seeds and receipting for the same.

The undersigned is also permitted to refer to Col Warren, editor of California Farmer, who has had an experience of twenty years in the Seed and Nursery business, and is conversant with the high value of imported seeds, and their superiority to all other seeds.

California Notes,

ABOUT

GRASSHOPPERS AND LOCUSTS,

BY ALEX. S. TAYLOR.

Notes of 1858.

The following collations of Notes are made in continuation of those in the CALIFORNIA FARMER, from January to March 1858. In these stormy epochs of war and strife, such matters must be stayed and delayed till the return of the piping times of peace. We are happy to notice that the Notes in the FARMER of 1858 have greatly assisted the study of the Gryllidæ, not only in the United States, but in Europe.

The following extracts from the Atlantic papers, of the summer and fall of 1858, are well worthy of being preserved for reference, as relating to the strange appearance of the Locusts in Texas and the Mississippi States, and even as far North as New York and Pennsylvania. From some remarks in the Ohio papers of March, 1859, it would seem that they threatened to make their appearance in the same States again. The extract on California Crickets is a curious piece of our natural history.

IN TEXAS.

The Grasshoppers in Texas.—The vast swarms of grasshoppers, which have been devastating the prairies of Texas, steered a northeast course upon their departure thence, and as they rose to a great hight from the ground, as though for a long journey, it is a melancholy conclusion that they are coming up this way. Myriads of them are now eating up the vegetation in Ohio. It is therefore no very violent supposition, that Pennsylvania, with a rather milder climate than Iowa, is not unlikely to be visited by them. These insects are not like the common grasshoppers, which are every summer found in our fields and roads, but are of the size of a locust, with the same gregarious habits. The ordinary grasshopper is weak of wing, and never rises to a great hight, whereas, the legions which have so repeatedly desolated Utah and Texas rise far into the upper air, and move off together to great distances, like wild geese. They appear in innumerable hosts, and, instead of scattering, alight in a body upon some devoted locality, which they attack and destroy with the systematic movement of an army. They will thus eat up a crop of corn or cotton in very short time. In Utah, this plague visited the growing cereals with utter destruction as often as three times in one season, so that the afflicted Mormons were reduced to extremities for food. They seem now to have attacked our frontier States, and to be moving gradually into the body of the republic. The horrors of famine have never been felt in our country, and, accustomed to the most prolific abundance, it is a calamity to which no one has ever looked; yet, these grasshoppers are a terrible visitation in a region.—[Philadelphia American, June, 1858.

Habits of Grasshoppers.—A Goliad correspondent of the Colorado (Texas) Citizen gives some curious facts in relation to the grasshoppers which have recently swarmed that region. He (in May, 1858) says: "They have an especial fondness for wheat and cotton, but don't take so kindly to corn. The only vegetable they spare is the pumpkin. The most deadly poisons have no effect upon them; fumes of sulphur they rather like than otherwise; musketo-nets they devour greedily; clothes hung out to dry, they esteem a rarity; blankets and gunny-bags they don't appear to fancy. They swim the broadest creeks in safety, sun themselves awhile, and then go on. The whole mass appear to start and move at the same time, traveling for an hour or two, devouring everything in their way, and then suddenly cease, and not move perhaps for a week, during which time no feeding is noticed; and finally they carefully avoid the sea coast."

Fight with Grasshoppers.—The Gonzales (Texas) Inquirer has an amusing account of the invasion of that city by grasshoppers (in June, 1858), and the attempt of the citizens to repel the intruders: "Everybody turned out—men, women, and children; white and black—everybody, with 'fire and sword,' brushes and brooms, blankets and buckets, carried on the deadly conflict; but to no avail. The 'hoppers' hopped on, and the defending forces were obliged to beat an inglorious retreat, leaving the barbarians in possession of the conquered city.

IN MINNESOTA.

The Grasshoppers all drowned in the Red River of the North.—The following grasshopper story we find in the St. Paul Minnesotian, of September 14, 1858: "By the last train from Selkirk Settlement, we learn that the previous reports of the destruction of the crops and herbage by the grasshoppers are entirely unfounded. Judge Johnstone, the Recorder of Rupert's Land, who came down by this arrival, states that the crops were most plentiful, and that, in respect to supplies of provisions, the colony was never better off. The reports of the destruction by grasshoppers originated in this wise: When the Red-River ingius left Selkirk, about the 15th of June, the whole country was filled with young grasshoppers just hatched, and the fear and supposition was that another such devastation by them as formerly created a famine in the colony would be experienced again. Under this belief, pork, flour, and other provisions were ordered from here both by the Hudson Bay Company and by private traders, and the returning carts were loaded with provisions. It seems, however, that about the 20th of June the grasshoppers rose in the air and in a body attempted to emigrate east of Red River; but lo and behold! their ambition exceeded their ability, and down they all fell and were drowned in the Red River, whose surface they covered to the depth of three or four inches! This has improved the fisheries on Red River, and the fish now caught, it is said, are gloriously fat. The drowning of the grasshoppers, therefore, not only rejoiced the hearts of all the people of Red River, but even the fish thereof must have shouted with gladness at the plentiful feast spread before their maws. 'Tis an ill wind that blows nobody any good.'"

IN MONTEREY, CAL.

A curious matter about the *Gryllidæ* is, that they are subject to the infest of minute *Acaridæ* (parasitic mites). On looking at some grasshoppers jumping about, near Monterey, in August, 1858, they seemed to be a new species, from the color of their lower parts and legs. But on examining, with a microscope, the legs and belly were found covered with minute vermillion-colored lice.

IN OHIO.

The Grasshopper Plague in Ohio.—Mr. Schenck, of Franklin, Warren Co, Ohio, writes to the Ohio Farmer, that the grasshoppers are making their appearance there in vast numbers. He says: "Last year we had millions of them; this year we have hundreds of millions." For five years, he says, they have been increasing on his farm, and he fears that, unless some means are discovered for their destruction, they will totally ruin his own and his neighbor's clover fields.

IN PENNSYLVANIA.

The speed of the Central Railroad locomotives is considerably decreased by the immense swarms of grasshoppers between Lancaster and Philadelphia. One engineer stated that his train was forty minutes behind, owing to the number of grasshoppers on the track, and that he used twenty buckets of sand, which was thrown on the rails in front of the driving-wheels, to enable him to get along at all. Improbable as this story may appear, its truth is vouched for by the engineers above alluded to.—[Pennsylvania paper of September, 1858.

IN CALIFORNIA.

A Plague of Crickets in the North.—Crickets are making their appearance in countless numbers in the vicinity of Yuba, and throughout Shasta Valley. The Yreka (California) Chronicle remarks that they are far more destructive to crops than grasshoppers, and though the latter insect has frequently made its appearance in that vicinity, this is the first advent of the huge crickets which now literally cover the ground for miles in the level country east of the town, devouring everything which comes in their way that is not large enough to resist their attack, frequently even eating other insects. They are of the same species as those in the Snake River country, which are used as food by the Diggers. The Indians about Yreka have recently gathered many bushels of them in Shasta Valley for the same purpose. A person from Table Rock says that the crickets have attacked his barley fields, and that he fears his own crops, and all in the vicinity will be entirely destroyed.—[June 12th, 1858.

California Crickets.—A friend says positively that the lower end of Shasta Valley is overrun with crickets as large as mice, and that the Indians have collected a pile as large as any hay-stack in this vicinity.—[Yreka Union, July 20, 1858.

The southwestern newspapers of August, 1858, state that the grasshoppers committed great damage to the grain and other crops in Louisiana and Mississippi during the summer, visiting those sections of the country by millions.

FRENCH PLATE GLASS.

THE UNDERSIGNED IS HAPPY TO INFORM his Friends and the Trade that he has established himself in this city as an

IMPORTER AND DEALER IN

PLATE-GLASS, MIRRORS,

STAINED GLASS, ETC.

Direct from Europe, of the

BEST WHITE QUALITY,

Of all thicknesses and dimensions. Large invoices of Plate-glass now opened—sizes varying from 24x48 to 132x78, and larger sizes will be imported to order.

He has received the agency of

Messrs. Aug. Nyssens & Co's

PATENT FRENCH PLATE-GLASS,

Silvered, for Mirrors,

A New Article to the trade, now almost entirely used in the Atlantic States and Europe, being much whiter in appearance and superior to the old style of Quicksilvering, not being liable to stain from heat, moisture or dampness, nor injury by handling or in packing for transportation. I would invite a call of examination to the sample invoice just received. Having the sole agency for California, I am now prepared to receive orders, and can sell as low as can be imported from New York.

I am also constantly receiving large invoices of CRYSTAL SHEET, STAINED, ENAMELED, CUT AND GROUND, WINDOW GLASS, ROSETTES, ROUGH PLATE-GLASS FOR SIDEWALKS, ETC, ETC.

Orders received for CHURCH WINDOWS, Ornamented and Plain, in any style or of any dimensions. Designs can be seen at the office. Any Society furnishing dimensions for Windows, or Glass, can have their patterns or designs made to order. All styles and sizes of

Glass for Conservatories,

GREEN-HOUSES,

and

GARDEN BUILDINGS,

To order. Also a large invoice of

SUPERIOR MIRRORS,

Framed, of an Entire New Pattern,

Suitable for Hotels, Parlors, Saloons, etc. These goods can offer on the most favorable terms.

By keeping constantly a full assorted stock of the above goods, I hope to merit a share of your patronage.

Fr. H. Rosenbaum,

221 Sacramento street,

SAN FRANCISCO.

The Piano Question Again.

Letter of Jacob Zech in Answer to Mr. I. N. Hoag, S. S. A. S.

I wish to say that every letter of this gentleman (Mr. Hoag), gives me positive evidence that the affair, of *defrauding* me of the first premium, at the late State Fair at Sacramento, was made up.

1. When the committee came up to examine the pianos, I asked the Rev. Mr. Starr King whether the said committee would look at the mechanism and interior construction of my instruments, as I would take them apart for their examination, and put them together again to be tried. Rev. Mr. Starr King answered that it was not necessary, as he himself was notified only an hour previous, and that he would not act on said committee, because he did not understand anything about pianos, and would like to do justice to every person; yet his name is used on the committee, with what right I do not know; for, if Mr. King did not sign his name to the Report, there would have been only two judges, and their Report of course not complete.

2. When, at the close of the Fair, the list of awards was read at the Pavilion, nothing of a "liberal special diploma" to Jacob Zech was said or heard by any one. Nay, more, the printed list of awards have nothing of it! How can it therefore, be otherwise than a made-up case by the Society?

3. On the 3d and 23d Oct., I published a letter or card, in the papers of Sacramento and of this city, stating the wrong that was done to me. Mr. I. N. Hoag, S. S. A. S, had not a word to say. To my formal protest to the President of the Society, of late date, published in the FARMER, said gentleman answered, that a 'special diploma" was ready for me. Now, in his letter of Jan. 6th, he says, that a "liberal special diploma" was awarded to me. All I demand is justice, not favors. I shall not accept a special diploma. That would be admitting my unworthiness of the first premium. The Society say a Grand Piano is not on the Schedule, and consequently ruled out. I ask the Secretary, is not a Grand Piano a Pianoforte? and why do the Board of Officers not accept my offer, made Dec. 18th, if they wish to do me justice? I will submit my Square Piano again before a committee of musicians, against the same Piano to which they awarded the premiums, and leave the result to their decision as a final test.

As for the proposition which Mr. Hoag makes, for the next State Fair, I must say that, for my part, I had enough of their justice, at the State Fair at Sacramento, the past year, and, unless they manage differently, I will leave it to others to exhibit there in future, and be similarly wronged, if they so desire. JACOB ZECH.

SAN FRANCISCO, Jan. 14th, 1864.

HOME COMFORTS.—Every working man needs good things to eat; and we hope every man is a working man, whether he be a merchant, a professional man, a manufacturer, a mechanic, or a farmer. Farmers we know are working men; for if they don't work in season, and out of season, they cannot harvest. Every body should work! Work, labor is honorable; and they that will not work should not eat! Drones should not be permitted in the hive of humanity. The "busy bees" kill the drones when they cease to work, and clear them out of the hive; and we go for driving out all drones, and then there would be more food for workers. Bowen & Brot'ers believe this doctrine, and act upon it. They are working men. See the lots of eatables they are sending to every part of our State—hardly a county where they have not lots of customers. Lately they have been receiving fresh goods. They call them

SPECIALTIES

We call them "goodies"—all kinds of nice things, such as nice dried and fresh fruits preserved. Goshen cheese and butter extra, Boston butter and water crackers, Bordeaux salad oil, very extra, teas, the imperial brand, coffee, chocolate, reliable. The family wines from this house are just what they should be, very superior; and these luxuries are for those who labor. "They shall eat the fat of the land."

SUPERB VASES.—The vases and statuette recently opened by Messrs Haynes & Lawton, are the most beautiful ever yet exhibited on our coast. Lovers of the exquisite in art should look at them. This must induce their possession

HORACE WATERS, Ag't,

No. 481 Broadway, N. Y

THE DAY SCHOOL BELL.

40,000 copies issued. A new Singing Book for Schools and Seminaries, called the Day-School Bell, is now ready. It contains about 200 choice songs, rounds, duets, trios, quartetts, and choruses, many of them written expressly for this work, besides 32 pages of the Elements of Music, which are easy and progressive.

Among the large number of beautiful pieces may be found, "Uncle sam's School," "Don't you hear the children coming," "Always look on the sunny side," "The little lass," and "Little Lad," "Oh, if I were a little bird," "Bird of beauty," "Pretty pair true," "Anvil Chorus," "Meet me by the running brook," etc. It is compiled by Horace Waters, author of "Sabbath School Bell," Nos. 1 and 2, which have had the enormous sales of 825,000 copies. Prices—paper covers, 25 cents, $20 per 100; bound 30 cents, $25 per 100; cloth bound, embossed gilt, 40 cents, $35 per 100. 25 copies furnished at the 100 price. Mailed at the retail price.

SABBATH SCHOOL BELL, NO. 1,

contains 144 pages, and nearly 200 tunes and hymns, and is the most popular S. S. Book ever issued. Among the most popular pieces are "Kind Words," "Eden Above," "Christian Hero," "Beautiful Zion," "I ought to love my Mother," "The Angels told me so," "In the Light," "Rest for the Weary, etc. Prices—paper covers, 20 cents each, $15 per 100; bound 25 cents, $20 per 100; clothbound, embossed gilt, 30 cents, $25 per 100.

SABBATH SCHOOL BELL, NO. 2,

is an entire new work of 192 pages, and nearly two hundred and twenty-five tunes and hymns. One million of these Bells have been issued and are now ringing through this and other countries. Among the many choice pieces may be found, "Shall we meet beyond the River?" "There is a Beautiful World," "Sorrow shall come again no more," "Don't you hear the Angels coming?" "Thou, God, seest me," "Sabbath Bells chime on," etc. Prices of Bell No. 2, are same as Bell No 1. Both numbers can be obtained in one volume, price, bound copy, 40 cents, $35 per 100; cloth bound, embossed gilt, 50 cents, $45 per 100. 25 copies furnished at the 100 prices. Mailed at the retail price.

WATER'S CHORAL HARP.

A new Sunday School Book of 160 pages of beautiful hymns and tunes. It contains many gems, such as "Shall we know each other there?" "Suffer little children to come unto me," "The Beautiful Shore," "Oh, 'tis glorious," "Leave me with my mother," "He leadeth me beside still waters," etc. Price, papers covers, 20 cents; $15 per 100. Bound, 25 cents, $20 per 100. Cloth bound, embossed gilt 35 cents. $30 per 100. Mailed at the retail price. It is edited by HORACE WATERS, author of "Sunday School Bells," Nos 1 and 2, which have had the enormous sale of over 800,000 copies.

Just published by HORACE WATERS,

No. 481 Broadway, New York.

THE NEW PATRIOTIC SONG BOOK

contains 96 pages of songs, duets, and choruses, both sacred and secular, including 14 pages of prayers for sick and dying soldiers, and soldiers' Scripture Manual. It is well suited for social singing, as well as Sabbath worship. Among the many beautiful pieces may be found, "Where liberty dwells is my country," "The Christian Hero," "Three cheers for our Banner," "Come sing to me of Heaven," Columbia, the Gem of the Ocean," "Freeman's Gathering," "Columbia's King forever," "Marching Along," etc Prices—paper covers, cents, $10 per 100. Mailed at retail prices.

THE HARP OF FREEDOM

contains 32 pages of songs, duets, and choruses for Freedom. Among the choice pieces we would name, "Fair Freedom's morn," "O let my people go," "Over the mountain," "They worked me all the day," etc Price 5 cents single, 50 cents per dozen, $3 per 100; postage 1 cent each.

RUTH: A SACRED CANTATA

contains 128 pages. Words by Rev. Sidney Dyer, music by Prof. Call. This is an excellent book for concerts for the young. Prices—paper covers, 20 cents, $15 per 100; bound 25 cents, $20 per 100.

THE REVIVAL MUSIC BOOK

contains 73 pages of tunes and hymns, designed for revival, prayer, and conference meetings. Price in paper covers single copies 10 cents, $8 per 100. Mailed at the retail price

THE ATHENÆUM COLLECTION

contains 512 pages of tunes and hymns, new and old of the choicest kinds, for church, Sunday school, revival, missionary, temperance, prayer, and conference, and all kinds of sacred and social meetings. The music in this book has life and animation in it, like "Shining Shore," "Rest for the Weary," "Shall we know each other there?" "Shall we meet beyond the River?" "There is a Beautiful World," "Kind Words," "Sweet Hour of Prayer," "There is a Land of Love," "Suffer little children to come unto me," "God save the Nation," etc. Prices—single copies, bound, 65 cents, $55 per 100; cloth bound, embossed gilt, 75 cents, $65 per 100 Mailed at the retail price.

HORACE WATERS, Ag't

481 Broadway, New York.

TO READERS AND CORRESPONDENTS.

The "Reform Dress," by M. J. U., is received; shall commend it to our readers. Letters from Brier Cottage are appreciated. J. M. P., San Jose, will have our attention. T. R., of Pacheco, will be attended to. Letter to D. W. R., from Carrie, will appear next week. "The Voice of a Woman," by "Fulvia," received.

"Sweet Memories."

Appreciation is a gem. Who does not love to be appreciated? What heart so cold as not to desire to have a noble act properly valued? Gifts, keepsakes, remembrances, are the bright planets in the soul's galaxy. Sometimes the heart cherishes silently, friendship's offerings, and sometimes the full heart will speak out. We can and do appreciate many kind tokens of the festival days, recently past; but among many, we have one gift that we so often feel its value we can appreciate it, as well as the kindly motives that actuated the donor: the gift of a beautiful scarf to protect us from the inclemency of wintry winds. In the gift of this scarf, so soft, so beautiful with its threads of "royal purple," we can only say, may the fingers that wrought these bright colors be decked with bright gems, and the heart that bestowed the gift ever be happy through life's long years. For many other tokens we shall ever be grateful.

"He that has nature in him must be grateful;
'Tis the Creator's primary great law,
That links the chain of beings to each other."

Prepay Letters.

Editor California Farmer:

There are some *thoughtful* souls in the world, and it does me good to know this. Many persons write to their friends seeking information exclusively their own. They ask for information, which, if obtained will be of pecuniary benefit to them only, and yet they never think to inclose a stamp or envelope to prepay the returned answer. They take the time, brains, and money of others without an equivalent. Is this the golden rule?

Inquirer.

[We only know in reply, that were we always supplied with stamps on like occasion, we should have more dimes in our pocket than we have now, and presume other editors and publishers would say so to.]

New Subscribers.

May we not ask of our friends over the State to give their kind aid in making our journal known in every locality. We will most cheerfully award to them for clubs, or any effort they make for us, a due and liberal compensation. We shall send extra copies to many persons, such, we hope, will give us their aid.

State Board of Agriculture Meeting.—Tuesday, the 9th February, the State Board of Agriculture held a meeting, at the Secretary's office, in Sacramento. On motion of J. J. Owen, the time for holding the Annual Fair of the Society, for the year 1864, was fixed to commence Friday the 16th of September, and to continue eight days. The Board addressed a memorial to the Legislature asking relief; a communication was also sent to the Board of Supervisors praying that a Special Tax might be levied, this year, in Sacramento county to pay the debt of the Society.

Arthur & Son's Agricultural Warehouse. The card of this firm deserves attention from the farmers of our State, and especially those who are purchasing implements for harvesting. Messrs. Arthur & Son have a valuable stock of new and fresh goods, and are receiving by every clipper to add to their stock. This firm have taken extra pains to have as complete an assortment as can be found, and the bulk of their stock is all new and fresh, and they will sell as low as the lowest, and as good as the best.

The Hubbard Squash.—We are indebted to B. Kamp, Esq., of San Jose, for a box of the genuine Hubbard Squash. We are very grateful; it was a most acceptable gift. There is no kind of vegetable equal to this, and we are surprised it is not more common in the market. Let it be remembered, however, the squash is to be *baked*—not boiled; sawed in halves and baked in the shell, and so served up on the table.

The Manoba Bean.—We would esteem it a great favor if any one to whom we furnished the "Manoba Bean," last season, gratis, will now furnish us a small quantity at any price, to meet the wishes of a friend or two at the east.

California in Peril.

The good name of the peerless State of California, is in peril; California, whose temples and palaces are of silver, and whose gates are golden; California who, boldly, nobly, threw down her gage for Freedom, when she became one in the bright galaxy of the States of our Union; California, whose voice and vote has made the welkin ring for Freedom, and the Union; California, whose largesses of bounty have been given for the sick and wounded in the army of Freedom; California, whose soldiers have written their names in blood on many a battle-field, and whose records prove them bold and valiant; California, the peerless State, whose "mountains are full of gold and silver," whose rivers roll o'er golden sands, speaking to the sea, in metallic voices; whose valleys and plains are like the "Garden of Eden," every wind that blows being "full of sweet odors;" California, the gifted of Heaven, is about to be "tried in the balance," and to have her loyalty and patriotism tested.

California is in peril! and all who love her fair fame should fly to the rescue, for as sure as the earth revolves; as sure as Truth exists and that God lives, so true it is that in this *Question of the Currency*, lies the future growth and glory of our State, and on this question depends the fate and prosperity of the Pacific Coast. What State has shouted louder, built more bonfires, made more illuminations, uttered greater promises, sung more songs, and glorified more in honor of our Flag and our Union, and our Constitution, than has California? Our boast, as a State, has been *California has been true to the Union*. Nobly, generously, and constantly, our true men, women and children, have given of their means to the cause, and proudly do they point to the California regiments, the "California Hundred," the "Sanitary Commission," which are all evidence of the great heart of California, and to her honor be it spoken, her "deeds," thus far, have given her a priceless heritage on the illuminated scroll of patriotism and love of country; but now that fame is to pass the fiery ordeal, and that priceless heritage either to be sold for a "mess of pottage," or rescued from the dominion of those who are its sworn enemies.

This "Currency Question" is but another name for patriotism and love of country"—this cannot be gainsayed—for the national currency is but the plighted faith and honor of our country to pay our soldiers, feed and clothe them; care for the sick and dying, carry on the war and crush out the rebellion; it is the *credit, honor and character* of the nation; it is the Stars and Stripes, the Constitution, the Army, the Navy; it is our all as a country, and they who lift a hand or a voice against our Flag, our Constitution, or the honor and credit of either, can they claim to be its defenders? Oh it makes the heart sick and faint with fear, when we see and hear those sad and fearful forebodings of the coming storm. There's danger in it—aye, fearful danger in it? The worst enemies of our State smile with wild joy as they hear boasting Union men strike their blows against the National credit; they hurry away to their secret conclaves and with savage joy, glory in such efforts of *Union men* (?) to hurry on their own plans of ruin to our country. Look to the boasted patriotism of California—proudly won till now! What have we done—are we a loyal State? Are we true to the Union? Can we be true? Let us calmly and boldly look the matter in the face. Have we not by our Supreme Court *disfranchised the soldiers*, that are our defenders? Have we not repudiated the national currency, and thus struck a fatal blow to our national credit in the hour of need? Even while that very power was laboring to aid and defend us, and lending us millions of her plighted faith, so that she could protect us? What great difference is there between the acts of South Carolina Nullification Laws in past years, and the laws of California that nullified the currency that Congress (the only money making authority of our nation) declares shall be legal? What did South Carolina do under the reign of "Andrew Jackson" that had more nullification in spirit, than has our Supreme Court in denying our soldiers to vote.

This currency question has more hidden beneath its outward seeming than the difference of exchange. There is "treason" in it, and the patriot who has an eye single to the glory of his country, he who does not stop to count private losses and gains, when his country needs his love, he will see the danger now and feel it too.

We repeat, our State is in danger. Repudiate the National Currency, and it is nullification in spirit, and we can no longer claim to be the friends of the Union, for we cannot serve two masters—we cannot claim to be the friend of the Union while we are destroying the credit of the Government. We shall be more like the "Parasites" who feed on the blood of our country, so well pictured by Ben Johnson:

"There can lie,
Flatter, and swear, deprave, inform,
Smile and betray! make guilty men, then beg
The forfeit lives, to get the living! cut
Men's throats with whisperings! sell to gaping suitors
The empty smoke that flies about a palace.

Alas for our State in her present peril. She is environed, as a celebrated writer says, with "a lazy, proud, unprofitable crew, the vermin gendered from the rank corruption of a luxurious State." But amid the dangers we thank God there are patriots at our Capitol, that see the danger and are now ready to meet it—

"Who, all unbribed on Freedom's ramparts stand,
Faithful and true, bright wardens of the land."

And this faithful band see in this "currency question" (of which, in its public progress we speak elsewhere), one of vital moment to the safety of the Pacific slope, and they will do their duty in this hour of her peril, and if need be, battle like true soldiers for their country's honor, credit and fame, knowing full well that

"They who for their country die,
Shall fill an honored grave;
For glory lights a soldier's tomb
And beauty weeps the brave."

And while thus contending should they be defeated by reason of corruption and intrigue and the traitorous schemes of the enemies of our country, they will know they have done their duty, though our State falls, and falling from her high glory and patriotism, they will point to California and say: her glory has left her. Behold

"The Niobe of nations! There she stands,
Childless and crownless, in her voice of woe;
An empty urn within her withered hands
Whose holy dust was scattered long ago."

Never Destroy Letters.

Family letters, friendly letters, and business letters should always be sacredly preserved. It may demand labor and care to file away such treasures, but they will always pay better than other kinds of property to a loving heart. Who, that has filial and fraternal love in their souls, does not treasure the words of loving parents, as they read and re-read them years after those parents have passed away to the "spirit land." How sweetly falls the words, as we read them, "God bless thee, my child!" Let the storms of the world break upon us ever so fiercly, that blessing from the father and mother in heaven gives the sunshine to the heart that no earthly prosperity can ever enforce, and that child that cannot find in the "old family letters," records of "parental love" will always find their pathway dark, dark indeed.

Letters of fraternal love, too, come as the solace of life's cares and burdens, they dispel many clouds that meet us daily. And letters from dear friends, they, too, are priceless jewels in the pathway of life. They, who recklessly throw aside or burn old letters, have a blank space in their hearts which must ever be an aching void. Oh, cherish these old letters, and in after years, if the world cast its clouds upon you, go to that treasury chest and bring out old letters, and sit down and hear father, mother, brother, sister, wife, child, and friend, they will all speak to you, and their voices will come like a choral anthem that will make the soul have a foretaste of that "higher life" which is promised when frail mortality is beyond the reach of earth's trials, for,

"As fragrance from the flower's heart,
Softly perfumes the summer air,
And we its odors sweet inhale,
Although the blossom is not there;

"So letters are the mind's perfume;
The fragrance that the spirits send
To soothe, to strengthen, and support,
And bind the hearts of absent friends."

The Soldier's Vote Unconstitutional.

The Supreme Court has unanimously decided that the law permitting soldiers to vote, out of the county or district where they claim a residence, is unconstitutional. The following paragraph from the decision *may* throw some light on the ground taken:

"But there is another ground, entirely distinct from any as yet assigned, upon which the unconstitutionality of the Act of 1863 may be rested. Admit that a voter 'may claim his vote' in any number of modes—all within the constitutional meaning of that phrase—verbal claim being one mode; an actual offer to drop a ballot in the ballot box another; the spoken word, coupled with the act named, standing for another, and so on to infinity—still the particular mode adopted by the voter must be worked by him in the county or district where he has resided for thirty days next preceding the election. For if the elector must 'reside for thirty days next preceding the election in the county or district in which he claims his vote,' then it follows that he must claim his vote in the county or district in which he has so resided. The 'claim,' whether it is in words or in conduct, or in an admixture of the two, or in dreams, still if in words, the words must be uttered, or if in conduct, the act must be performed, or if in vision then the vision must pass in the county or district where the elector has had his residence for thirty days next preceding the election."

The decision consoles the soldiers, however, by telling them that, "none of the rights of the volunteers have been forfeited by their self-sacrificing devotion in the cause of their country," and that when this cruel war is over they will again be permitted to exercise the privilege of voting, a privilege which they imperil their lives and undergo untold hardships to guarantee to us. Well, law is always law; but is not always justice.

The Repeal bill in the Legislature.—The bill repealing the Specific Contract Law, which has been for some days the exciting theme of discussion, in the Legislature and out of it, was defeated in the Senate on Wednesday, by a vote of 23 to 15. A notice of reconsideration was given. All the Copperhead Senators voted against the bill, as was to be expected from their known sympathy with rebellion and nullification. On Monday evening, D. W. Cheeseman, the U. S. Treasurer at San Francisco, who was denied a hearing at the Platt's Hall meeting last week, delivered an address, by invitation, in the Assembly Chamber, to a large audience, urging the repeal of the law, and the introduction of the U. S. currency into this State. The following telegraphic dispatches were read and received with rapturous applause in the Assembly on Tuesday, and immediately sent to the Senate:

Sacramento, Cal., Feb. 6, 1864.

To Hon. S. P. Chase, Secretary of Treasury, Washington: Is California Gold Law against National policy? Repeal proposed. Your opinion is important. Answer.

Thompson Campbell, Assemblyman.
J. W. Roberts, Senator.

Following is the answer:

Washington, Feb. 8, 1864.

To Thompson Campbell and J. W. Roberts: I am clearly of opinion that the California Gold Law is against National policy, and I shall be much gratified to see California declare herself in favor of one currency for the whole people, by its repeal.

S. P. Chase, Secretary.

From Lake County.—A correspondent at Lower Lake, writes to us relative to the season and crops in that section: The weather is fine here, now, and in fact has been nearly all the time this winter. We have had but little rain, and the creeks and springs of water are very low for the time of year. The little rain we have had has kept the land in the best order for the plow, and I never saw a better season for plowing than this has been. Stock is getting its living now, which is quite a contrast to two years ago when cattle were dying by the hundreds.

LETTER FROM MAZATLAN.
(NUMBER TWO.)

Hacienda de Sombrero (Mexico), January 23d, 1864.

Editor California Farmer:

Mines and Mining.

I have been here now nearly three months, yet have seen but little of the country. We are busy opening the mine [at Copala], and clearing out a place for the mill. We have not taken out much metal yet, but are driving three separate tunnels, intending to drain the old works where rich metal was taken out when the mine was formerly worked, under Mexican rule. We will not be able to get the mill into operation for some time, on account of difficulties in transportation. In this country there are but few roads—in the mountains mere trails, suitable for pack-mules; in the valleys and plains wagons can be used without building roads; the Mexicans pack all their goods, having only a few carts in the cities; we have a team of our own and are working the road some. This country is not so bad to make roads in, if the natives had any "soap" in them, but they have no ambition, except to steal and take all the advantage they can; the very few who will work—the Indians—are pretty fair laborers if they know how, but few of them understand handling edged tools.

The mines, in this locality, are nearly all old leads, some of which have been worked very extensively, but so long ago, a few have caved and many are full of water, so that most persons prefer making new openings rather than to clean out the old works. There is but one quartz mill in this locality, now in operation, but they have not as yet succeeded in separating the metals to the satisfaction of themselves or any one else; the mines differ in metals, however, some are said to work much easier than others. We must first learn what kind of machinery is wanted and how to treat the metals. It is said by some, who have worked metals in Washoe, that the same process will not do here. We have a ten-stamp mill, with the Wheeler Pans, which will be put in operation as soon as completed, and the quality of the rock and efficiency of the process will then soon be known. A number of mills are now being built, in this vicinity, and if they all or any of them do well, those interested will adopt the best process, although the ores differ so much that some amalgamators will not save the precious metal, owing to different combinations of baser ingredients, such as cobalt, nickel, antimony, etc. There is very little done in the way of mining, except by Foreigners; the Mexicans, nearly all, have mines, yet few have money to work them; they are nearly all "on the sell."

Agricultural Resources.

In regard to the agricultural part of this country: The soil and climate I think cannot be surpassed for raising cotton, sugar-cane, tobacco and in fact almost anything except wheat, barley and such grains; corn grows in great abundance, and a good crop is raised with very little labor; they take a bar, make a hole in the ground, put the seed-corn in and give it a kick with the foot, when the corn grows above the ground they cut out the weeds, and the crop is not again touched until ripe or gathered. It is frightful to see the side-hills that they plant in corn—a wild goat could hardly climb the slopes—and yet they get a splendid crop, which is worth from five to six dollars per cargo, of 300lbs. These primitive agriculturists make Los Gringos (*green-horns*), pay big prices for everything they have, but they do not produce much.

In Regard to Cotton and Sugar Raising:

There is a large cotton farm near Mazatlan, where a heavy crop is planted, and those who have seen it speak favorably of the experiment, the plant yielding a crop three years in succession from one planting, in fact the mother stalk does not then die. I have seen a cotton plant ten feet high, and was informed it was the same variety as grows in the Southern States. Sugar-cane is said to produce more joints, in fact more than double as many, as on the sugar lands of the south. I have no doubt that if this country had a Government, that could be depended on, there would be a great change in a very few years; should the mines prove quarter as rich as expected prosperity would soon prevail over anarchy and confusion.

A large party came down on the last steamer, from San Joaquin county, designing to prospect for cotton lands, among others are Pap Kelty, Mr. Tuuis, Wm. Geddes, W. C. Culbertson, Mr. Bell, and Wm. G. Anglin, all staunch men, and enterprising. At the Presidio, where cotton-raising is attracting most attention, there is quite a settlement of Foreigners and a number of white families have located; emigrants to Mexico would find this a favorable neighborhood to reside in, the locality is healthy, and a very large portion of the travel to and from the mines passes this village. It would be a good place for a hotel; there is lots of travel now on the road, and increasing daily, as when the steamer is due some one from each Mining Company visits the Port. A stage-coach will soon be put on the route, from Copala to Mazatlan, so report says, and it is further said that S. P. Bowman, formerly of the Omnibus Line, San Francisco, will have the management of the enterprise, or at least furnish most of the capital.

In the main, I would say, this is an unpleasant country for an American, in its present condition. The natives are a miserable set; they will not try to develop the natural resources of their country, and they are jealous of Foreigners and throw all the obstacles they can in their way. I do not like the climate; it is too hot, though at this time the nights are quite cool, but part of the day is awful hot; the country is not as healthy as represented. The weather is now much cooler than three months ago. We live on the Pannco river, and more than one-half of our men have had the chills and fever, and it is about the same so far as I can hear from other posts. I would not advise any one to come to this country, at this time, as I believe they are on the eve of a change of Government, which might prove disastrous to all. I fear that many interests will suffer, for a time, at least. There has been one French war vessel here, at the Port of Mazatlan, but did not remain longer than an hour. What she called for, I do not know but the Mexicans were pretty badly scared, if not hurt; but the French, I believe, will soon have this Port, which I am afraid will give us some trouble, on account of duties inland, until the country is all taken. Yours, etc. McGehee.

Judge Lynch.

The Lynch law has been somewhat triumphant of late, for during the past four months about twenty, or more, desperados have been hung by Vigilance Committees in California, Nevada, and Idaho. Last November, four were hung in Los Angeles, one in Alameda, and now we hear of the doings of the Vigilantes in other places. There is a committee, in Idaho Territory, composed of upwards of 1,000 persons, exercising jurisdiction over the whole range embracing Virginia, Bannock, Nevada City, and the surrounding region. They have hung George Ives, at Nevada City, Stinking Water diggings; Reed and Brown, at Stinking Water; Jack Gallegher, George Lane (alias Clubfoot), Haze Lyons, Boon Helm, and Frank Parrish, at Virginia City; Spanish Frank, John Wagner (alias Dutch John), Buck Stinson, Ned Ray, an escaped convict from Salt Lake Penitentiary, and Henry Plummer, Sheriff, at Bannock City. This Plummer, we think, is the same man who committed a murder in Nevada, Cal., a few years ago, was tried by the Court, and by a tech-neck-ality saved his neck and went to board at San Quentin, but the climate not agreeing with his health, Gov. Weller invited him to leave that place, giving as a reason for pardoning him, that Plummer "was in bad health." Plummer went back to Nevada, his health improved rapidly, so rapidly, in fact, that in a short time after his arrival at his old cruising ground he was able to raise a muss, knock a man on the head and nearly kill him, and, from force of circumstances, start on a trip over the country very suddenly.

There was quite an excitement at Aurora, on Tuesday last, when an armed guard of the Citizens' Safety Committee marched to the County jail, and took out John Daly, James Buckley, James Masterson, and John McDowell, alias Three-Fingered Jack, charged with the murder of W. R. Johnson a week previous, and hanged them on a gallows erected in front of the Armory Hall. "The prisoners mounted the platform with a firm step. Buckley was the first to address the crowd; he said he and Daly were guilty; they killed the man, but McDowell and Masterson were innocent. Nothing could exceed the firmness and nerve of Buckley. He spoke to all respectfully, and showed no symptoms of fear. Daly stated that he had killed Mr. Johnson. He (Johnson) had killed his partner, and he only regretted that he could not live to kill all connected with Johnson. He was under the influence of liquor, staggering around the platform, and had to be helped up when the time came for him to die. Masterson simply said he was innocent, otherwise he was silent, cool, collected, and firm as could be. McDowell appeared to be under the influence of liquor; raved awfully, called on God to witness he died innocent; told the crowd they were murdering an innocent man, and that the Coroner's jury promised with a solemn oath that he should not be hurt. Just before his arms were tied, he bid good-by to all, then suddenly drew a Derringer, put it to his breast, pulled the trigger, but the cap snapped, and he dashed it down with a curse. About half-past one the prisoners took their positions, with hands tied and eyes bandaged, the signal gun was fired and four souls were launched into eternity. The Rev. C. Yager remained with the prisoners to the last. The Military had control of the city, and of everything connected with the execution. An immense crowd was present, but the most strict order prevailed."

A Heavy Forgery.—Mr. Moulder, of the firm of A. J. Moulder & Co, of this city, presented his check at the banking house of Donahue, Raisin & Co, a short time since, when he was notified that the account was overdrawn. This he pronounced an impossibility, and an examination of the checks disclosed where the trouble lay: a check was found, drawn for $6,200, in the name of Andrew J. Moulder & Co, which was instantly pronounced a forgery. It was an excellent forgery, the number of the check being correct, and the time chosen when Moulder & Co. had a balance in the bank. The matter was placed in the of detective officer Johnson, who soon had reason to suspect a man calling himself J. Shotwell, but whose real name is J. Shotwell Stevenson. He has been splurging around since his arrival here in October last, and had represented himself as a large owner of Savage and Real del Monte. Here was a clue to his identification. He was a fast man about town, had plenty of money, fast horses, splendid wardrobe and all the costly etceteras, but regretted that his early education had been neglected, as he couldn't write. Moreover, he had represented himself as a cousin of J. M. Shotwell, cashier in Alsop & Co's bank, also stating that his "cousin" had a large amount of money to invest for him, and that he had his Savage and Real del Monte stock deposited with him. The officer saw this gentleman and asked him about his "cousin," receiving for a reply that he had no "cousin," but that a scoundrel about town was traveling on that relationship. Sure of the man, and learning that he had gone to Virginia City, the officer had him arrested and brought back to this city. The proof against him is positive, and his chances for board and lodging free, for a time, are said to be good.

Suicide of Colmere.—George W. Colmere, who was under sentence of death, and was to have been executed last Saturday, committed suicide last Friday in his cell in the County Jail. He was told by his counsel that there was no hope of a reprieve, and that he must prepare to die. He said that his children would never have the disgrace of knowing that their father had been hanged. In consequence of this and other intimations, the strictest watch was kept upon him, he not being permitted to even have a tin-cup in his cell, lest he might uncoil the wire from the rim and make an instrument of that. But all precautions were useless. At half-past eight in the morning he opened the artery in his arm with the tooth of his comb, sharpened down, and died at 10½, attended by Dr. Raymond. He left a slip of paper written with a lead pencil: "May God bless and protect my children, and forgive my enemies as I do."

Merced Banner Mourns.—The Stockton Independent, of February 4th, says: It is reported that Company I, Second Cavalry, C. V, while passing through Snellingville, on Tuesday, Feb. 2d, gutted the office of the Merced Banner. The provocation was some scurrilous remark which appeared in that paper a few days before, against the soldiers.

CONGRESSIONAL.

Senator Sherman's bill was introduced, Feb. 9, prohibiting speculative transactions in gold, and to make all time sales of specie and foreign exchange null and void, and partial payment thereupon reclaimable by a suit. It shall be the duty of District Attorneys to prosecute such suit, the money reclaimed going in equal parts to the informer, the District Attorney and the U. S. Treasury. All checks and drafts not payable at sight, given for such transactions, are made void, excepting when passed into the hands of third persons ignorant of the agreement, but the person making the sale may at any time within three years bring a suit for recovery of the full amount from the persons by whom made.

The President has acceded to the wishes of the State Convention of Arkansas, and ordered Gen. Steele to hold an election on the day designed. To make sure of avoiding a collision between the military and civil powers, he has commissioned Gen. Sickles to go to Arkansas, with full discretionary authority to keep things straight.

The Military Committee of the House agreed to a resolution that all Generals who on the 16th of March next shall not have been in active service for the previous three months, shall be dismissed. The Senate Judiciary Committee have agreed to an amendment of the Constitution, forever prohibiting slavery in the United States.

The House refused to strike out the clause of the Enrollment bill consolidating the classes, by 45 against 60.

Commissioners from the Dominican Republic, which was suppressed by Spain in 1861, are applying to be recognized as belligerents. Secretary Seward has laid the case before the Cabinet to-day. It did not receive very considerate treatment.

A letter from Waltham, N. C., dated January 24th, states that Western North Carolina and the towns in the county of Georgia, were recently invaded by 1,500 Yankee cavalry, who pillaged indiscriminately and carried off negroes, food and horses.

A General Order, dated the 29th of January, from the Adjutant-General's office in North Carolina, requires all white males, between sixteen and sixty, to enter the military service.

Dispatches have been received at the Navy Department that the Sassacus and Florida destroyed the new fast blockade runner Wild Darrall, near New Topsail Inlet, where she got ashore, and destroyed most of her cargo.

The Times' dispatch says it has been ascertained that the main body of Lee's army is between Gordonsville and Orange Court-house. Citizens residing within the enemy's line say that Lee expects to have 45,000 conscripts added to his army by the new levy, raising it to 80,000 or 90,000 men.

AGRICULTURAL REPORT.—We have received from Hon. Isaac Newton, of the Agricultural Department at Washington, D. C., copies of the Report of 1862. This work is an improvement on the former style, the material of the volume containing more of the practical facts, and with many series of valuable suggestions.

ANOTHER TEMPERANCE PAPER.—We have received the first Number of the Rescue, a new paper devoted to temperance, under the supervision of the Grand Lodge of Good Templars. It is published at Sacramento, and appears monthly. We hope it will receive the support which a paper devoted to that cause is entitled to.

The steamer Sierra Nevada, from Mexico, brings intelligence of the defeat of the French at San Luis Potosi, where they lost thirteen pieces of artillery. It is also stated that three letters of marque have been issued by Juarez, and are on their way to San Francisco.

Purchasers of Farms.

We shall now keep a complete record of *Farms, Ranches, Orchards and Vineyards*, for sale, and make it a speciality from this date. A "Bulletin Board" in our Reading Room, will contain numerous Farms, etc., on sale, and to which we invite special attention of both *Buyers and Sellers*.

☞ MANUFACTURERS OF MACHINERY, AGRICULTURAL *Warehouses, Nurseries and Florists*—All such who desire to make their business known over the entire State of California, should send their business advertisements to us, and we can spread the news for them.

TERMS OF ADVERTISING.

THE charge for Advertising in the CALIFORNIA FARMER (payable in advance), is **One Dollar** for five lines, or less of space, in nonpareil type, for one insertion, and ten cents a line for any larger space. Each subsequent insertion half these rates. This it is believed affords the cheapest and best medium of reaching the Agricultural community on this coast. As heretofore, the right is reserved to reject any advertisements deemed objectionable.

Opinions of Professors of Music on Jacob Zech's Pianos.

SAN FRANCISCO, December 29, 1863.

JACOB ZECH, Esq:

Dear Sir—We, the undersigned, musicians of the City of San Francisco, do hereby give our unbiased opinion as to the workmanship, purity, power, and brilliancy of tone, and perfectness and durability of action, of the Grand Piano manufactured and exhibited by you. We have no hesitation in pronouncing them far superior to any piano, ever placed before us for inspection. At the late exhibition of the State Agricultural Society, the Committee saw fit to denounce your instrument and award the first prize for an inferior *square piano*, which we pronounce a great injustice to you, and we do hereby give our names, and warrant your pianos to be superior to any in the State. With the greatest esteem, and the most fervent desire for your success, and a wish that the people of California may give you justice, and not be controlled by money or the opinion of any body of men who are not qualified to judge of the merits of a Piano.

We are truly yours, etc,

R. HEROLD, Professor of Music,
GEO. T. EVANS, Pianist and Organist,
GEO. F. PETTINOS, Pianist and Organist,
LOUIS SCHMIDT, Pianist and Organist,
CHAS. STADERMAN, Pianist,
STEPHEN W. LEACH, Artist,
L. T. PLANEL, Professor of Music,
A. LAPPGER, Pianist,
ALBERT STOHR, Musician,
JOSEPH B. SCHMITZ, Musician,
EMILE TOUSSIN, Pianist,
CHAS. SCHULTZ, Pianist and Organist,
J. D. KNELL, Pianist, and Organist at Cathedral,
H. HOLZHAUER, Pianist,
WM. CROOKER, Pianist.

Letter to Jacob Zech.

[The following notice of my Pianos was received by me from the gentlemen named, professors of music at Sacramento, and approving, in very flattering terms, my instrument.—J. ZECH.]

Your Grand Piano was an excellent and beautiful instrument, full and rich and tone, in with all the excellencies that are desired in a Grand Piano.

Your Square Piano was one of extraordinary excellence, and beyond question the best on exhibition, having a full and powerful tone, yet, with that soft and delicate expression so desirable to an artistic ear. We feel gratified to know of your success in this art, and hope your efforts will be duly appreciated.

Wishing you all success, we are your friends,
CHARLES WINTER, Pianist,
CHAS. STADDERMAN, Pianist.
CHRISTIAN STATFIELD, Pianist,
GEORGE GREINER, Piano Maker.

"MENLO PARK,"
San Mateo County.

Beautiful Sites for Homes in the Country.

THE UNDERSIGNED OFFER FOR SALE THE BALances, unsold, of this choice tract. There, are few, if any, places within one hundred miles of this large and growing metropolis, which combine so many natural advantages for a country residence; the soil is excellent; it is wooded with large, splendid live oaks, and other evergreen shade trees. The climate is unsurpassed; the extremes of heat and cold are never felt, and the harsh summer winds and fogs don't reach here. Good well water can be obtained here at thirty feet, independent of which, there is a Company already formed, in San Mateo County, for introducing an abundant supply of the best spring water, for this and adjacent tracts, and Redwood City; it will have a head of about sixty feet at this point. The cars of the S. F. & S. J. R. R. land passengers at their depot, at this point, in about an hour and a quarter, thus enabling business men to live here and transact their business in town, without interruption. A first class school is about being established here, with educational ability second to none in the State. There will also be a first class family hotel opened in the Spring.

Those who are alive to the importance of a home in the country, with all the advantages for health, education, etc; are earnestly requested to go and look at this lovely spot. AS AN INVESTMENT, it is worthy the attention of every one who wishes to invest SAFELY AND PROFITABLY, as it is rapidly enhancing in value. The title is unquestionable, it being a portion of the PULGAS RANCHO, the first Spanish grant finally confirmed, and the patent issued.

About thirty heads of families have already purchased, with a view of building, in the Spring.

As to the merits of this choice tract, we refer to the following gentlemen, some of whom are now living in the neighborhood, and others have purchased with a view of doing so.

A Fine Ranch
IN MENDOCINO COUNTY.

A FINE GRAIN AND STOCK RANCH of 600 acres under fence, in Mendocino County, will be offered at a bargain if applied for soon. Together with this is a Stock Ranch of some thousand acres of mountain land which goes with this Ranch, being Uncle Sam's land.

The Ranch is about 30 miles from Petaluma and on the great mill road to the Navarro, Albion, and Mendico & Noye's mills.

The location is pleasant, having the Redwood Hills for a back ground, with a fine valley tract—one hundred and sixty acres valley land, mostly under cultivation—yielding fine Barley, Oats, Wheat, Hay, Corn, etc. The crop of Hay is fine.

This Farm will sustain a herd of 300 Cattle, and is a grand Ranch for raising Stock, Horses Mules, or Hogs, and a good place to raise Poultry. There is an orchard of two acres of bearing Trees. Vegetables grow well.

There is on the place a fine two-story frame Building, in which was put 30,000 feet of lumber, also Granary, Smokehouse, and Barn. The vicinity to the Redwoods gives an opportunity to improve, as Lumber is cheap and Timber handy.

There are, at present, good Tools, Implements, Harvesters, Plows, etc, on the place; also some furniture. The House has been used as a Hotel and Store, and is also the Stage House. Hay, Grain, and Produce can always be sold at good prices.

There is also a herd of 100 head of Stock which will be sold at a bargain

This is a rare chance, and worthy the attention of those who wish a good Home, a good Farm, and a profitable business. Prices reasonable. For particulars inquire of Editor Farmer. 21-1

Farmers and Immigrants.

LAND FOR SALE OR TO RENT.

THE ANTELOPE RANCH,

(FORMERLY JOB F. DYER'S) on the East side of the Sacramento River, embraces many very superior Farms of

100 to 500 Acres each; also Vineyards, Gardens and Orchards,

above all overflows, Fenced, having Dwellings, Barns, etc., and throughout the year, large running streams, and irrigating ditches.

The soil is from 3 to 10 feet deep, very rich, and adapted to Wheat, Barley, Oats, Tobacco, Chinese Sugar-Cane, Fruits, etc.

The best market in the State is at Red Bluff, two miles above; at Tehama, three miles below the Ranch, and on the Ranch itself, for consumption in the northern portion of the State, Oregon, and the Humboldt Mines. The new Wagon Road from Red Bluff to the Humboldt Mines is within three miles of the Ranch.

Good Farmers (with families preferred) can hire these farms at low rates, or conduct them on shares, with privilege of purchase. Cash loans will be made, if desired, to assist in cultivating or holding crops, and every facility will be given.

Mowers, Headers, Threshers, etc, are on the Ranch—"The Antelope Flour Mill," of large capacity, and high reputation, is on the Ranch, owned by the same proprietors

☞ The "Job Dye Farm," of 250 acres—with Orchard, Vineyard, and Garden, with irrigating water, large Adobe House, and numerous out buildings—will be rented to a satisfactory tenant

Apply to GEO. CHAMPLIN, Red Bluff P. O, or on the Ranch, or to

E. F. NORTHAM and R. B. WOODWARD,
Dec. 17—19-2m San Francisco.

[For the California Farmer.]

FROM THE DEEP WATERS.

HEAR, O Lord, and have mercy upon me; Lord, be thou my helper.—Psalm XXX, v. 10.

I pray thy mercy,—spare!
Oh Father! God!
How shall frail mortals bear
Thy chastening rod?
Afflictions hand is heavy on us now,
Help us, submissive at thy feet to bow.

Thou ever present help,
In every need!
We know thou wouldst not break
The bruised reed;
No human strength, sufficeth sorrow's hour,
Unless sustained, by thy Omnicient power.

Oh thou! who hearest the ravens,
When they cry;
Who markest the smallest wing,
That cleaves the sky;
By whose Creative hand, all things are made,
In deep distress, we come to Thee for aid.

Thou clothest the lily fair,
In spotless dress;
Decking the fertile earth,
With flowers numberless.
Will Thou not hear thy suppliant children call,
Thou whose beneficence is over all?

On thy blessed promises
Our hopes are stayed.
None ever vainly called
To Thee for aid.
We leave our wants with Thee, O Holy one!
Praying for Faith to say, "Thy will be done."

AGNES.

HOME-VALLEY RANCH, January 29th, 1864.

Demoralization of our Youth.

EDITOR CALIFORNIA FARMER:

The topic which heads my letter, is one which is fraught with a portentious truth, though I am fully aware that many a parent, who reads this, will exclaim: "What impertinence? I am sure that my child is as good as any one, and, Sir, or Madam, you may perchance be right, your child may have had moral training, and gentle culture at home, perhaps you do not send them to run the streets and sow the seeds of vice, to bring forth ten-fold, in after years, a prolific crop of misery and grief. Look in our streets and what will you hear: Obscenity, oaths and slang. You have but to listen to a crowd of boys just let loose, even from a school, to be convinced of this. When you find a child truthful, do you not marvel at the wonder? Falsehood is the rule, truth the exception, even among the young who have the training of day and sabbath schools, prevarication and exaggeration are common; deference to elders is not practiced. Where, or but seldom do you see blushing modesty among our girls? Californian females have no girlhood, that sweet season when a girl is half an angel; when she blushingly stands on the threshhold of womanhood, pure in thought, and white-robed innocence her shield from passion's power. Alas how few such here? The dew is off the rose, the down is off the peach, ere even childhood is possible. Go to our public balls, and places of general exhibition, and watch the flushed cheek of vanity, the eager search for admiration, listen to the conversation of even children about their dress and their beaux, or even worse. The midnight dance and public show have too many victims of unbridled youth, pale-faced modesty hides her head in shame, and pertness, flippancy and forwardness are triumphant. How to dress, and how to dance, occupy the thought, which should be an innocent play, and lessons. Of the physical evil consequent on this preternatural excitement I will not now speak, though they are sad and many, but the moral and social teaching is evident. To have beaux and to be married is the only topic of thought and conversation. Ere childhood has scarcely past, and before tastes or feelings are matured, too often, an indiscreet marriage takes place, or parents have to deplore indiscretion and disobedience to their wishes.

That frightful evils exist among the young cannot but be known to many, however we may shut our to the fact, and p'shaw at the idea. Where then is the radical defect in our system? Are we not answerable to posterity, if we do not train up children in the nurture and admonition of truth, purity, and virtue, true to nature and nature's God? Or shall we in our blind indifference to the lamentable facts around us, expect fruit when the apple is rotten to the core. The basis of these evils arises much from the want of home training, and very much from the want of moral culture in our schools. A certain amount of book learning is drilled into the pupil, but they might as well be calculating machines, as to the training their hearts and characters receives. Occasionally you may find a conscientious teacher with a more exalted idea of his or her duty, desirous of reforming the manners and behavior of the pupils, but they soon give up the effort, finding the endeavor after fruitless trials, to give offense. Not long since a Teacher, who had been reproving a Pupil for swearing and dirty habits, was indignantly told by the parent of the child, "I sent my child to be 'teached' his books and 'nothink' else; it is none of your business if he does swear or wipe his nose on his fingers. I'll see you (something not polite) if you shall interfere with my child's doings." This is a fact, and the *gentleman (?)* was also—*mirabile dictu*—a School Trustee. We require a higher standard for the training of our youth, the acquisition of mere verbiage ought not to be the only aim of education. Neither will dry didactics alone avail; parents and teacher must harmonize together and remember that they are training heirs for immortality, thinking, sentient beings, upon whom depend the evil or good both physical and moral which is to be transmitted to posterity. Teach the young that—

"One self approving hour, the year outweighs,
Of stupid starers, and of loud huzzas."

ST. AUBYN.

THE true theory of woman's rights is to educate the girls thoroughly, and then let the women do as they have a mind to.

"Happy Homes."

Answer to "Cherrie."

So, Miss "Cherrie," you come out under your true colors. Well, I am pleased to see you state your qualifications in so few words—we will sum them up: to cook and iron, wash and sew, are not to your taste, you'll have me know; when you have good music you "are all heel and toe;" you follow the fashions wherever they go. To ride in a carriage, would suit you, I see, and you would have no objection to *pay* A. B. C., provided nothing else was required of you to soil those nice white hands. You seem to be quite patriotic in your professions, but must have originated from Dixie, for I never knew a lady from that land who did not think more of her hands than all the intellectual qualities she ever possessed. I think you must have made a mistake when you advertised in the FARMER for a husband. Not cook and iron, wash and sew? Did you ever consider that the yeomanry of California are not all *wealthy*, that they came here to *make* fortunes, not to spend them; that it requires labor, industry, and economy, to turn the wilderness of all new countries into a blooming paradise? Are you not willing to perform your part to help California become the first State in the Union, the wonder and admiration of the world? Are you so helpless that you require a servant continually by your side, and so dependent on Irish Mollie, or Betsy, that you cannot accomplish anything without them? If so, I think you cannot pass muster with the farming community, notwithstanding your *patriotic volunteering*;

For if a man must in this world
Be to two women tied,
He better marry the servant girl,
And let the *other* slide.

When you hear good music you "are all heel and toe;" unable to accomplish anything with your hands, you are very active with your feet. What an interesting young lady you must be! and what a splendid farmer's wife you would make, when, after laboring all day, he returns home from his daily toil to find you dressed for a ball, and as you leave with some one whom he secretly dislikes, you politely require him to take good care of the baby till you return in the morning! Do you not think his "*good heart would be happy?*" And then you follow the fashions! What think you we care for the fashions? We have something more noble to perform than continually hunting the ever-shifting, ever-changing fashions of a city; our happiness and pursuits in life are of a solid and far more substantial character; we earn our bread by our daily labor, we are robust and healthy, our minds are not continually vexed with the uncertainty of mercantile and commercial pursuits. We consider labor honorable, both for males and females, and when we look over our broad and splendid fields of waving grain, our bounteous orchards and vineyards, and contemplate our manly independence breathing the pure air of heaven unadulterated by the dust of cities, what care we a fig for the fashions? Now these being your qualifications, while I might greatly admire the beautiful "Cherrie" at the piano, she would lack those ever enduring principles which would "make a good heart happy," and as I never compromise (for my motto is "be sure you are right, then go ahead") I must leave that "Cherrie tree" alone in its glory, and see what "Carrie" has to say on the subject. A. B. C.

An Answer to "Carrie."

MISS CARRIE: I stand corrected, and will answer your questions:

No, no, most decidely, the woman possessing beauty of person only, would not be the one selected by me, though she might be by many. External beauty cannot hide the deformities of a weak, uncultivated, selfish mind; it is as transparent as glass to a close observer. Beauty may "cover a multitude of faults," but their black forms can be seen back of such a gauzy curtain. I now have one in my mind, who is deemed beautiful by thousands in this State, yet every action, every look of hers, tells the student of human nature that her wishes, aims, and aspirations, are such as to make it utterly impossible for her ever to make any home a happy one, and she is the very last one I should select as possessing "beauty of heart and mind." Really, I do not know as I can tell you my "plan of finding a person out." I merely judge of them after being introduced, shaking hands, and hearing them speak a few words, and ninety-nine times in a hundred I generally find the idea then formed correct. The physiologists say the organ known by them as "human nature," is largely developed in my head, and it may be from this, arises my powers to judge correctly of others character. I quote Fowler's description of the powers of this organ when large: "Reads men"—and women, too, I suppose—"intuitively from their looks, conversation, manners, walk, and other kindred signs of character; with Individuality and Comparison large, notices all the little things they do, and founds a correct estimate upon them, and should follow first impressions." It is very easy to tell when people act contrary to their nature, or put on airs for effect; the airs sometimes slip off before they are aware of it.

When I speak of "attraction," I don't mean that of money, passion, or anything else but that natural adaptability of two souls for each other that causes love, and this the reason sanctions, and I have yet to learn of an instance of wrecked happiness when such an attraction has been the ruling power. I don't think there is any difference in our ideas on these points when we understand each other. The closing thoughts of your letter are true ones, and if this correspondence leads to no other good, I hope it may be the cause of those about to seal their future life for better or for worse, to ask themselves the question whether they are proceeding in accordance with their reason and better judgment, and make their final action conform to the answer that will reverberate through their whole being if they have a true idea of the magnitude of the responsibilities they are about to assume. R. W.

[For the California Farmer.]

ALL WE LOVE MUST DIE.

THE morn was fair, the sun was high,
All was clear in the bright blue sky,
And nought was wanting there;
But along the road came drearily,
As if they were plodding wearily,
Men with a funeral bier.

The bearers slowly bore the load
Through the winding devious road,
To where the grave was made.
A brother all alone stood there,
Uncovered in the morning air,
To mourn a brother's fate.

In life they dearly loved each other,
Toiling, hoping, bound together,
Nor thought of life's decay;
Now that mourner stood alone,
Far from his childhood's home—
His brother passed away!

The Sexton covered the lowly bed,
And the clods fell on the coffin-lid,
Of the one departed;
The others to their homes they sped;
He stood alone by the quiet dead,
Almost broken hearted.

"Farewell, a last farewell, my brother!
Thy memory I'll cherish ever,
While on earth I dwell.
Until that monster Death shall come,
And take me to thy unknown home,
Nought shall break the spell.

"Though other hearts may cheer me now,
To heary hairs and wrinkled brow,
I'll ne'er forget the past.
Though youthful hands may guide my steps,
My cheeks be pressed with youthful lips,
Thy memory shall last.

"As the western sun is slowly sinking,
So Time my life's blood now is drinking;
I feel its fast, firm hold;
And ere thy bones have moldered quite,
I shall have reached Life's weary night,
And joined you in the mold."

With aching heart, and bended head,
With drooping eyes, and measured tread—
He heaved a parting sigh—
And, as from the grave he wandered,
Sadly to himself he murmured,
"All we love must die."

R. FULFORD.

[For the California Farmer.]

Friendship.

IT would seem almost unnecessary to write upon a subject that has been for ages sung in the song of the poet and reasoned upon by the philosopher. Yet it is always new to us, never ceasing to be interesting. The Christian and Heathen of all nations agree in their belief of Friendship. Now what is the meaning of this one word that unites and exerts such an influence over nations, society and family. Some, I know, scoff at the word *friend*, saying that its merely a *dream* of the unsuspecting, but they are those who being evil, cannot see good in others that they do not possess themselves. To understand friendship in its holiest sense, we must *feel* it in *our own hearts*. Unless it is felt, there can of course be no faith in belief. Now we have come to its true sense, it is *faith* in the good intentions and wishes of those around us. We cannot call or feel that every one we meet is a *friend*, for to our sorrow we would soon find that the word *friend* has an especial meaning not lightly to be applied to every one. True friendship is a holy tie, unchanging, eternal. Let the storm of adversity or calumny beat around us, yet true friendship will stand unwavering at our side, with willing heart and hand to succor and comfort us. To me, the simple word "friend" has a touching sweetness; often I see the word written. It is in every book and paper, yet never loses its beauty to my eye and ear, for as often as I see it, memories of my friends come crowding up, bringing with them many pleasant thoughts and feelings, chasing away the sorrow and gloom of the heart. Life takes a new color, all seems bright again, cheerfully I take up the burden of life and go on my way rejoicing, in my heart of hearts praying with intense earnestness, God bless them. If *true* friendship has such influence on one person, it must surely upon others, for the human mind, although it may have diversity of opinions, yet one grand principle governs the whole. All are conscious of feeling, whether it be pleasant or unpleasant, love or hatred. Some possess it to a greater degree than others. Yet in all created things, friendship in some form governs their lives.

"What magic words are these *my friend*,
Like the "dew to the flower," so these words lend
To *life* its brightest, sweetest charm,
And bid the hearts-blood quickly warm,
Into new *life*, till o'er the soul,
Sweet voices, music-like, will roll.
Oh, Friendship, magic power is thine,
Within our hearts thou canst intwine
The dearest friends, we hide them there,
Our jewels—those we hold most dear."

MIRIAM.

LADIES DRESS GOODS.—Those who wish rich goods, need not send to Paris or London to make private purchases of rare samples of ladies' dress good, for all this trouble is saved "If Dunsinane will not go to Burnham Wood, Burnham Wood will come to Dunsinane." And so if ladies cannot go to Paris and London, Paris and London will come to them This, Messrs Kirby & Co. have accomplished for their numerous patrons, by having the very best and richest goods, such as they know will suit their customer—made to order in England, France, and other parts of Europe, and sent to them expressly for their own trade Those so ouild goods they are now opening, and ready to show them. Their courteous salesmen are ever attentive, and no urging to purchase The pleasure, satisfaction, and approval of patrons, at this one-price house, is the ruling principle.

RICH TEA-SETS, VASES, ETC.—Some of the most superb Tea and Coffee sets we have ever seen, are now being opened at Haynes & Lawton's Crockery Warehouse. The beautiful blending of the colors of blue and gold, crimson and gold, green and gold, in their chaste designs, gives harmony and beauty, that is most gratifying to the eye, and adds materially to the flavor of the beverage.

The Golden Eagle Hotel.—This admirable Hotel is the popular one of the Loves City, and the ever active, Callahan, must enlarge to supply the demand on him for rooms. We speak of the Hotel as a good "House," and we are pleased to know our Legislators, many of them, find it so.

BOWEN BROTHER,

WHOLESALE AND RETAIL DEALERS IN

STAPLE AND SELECT FANCY

GROCERIES,

Ship stores, Ranch and Farm Stores

Denn & Manrow's
Combined Power
WINE PRESS.

THIS NEW PATENT PRESS IS NOW OFFERED TO the Grape Growers of this State as a Californian Invention. It has been designed and finished with reference to the saving of labor and expense, while the work done is more speedily accomplished and with greater results.

It is the FIRST COMPLETE WINE PRESS in the country. The power of the machine is almost unlimited. With the crank alone the power of this press is as 500 pounds to one pound of strength applied. After the crank has been worked by hand to a certain point a lever of eight feet is attached, by placing weights at the end of this lever a new power is given equal to 1,000 pounds for one. This power is continuous, a self-working power—no supervision needed.

This Press is made of solid timber, yet neat, compact, and very powerful; the wheels and gearing simple but sure; the whole weighing about 800 pounds; easily put up or taken down and easily transported; so simple yet carefully constructed that it cannot get out of order unless by extraordinary results. The cost of this machine will be less than the ordinary Screw Press. It will save the labor of six or eight men usually required, as ONE MAN can do all the work.

The quantity pressed is only governed by the size of the machine, each pressing being from 400 to 4000 pounds as the size of the machine may be, and from four to six pressings a day, thus yielding from 400 to 2,000 gallons per day

Machines will be constructed to order, of any size. For any further information address the undersigned,

DENN & MANROW,
Patentees and Proprietors, Sacramento.

P. S.—The Editor of the Farmer having thoroughly examined this Wine Press, we are permitted to refer to him for capability and perfection, or any other information. 9

Literary Shrubbery.

Blackbirds Wings.—Fashion is appropriating the wings of the American blackbird, so abundant in Autumn in the swamps and among the river rushes, to a new use. The milliners have pressed them into service, and they now serve a pretty purpose in the jaunty head gear of juvenile misses. The wings are coal black, with a patch of vivid vermillion on the shoulder. They are placed, folded *au naturel*, in the little hats worn by the misses and young children. The effect is very jaunty, suggesting the partridge wing worn in a Scotch cap as seen in the fashion plates. The pinion of the red-winged blackbird is so much handsomer.

Our Best Parlors.—Don't keep a solitary parlor, into which you go but once a month, with your parson or sewing society. Hang round your walls pictures which shall tell stories of mercy, hope, courage, faith and charity. Make your living-room the house. Let the place be such that when your boy has gone to distant lands, or even when, perhaps, he clings to a single plank in the waters of the wide ocean, the thought of the old homestead shall come to him in his desolation, bringing always light, hope and love. Have no dungeon about your house—no room you never open—no blinds that are always shut.

The oldest married couple in the world are living in Maruiua, in the colony of New South Wales; they are aged respectively 111 and 107 years. Both are extremely feeble and bedridden, but are in possession of both sight and hearing. The old man arrived in the first fleet in 1788, and has consequently been 75 years in the colony.

A lady made a call upon a friend who had lately been married. When her husband came home to dinner she said, "I have been to see Mrs. ——." "Well," replied the husband, "I suppose she is very happy." "Happy? I should think she ought to be, she has a camel's hair shawl two-thirds border."

"Mamma," said a little girl, pointing to the telegraph wires, "how do they send messages by those bits of wire without tearing them to pieces?" "They send them in a fluid state, my dear," was the mother's reply.

A young lady of musical taste thinks that one of the great blessings of peace—should peace be finally restored—will be that the hand-organs can no longer play "When this cruel war is over" under her window.

A loaf of bread at one of the thanksgiving dinners in New York was eleven feet long, ten inches thick, twenty-two inches wide, and required a whole barrel of flour for its construction.

"Mr. Smithers how can you sleep so? The sun has been up these two hours." "Well, what-if he has? (hiccup.) He goes to bed at dark, while I'm on a bender till after midnight." (hiccup.)

The rebel rams in Europe have been opportunely arrested, but our "Old Buck" is said to be still at large in England.

On the marriage of Miss Wheat, it was hoped that her path would be flowery, and that she might never be thrashed.

As acquaintance suggests the propriety of changing the popular name needle-work to needless work.

"Russia: May her friends and enemies be ours," proposed the brave Farragut at a recent visit to the Russian fleet.

Jebb's Patent Churn.—We invite those who want a churn to call at the Farmer office and see the best churn ever made. One that gives them butter from cream in five minutes, or butter from new milk in ten to fifteen minutes. Seeing is believing, and the trials furnish facts that are not to be gainsayed. Patent rights for counties for sale, from which a fortune can be made. Single churns can be purchased also.

HOTELS.

SOLANO HOTEL

....AND....

ARTIFICIAL BONE FILLING

For Decayed Teeth,

Put in while soft, without pressure or pain. Aching Teeth, or mere Shells can be filled with it, and restored to health and usefulness, by the discoverer, DR. PEARSON (late Pearson & Crane), at his rooms No. 633 (old No. 167) Clay Street, San Francisco.

Dr. Pearson having spent the last six years in New York, Philadelphia, Baltimore, London, and Paris, is prepared to supply at short notice, and at reasonable prices, Artificial Teeth on the most approved methods, including Vulcanite Rubber Work, rendering the Extraction of roots wholly unnecessary.

DR. PEARSON'S NERVINE

Cures the severest Tooth-ache, and serves as a temporary filling—any one can apply it by observing the directions. Price $1, sent by express.

ALL DENTAL OPERATIONS will receive the personal attention of Dr. Pearson, as he has no partner, and INTENDS having none in future. His office has been established thirteen years—being one of the oldest, if not the oldest Dental Office in the State of California.

THE

AUTOCRAT OF THE KITCHEN.

THE ORIGINAL P. P. STEWART.

Fuel Saving and Comfort Producing

LARGE OVEN

SUMMER AND WINTER AIR-TIGHT,

COOKING-STOVE

....FOR....

Wood and Anthracite, or Bituminous Coal.

IMPROVED IN 1859,

With New and Extra Large Flues, and by the addition of the *Celebrated Patent Double-sheet Bottom Flue.*

Attention is invited to the following points of superiority:

1st, Durability—Lasting, with proper care, at least 30 years. Stoves are now in use that were set up in 1833.

2d, Manufacture—Every portion of the Stove is thoroughly constructed Each Stove is submitted to a critical test, and none leave our works unless completely and perfectly finished.

3d, Capacity—Baking, boiling, broiling, roasting, and all other culinary operations performed at the same time.

4th, Economy—Saving the cost of the Stove in one year in the item of fuel

5th, Ventilation of Heat—In the Stewart Stove alone, the front doors open directly into the oven (protected by letters patent), securing a direct draft through the top of the oven, by means of holes perforated in the doors and back flues It will be borne in mind that, as the heated air always rises, this method of ventilation is the only one of any value whatever

6th, Entire Control of Heat—The heat generated by the Stove may be held therein, and used or thrown into the room at pleasure

7th, The Double-Sheet Bottom Flue—By which a compressed and levelling action of heat is obtained, and the oven more evenly and efficiently heated than by any other known invention

8th, Broiling—Performed on the top, and without the possibility of smoke entering the room.

9th Hot Water Reservoir and Warming Closet—Both useful and convenient, supplied by the waste heat and without extra fuel

10th, Water Back—An arrangement for supplying hot water for the bath-room, equal to any range.

☞ Beware of the numerous imitations in the market, many of which resemble the Stewart only in appearance, and none of them possess any of its peculiar qualities. See that the name of P P STEWART, and of the Manufacturers are on each stove None other are genuine For sale by

CALEB M. SICKLER,

v20-6 122 Kearny street, bet. California and Pine, San Francisco.

The Markets.

Wholesale Produce Report.

This represents the prices paid by the dealer to the producer.

Corrected weekly, by A. H. Todd & Co., corner of Clay and Drumm Streets.] Feb. 11.

Our Grain and Produce Markets continue active, and prices are firm for every description of Cereals. Barley, Oats, and Corn are sought after at present, the demand fully equaling the supply. Wheat is in better demand at an advance. Potatoes being about the only article of produce that is neglected, and they have proved a poor crop to the producer. Exports of California Produce for the past week have been on a liberal scale. We have reason to believe that the appearance of the privateer Alabama in the China waters will have an injurious effect on Grain shipments temporarily, and exporters will not consider it prudent to ship in American vessels. Foreign tunnage will be in demand at an advanced rate, which must necessarily come out of the farmer in way of a reduced price. The China demand for California Produce is large and rapidly on the increase, any detriment or interruption is a heavy loss to California.

Our Exports are as follows: Ex the British ship Rosedale for Liverpool, 11,225 sks Wheat, 1508 sks Copper-ore. Ex Prussian ship Ferdinand Brumm for Hong Kong, 14,985 sks Wheat, 3200 qr-bbls 525 bbls and 1857 qr-sks Flour, etc. Ex ship Winfield Scott for Liverpool, 24,240 sks Wheat.

Our receipts of Produce from around the Bay since our last report have been as follows: Wheat 20,428 sks, Barley 11,187 sks, Oats 3110 sks, Corn 195 sks, Potatoes 928 sks, Hay 194 tons, Bran 515 sks, Flour 3856 qr-sks.

Also, Coastwise: Potatoes 4604 sks, Buckwheat 102 sks, Beans 37 sks, Oats 1118 sks, Wheat 325 sks Barley 824 sks.

BY CONTINENTAL TELEGRAPH.

DATES TO FEB. 11.

There is some stir in army circles at the East. The Army of the Potomac has lately made a "reconnoisance in force" across the Rapidan, with "satisfactory results," and some fighting. Richmond has again been nearly captured, and the rebels there badly scared. Gilmore is still dropping his shell compliments on the Charlestonians, and battering away at Sumter, the rebels having lately mounted a few guns on that fused-up fortress. The rebels tried a reconnoisance toward Newbern, N. C., but meeting with a warm reception, concluded to retire. Sherman, is said to be progressing towards Mobile, with a force of 30,000 men, and all the necessary equipments to capture that city or any other place. A plenty of loyal Texans are said to be ready to spring up when the advancing Union column appears, and redeem that State from rebeldom.

The Richmond Sentinel referring to the movements in North Carolina, says the rebel army has fallen back 16 miles from Newbern, finding the fortifications so strong that they could not be taken without great loss. Gen. Pickett, who commanded the expedition, says that he made a reconnoisance to within 1½ miles of Newburn. The Sentinel also says that the Government has discovered the existence of a secret organization, having for its object the release of the Yankee prisoners, the assassination of President Davis and the destruction of the Government buildings. A German named Heinke, member of the treasonable organization, was arrested. A number of important papers were also seized, including lists of members of the organization.

The Enquirer, in a leader, suggests that the Confederate currency, having lost its purchasing quality, and the strong arm of imprisonment having already almost failed, and being sure to lose its potency altogether in a few months, the Commissary Department ought to advertise for proposals to furnish fifty millions of rations of beef, to be paid for in cotton or tobacco.

Commissioner Ould is desirous of exchanging all prisoners, officers, soldiers and civilians received at City Point before the first of January; and all officers and men of the Vicksburg capture who have reported for duty at Enterprise, Miss., prior to November 14th, 1863; also, all officers, and men of the Vicksburg capture belonging to the First Tennessee Artillery.

A Chattanooga dispatch of the 7th says the railroad is open to Cleveland, Tennessee, and will be open to Knoxville within five days. There are reports of a mutiny and wide-spread rebellion in the rebel army afloat, from deserters, who arestill coming in. The railroad depot at Chattanooga, containing quartermasters' stores was burned on Saturday night. The loss to the Government is one hundred thousand dollars. The rebel army is on and around the Tunnel Hill road, near Dalton.

A rebel dispatch from Mobile, Feb. 6, says: The enemy crossed the Big Black yesterday, at the railroad bridge. His force consisted of six regiments of infantry and two of cavalry, and two batteries. They attempted to cross at Messenger's Ford, but failed. The city is full of rumors. Some excitement prevails. The people generally confident. The enemy is 30,000 strong.

The gunboat Flambeau, from Charleston on the 1st, reports that Gilmore keeps up a regular fire on the city, averaging three shells every five minutes. The rebel's have mounted five guns on Sumter. Gilmore keeps a good surveillance of it, and the garrison is enabled to do but little harm. The Navy is still picketing the harbor. The attempt to raise the Weehawken will probably prove a failure. Charleston does not yet show many marks of our fire.

The reporter of the Associated Press, in front of Grant's army, reports, on the highest military authority in Nashville, that all the skirmishes recently reported were merely foraging fights between ours and the rebel cavalry. He also reports that General Park, on the night of the fourth, was at Knoxville, and his communication not cut off this side of Cumberland Gap. The Tazewell fight is said to have been an unimportant affair, and did not affect the general situation. General Schofield assumed command of the Department of Ohio.

A Memphis letter fully confirms the previous reports as to Sherman's movements towards Jackson, Meridian, Montgomery or Mobile. A cavalry force is attached thereto, under Generals Smith and Grierson, and a large number of negro troops from Port Hudson, under General Ullman, are to join the expedition. The correspondent says there are boats on Tombigbee river, which may be made available and he believes Mobile to be the real object of the movement.

A dispatch from Gallatin, Tenn, the 8th, says the expedition under command of Col. McConnell, which has been out 11 days, returned, having traveled over 300 miles. They killed 33 guerrillas and took 102 prisoners, captured horses and mules and a considerable quantity of stolen property.

New Orleans dates to the 2d, are received. Gen. Banks' letter to the State Convention says he will allow all persons to vote at the ensuing election, who have been registered as voters under the President's Proclamation of the 20th of July, 1862, and his subsequent orders on the subject. He will be glad to appoint Commissioners of Elections, who will be authorized to administer the oath of allegiance to persons otherwise qualified to vote by the State laws. All persons taking the oath on the day of election are authorized to vote. The recruiting of veterans exceeded all expectation, and an active campaign is looked for soon. Farragut's fleet had arrived.

Gen. Butler has commenced the establishment of a common school system at Norfolk and Fortress Monroe precisely like that in Massachusetts.

Gen. Butler sent an expedition, Feb. 6, under Gen. Wistor, consisting of cavalry and infantry, to make a raid into Richmond and release the Federal prisoners. It was expected to surprise the enemy at Bottom's Bridge, who had for some time only a small picket there. The surprise failed, because—as the Richmond Examiner says—a Yankee deserter gave information in Richmond of the intended movement, and the enemy had felled a large amount of timber, so as to block up and obstruct the fords, and make the crossings impossible for our cavalry to pass. The expedition having failed, our troops returned to Williamsburg. On the march, our rear was attacked by the enemy, but they were repulsed without loss. A great excitement prevailed in Richmond, during Saturday and Sunday. The bells were rung, and men rushed through the streets crying "To arms! the Yankees are coming!" women and children were hurrying to and fro, and there were evidences of such a panic as was seldom before seen in Richmond. The Home Guard were all marched out to the defenses, and armed citizens were placed on guard over the prisoners. It is though that 8,000 or 10,000 cavalry would have little difficulty in entering the city and releasing the prisoners before a sufficient force to resist them could be brought to aid the garrison there.

☞ **Holloway's Pills.—Determination** of blood to Head.—Imprudence or neglect of health is tantamount to constructive suicide—the penalty, a short, quick struggle, and instantaneous death. All who are full of habit or subject to apoplectic or epileptic fits, should never be without a supply of these invaluable medicines, as they will find a safeguard in occasional doses of them. In every instance they have been attended with the most successful results.

Fall Crops of 1863.

In the monthly report of the Department of Agriculture, says Hunt's Merchants' Magazine, of Dec. 1863, for September and October, the amount of the crops for 1863 were given:

ESTIMATES FOR SEPTEMBER.

Corn.	Buckwheat,	Potatoes,	Tobacco.
449,161,834.	17,193,252.	97,870,035.	258,462,413.

ESTIMATES FOR OCTOBER.

Corn.	Buckwheat,	Potatoes,	Tobacco,
452,446,128.	15,821,305.	114,533,118.	267,302,670.

These estimates exhibit a remarkably close approximation, and speak well for the system adopted by the department to ascertain the amounts, annually, of the leading commercial crops.

The amount of the crops of 1863 is as follows:

Corn.	Buckwheat,	Potatoes,	Tobacco,
826,704,474.	15,821,305.	114,533,118.	267,302,770.

The five principal states of the west for the production of sorghum molasses are Missouri, Iowa, Illinois, Indiana, and Ohio. Their estimated production last year was 10,203,728 gallons; this year only 6,970 823 gallons—a decrease of nearly three and a-quarter millions of gallons. The amount of ground planted was much greater than in 1862, but the frost destroyed the yield [an accident that never can happen in California]. The falling off of the hog crop, the present year, in the above named States, is 806,139 head, one-fifth less than last year's estimates.

Foreign Grapes, Plums, etc., in California.

[Letter from a Pennsylvania Grape Grower.]

Nazareth (Pennsylvania), Jan. 15th, 1864.

Editor California Farmer:

Ever since the acquisition of California, by the United States, it has been my wish to move and settle there, as I knew that I would find there a climate better adapted to Horticulture than that which I found here in the Eastern States. But I have always been prevented from carrying this desire into practice. Fruit culture, generally, and the grape-vine especially, has been my hobby as long as I can remember, the source of ever-renewed and unmingled pleasure, while in my native county (Westphalia).

But, lo! when arriving here, in this State (Pa.), a bunch of blue grapes, said to be "first rate," was offered me; I was shocked when I put the first berry into my mouth—no, I was choked, too—and quite at a loss how to thank my kind benefactor for the gift of such "first rate fruit." Nevertheless I set to work planting and grafting and importing fruit-trees and grape-vines from various countries, even from the Cape of Good Hope, in the expectation to find some kind of good fruit that might do well in North America; but, alas, disappointment was the general result. At last, some twelve years ago, I built myself a grapery, and seeing good success I built, two years later, another. Having now such fine grape-wood the thought struck me to send it to California, where I knew foreign grapes would grow. I wrote to Dr. Rhees, in Stockton, a former student of mine, to find some one who would accept of my grape-wood and plant it, he succeeded at last in finding a certain W. S. Smart, near Jacksonville, Tuolumne county, to whom I sent a fine collection of grape-wood and roots, for which Mr. Smart reported his success during several years; but as I have not heard of him for more than a year I fear that he is dead. About three or four years ago I was requested by Mr. Edward J. Jarvis, near Columbia, Tuolumne county, to send him also a collection of grape-vines, which I also did. But as Mr. Smart wrote me that Mr. Jarvis was a rich man and would buy, only, from me, I made him a small charge for my trouble and transport to New York. Next I had an order from Gen. J. A. Sutter, Sutter county (of California gold-finding fame), but I told him that he could now procure all that he wanted in California, as I do no propagate grape-vines for sale.

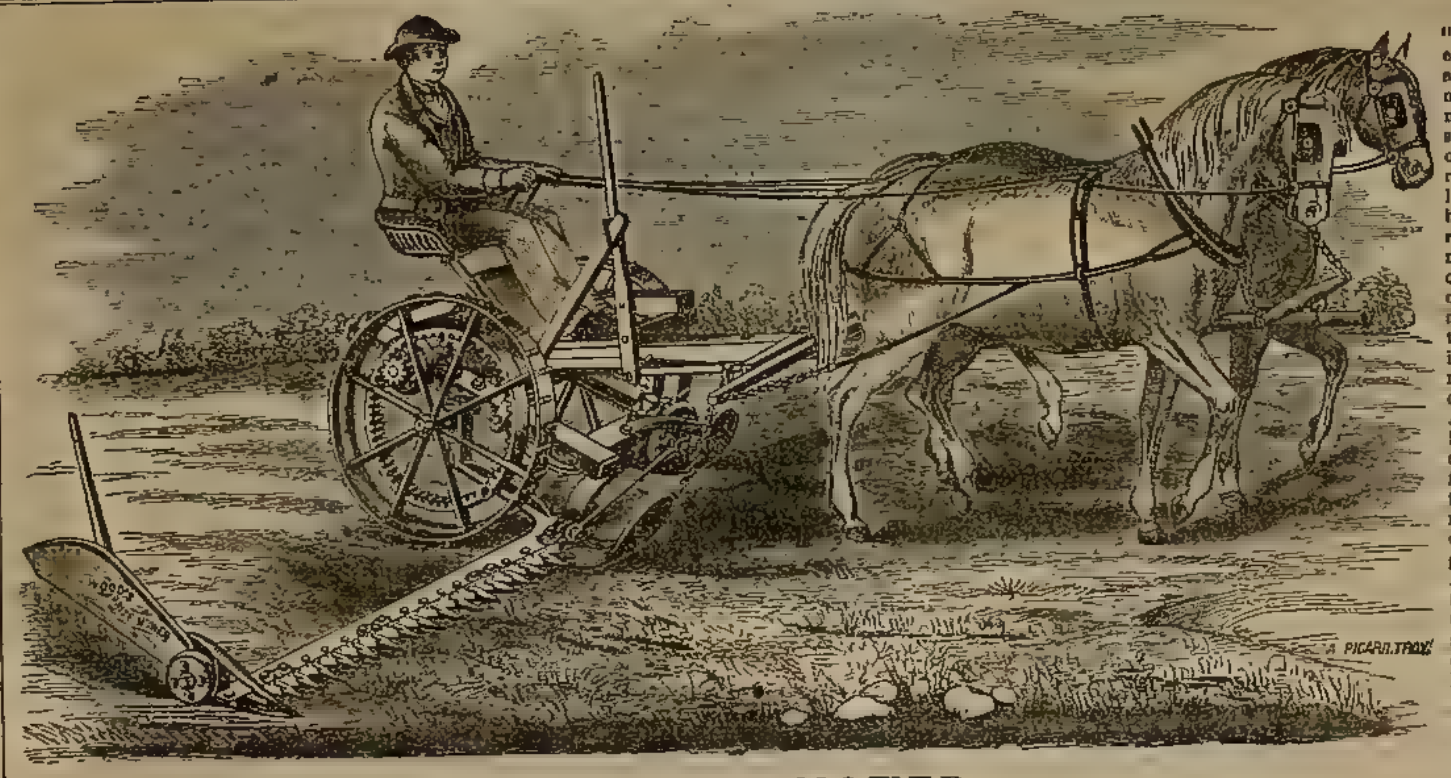
And now I come to the point why I send you this letter, namely: To draw the attention of the Agricultural public of your State and Oregon to those sources where they can obtain something very good, as I have imported and cultivated, of grape-vines, alone, over 300 varieties. Mr. Smart and Mr. Jarvis are entire strangers to me, and the latter has not even given any account of his success. To those who wish to make a very good wine—the best of all wines—let them plant the Riesling grape and the Basilicum grape, pressed together, but to let them get quite ripe. White Lombardy, Van der Lahn, White Augsler, Chasselas Musque, Yellow and Green Silk grapes, and Blue Portugal are very early. Furmint and Harsbereli produce the famous Tokay wine, but must hang on the vine until shriveled to a raisin. The Basilicum grape I sent to Mr. Smart only, not to Mr. Jarvis. But to Mr. Jarvis I sent some apples, which I expect to be of importance for California; the one is an early German apple of peculiar excellence; the other is a Cherokee apple, called "Equinately," which requires for its perfection a long, warm summer; a third apple from Northern Germany, called "Borsdorfer," undoubtedly the *finest* apple in the world, but requires a mild climate, it is the *apple for Oregon*. The German Prune ought to be planted also in Oregon, as we shall look for them when the Railroad is done, as the curculio wont let us have any here in the East. The Blassard grape makes also an excellent and lovely wine, as also the Black Hamburg, if left to become over-ripe. The Italian Malvasier is important for its earlyness, as a table-grape, as well as the Chasselas, in variety. The White Seedless Corinth is a curiosity, large bunch, very small berry, but sweet; I hope that we shall soon see hogsheads full dried and sent us, by rail and sail, of these delicious currants. Yours, etc. B.

[The above letter will doubtless be of interest to our grape-growers and cultivators, and we would be pleased to receive some comments from them. The writer mentions some grapes that are not generally known, or else has called them by names which are not familiar; but we have given the names as written. He is perhaps not fully aware of the great advance we have made in the culture of grapes and other fruit. We hope to hear further from him.]

Remedy for the Borer.

Santa Rosa, Feb. 7th, 1864.

Editor California Farmer:



As I have had long experience in this State, in the culture of the Fruit tree, and, like all horticulturists, have suffered from the ravages of an insect known as the "borer," or worm in trees, I have at last discovered a remedy, and considering it to be my duty to give it to the public, I will ask you to insert it in your columns for the benefit of your many readers.

Remedy: Take straw of any kind, twist a small rope of it, commence at the surface of the soil and wind round the tree, fitting it closely, but not very tight, from the soil to the first limbs of the tree and fasten it, but be careful not to tie so as to obstruct the growth of the tree, and let it remain the year round. This you will find to be a sure remedy. Try it. Yours, etc,

H. H. Lintille.

A Rehearing.—A rehearing has been petitioned for in the case from Tuolumne county testing the right of the California volunteers to vote, and it is probable that a rehearing will be granted. Let not this move prevent legislators from perfecting and passing a law upon this subject. Do not wait for the Court. It may grant this rehearing from policy, and keep the question silent until the adjournment of the Legislature and then reaffirm its opinion disfranchising our brave troops. Let the Legislature do its duty without any regard to the supposed action of that Court and all will be well.—[Bee.

The Hubbard Squash.—Everybody should plant the Hubbard Squash, no luxury equal to it better than the best sweet potatoe.

WOOD'S PRIZE MOWER.

Wood's Prize Mower.

The implement presented by the cut herewith, is now esteemed by our "hay-makers," as the very perfection of machines. With the recent improvements made upon it, new strength and firmness have been given to it to adapt it to the heavy, quick, and constant labor required for the Pacific Coast. The "Wood's Mower" has, thus far, beaten every other Mower at all the Exhibitions in the world. It is universally admitted to be the best, strongest, cheapest, and most complete ever offered. The following testimonial has been received:

Benicia, Jan. 29, 1864.

Messrs. Treadwell & Co: My attention has been called in regard to the relative merits of the Wood's and Buckeye Machines as Mowers, and having some experience in the working of Machines, I have become satisfied that the Wood's Machine is the best. It is of a lighter draught, cuts closer, less liable to get out of order, and no danger if it strikes a rock or stone, which all Machines are liable to do, and I am satisfied the Wood's Machine will wear out two Buckeyes.

I am yours, truly, D. N. Hastings.

Messrs. Treadwell & Co. are sole agents for the Pacific Coast.

Experiment In Feeding Swine.

Different experiments have been made in fattening hogs, but the one most deserving notice was in the State of Maryland. The Agricultural Society of that State instituted an inquiry into the respective merits of two modes of feeding, and the following is one of the results. On the first day of December, four shoats of the same breed, nearly of a size, and as much alike in every respect as could be selected from a herd, were made choice of, each being carefully weighed, and placed in a single stye, where their food could be exactly regulated. Two of them weighed together one hundred and eighty-five pounds. These were fed on one gallon each of shelled Indian corn, the gallon weighing seven pounds. This was the allowance for twenty-four hours, and as much water as they needed. The other two were fed on half as much by weight of Indian meal made into hasty pudding, with a little salt. The seven pounds of meal, when cooked, weighed thirty pounds, and measured three gallons. Before the experiment had progressed a fortnight, it was perceived that the two fed on hasty pudding were outstripping the two fed on whole corn; and on the thirty-fourth day they were again weighed; the corn-fed ones together weighing twenty-five pounds more than they did on the first of December, while the two fed on mush—half the quantity—had gained forty-four pounds.

Grapes and Wine.

A correspondent of the N. Y. Tribune says: "Some time ago I thought of writing against making wine of grapes—now, after reflection and careful examination, I write in favor of the object. Some of the reasons are: many men seek stimulating drink with the rage that a tiger seeks blood. Drink they will. The children of such inherit this taste. It is better for them to have the gout than the delirium tremens. Young persons are led astray—they drink and fall to rise no more. It is fashionable, it has been thought not hurtful, to drink wine. The wine of the saloons, the grog-shops, and the hotel tables, is worse than the whisky of which it is the basis. There is no doubt that in drinking it thousands have been ruined. So long ago as 1789, Marmontelle, in his memoirs, relates that an Archbishop whom he names, when getting a supply of wine, went himself to the press and selected the grapes; he saw them mashed and pressed, he furnished casks into which the wine was put, then he had them put into wagons which he could lock up, and he kept watch of them by day and night till they were placed in his own cellar. If this was necessary then, in order to get pure wine, what is required now? Simply that farmers should plant grapes, and that wine be plentiful. I candidly believe it can become as common as cider. It is vastly easier to make a temperance man of a wine-drinker than of a whisky-drinker, because there is a basis to work on. Reforms come by degrees. First, one step, then another step; never many steps at once. The temperance movement has resulted in making beer-drinkers. Next let there be wine-drinkers. When this habit shall be removed, it will be last in the series of temperance reform. Perhaps, if not quite so successful in this, no harm will be done.

We must take the mass of mankind as they are, not as we wish them to be, or as a few of us may be. I do not believe that if we have a plenty of pure native wine we will be inclined to abandon it for whisky, any more than I believe we will abandon good for poor food. Wine drinking, as I propose it, is wholly unknown in this country. I have no confidence that a glass of pure wine can be obtained, simply by asking for it, either in New York or London. In Cincinnati it is notoriously drugged. I think I can show how almost every farmer can have barrels of pure wine in his cellar, and at a little expense. Let us remember that we have free schools, that the sciences are enlarging, and that the human brain itself is expanding. A vast, rich, and wonderful country is ours. The Arabain Nights does not speak of any country so desirable as our own. Every one who treads this soil should be proud that even in a remote degree, he shares in this wealth, and that he is able to contribute to our shining destiny.

U. S. Agricultural Society.

The "annual meeting of the United States Agricultural Society was held last Wednesday, in the Smithsonian Institute, Washington. Mr. B. B French was elected President for the ensuing year, with one Vice-President from each of the loyal States; Benjamin Perley Poore, secretary, and Joseph F. Brown, treasurer. Executive Committee—Isaac Newton, Commissioner of Agriculture; John Jones, Delaware; Frederick Smyth, New-Hampshire; Ward H. Lamon, Illinois; W. B. Todd, District of Columbia; James S. Grinnell, Massachusetts; J. R. Dodge, Ohio.

"A resolution was adopted favoring an exhibition of stock, agricultural machines, products of textile fibres, wool, products of sorghum, native wines, &c., also, a resolution commending the system for the collection of statistics adopted by the Department of Agriculture and the publication of reports. The meeting then adjourned till the 24th of February."

The foregoing is the brief account we have of the annual meeting of the National Society. The exhibition recommended, we do not agree to. Omitting stock and machinery, such an exhibition would be very desirable, if held at the National Capital. The proof of the correctness of our protests against this society holding ambulatory agricultural exhibitions, was established by their abandonment several years ago.—[Gor Tel.

Sleighing.—Only about five inches of snow fell last week, and although the sleighing was anything but good, our citizens availed themselves of the opportunity offered, and made the best possible use of it.—[Quincy (Plumas county) Union.

An apple tree is in full bloom at Red Bluff.

The Beauty of Sewing.

"There is something very pleasant and even touching—at least, of very sweet, soft, and winning effect—in this peculiarity of needlework, distinguishing women from men. Our own sex is incapable of any such by-play, aside from the main business of life; but women, be they of what earthly rank they may, however gifted with intellect or genius, or endowed with awful beauty, have always some little handiwork ready to fill the tiny gap of every vacant moment. A needle is familiar to the fingers of them all. A queen, no doubt, plies it on occasions. The woman-poet can use it as adroitly as her pen. The woman's eye that has discovered a new star, turns from itsglory to send the polished little instrument gleaming along the hem of her kerchief, or to darn a casual fray in her dress. And they have greatly the advantage of us in this respect. The slender thread of silk or cotton keeps them united with the small familiar, gentle interests of life, the continual operating influences of which do so much for the health of the character, and carry off what would otherwise be a dangerous accumulation of morbid sensibility. A vast deal of human sympathy runs along this electric line, stretching from the throne to the wicker chair of the humblest seamstress, and keeping high and low in a species of communion with their kindred beings. Methinks it is a token of healthy and gentle characteristics, when good women of high thought and accomplishments, love to sew; especially as they arenever more at home with their own hearts than when so occupied. And when the nice work falls in a woman's lap of its own accord, and the needle involuntarily ceases to fly, it is a sign of trouble, quite as trustworthy as the throb of the heart itself."

The above very spirited and pretty paragraph illustrates the idea of a woman's power and ability in the performance of those duties that can be classed among the useful and the ornamental; but however poetic may be the above description of the "beauty of sewing," with the needle—stitch, stitch, stitch, when referring to the old fashioned way of sewing by hand—here is new "Song," been put into the mouth of the Seamstress, *who lives by her labor*, as well as the Artist worker in Embroidery since the grand invention of the Sewing Machine.

Now, instead of hard work, or "drudgery," it is only pastime, or a stimulus to a love of the beautiful. Look at the innumerable specimens in every family, of little "children's dresses," so exquisite, that never would or could have been accomplished save with a Sewing Machine. Besides, the cost of such labor has now been brought to a mere nominal sum, by the invention of this noble labor-saving implement, for woman. We are glad to know that over the whole United States where there is now a trade continued, the Wheeler & Wilson Sewing Machine is being called for in immense numbers. So great has been the demand this last year that Wheeler & Wilson have not been able to keep a stock on hand. We learn from our correspondent, in New York, direct, that "so great has been the orders from every part of the country, that it was impossible to supply orders at once, and never have they had so many workmen in their employ as at the present time, nor has their business ever been so good, so greatly prosperous as now; notwithstanding some of the other makers of Sewing Machines are boasting largely of taking premiums, all over the country, Wheeler & Wilson have not had time to exhibit out of New York, or to *compete at all*, for premiums, the past year; those that claim them won them without competition. Wheeler & Wilson did exhibit in New York, and always bore off the first and highest prize, as they only desire to win by merit, when in full competition with as many competitors as please to make the exhibition. The newly improved machines are now at the agency of J. B. Haydon, Esq., whose attention and explanation of those admirable machines, together with the various styles of work now shown by the accomplished Lady Artists, at the rooms, will convince all of their superiority.

The Work at the Aquila.—The workmen on the wreck of the Aquila were impeded the greater part of yesterday by a quantity of lumber and loose dunnage which had worked its way up to the main hatch and prevent the hoisting out of the cargo. The immensely heavy guns of the Comanche lie directly under the main hatch, where the divers are now at work, but in the lower hold, and it will be some time before they will be got out, unless it is decided that urgent necessity demands an extraordinary effort. Sixteen working days, including those employed in cutting away the decks and clearing the hatchways, have now been consumed by the wreckers, and about two hundred and forty tuns of the cargo have been got out. By the end of next week, at least one hundred tuns more will be saved. The fresh water condenser of the Comanche, weighing two and a half tuns, was landed at the foot of Third street, last evening.

The useful and beautiful are never apart. It is a blind man's question to ask why those things should be loved and worshiped which are beautiful.

What are the best kind of Agricultural Fairs?—Farmer's daughters.

MINERALOGY.

[Continued from California Farmer of February 19th, 1864.]

Silver.

Silver occurs native and alloyed; also mineralized with sulpur, selenium, arsenic, chlorine, bromine, or iodine, and in combination with different acids.

The ores of silver fuse easily and decompose before the blowpipe, affording a globule of silver either alone or with soda; the globule is known to be silver by its flattening out readily under a hammer, and also by its sectility. The species vary in specific gravity from 5·5 to 10·5.

NATIVE SILVER.

Monometric. In octahedrons. No cleavage apparent. Occurs often in filiform and arborescent shapes, the threads having a crystalline character; also in lamina.

Color and streak silver-white and shining. Sectile. Malleable. H=2·5—3. Gr=10·3—10·5.

Composition: native silver is usually an alloy of silver and copper, the latter ingredient often amounting to 10 per cent. It is also alloyed with gold. *A bismuth silver* from Copiapo, S. A., contained 16 per cent of bismuth.

Before the blow-pipe it fuses easily and affords a globule which becomes angular on cooling. Dissolves in nitric acid, from which it is precipitated by putting in a clean piece of copper.

Dif. Distinguished by being malleable; from bismuth and other white native metals by affording no fumes before the blowpipe; by affording a solution with muriatic acid, which becomes black on exposure.

Obs. Native silver occurs in masses and string-like arborescences, penetrating rocks, and is found in igneous rocks and in sedimentary strata, in the vicinity of dikes of trap and porphyry.

The mines of Norway, at Kongsberg, formerly afforded magnificent specimens of native silver, but they are now mostly under water. One specimen from this locality, at Copenhagen, weighs five hundred pounds. Other European localities are in Saxony, Bohemia, the Hartz, Hungary, Dauphiny. Peru and Mexico also afford native silver. A Mexican specimen from Batopilas, weighed when obtained, 400 pounds; and one from southern Peru (mines of Huantajaya), weighed over 8 cwt. In the United States, elegant specimens are associated with the native copper of Lake Superior. The silver generally penetrates the copper in masses and strings, and is very nearly pure, notwithstanding the copper about it.

Much of the galena of the west contains a very small per centage of silver, and that of Monroe, Conn, yields nearly 3 per cent.

Native silver has also been observed near the Sing Sing state prison, N. Y.; at the Bridgewater copper mines, N. J.; and in handsome specimens at King's mine, Davidson county, N. C.

Uses. The uses of silver are, for the manufacture of various articles of luxury, for plating other metals, for philosophical instruments, for coinage, and also various purposes in the arts. For coins, it is alloyed in this country with copper, and is thus rendered harder and more durable; 1000 parts of the coin contains 100 parts of copper. When this alloy is boiled with a solution of cream of tartar and sea-salt, or scrubbed with water of ammonia, the superficial particles of copper are removed, and a surface of fine silver is left. Silver is much less malleable than gold, and cannot be beaten into unbroken leaves less than 160,000th part of an inch thick.

In expressing in the arts the purity of silver, if absolutely pure, it is said to be silver of 12 dwts; if it contain on-twelfth of its weight of alloy it is called silver of 11 dwts; if two-twelfths be alloy, it is called silver of 10 dwts, and so on.

VITREOUS SILVER—*Sulphuret of Silver.*

Monometric. In dodecahedrons more or less modified. Octahedron, and also other modifications. Cleavage sometimes apparent parallel to the faces of the dodecahedron. Also reticulated and massive.

Luster metallic. Color and streak blackish lead-gray; streak shining. Brittle. H=2—2 5. Gr 7 19—7 4.

Composition: when pure, silver 87 04, sulphur 12·96. Before the blow-pipe it intumesces, gives off an odor of sulphur, and finally affords a globule of silver. Soluble in dilute nitric acid.

Dif. Resembles some ores of copper and lead, and other ores of silver, but is distinguished as a sulphuret by giving the odor of sulphur before the blow-pipe, and as an ore of silver by affording a globule of this metal, by heat alone. Its specific gravity is much higher than any copper ores.

Obs. This important ore of silver occurs in Europe, principally at Annaberg, Joachimstahl, and other mines of the Erzgebirge; at Schemnitz and Kremnitz, in Hungary, and at Freiberg in Saxony. It is a common ore at the Mexican silver mines, and also in the mines of South America.

A mass of sulphuret of silver, is stated by Troost, to have been found in Sparta, Tennessee. It also occurs with native silver and copper in Northern Michigan.

Besides this sulphuret of silver there are two others, which contain also sulphuret of iron or copper.

Stromeyrite. This is a steel-gray sulpuret of silver and copper, containing 52 per cent of silver. Gr=4·25. Before the blowpipe it fuses and gives an odor of sulphur; but a silver globule is not obtained except by cupellation with lead. A solution in nitric acid covers a plate of iron with copper, and a plate of copper with silver indicating the copper and silver present. From Peru, Siberia, and Europe.

Sternbergite. A sulphuret of silver and iron containing 33 per cent of silver. It is a highly foliated ore resembling graphite, and like it leaving a tracing on paper; the thin laminæ are flexible and may be smoothed out by the nail. Luster metallic, color pinchbeck brown. Streak black. It affords the odor of sulphur and a globule covered with silver on charcoal, before the blowpipe. With borax a globule of silver is obtained. From Joachimstall, in Bohemia.

BRITTLE SILVER ORE—*Sulphuret of Silver and Antimony.*

Trimetric. In modified right rhombic prisms. M: M=115°30′. No perfect cleavage. Often in compound crystals. Also massive.

Luster metallic; streak and color iron-black. H=2—2·5. Gr=6 27.

Composition: Sulphur 16·4, antimony 14·7, silver 68·5, copper 0·6. Before the blowpipe it gives an odor of sulphur and also fumes of antimony, and yields a dark metallic globule from which silver may be obtained by the addition of soda. Soluble in dilute nitric acid, and the solution indicates the presence of silver by silvering a plate of copper.

Dif. The black color of this ore distinguishes it from the preceding; and more decidedly the fumes of antimony given off before the blowpipe. By the trial with nitric acid as well as by soda and the blowpipe, it is ascertained to be an ore of silver.

Obs. It occurs with other silver ores at Freiberg; Schneeberg, and Johanngeorgenstadt, in Saxony; also in Bohemia and Hungary. It is an abundant ore in Chili, Peru, and Mexico. It is sometimes called *black silver.*

An antimonial sulphuret of silver is said to occur with native silver and native copper, at the copper mines in Michigan.

Uses. This is a very important ore for obtaining silver, especially at the South American mines.

Besides this there are other antimonial, and also arsenical and selenniferous ores of silver.

HORN SILVER—*Chlorid of Silver.*

Monometric. In cubes, with no distinct cleavage. Also massive, and rarely columnar; often incrusting.

Color gray, passing into green and blue, and looking somewhat like horn or wax. Luster resinous, passing into adamantine. Streak shining. Translucent to nearly opaque. Cuts like wax or horn.

Composition: when pure, silver 75·3, chlorine 24·7. Fuses in the flame of a candle, and emits acrid fumes. Affords silver easily on charcoal. The surface of a plate of iron rubbed with it is silvered.

Obs. A very common ore and extensively worked in the mines of South America and Mexico, where it occurs with native silver. It also occurs at the mines of Saxony, Siberia, Norway, the Hartz, and in Cornwall.

Iodic Silver. Bromic Silver. Silver also occurs in nature united with iodine and bromine. These rare ores occur with the preceding in Mexico, and the latter in Chile, and at Huelgoet, in Brittany.

Chenocoprolite, (*ganzekothig-ers* of the Germans). Mammillary, of a yellow or pale green color; luster resinous. Yields silver and alliaceous fumes before the blowpipe, and is supposed to be an arseniate of silver and iron.

[TO BE CONTINUED.]

The Tendency of Labor.

We make the following extracts from the Report of the Commissioner of Agriculture, for 1862:

The two prominent causes which have tended to degrade labor in the United States are, first, *the many avenues to wealth, respectability and position open to young men, independent of manual labor;* and, secondly, *the condition of a large portion of our laboring population.* A great point will be gained for agricultural purposes when farmers cherish not only a high respect for their employment themselves, but instil their convictions into the minds of their children. It is not only a great mistake but a great misfortune that young men should feel dissatisfied with the comparatively slow gains of agriculture, or that they should regard the farmer's life as one of tameness and real drudgery. They notice the rapid growth of the property of the merchant, the trader or the professional man, and see him in situations of apparent comfort and ease, limiting, however, their observations to the few who are successful, and not noticing the many who fail of ultimate success. Independent of the unrest, the disappointed ambition, the wear and tear, and mean rewards of public life, it is said that of one thousand merchants who had kept an account at one of the Boston banks, only *six died rich.* The number of successful merchants in New York is even less than this. On the other hand, the farmer, if not absolutely rich, is, at least, independent. He has a home which his labor and his taste have adorned; he has broad acres, not held by lease, as in many countries, but as a freehold. In the Old World land is generally divided into large estates, and owned by few proprietors. In England, for instance, the number of acres is 32,342,400; the number of proprietors about 44,000; in Scotland, 19,738,930 acres and 4,000 proprietors. Such is not the case in our country. No law of entail or primogeniture fosters the accumulation of large estates. It is one of the blessings of the American farmer that he owns in fee simple the land which he cultivates. He has not to stoop and cringe and stand in awe in the presence of those whom he calls masters. He has no master—no favors to beg of man. He has a sturdy independence of character, adorned, perhaps by culture and refinement. He belongs to a class of citizens who hold in their hands five-sixths of the wealth of the country and its entire political power; and the hands which have wrought this wealth are able to defend the Constitution which makes us one people.

In speaking of the other influence which tend to degrade labor in the United States I do not propose to discuss the vexed question of the relation between capital and labor, but to state a fact as patent as any other on the surface of American society. Slavery always and everywhere degrades labor. This degradation is positive at the south, while its reflex influence is felt throughout the north, in spite of the teaching of the press, the pulpit, the platform, and the example of millions of honest, noble, hard-working men. Had labor been respected at the south—had the soil, divided into moderate farms, been owned by those who tilled it, as at the west—no rebellion would have been desirable or possible. In Brazil the same influences are at work as in our own country. Servile labor has so degraded agricultural industry that a plow was unknown there thirty years ago, and an empire capable of feeding all Europe has never been able to raise food sufficient for its own 7,000,000 of inhabitants, but depends for its breadstuffs upon the United States and the neighboring republics. Though the greatest inducements have been held out by the government, immigrants, owing to the condition of labor, have hitherto been slow in settling in Brazil. Those who have gone, however, are forcing, by superior skill, intelligence and public sentiment, slave labor towards the equator, and winning the victory which free labor ever gains.

Labor, for a fair remuneration, whether of the brain or hand, should be the glory of America; besides, there is a true dignity in labor, especially in cultivating the soil. The object which the farmer has in view is to subdue the earth; to eradicate its briers and thorns, and to plant in their stead what is useful and beautiful to man. It is to fulfill the original appointment of the Creator, that man "shall eat bread in the sweat of his face." "Labor," says a noble worker, "has been made by Providence the law of man's condition. It is the price at which whatever is valuable in life must be earned. Whatever, therefore, degrades labor as the business of life, or renders it distasteful or dishonorable, does violence to our social laws no less than to a wise economy." All improvement—all progress of the race in civilization—has been the result of intelligent labor. It has built our cities, dug our canals, constructed our railways, developed our mines, built our steamers and ships, given life and energy to the industrial arts, and, above all, is feeding and clothing our people and providing for their happiness. "The nation," says Dr. Samuel Johnson, "that can furnish food and raiment, those universal commodities, may have her ships welcomed at a thousand ports, or sit at home and receive the tribute of foreign countries, enjoy their arts, or treasure up their gold." Let labor, therefore, be crowned with honor—that labor, especially, which contributes so much to the welfare of man, and allows him to approach nearest, through Nature to Nature's God.

The fourth condition on which depends our agricultural progress is *a more thorough knowledge and practice of agriculture as a science and as an art;* and by this is meant a knowledge of the principles—the *whys* and *wherefores*—which lie at the foundation of successful farming, and of the practical application of those principles, combining skill, economy, and all the appliances of art. The great difficulty with the American farmer has been, and still is, that he has been nurtured and educated in the habit of cultivating a *primitive soil.* The labor and expense attending the accumulation and application of manures, with the necessity of *unlearning* old habits and theories, have made him tempt nature to the verge of exhaustion, and degrade a noble profession to one of mere routine. While Americans are ever disposed to boast of their inventive skill and teachable disposition, the elder nations, which we affect to despise, offer us some valuable lessons in agriculture. The Chinese, by minute and careful culture, by rotation of crops, and by the use of every possible kind of manure, have made their lands yield undiminished products for thousands of years. The northern provinces of China produce two annual crops, and towards the south five are usually obtained every two years. This prodigious yield has continued for ages, and yet the soil is rich and productive, teeming with nearly four hundred millions of human beings. The spade is extensively used; every inch of ground is thoroughly tilled; the hills are terraced, and the soil irrigated wherever possible. Agriculture is everywhere honored and encouraged. The Emperor himself goes annually to the field and turns the first vernal furrow. If China or Japan were to follow our methods of tillage, famine and death would soon sweep millions into their graves. * * * *

Let the farmer, therefore, as a cultivated man, magnify his occupation. In all ages wise, learned, and good men have gladly turned away from the employments of public life to the pleasures, the consolations, and the quietude of rural pursuits. Without citing the men of other countries and ages, who can forget how eagerly Washington laid aside his robes of office and sought the repose of Mount Vernon; how gladly Clay returned to the shades of Ashland after the excitement and honors of congressional life; and how Webster hastened from the cares of state to his herds and fields, and the sight and sounds of the ocean, all endeared to him by the sweet memories of rural life? Men who have chosen to follow other avocations of life, and who pursue them with success, still long for the pleasures and employments of the farm. All their plans of life have a kind of natural culmination in the determination to retire into the country and share with the farmer the healthful and dignified occupation of husbandry.

Alsike

A correspondent of the Prairie Farmer writes the following in regard to Alsike or Swedish White Clover. I do cultivate the plant. I sowed one acre three years ago next Spring, and I could ask for no better hay or bee pasture. After it was thrashed the horses and cows seemed to prefer it to good timothy hay. I sowed six acres last Spring and let my neighbors have 60 bushels of chaff. That I sowed first cut more than double the hay per acre than the red clover. It stands the Winter better than the red clover, and it yields many flowers on a stalk. It blossoms about the same time as the White Clover, but the second crop of flowers comes about the time the common white is gone, and lasts until hard frost.

I have seen the bees at work on it when it was as wet as the rain could make it, and from early in the morning until late in the evening it is alive with bees. And when it is in full bloom one can smell it as far as you can a field of buckwheat. I think four pounds of seed to the acre would be plenty. I think wheat the best to seed with. I went over the ground once with the drag after the clover was sowed. Let those that try it sow it on a good level piece of prairie, and if anything in the clover line will please them, I think the Swedish White Clover will do it. I know of but one place where the seed can be procured that is clean, and that is of J. M. Torburn & Co.'s Seed Warehouse, 15 John St., N. Y. I shall have but little to spare and that will be in the chaff and I prefer to let my neighbors have it. I paid 60 cents per pound, but last Spring they charged one dollar per pound.

CURRANTS.—Dried currants of commerce, as they are miscalled, are in reality a grape, and free from stones or pits; they come from the Isthmus of Corinth and several places in the Indian Archipelago. A small Spanish currant is sometimes sold in their stead. It is the island of Zante which furnishes the largest amount of these currants, and their cultivation is materially lessening, as the jealousy of the Ottomans does not allow large vessels to enter the gulf for their purchase. These currants grow on vines like grapes; the leaves are somewhat the same figure, and the grapes similar; they are gathered in August, and dried on the ground; when kegged they are trodden down closely with the feet. Zante island produces enough to load five or six large vessels; Cephalonia three or four, and other islands one.

THE 22-ton gun of Sir William Armstrong requires a crew of 20 men to handle it; the 20-ton gun in the monitors can be worked by three, or at most four men—a slight difference!

Churning.

A Writer in the Germantown Telegraph says: A talented Frenchman once wrote a pamphlet upon the proper manner of blowing out a candle; and I suppose the reader will consider his book and the heading of this article to be parallel cases and exclaim, "Why, everybody knows how to churn." But I think a careful examination will show that everybody does not know how to churn, or rather how to produce butter from cream, or we should have less growling from the "gudewife" because the butter does not "come." All who have had any experience in the matter know the apparently perverse nature of butter; at times it will come (that is, separate from the buttermilk) in a few minutes, and sometimes will not come at all. This and many other curious facts may be made clear by a little careful investigation into the matter, which, with thy permission, friend editor, I propose to make. The butter exists in the cream in the form of minute globules surrounded by a thin film of casein, and to obtain the butter we must first break this film. This may be done in two ways, either by agitating it, or by heating it. There are several conditions which influence the time required for separating the butter by churning; and if these are thoroughly understood and complied with, there will be little or no trouble in getting butter to come. The main and most important condition is the temperature of the cream when it enters the churn; there seems to be a certain medium established, and it seems to make but little difference whether the temperature of the cream is above or below it, there will still be the same trouble in breaking the casein which envelopes the globules of butter. The cream when poured into the churn should not have a higher temperature than 55° nor a lower one than 53°; when put in at this temperature, it will rise from five to ten degrees during the operation of churning. Another important condition which does much to influence the time required for separating the butter is the state of the cream when it is put into the churn; if sweet, it will require much longer than if sour,—and it is an established fact that before butter can be made the cream must be sour; if it does not reach this state before it goes into the churn, it must and will afterward, or no butter will be obtained. Some of those who always take the premium at our county fairs, always churn sweet cream to obtain it, and I have often had this thrown in my teeth when advocating the above doctrine, but that does not controvert my argument, for before the butter separates it does get sour. A thermometer hanging in the room where the cream is kept will indicate the temperature of the cream at the time, and this may be either raised or lowered to about 54° after it goes into the churn, by adding cold or hot water, as the case may require, while the churn is in motion.

The time occupied in churning has a great effect upon butter, and also upon the temperature of the cream in the churn: if the cream is at 55° when put into the churn, very fast churning will raise it too high, and soft, light colored butter will be the result, especially in warm weather; in cold weather the motion should be faster, in order to keep up the proper temperature. I have known entire churnings to be thrown into the hog tub because one or two of these necessary conditions were not complied with. Even when the churn fails to separate the butter, we have one unfailing agent left in the form of heat, which never fails to burst the films of casein, but will not produce an article fit to be called butter—but it can be put to uses known to every housekeeper. Some are in the practice of churning the whole milk; in this case it should have a temperature of at least 65° before going into the churn. Of the comparative economy of the two methods, churning the cream and churning the whole milk, I will treat in my next.

Opinions of Professors of Music on Jacob Zech's Pianos.

SAN FRANCISCO, December 29, 1863.

JACOB ZECH, ESQ:

Dear Sir: We, the undersigned, musicians of the City of San Francisco, do hereby give our unbiased opinion as to the workmanship, purity, power, and brilliancy of tone, and perfectness and durability of action, of the Grand Piano manufactured and exhibited by you. We have no hesitation in pronouncing them far superior to any piano, ever placed before us for inspection. At the late exhibition of the State Agricultural Society, the Committee saw fit to denounce your instrument and award the first prize for an inferior *square piano,* which we pronounce a great injustice to you, and we do hereby give our names, and warrant your pianos to be superior to any in the State. With the greatest esteem, and the most fervent desire for your success, and a wish that the people of California may give you justice, and not be controlled by money or the opinion of any body of men who are not qualified to judge of the merits of a Piano.

We are truly yours, etc,

R. HEROLD, Professor of Music,
GEO. T. EVANS, Pianist and Organist,
GEO. F. PETTINOS, Pianist and Organist,
LOUIS SCHMIDT, Pianist and Organist,
CHAS. STADERMAN, Pianist,
STEPHEN W. LEACH, Artist,
L. T. PLANEL, Professor of Music,
A. LAPPGER, Pianist,
ALBERT STOHR, Musician,
JOSEPH B. SCHMITZ, Musician,
EMILE TOUSSIN, Pianist,
CHAS. SCHULTZ, Pianist and Organist,
J. D. KNELL, Pianist, and Organist at Cathedral,
H. HOLZHAUER, Pianist,
WM. CROOKER, Pianist.

Letter to Jacob Zech.

[The following notice of my Pianos was received by me from the gentlemen named, professors of music at Sacramento, and approving, in very flattering terms, my instrument.—J. ZECH.]

Your Grand Piano was an excellent and beautiful instrument, full and rich and tone, in with all the excellencies that are desired in a Grand Piano.

Your Square Piano was one of extraordinary excellence, and beyond question the best on exhibition, having a full and powerful tone, yet, with that soft and delicate expression so desirable to an artistic ear. We feel gratified to know of your success in this art, and hope your efforts will be duly appreciated.

Wishing you all success, we are your friends,
CHARLES WINTER, Pianist,
CHAS. STADDERMAN, Pianist.
CHRISTIAN STATFIELD, Pianist,
GEORGE GREINER, Piano Maker.

SACRAMENTO, October 6th, 1863. 21-3m

SEEDS,

NO. 408 CALIFORNIA STREET

Old Number 110,

Between Sansome and Montgomery streets,

SAN FRANCISCO, CAL.

THE UNDERSIGNED HAS ESTABLISHED SUCH a correspondence and business in Europe as to enable him to secure from the very best source—the most careful growers—their choicest seeds grown, of which he will always be in receipt, and in endless variety, imported directly from France and England, from well known and responsible houses; some of the most prominent of which are named in our catalogues.

It has been the experience of our best gardeners and growers, and all others who plant seed, that seeds raised in California are not fully reliable and cannot be far superior of year, until more capital, experience and scientific knowledge shall be given to the business.

HAS FOR SALE

Alfalfa or Chile Clover;	Hungarian Grass;
Kentucky Blue-grass;	Orchard Grass;
Red-top Grass;	Soinfoin Grass;
English Rye-grass,	Timothy Grass;
Red Clover;	White Dutch Clover;
Crimson Clover,	Lucerne, &c. &c. &c.

With many entire new varieties of Grass Seeds and prepared Lawn Grasses never before offered.

EVERY VARIETY OF

BEET, CABBAGE, CARROT, RADISH, TURNIP, CUCUMBER, MELONS, LETTUCE, ONIONS, TOMATO, EARLY AND LATE PEAS, BEANS, &c., &c., &c.

Tobacco Seed.

HAVANA, VIRGINIA, CONNECTICUT SEED LEAF, AND MARYLAND TOBACCO SEED.

COTTON SEED.

Guano from Johnston's Island.

FLOWER SEEDS (300 Varieties

BULBS:

LILIES,	TULIPS,	HYACINTHS,
Amaryllis,	Anemones,	Ranunculus,
Narcissus,	Tuberoses,	Peony-roots,
	Gladiolus.	Iris,

and in endless variety, imported direct from FRANCE and GERMANY.

From his long experience in the Seed Business (on thirteen years), and his very extensive stock of good appertaining to an establishment of this kind, he is confident of his ability to satisfy his patrons.

California Notes,

ABOUT

GRASSHOPPERS AND LOCUSTS.—No. 2

BY ALEX. S. TAYLOR.

Continued from the California Farmer of February 13, 1864.

Notes of 1859, and 1860.

IN CALIFORNIA.

Grasshoppers and Crickets.—The grasshopper, langosta or chapulis (chapule in the singular, and chapulis in the plural in California), was called in the different Indian languages of Alta California as follows, as ascertained from some of the Indian vocabularies we have collected: The Indians of Orleans Bar and vicinity, on Klamath river, Klamath county, called it *Chana*. Those of San Luis Rey Mission call it *To-mow*. Those of Santa Ynez Mission valley (Cas-ell), in Santa Barbara county, call it *Tuk-ha*. Those of Santa Barbara call it *Tuc*. Those of the vicinity of Tehama, on the Sacramento river, call it *Wee-lik*. Tehama is the Indian name of the Sacramento river. Those of the mission of San Gabriel (the Tobiscangas) call it *Way-et*. Those of the island of Santa Cruz (native, Limou) opposite Santa Barbara, call it *Pana-wathoo*. They speak nearly the same language as those of Santa Barbara. Those of Carmelo and Monterey (the Eslenes) call it *Po-lo-kus*. Those of Campo Seco and vicinity of Stanislaus river, in Calaveras county (the Taa-kins) call it *Tiaa-nuk*. The Ukiahs of Petaluma and vicinity, in Sonoma county, called it *Cha-ko*.

In some notes on the Indians of California, published in the April, 1859, number of Hutching's California Magazine, it is stated that, "Grasshoppers are a great luxury to the Indians (particularly those of the Sacramento and Sierra Nevada Valleys), and are used as meat, and eaten in various ways. Sometimes they are caught, threaded on a string, hung over a fire until they are slightly toasted and then eaten from the string. At others, the grass is set on fire, which both disables and cooks them, when they are picked up and eaten, or laid aside for future use. The most popular method of providing these, however, and which we have seen most frequently, is, in digging a hole deep enough to prevent their jumping out; after which a circle is formed of Indians, both old and young, male and female, who, with a bush in each hand, beat from side to side, now with the right then with the left, when the insects keep jumping toward the hole, into which they fall and are caught. They are then gathered into a sack and saturated with salt water. A trench is then dug and in it a fire is built, after which the ashes are cleaned out, and the grasshoppers put in, and then covered with hot rocks and earth until they are cooked. They are then taken out and eaten in the same manner as we eat shrimps; or put away to mix with acorn or seed meal, after being ground into a paste."

In June of the present year, 1859, the grasshoppers made their appearance in Honey Lake, Carson, and other valleys of Utah, at the eastern base of the Sierra Nevadas, and committed great destruction to the crops of the American settlers, and injured the cattle pastures very materially. They have been also found, this summer, very destructive on Cache Creek and the country around Tehama.

The editor of the Yreka Union says that crickets as large as mice, and twice as destructive and ravenous as grasshoppers, have been extremly abundant and annoying in the Shasta Valley during the month of June.—[Cal. Farmer.

The Grasshopper Plague.—In many portions of the State the grasshoppers have made their appearance, and are destroying a vast amount of property, fruit trees, growing crops. They appeared almost simultaneously at Tehama, Santa Barbara, Carson Valley, Placer county, White Rock, El Dorado county, near Oroville, and at various other portions of the State.—[1 July 1859.

Some on Grasshoppers.—Gideon De Voir has a piece of land about one mile from the White Springs, on the Placerville road, consisting of some four or five acres, on which was a crop of garden vegetables, and also trees. It was surrounded by a ditch which was used for watering. Recently it has been infested by grasshoppers innumerable, and it has been his practice to drive them towards the ditch, when they would fall in and be drowned. But before they met their fate they stripped the ground of every green thing. On looking at the ditch lately, good judges estimate that there were in it about two hundred bushels. This is a big story, but the owner is willing to make affidavit of the fact.—[June 23, 1859.

The Grasshoppers in Tehama County.—Several places on Thomes Creek, and also on Deer Creek, they have appeared so thick and formidable that the farmers have given up all hopes of saving anything which they can consume. Fruit trees are stripped of their bark and leaves in an incredible short space of time, and such articles as corn, potatoes, onions, melons, etc, stand no chance at all. The grain crop being so far advanced will escape their ravages this year; but it is a disheartening fact to farmers that the best portion of their crops, and that which generally pays the best, should thus be destroyed.—[Tehama Gazette, 18 June, 1859.

Sea-Gulls and Grasshoppers.—During the second week, from 10 to 17 of July, there appeared on the Sur Ranche, on the Ocean Coast, thirty miles below Monterey, immense numbers of young grasshoppers, completely covering the ground in many places. The wind all this time blew in heavy gales from the north-west daily, and brought inland thousands of the common sea-gull of California, who, not having anything else to eat, fell on the unhappy grasshoppers and devoured the pestilent little plagues by thousands, to the great gratification of the owner of the farm, who was losing all his garden crops and cattle pasture from their inroads.—[O Farmer, 5 Aug, 1859.

The Cricket Plague in Shasta Valley.—The crickets have made their appearance in great numbers in Shasta Valley. The Yreka Union, of June 16, 1859, says: They have a partiality for thistles, and, discovering one in their progress, they mount the stalk in great numbers, and in a little time strip it of every leaf. A hundred rapacious fellows may be seen on a single stock. They seem very apprehensive of danger, and as one approaches, they drop down and make off, hopping, rolling, and tumbling, in grotesque haste. In the heat of the day they had collected under weeds and bushes in incredible numbers, absolutely covering the ground and burying the root of the shelter several crickets deep. They had crossed the divide to Yreka Valley, proceeding west. It is a curious fact that migratory men and insects "go west." Man originating in the eastern garden, traveled west; the locusts of Egypt came on the plague-freighted east wind; pestilent frogs and flies came up from the east, and, in imitation of illustrious ancients, these careful little travelers are journeying in the same direction.

A farmer residing on the Scott Valley road, three miles from Yreka, informs the Union that the crickets have reached his place, and are mowing everything in their way. They have a partiality for onions, and destroy both tops and roots; they are also cutting grain fields and barking fruit trees. They first appeared on Shasta river, and, at first, traveled west, but have now turned eastward. They were unknown in this valley until three years ago; Indians say that they appear at long intervals and continue three successive years. In the latter part of the summer, having deposited their eggs in the ground, they die; the next spring they "come up" and proceed on during their lifetime, deposit their eggs and die like their predecessors. The insect is of a reddish color, and is provided with serrated claws with which it cuts down its food. They are quite as large as the crickets on the plains—as big as a half-grown mouse. No means of arrest has been discovered, except by making a tin or zinc fence with an outward projection at the top. Our informant says they live three or four months.

The Farmer's Loss, the Digger's Gain.—Most people will remember that in 1855 most of the crops in Shasta Valley were entirely destroyed by grasshoppers and crickets. The latter have recently again made their appearance in inconceivable and destructive numbers. Several grain-fields and gardens have already been totally destroyed by them. On Tuesday, 17th of May, an army over half a mile in width, and of unknown length, made their entry in the gardens bordering on the eastern portion of Yreka, and in passing through them, so thick and numerous were they, that every footstep would crush numbers of them. There is no danger of a famine as in the days of Pharoah, but it is feared that it will be the cause of much mischief. The digger fraternity regard it as a favor of the Gods, and gather them up as "hi-you muck-a-muck." The march of these offensive depredators is in a southwestern direction. [Siskiyou Chronicle, 1859.

Crickets in the North.—The Yreka Union of 19 May says that the hills and valleys east of its town are to all appearance completely covered with crickets of a large size. At night they crawl into stumps of trees, bushes, under stones, shrubs, or into any crevice, and renew their journey by day. Nests of tens, and from that to thousands, may be observed about dusk, snugly stowed away for the evening's rest: If they are as plentiful in other portions as they are in this section, says the Union, the crops they promenade through will hardly be fit for common pasturage for cattle.

A telegram from Yreka, of date 25th May, says that all the gardens about that place are destroyed by the crickets.—[28 May, 1859.

The Marysville Express remarks that the grasshoppers are becoming troublesome in its vicinity. Some of the gardens about Marysville are full of them.

In Honey Lake Valley.—In Honey Lake the grasshoppers have made their appearance in unprecedented numbers, committing serious depredations on the ranches, in many cases destroying every vestige of vegetation. A citizen, one of the afflicted, says the Plumas Argus, tells us that the vermin came out of the ground, it is supposed, from eggs deposited the previous year, in uncounted myriads, and as ravenous as the lean kine. At the time of their making their first appearance they are quite small, of a dark brown color, and unable to fly. They take up their line of march, however, immediately in search of food, leaving no green thing undevoured and turning aside for no obstruction. If a house or barn stands in their path, so many as come in contact with it go up one side and down the other. This destructive army, is usually attended by a large number of birds, not always native to the locality, who devour large numbers of the grasshoppers and disappear or scatter with their entire destruction. [Aug. 1860.

FRENCH PLATE GLASS.

THE UNDERSIGNED IS HAPPY TO INFORM his Friends and the Trade that he has established himself in this city as an

IMPORTER AND DEALER IN

PLATE-GLASS, MIRRORS,

STAINED GLASS, ETC,

Direct from Europe, of the

BEST WHITE QUALITY,

Of all thicknesses and dimensions. Large invoices of Plate-glass now opened—sizes varying from 24x48 to 132x78, and larger sizes will be imported to order.

He has received the agency of

Messrs. Aug. Nyssens & Co's

PATENT FRENCH PLATE-GLASS,

Silvered, for Mirrors,

A New Article to the trade, now almost entirely used in the Atlantic States and Europe, being much whiter in appearance and superior to the old style of Quicksilvering, not being liable to stain from heat, moisture or dampness, nor injury by handling or in packing for transportation. I would invite a call of examination to the sample invoice just received. Having the sole agency for California, I am now prepared to receive orders, and can sell as low as can be imported from New York.

I am also constantly receiving large invoices of

CRYSTAL SHEET, STAINED, ENAMELED, CUT AND GROUND WINDOW GLASS, ROSETTES, ROUGH PLATE-GLASS FOR SIDEWALKS, ETC, ETC.

Orders received for CHURCH WINDOWS, Ornamented and Plain, in any style or of any dimensions. Designs can be seen at the office. Any Society furnishing dimensions for Windows, or Glass, can have their patterns or designs made to order. All styles and sizes of

Glass for Conservatories,

GREEN-HOUSES,

and

GARDEN BUILDINGS,

To order. Also a large invoice of

SUPERIOR MIRRORS,

Framed, of an Entire New Pattern,

Suitable for Hotels, Parlors, Saloons, etc. These goods can offer on the most favorable terms.

By keeping constantly a full assorted stock of the above goods, I hope to merit a share of your patronage.

Pr. H. Rosenbaum,

221 Sacramento street,

SAN FRANCISCO.

The Piano Question Again.

Letter of Jacob Zech in Answer to Mr. I. N. Hoag, S. S. A. S.

I wish to say that every letter of this gentleman (Mr. Hoag), gives me positive evidence that the affair, of *defrauding* me of the first premium, at the late State Fair at Sacramento, was made up.

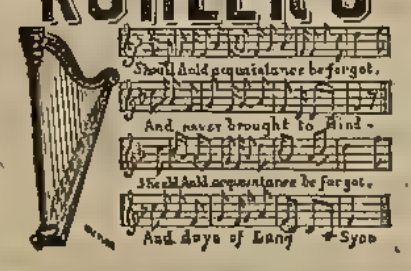
1. When the committee came up to examine the pianos, I asked the Rev. Mr. Starr King whether the said committee would look at the mechanism and interior construction of my instruments, as I would take them apart for their examination, and put them together again to be tried. Rev. Mr. Starr King answered that it was not necessary, as he himself was notified only an hour previous, and that he would not act on said committee, because he did not understand anything about pianos, and would like to do justice to every person; yet his name is used on the committee, with what right I do not know; for, if Mr. King did not sign his name to the Report, there would have been only two judges, and their Report of course not complete.

2. When, at the close of the Fair, the list of awards was read at the Pavilion, nothing of a "liberal special diploma" to Jacob Zech was said or heard by any one. Nay, more, the printed list of awards have nothing of it! How can it therefore, be otherwise than a made-up case by the Society?

3. On the 3d and 23d Oct., I published a letter or card, in the papers of Sacramento and of this city, stating the wrong that was done to me. Mr. I. N. Hoag, S. S. A. S, had not a word to say. To my formal protest to the President of the Society, of late date, published in the FARMER, said gentleman answered, that a "special diploma" was ready for me. Now, in his letter of Jan. 6th, he says, that a "liberal special diploma" was awarded to me. All I demand is justice, not favors. I shall not accept a special diploma. That would be admitting my unworthiness of the first premium. The Society say a Grand Piano is not on the Schedule, and consequently ruled out. I ask the Secretary, is not a Grand Piano a Pianoforte? and why do the Board of Officers not accept my offer, made Dec. 18th, if they wish to do me justice? I will submit my Square Piano again before a committee of musicians, against the same Piano to which they awarded the premiums, and leave the result to their decision as a final test.

As for the proposition which Mr. Hoag makes, for the next State Fair, I must say that, for my part, I had enough of their justice, at the State Fair at Sacramento, the past year, and, unless they manage differently, I will leave it to others to exhibit there in future, and be similarly wronged, if they so desire. JACOB ZECH.

SAN FRANCISCO, Jan. 14th, 1864.



HOME COMFORTS.—Every working man needs good things to eat; and we hope every man is a working man, whether he be a merchant, a professional man, a manufacturer, a mechanic, or a farmer. Farmers we know are working men; for if they don't work in season, and out of season, they cannot harvest. Every body should work! Work, labor is honorable; and they that will not work should not eat! Drones should not be permitted in the hive of humanity. The "busy bees" kill the drones when they cease to work, and clear them out of the hive; and we go for driving out all drones, and then there would be more food for workers. Bowen & Brothers believe this doctrine, and act upon it. They are working men. See the lots of eatables they are sending to every part of our State—hardly a county where they have not lots of customers. Lately they have been receiving fresh goods. They call them

SPECIALTIES.

We call them "goodies"—all kinds of nice things, such as nice dried and fresh fruits preserved. Goshen cheese and butter extra, Boston butter and water crackers, Bordeaux salad oil, very extra, teas, the imperial brand, coffee, chocolate, reliable. The family wines from this house are just what they should be, very superior; and these luxuries are for those who labor. "They shall eat the fat of the land."

SUPERB VASES.—The vases and statuette recently opened by Messrs Haynes & Lawton, are the most beautiful ever yet exhibited on our coast. Lovers of the exquisite in art should look at them. This must induce their possession

HORACE WATERS, Ag't, No. 481 Broadway, N. Y

THE DAY SCHOOL BELL.

40,000 copies issued. A new Singing Book for Schools and Seminaries, called the Day-School Bell, is now ready. It contains about 200 choice songs, rounds, duets, trios, quartets, and choruses, many of them written expressly for this work, besides 32 pages of the Elements of Music, which are easy and progressive.

Among the large number of beautiful pieces may be found, "Uncle Sam's School," "Don't you hear the children coming," "Always look on the sunny side," "The little lass," and "Little Lad," "Oh, if I were a little bird," "Bird of beauty," "Pretty pair true," "April Chorus," "Meet me by the running brook," etc. It is compiled by Horace Waters, author of "Sabbath School Bell," Nos. 1 and 2, which have had the enormous sales of 823,000 copies. Prices—paper covers, 25 cents, $20 per 100; bound 30 cents, $25 per 100; cloth bound, embossed gilt, 40 cents, $35 per 100. 25 copies furnished at the 100 price. Mailed at the retail price.

SABBATH SCHOOL BELL, NO. 1,

contains 144 pages, and nearly 200 tunes and hymns, and is the most popular S. S. Book ever issued. Among the most popular pieces are "Kind Words," "Eden Above," "Christian Hero," "Beautiful Zion," "I ought to love my Mother," "The Angels told me so," "In the Light," "Rest for the Weary," etc. Prices—paper covers, 20 cents each, $15 per 100; bound 25 cents, $20 per 100; clothbound, embossed gilt, 30 cents, $25 per 100.

SABBATH SCHOOL BELL, NO. 2,

Is an entire new work of 192 pages, and nearly two hundred and twenty-five tunes and hymns. One million of these Bells have been issued and are now ringing through this and other countries. Among the many choice pieces may be found, "Shall we meet beyond the River?" "There is a Beautiful World," "Sorrow shall come again no more," "Don't you hear the Angels coming?" "Thus, God, meet me," "Sabbath Bells chime on," etc. Prices of Bell No. 2. are same as Bell No. 1. Both numbers can be obtained in one volume, price, bound copy, 40 cents, $35 per 100, cloth bound, embossed gilt, 50 cents, $45 per 100. 25 copies furnished at the 100 prices. Mailed at the retail price.

WATER'S CHORAL HARP.

A new Sunday School Book of 160 pages of beautiful hymns and tunes. It contains many gems, such as "Shall we know each other there?" "Suffer little children to come unto me," "The Beautiful Shore," "Oh, 'tis glorious," "Leave me with my mother," "He leadeth me beside still waters," etc. Price, papers covers, 20 cents; $15 per 100. Bound, 25 cents, $20 per 100. Cloth bound, embossed gilt 35 cents, $30 per 100. Mailed at the retail price. Is is edited by HORACE WATERS, author of "Sabbath School Bell," Nos. 1 and 2, which have had the enormous sale of over 800,000 copies.

Just published by HORACE WATERS, No. 481 Broadway, New York.

THE NEW PATRIOTIC SONG BOOK

contains 96 pages of songs, duets, and choruses, both sacred and secular, including 14 pages of prayers for sick and dying soldiers, and soldiers' Scripture Manual. It is well suited for social singing, as well as Sabbath worship. Among the many beautiful pieces may be found, "Where liberty dwells is my country," "The Christian Hero," "Three cheers for our Banner," "Come sing to me of Heaven," Columbia, the Gem of the Ocean," "Freeman's Gathering," "Columbia's King forever," "Marching Along," etc Prices—paper covers, cents, $10 per 100. Mailed at retail prices.

THE HARP OF FREEDOM

contains 32 pages of songs, duets, and choruses for Freedom. Among the choice pieces we would name, "Fair Freedom's morn," "O let my people go," "Over the mountain," "They worked me all the day," etc Price 5 cents single, 50 cents per dozen, $3 per 100; postage 1 cent each.

RUTH: A SACRED CANTATA

contains 196 pages. Words by Rev. Sidney Dyer, music by Prof. Cull. This is an excellent book for concerts for the young Prices—paper covers, 20 cents, $15 per 100; bound 25 cents, $20 per 100.

THE REVIVAL MUSIC BOOK

contains 72 pages of tunes and hymns, designed for revival, prayer, and conference meetings. Price in paper covers single copies 10 cents, $8 per 100. Mailed at the retail price

THE ATHENÆUM COLLECTION

contains 512 pages of tunes and hymns, new and old of the choicest kinds, for church, Sunday school, revival, missionary, temperance, prayer, and conference, and all kinds of sacred and social meetings. The music in this book has life and animation in it, like "Shining Shore," "Rest for the Weary," "Shall we know each other there?" "Shall we meet beyond the River?" "There is a Beautiful World," "Kind Words," "Sweet Hour of Prayer," "There is a Land of Love," "Suffer little children to come unto me," "God save the Nation," etc. Prices—single copies, bound, 65 cents, $35 per 100, cloth bound, embossed gilt, 75 cents, $65 per 100 Mailed at the retail price.

HORACE WATERS, Ag't 481 Broadway, New York,

Publisher of the above Books.

NEW INSTRUMENTAL MUSIC.

"Idlewild," "Polka Caprice," by M. Keller: "Morning Prayer," by W. F Muller; "Summer House of Roses," Gallop, by Mrs. Parkhurst; "Le Pirl Polka;" "West Point March;" 25c each "Omoteno Wal z;" "L'Armotee Waltz," "Frederica Waltz," J. G. Bernard, 40c each. "We are coming Father Abraham," "Always look on the Sunny Side," "Brilliant Variations," by Charles Grobe, 50c each. "Shall we know Each Other There," for Guitar, by Bloomer, 25c. "Sunny Side," set of 20 easy arrangements for the piano, 10 by James Bellak, and 10 by Mrs. Parkhurst, 15c each Mailed free. HORACE WATERS, Publisher, No. 481 Broadway.

NEW VOCAL MUSIC.

"Land of the Brave and Free," Rev. C. S. Plumley: "Your Fortune is too Small for Me," Comic Song, Maurice; "I will Wait at the Gate for Thee," E. Holden; "We parted with a Cheerful Smile," M. Keller, "One by one the Stars of Evening," "The Flowers Bloom in Linden Vale," S. Lawrence; "The Morning is Dawning," H. S. Leland; "There is a Beautiful world," "Shall we Meet Beyond the River?" "The Angel's are Hovering Near," "The Year of Love," "How Softly on the Bruised Heart," Mrs. Parkhurst; "Kindly Words and Smiling Faces," J. R. Thomas; "For the Dear Old Flag I Die," "Oh, Why am I so Happy?" S. C. Foster; "Sabbath Bells, Chime On," Lowry, 25 cents each, mailed free.

8 *SAN FRANCISCO.*

The California Farmer.

SAN FRANCISCO:

FRIDAY.....S.FEB 19, 1864.

☞ Those who receive a number of the FARMER with this paragraph marked, may understand that it is sent to them on their examination, hoping it will meet their approval and induce them to subscribe, and ask their neighbors to do so.

Postmasters and others, who may receive the paper, will oblige us by soliciting subscriptions, or putting it in the hands of those that will. Subscriptions may commence at any time.

Send for Sample Papers and get up a club. Address, PUBLISHER CALIFORNIA FARMER, San Francisco.

THE CALIFORNIA FARMER READING-ROOM AND MUSEUM OF NATURAL HISTORY.

320 Clay street—Marble Building—Up Stairs.

The Farmer's Headquarters.

The Editorial Rooms and Museum of the FARMER OFFICE are always open, and an attendant ready to make a visit instructive to those who take an interest in the productions of our State. Samples of all productions: grains, grasses, fruits, models, inventions, minerals, and specimens in Natural History innumerable, are constantly being added.

Farmer's Reading-room.

Farmers and Mechanics, from the country, who visit San Francisco, should visit the Free Reading-room and Museum, at the FARMER OFFICE. Members of the Press, and Strangers, are particularly invited to avail themselves of these rooms. Newspapers from every State to which we have access by mails, as well as Foreign Newspapers, Periodicals, and Magazines, are upon file and on the tables for use; a Good Library of hundreds of volumes, with works illustrative of Agriculture, Horticulture, and Floriculture, works for reference upon all Sciences, with a Cabinet of Minerals, Coins, and Curiosities of interest to the Naturalist, to which we invite all.

Immigration Office.

New comers to California can always obtain all needed information about Lands, Farms, etc, at the Farmer's Reading room, 320 Clay street. Most cheerfully we bid all welcome to our Sanctum.

TO READERS AND CORRESPONDENTS.

"*Humbuggery*," by St. Aubyn, gives some happy hits at the condition of things in society. His spice will season many a dish, and strike home in many places.

Our excellent correspondent, M. A. S. (Professor Sarles, formerly of Benicia) whose letters are so eagerly looked for by his many friends, has sent a happy message, we regret we could not give it this week, it will appear in our next.

"*Portia*," on "Happy Homes" received, with many others on the same subject. We wish it well understood the subject of "Happy Homes" is one that requires from all a tone and character in their correspondences, and an assurance of sincerity and truth. Each party desires in this correspondence a pleasant and an intellectual communication, if nothing more, without which no letters can be received.

An article on the "Tendency of Labor" from the Commissioners of Agriculture at Washington, D. C., is worth the perusal of every working man, especially the cultivator of the soil. The sentiments expressed are sound, their practical results are seen everywhere.

We ask attention of our readers to the earnest letter of H. H. C., on "*Reform of Dress*." Heaven knows there is need enough for a reform of dress by woman. If the mothers of men desire health of body and beauty of person, then reference should be had to dress as well as food. Both are the great pre-requisites to bodily health, mental activity and vigor, comeliness of person, grace of action, great intelligence, vigor of constitution, and perfection of all the moral and intellectual graces.

The "Voice of Woman," by Fulvia, is a capital satirical essay. It strikes right and left, like a two-edged sword, but it strikes for truth and contains a moral.

We give this week a translation of the beautiful poem "Contentment," by Tollens, the Dutch poet. We republish this from the Pacific with an additional stanza—the 5th—inadvertantly omitted by the translator. There is a smooth musical harmony about this poem, that is most delightful. We commend it to the reader who if they love the beautiful will appreciate it fully.

"*Man's Destination*," by M. J. W. is received. Will appear.

Copies of the speeches of Hon. F. M. Smith, of Butte county, delivered in the Senate upon the Currency Question, have been received. They are full of sound doctrine, which we shall advert hereafter.

SAN JOSE RAILROAD.—This road is now completed through to San Jose, and is among the great enterprises of the day triumphantly finished. All honor to the energy and perseverance of the Contractors. This railroad will soon show the producers of the country all along its route how much it advances their interests by giving them a readier access to a market for their produce. The advantages of this road are not, and cannot be fully appreciated just now, but soon every owner of Real Estate, every farmer, stock raiser, and mechanic, will see and feel they have been benefited more or less. We intend to present practical facts of the beginnings of benefits resulting from this road as a stimulous for other roads over our State. We hope our citizens will avail themselves of this road for a pleasant trip often. Santa Clara and Santa Jose are delightful places to visit.

PEAR GROWN IN WINTER.—We give as an evidence of the superior climate of California, and especially the unrivaled mildness of the present winter, the fact that in our little garden, on Mason street, a pear tree that bloomed in December, one branch matured a pear, and we gathered it a few days since. It was eatable, though grown in the wintery months. We think this a rare case.

The Whip Manufactory of Messrs. Main and Winchester.—This pioneer whip manufactory is now turning out as splendid a style of whips as can be made in any part of the world. All who wish well to our State should visit this establishment, and see how rapidly our State is becoming self-sustaining—all honor to Pioneer manufacturers.

Washington's Birthday.

We rejoice that this memorable Day, now at hand, is to be observed in our City and State, with becoming honor. Of all the days in our calendar of Public Days, there are none more worthy of perpetual remembrance, reverence and love, than the day that gave to our country the IMMORTAL WASHINGTON. He who was "First in War, first in Peace, and first in the hearts of his countrymen," can never die. Our lips, our hearts and our best affections should ever hallow his memory.

"How sleep the brave who sink to rest,
By all their country's honors blest."

Over the din of battle, amid all the confusion of party, this day will be hallowed, we trust, by all the wise and good of our countrymen, wherever found. He who stood before the world without a superior,

"Unawed by power, unappalled by fear,"

Will live forever in the grateful memory of millions of his countrymen.

Let this day be kept worthy a grateful nation.

Greenbacks! Greenbacks!

We receive Greenbacks for subscriptions to the California Farmer, and allow the ruling premium on gold!

It is a well known fact to all conversant with newspaper publishers, that since the war commenced the cost of publishing a paper has very greatly increased, so much so as to stop hundreds of papers, over the United States. Yet it has been our pride not to add cost to our *subscribers*, but to relieve them although we have made sacrifices of thousands to carry out our principles, and do what we esteemed our duty to uphold the credit of our country both by precept and example. From the first we announced that we would receive Treasury Notes at par for *Subscriptions to the Farmer*. But the notes were rejected, here, as currency and many of our subscribers have, in conformity with the custom, continued to pay us in gold; yet we have never refused greenbacks at their face value when sent us by subscribers, though it has subjected us to serious loss from our being obliged (from the rejection of the currency as mentioned), to pay gold in our disbursements. At the present cost of all articles, we could not do a paying business by receiving greenbacks at par, at our present rates. But to make the thing work equally for all our subscribers, as well as conform to what we think our duty, we propose to adopt the greenback basis, and raise our subscription price to $5 a year, payable in greenbacks.

As it is evident to us now that the people of California are determined to sustain the National Government and make Treasury Notes the medium of trade, generally, we announce as follows:

The price of subscription to the CALIFORNIA FARMER, hereafter, will be $5 a year, payable in U. S. Legal Tender notes; this being a safe and easy medium of transmission, by mail; and we will allow the ruling premium when gold is tendered in payment.

We also announce, to all who are indebted to us for *Subscriptions* to the CALIFORNIA FARMER, send along your *Greenbacks*. They will come to us with the glorious impress of our country's sovereignty, and every pecuniary sacrifice we may make we cheerfully lay upon the altar of that country whose faith stands pledged in these notes and whose integrity *we dare not question*.

We make this change in the terms of our subscription *not to advance the present cost* of our journal, but rather to make it cheaper to all, for at the *present nominal* value of the notes it will cost the subscriber but $3 25.

We do hope also that all to whom we have sent bills, all who are indebted to us, will now see how easy we make it for them to pay their dues. It must be remembered also that all who owe for this paper, a bill of six month's standing should, by the terms already heretofore announced, remit us $5, and g. b.'s to that amount will be very acceptable.

We shall now have the consciousness of having taken a true step to sustain the National Currency, and we shall know who will "go do likewise."

We do hope that the friends of a good, sound National Currency will give us their aid and cooperate by sending us their names.

Order the CALIFORNIA FARMER.

The Season—Shall there yet be Rain?

The winter of 1851-52 will be remembered by Sacramentans as a remarkably dry winter, no rain till late, and that about the 1st of March came the rains and the melted snows, and the levee gave way and Sacramento was flooded. A correspondent up river writes thus: "What are we to do if it don't rain? Can't you get up a storm or young earthquake, or something of the kind? This is the dryest season, so far, since '51-52; then it was dry till the 1st of March, when the levee was broken away and the city overflowed. We may have the same thing this year."

Yes, it may be so; there is "many a true word spoken in jest;" glad to gratify our friend—couldn't start an earthquake this week, so started a "norther" to accommodate our friend; the earthquake's "a coming," the *material is all bottled up*, and such a shaking as there will be! We just got a hint from an eye witness who *peeped through a hole in the wall*, and saw the *workers* round the cauldron; black spirits and white, blue spirits and gray—they mingled and mingled—so says the play. The earthquake's a-coming, and the rain too, and the flood—the latter will "sweep away all the chaff."

MUSIC RECEIVED.—We received by last steamer a fine collection of new and choice music, from Horace Waters, Esq., of New York, which was most acceptable. We note: "Bread, Cheese and Kisses," "I can't forget," "Beauties of Terpsichore," "My Wife is a Knowing Woman," "The Sunny Side Set," "Mary Fay," "Union Medley," etc.

LOST.—A valuable pair of German pruning shears, with brass handles, was lost, or left by the editor of this paper in his rounds over the city. Any one finding the same will confer a favor by notifying the loser. They were a gift, and therefore valuable.

Oakland and her Advance.

Since the opening of the new route of the steamer and the railroad, Oakland has made rapid advances in growth; its course is now onward and upward—the railway gives a quickening to everything. The new route shortens the time to about thirty-five minutes, and is much more pleasant than formerly.

With the advantages of a quick trip, our citizens may now locate at Oakland and enjoy a beautiful climate and one of the most rural spots in all our State. The railroad depot is now a busy place; hundreds congregate at every period of arrival and departure of the train; "carriages to any part of the CITY," is as much the cry now, at Oakland, as any of our great cities, while new hotels, stores, and places of business are being established upon quite an extensive scale, denoting a permancy that is most gratifying.

The present proprietor of the City Hotel will open a new hotel, near the depot in a few days. A French hotel, also, is being made. Grocery, furniture, hardware, and other stores, with good stocks, furnish ready supplies for all the citizens of this young and growing city. Bamber's & Co's Express is near the depot. Shattuck & Hilligas, so long known at Oakland, have opened a new brick stable with every convenience as a livery stable, with fine horses and carriages for those who wish a trip across the bay and enjoyment of a pleasant ride.

Improvements, new and valuable, are constantly being made. Real estate is rising in value, and ere long, Oakland will take rank among the large inland cities of our State, as there is ample room for beautiful residences for our merchants and business men to have "Happy Homes," across the Bay, thus giving to their families a new lease of life by the fresh air of the country, and the enjoyment of a pretty fruit and flower garden which all should have.

INSANE ASYLUM ANNUAL REPORT.—We have received the Annual Report of the Board of Directors of the Insane Asylum, for the year 1863. It is a work of 54 pages, and contains the reports of the Resident officers, tables, etc. The report is not complete; it should have contained the usual statement of particulars and details of the money expended, to whom paid and what for, especially as the large sum of $21,207 30 is stated as paid out on "Pay Roll," which is nearly one-third of the entire reported expense ($69,076 07) incurred from November 30th, 1862 to October 20th, 1863. The sum of $5,320 57, is also reported, without items and details, as expended on the garden, the income of which is returned at $7,751 27, leaving a balance in favor of Asylum of $2,430 72. This is very fair considering the great benefit of pleasing and healthful employment, to the better class of patients. Number of patients in the Asylum December 1st, 1862: Males, 395; Females, 104; Total, 499. Remaining, October 20, 1863: Males, 451; Females, 132; Total, 583. During the year, the following changes occurred: Discharged cured, 92; removed convalescent, 13; removed unimproved, 4; died, 47; eloped, 12. Total discharged, died and eloped, 168. The sewing rooms appear to be properly conducted under the supervision of an experienced and competent seamstress, and during the year 3,111 articles of clothing were made, besides the necessary repairs, on garments, for 751 patients. The store-room and farm contain articles of subsistence, supplies, etc., on hand, valued at $16,062 09. The nativity of insane patients shows: The United States, 82; Foreign countries, 147; Unknown, 23; of which Ireland has 33, Germany 16, France 13, China 7, England 6, &c

The affairs of the Asylum have been conducted, according to the majority report, creditably, and Dr. Tilden is recommended as a Physician of peculiar fitness for the responsible position, and in conclusion says: "We therefore earnestly and disinterestedly hope that the State will not drive Doctors Tilden and Clarke from that refuge of lunatics which their ability and zeal are fast making an honor to the State and humanity."

STATE AGRICULTURAL SOCIETY.—It seems that this Society has fixed the place of holding the next Annual Fair at *Sacramento*, for the year 1864, to commence Friday the 16th of September, and to continue eight days. It was hoped, by the friends of this Society that it might have had the Fair, this year, at San Francisco, and have united with the Mechanics' Institute, and thus have had a Grand Fair. Now these Fairs will be competitors, and it is not at all difficult to foresee the result. We wish both, however, to be a success; but in "union" there is strength.

The Board addressed a memorial to the Legislature asking relief; a communication was also sent to the Board of Supervisors praying that a Special Tax might be levied, this year, in Sacramento county to pay the debt of the Society. We hope the Legislature will allow Sacramento county and city to levy a tax to pay the Society's debt. That would be a good thing, for the Fairs have benefitted the county enough to have the county pay the debt.

ST. VALENTINE'S DAY.—The "day of days" in the years of years, to many young hearts, a very happy day, too, in the transmission of happy thoughts to friends to make them happy. "Valentine's day" and Leap year will give to the "ladies" a double power if they need more than they have already. There will be, however, regrets mingled with the pleasant memories of this day and season now with us to last, as it is said, till the end of the month. February 14, will with many hearts, find record of many sad thoughts, and among the many millions that keep this day, some memories will be sad. There are, however, many bright memories to chase away the sad ones. Would that they who send valentines would send those which shall aim to make the recipient wiser, better, and happier—then would valentine's day be linked with the bright memories of the times.

Travelers on the river between Sacramento and San Francisco speak of the grand display made by the fire, fanned by the strong wind prevailing, sweeping over immense tracts of tule.

The Voice of Woman.

To the People of San Francisco, and to the Honorable Legislature of the Loyal State of California, Greeting: I have been told that a petition in MS. is in circulation throughout this enterprising and especially litigous city, for the purpose of obtaining signatures of citizens, praying the Legislature to re-district this fair and most populous and influential portion of our Commonwealth, to the end that we, the People, may have and enjoy the civil benefits of another—an additional—Court; *one more* tribunal to promote the determinations of Justice and of Right Rule.

The petition, aforesaid, sets forth the fact, and the complaint, that the Fourth and the Twelfth Judicial District Courts *are so crowded with business* [divorces?] *that the interests of The People suffer thereby by reason of the unavoidable delay.* Can it be that there are, really, among us so many *People* who suffer the exquisite torments of the little blind God's torch unmercifully set-a-blaze within Hymenially-obstructed bosoms?

Oh, Honorable Statesmen and dear People, all, pity such delay! Help these suffering men, and these women!

It has been said that the Ex-Attorney General of the State of California (Pixely) will consent to officiate as Judge upon the projected Bench, aforesaid. I have not alluded to this report with any intention of offering a remonstrance, on the contrary, I will show that I have faith in his discipline.

Having hastily wiped my hands of the Spring Valley suds, this morning, I have taken pen and paper to offer a brace of suggestions to the Honorable, the Legislature of California: The first, in the form of an alternative, and in case such alternative be rejected, the latter I offer as a substitute for this projected additional Court aforesaid. The alternative is simply a proposal to amend our rampant Divorce Law, or to repeal it, *in toto*; wipe it out of the books, thereby putting a final stop to all this illicit and indecent *courting*, and save the State some well-deserved scandal among the respectable sisterhood, as well as the expense (which, out of considerations of loyal polity should be avoided in these troublous and battalious times) of instituting and maintaining a Bench which panders—no matter how irresponsibly, because of the existing law—nevertheless, panders to those vicious and demoralizing proclivities of sensual men and women—adventurers, for the greater part, male and female, which the State would do better to repudiate than to protect. Thus much I have said in good faith.

Now then, the substitute which I beg leave to offer, in case my proposed alternative, aforesaid, is rejected, is the institution, without further delay, of a plenipotent, out-and-out Divorce Court. Make way for these Soldiers of Fortune, these nomadic Benedicts, and these dear, delusive Lorettes—these men-and-women Free Lovers. Let us see what they *will* do, if they are let alone.

Sir Creswell Cresswell, late of the English Divorce Court, has decided that it is immaterial, in a case of this quality, to prove the fact of lawful marriage between the parties, it being reasonable to suppose none would petition for the dissolution of bonds which had never legally existed.

Pooh, pooh! Sir Knight, that was the superficially-based judgment of a woman! You, with all your high legal accomplishments would not have done for a *California* Divorce Court. Our Ex-Attorney's learned *mule*, in such a position, would proclaim a wiser decision. You would have to learn that we female divorcees get half the property of our forlorn repudiated lords, and our clever lawyer pockets his little contingent fee on the proper adjustment of that identical point—besides lots of us have a way of retrieving a reputation, somewhat damaged by circumstances, out of this same measure.

Let some committee of transcendentalists offer a premium for the successful invention of a pair of spectacles, with which, one shall be able to discern the beauty of that moral *status*, which is susceptible of elevation through the fulsome intricacies of a prosecution and decree of Divorce and concurrent marriage.

But I ask pardon of English legal dignity for this audacious criticism upon the decision of the Hon. Sir Cresswell Cresswell, especially impertinent from the fact that he, having entered the world of spirits, whither we are all journeying, to be judged of an unerring Judge, and where, we have been assured, there is no more marrying or giving in marriage, therefore, no more divorcing or granting divorces, his occupation's gone—*Illi placatus et quietus est animus.*

Dear People of San Francisco, and Most Excellent Legislators of the State of California: Pray, let us have this rampant Divorce Law corrected, let us have it brought within the decent and judicious limits of the Christian rule, or let us acquiesce at once in the formal institution of a jolly Divorce Court, endow *ci mulo* with the magistratic-ermine and raise him to the Bench. Go to! And that there be, in future, no envious delays, give that jolly Bench a brace of novel and distinctive legal features, *instar omnium:* Let the decree of this Court include, without extra fee, the license to re-marry, and let there be appointed thereto, in retinue, a fat salaried jolly parson, whose duty shall be to ratify the decisions of this jolly Bench; to bless the Free Lovers as soon as liberated, and to re-adjust the nuptial ligament, *sur le champ.* Come, begin!

Note to the Editor.—I have written my Latin and French from memory, considerably confused among the pots, kettles, and pans—please excuse and correct all errors and oblige,

Yours respectfully, FULVIA.

SAN FRANCISCO, Feb. 12th, 1864.

COMMENCED RUNNING.—The new opposition steamer Annie Stewart started up the river on her first trip to Sacramento, at 2½ p. m. yesterday, with a full load of freight and a great number of passengers. She will hardly ever have a rougher time on the Bay than she had yesterday. The fare on this trip was $3 in the cabin, and $2 on deck.

[For the California Farmer.]

Humbug

MR. EDITOR: Permit me to offer a few considerations on this theme: Great and powerful art thou, O, Humbug! From the cradle to the grave we are thy willing slaves. When Cowper wrote those lines, "Dupe of *to-morrow* even from a child," the to-morrow must have meant the present. O Humbug! In infancy we are made to believe that of which riper years show the fallacy. "Study hard, be a scholar," cries Pater Familias, and you "may be President." Manhood wanes and the scholar sees the race is won by the ignorant and vicious man; whose conscience interferes not with his prospects; the tool of a party sits in high places, while the man of probity and intelligence is passed by. Paternal advice says, "my daughter good sense is better than beauty," and the plain girl, however intelligent, gets herself neglected for some silly, pretty piece of affectation; but men who think themselves sensible, ready to sell a world for the smile of a pretty fool, and has not a very common-place woman often wit enough to humbug a good sensible man into the belief that she loves him, when she has not heart enough for a mite. Is not an innocent girl humbugged, when some scamp vows that his love is sincere, or that some fond girl thinks the attentive lover will equably prove the kindest husband? Is not a parent humbugged when the time-serving teacher tells him that his stupid child is the genius of the school, or some Mistress of a Boarding School, informs the mamma that she loves her sweet daughter so much—when it is the pay she loves? Do not politicians humbug when they tell their deluded fellow-citizen that they would, like Curtius, sacrifice themselves for the public good, when the sooner are they elected than they seek to reap the loaves and fishes of office. The loud-mouthed patriot tries to humbug when he talks of shedding his blood for his country, takes good care to keep at home, and if by a contract he make a little out of Uncle Sam, so much the better are we humbuged. The minister humbugs his congregation when, as Burns says:

"With three mile prayers and half mile graces,
And well stretched words and long wry faces,"

He preaches sectarianism, or dogmatical doctrine, but leaves unspoken the grand doctrines of Love and a high standard of Christian morality. Mr. Nocash vies with Mrs. Allmoney in her style of living, and by dint of sordid indoor savings, displays in outside appearance, which humbugs Mrs. Grundy into a belief that Mrs. Nocash is as opulent as Mrs. Allmoney. The kind public are now humbugged with advertisements of medicines to cure all diseases. The newspapers humbug us in giving accounts of things which never happened, and lastly do not grave-stones humbug us with mythical descriptions of the virtues of the dear departed. Finally, do we not humbug ourselves? Verily, do we. Our vanity and self-esteem humbug us most egregiously, in youth and age we flatter ourselves, or allow our mirror to do so. We pet our vices and our follies, vainly does conscience call on us to "See ourselves as others see us," we cry avaunt and hoodwink Heaven's vicegerent, conscience. Deceit we call policy; violent passions, just resentment; sensual passion, love; self-righteousness, religion; sordid niggardness, thrift; levity, or vulgar boisterousness, mirth. Well would it be, did we dare to cast aside humbug and call things by their right names. The drunkard would no longer call his vice a social glass, or having a jolly time, but would see demons who are leading him down the dark road which ends in madness, disease, and death. The gambler who wastes his time and money would see himself the cheat and rogue, which time may make him. The married woman, whose love of admiration causes her desire of attention, would see that she sullies her pure womanhood when she allows the flattery of word or look to give her pleasure, and that "it is her heart's supreme ambition to be fair." Worse, still, if she humbugs herself with platonic love, and trembles on the precipice of degradation.

If once her feeble bark recede,
She deviates from the course decreed,
In vain the wanderer seeks the shore,
Her swifter folly flies before;
Tossed on life's illusive tide,
Weak woman falls to rise no more.

I must close, or I shall humbug myself into the belief that I can write an essay or sermon, and you will think I am illustrating my doctrine by trying to humbug your many readers into the opinion that I am no humbug. ST. AUBYN.

HOW TO JUMP SAFELY FROM THE CARS.—We often see persons make a bungling jump from cars while in motion, and often see them thrown down. This arises from a want of reflection, as they could jump safely (if they only knew how), though it is better and safer to wait till the cars stop than to run any risk. Now there is a way, that all persons should know, by which one can jump safely, even though the cars are going at great speed. Take care to have sure foot-hold when you are about to jump, then jump easily forward, at a little angle from the cars the same way they move, and continue your pace easily when you strike the earth, and you will not feel any more sensation than in an ordinary run. If the cars are at a very great speed, and necessity requires you to jump to save your life, then give all your vigor and strength and jump with the cars, yet at a slight angle, from them, and jump as high as possible into the air—the higher the better—for the body will soon lose its momentum and you will descend and light upon your feet without injury. This can be seen by sending an apple or a rocket into the air; when its strength upward is gone it falls to the ground in a direct line, so persons, that jump up in this way, without fear are safe. Any other way is always dangerous to life.

POTTERS' GARDENS, OAKLAND.—We made a hasty visit to these fine gardens the past week. There is much to admire in the beautiful order and arrangement. Superb flowers are now in bloom in the air. *Acacia* trees of magnificent appearance. Greenhouses in perfect order and much to admire.

Liverpool Wool Market.

John L. Bowes & Bro.'s Wool Circular dated Liverpool, 1st January, 1864, says: Up to the middle of December the dearness of money checked business considerably, but excepting in occasional instances prices of Wool did not fall more than 5 per cent, subsequently money having become easier Wool is recovering. Purchases for the United States have almost entirely ceased.

The Wool trade in England during last year was unprofitable to importers, prices realized in the home market in many instances not exceeding the cost at place of growth. The supposition that the high value of Cotton would largely and immediately stimulate the consumption of Wool having, so far, been realized to only a very limited extent, the speculation entered into on that basis in the Autumn of 1862 failed, leaving considerable loss to operators, and enabling Wool growers in distant countries to obtain higher rates than were justified by the actual position of the market. Consumption has in the aggregate been large and satisfactory, in the first half year there were complaints in some quarters, but since our good grain harvest was secured, trade has in most branches been exceedingly active. The Home market for manufactures has been satisfactory, and our export shows an increase of nearly 20 per cent on the previous year, the increase being exclusively in Stuff Goods and Worsted Yarns requiring long stapled Wool. The supply of Short Wools, both fine and coarse, has been abundant, and prices declined 10 to 15 per cent during the summer, but have since recovered and are not materially different to the opening rates; the supply of long stapled kinds is still deficient, and we have to quote an advance, on the year, of 5 per cent on the common kinds and 10 per cent on the medium and better classes, including those of Domestic growth. The Wool trade may be considered in a sound state, remarkably free from speculation; stocks moderate and consumption healthy.

Assuming the growth of Domestic Wool to be unaltered, the total balance of Foreign, Colonial, and Domestic retained for Home consumption, after deducting the quantity exported during the eleven months, is about five million pounds less in 1863 than in 1862, and thirteen and a half million pounds more than an average of 1856-1862.

The exports of wool to the United States for the month of November, 1863, have 1,908,477 lbs, against 1,755,568 in 1862, and 3,911,640 in 1861. The exports for eleven months ending 30th Nov. 1863, have been 14,202,122 lbs, against 12,654,599 lbs, in 1862, and 6,704,014 lbs, in 1861.

The Red Bluff Independent has been shown some fine specimens of cotton grown in Tehama county. That paper says a large amount of both cotton and tobacco will be raised in that county next season.

BORN.

In this city, Feb. 18th, to the wife of T. W. Lockwood, a daughter.

Purchasers of Farms.

We shall now keep a complete record of *Farms, Ranches, Orchards and Vineyards*, for sale, and make it a speciality from this date. A "Bulletin Board," in our Reading Room, will contain numerous Farms, etc., on sale, and to which we invite special attention of both *Buyers and Sellers*.

THE MANGRA BEAN.—We would esteem it a great favor if any one to whom we furnished the "Mungen Bean," last season, gratis, will now furnish us a small quantity at any price, to meet the wishes of a friend or two at the east.

☞ MANUFACTURERS OF MACHINERY, AGRICULTURAL *Warehouses, Seedsmen and Florists*—All such who desire to make their business known over the entire State of California, should send their business & dvertisements to us, and we can spread the news for them.

TERMS OF ADVERTISING.

The charge for Advertising in the CALIFORNIA FARMER (payable in advance), is **One Dollar** for five lines, or less of space, in nonpareil type, for one insertion, and ten cents a line for any larger space. Each subsequent insertion half these rates. This it is believed affords the cheapest and best medium of reaching the Agricultural community on this coast. As heretofore, the right is reserved to reject any advertisements deemed objectionable.

Corner of Washington and Montgomery streets,
11 San Francisco.

BATHING.—We fear the luxury of a good bath is not properly appreciated by the most of our citizens. In a climate like ours, a daily bath is as much a matter of importance as daily food—"cleanliness is godliness" in more ways than one, for a cleanly person will enjoy his food better, and this will give him a healthier body as well as a clean one. We believe it is admitted that health is a great pre-requisite to oreneas of temper, generosity of action, and nobleness of action. Among the many good bathing places in our city (and they are numerous) the enjoyment of a steam-electric bath is one of the best. This can be found at the Electric Institute of Dr. Josselyn, on Washington street, where cleanliness, order, and good attention add much to the enjoyment of a bath. At this place, each bather has the enjoyment of an apartment so comfortable and pleasant as to make it doubly luxurious, not, as is too often the case, exposed among many male bathers at the same time. As electricity is the vitalizing element of life, so an electric bath infuses new life and energy to all who practice and enjoy this great luxury.

SAN FRANCISCO AND SAN JOSE RAILROAD.

Two Trains Daily, Each Way.

CHANGE OF TIME.

ON AND AFTER FEBRUARY 15, 1864, the San Francisco and San Jose Railroad Company will run two trains each way, daily, leaving the Depot on Brannan street, between Third and Fourth, for San Jose and intermediate stations, as follows:

Leave San Francisco at 8 a. m., and 4 p. m.
Leave San Mateo at 8, 55 a. m. and 4:55 p. m.
Leave Redwood City at 9:20 a. m. and 5, 20 p. m.
Leave Santa Clara at 10:10 a. m. and 6:10 p. m.
Arriving at San Jose at 10:20 a. m. and 6:20 p. m.

RETURNING.

Leave San Jose at 7:30 a. m. and 3:30 p. m.
Leave Santa Clara at 7:40 a. m. and 3:40 p. m.
Leave Redwood City at 8:30 a. m. and 4:30 p. m.
Leave San Mateo at 8:55 a. m. and 4:55 p. m.
Arrive at San Francisco at 9:50 a. m. and 5. 50 p. m.

FREIGHT.

Our road being completed from the City of San Francisco to the City of San Jose, we are prepared to take Freight from either end of the line, or to and from any Station on the Road, at the lowest rates.

☞ Passengers can reach the Depot by either the Third or Fourth street lines of city cars.

"MENLO PARK," San Mateo County.

Beautiful Sites for Homes in the Country.

THE UNDERSIGNED OFFER FOR SALE THE BALance, unsold, of this choice tract. There, are few, if any, places within one hundred miles of this large and growing metropolis, which combine so many natural advantages for a country residence; the soil is excellent; it is wooded with large, splendid live oaks, and other evergreen shade trees. The climate is unsurpassed; the extremes of heat and cold are never felt, and the harsh summer winds and fogs don't reach here. Good well water can be obtained here at thirty feet, independent of which, there is a Company already formed, in San Mateo County, for introducing an abundant supply of the best spring water, for this and adjacent tracts, and Redwood City; it will have a head of about sixty feet at this point. The cars of the S. F. & S. J. R. R. land passengers at their depot, at this point, in about an hour and a quarter, thus enabling business men to live here and transact their business in town, without interruption. A first class school is about being established here, with educational ability second to none in the State. There will also be a first class family hotel opened in the Spring.

Those who are alive to the importance of a home in the country, with all the advantages for health, education, etc; are earnestly requested to go and look at this lovely spot. AS AN INVESTMENT, it is worthy the attention of every one who wishes to invest SAFELY AND PROFITABLY, as it is rapidly enhancing in value. The title is unquestionable, it being a portion of the PULGAS RANCHO, the first Spanish grant finally confirmed, and the patent issued.

About thirty heads of families have already purchased, with a view of building, in the Spring.

As to the merits of this choice tract, we refer to the following gentlemen, some of whom are now living in the neighborhood, and others have purchased with a view of doing so.

17 San Francisco.

A Fine Ranch IN MENDOCINO COUNTY.

A FINE GRAIN AND STOCK RANCH of 800 acres under fence, in Mendocino County, will be offered at a bargain if applied for soon. Together with this is a Stock Ranch of some thousand acres of mountain land which goes with this Ranch, being Uncle Sam's land.

The Ranch is about 80 miles from Petaluma and on the great mill road to the Navarro, Albion, and Mendico & Noye's mills.

The location is pleasant, having the Redwood Hills for a back ground, with a fine valley tract—one hundred and sixty acres valley land, mostly under cultivation—yielding fine Barley, Oats, Wheat, Hay, Corn, etc. The crop of Hay is fine.

This Farm will sustain a herd of 300 Cattle, and is a grand Ranch for raising Stock, Horses, Mules, or Hogs, and a good place to raise Poultry. There is an orchard of two acres of bearing Trees. Vegetables grow well.

There is on the place a fine two-story frame Building, in which was put 30,000 feet of lumber, also Granary, Smokehouse, and Barn. The vicinity to the Redwoods gives an opportunity to improve, as Lumber is cheap and Timber handy.

There are, at present, good Tools, Implements, Harvesters, Plows, etc, on the place; also some furniture. The House has been used as a Hotel and Store, and is also the Stage House. Hay, Grain, and Produce can always be sold at good prices.

There is also a herd of 100 head of Stock which will be sold at a bargain.

This is a rare chance, and worthy the attention of those who wish a good Home, a good Farm, and a profitable business. Prices reasonable. For particulars inquire of Editor Farmer. 21-1

Farmers and Immigrants.

LAND FOR SALE OR TO RENT.

THE ANTELOPE RANCH,

(FORMERLY JOB P. DYE'S) on the East side of the Sacramento River, embraces many very superior Farms of

100 to 500 Acres each; also Vineyards, Gardens and Orchards,

above all overflows, Fenced, having Dwellings, Barns, etc., and throughout the year, large running streams, and irrigating ditches.

The soil is from 3 to 10 feet deep, very rich, and adapted to Wheat, Barley, Oats, Tobacco, Chinese Sugar-Cane, Fruits, etc.

The best market in the State is at Red Bluff, two miles above; at Tehama, three miles below the Ranch, and on the Ranch itself, for consumption in the northern portion of the State, Oregon, and the Humboldt Mines. The new Wagon Road from Red Bluff to the Humboldt Mines is within three miles of this Ranch.

Good Farmers (with families preferred) can hire these farms at low rates, or conduct them on shares, with privilege of purchase. Cash loans will be made, if desired, to assist in cultivating or holding crops, and every facility will be given.

Mowers, Headers, Threshers, etc, are on the Ranch—"The Antelope Flour Mill," of large capacity, and high reputation, is on the Ranch, owned by the same proprietors

☞ The "Job Dye Farm," of 250 acres—with Orchard, Vineyard, and Garden, with irrigating water, large Adobe House, and numerous out-buildings—will be rented to a satisfactory tenant

Apply to GEO. CHAMPLIN, Red Bluff P. O, or on the Ranch, or to

E. F. NORTHAM and R. B. WOODWARD,
Dec. 17—19-2m San Francisco.

Home Miscellany.

"PENSIVE THOUGHTS."

[A Composition written in Vermont, in 1850.]

When Autumn comes, I often muse,
Upon life's short, and brittle thread;
'Tis then I happy thoughts refuse
And dwell on those who now have fled.

There is one, I well remember now,
A smiling face he used to wear,
And never on his youthful brow,
Did I behold a look of care:

In yonder schoolroom oft we're met,
The fields of knowledge to explore;
But ah! his sun of life has set,
And we can never meet there more.

How many die in early youth,
While things a shade of beauty wear;
Then let us learn to love the truth,
And for a change of scene prepare.

Earth's purest riches, sweetest flowers,
Will wither in the noonday's sun;
Our brightest hopes, our gayest hours
Will pass away and soon be done.

One hope alone remains to cheer
The Pilgrim on his weary way,
When trials cause the flowing tear:
The hope to see an Endless Day

ROSA.

CONTENTMENT.

["Tevredenheid," by Tollens, the Dutch poet.]

A TRANSLATION, BY ALEXANDER LYONS.

Let venture all who venture will,
And banks and depths explore:
I keep on my own hearth still,
And save my sails on shore.
Let struggle all, for empty gain,
Where hearts for bubbles leap;
Let tempests haunt the moaning main:
I scan the weather once or twain,
And lay me home to sleep.

The maiden by the name of Fame
Shares never my embraces:
'Tis said, it is a deadly game,
To win this lady's graces.
Her glances vie with burnished steel,
And dazzling are her dresses:
But woe who hold these tinsels real;
A damsel frail, her looks reveal,
And feigned are her caresses.

At first she spreads her charms in sight,
By rouge, and borrowed tresses;
But ill betides the hapless wight,
Who's tangled in her meshes.
Some little rank she deigns to-day,
And other trinkets hollowed:
Yet seldom doth her favor stay—
The morrow dawns her fickle way
To others whom she's followed.

A gorgeous scene she first displays,
And thither thou art beckoned;
But scarce within that magic maze,
She leads thee to a second.
Thou grop'st around, as one betrayed
In numberless perspectives;
Thou look'st in vain for light and shade:
The captive heart is yearning made,
Yet finds not its correctives.

Let hanker then for gloss and gold,
All who this siren hear;
Let others to her fables hold:
I close, in dread, mine ear.
Who wish may lust the bright alloys,
Founded on narration;
Each fowler has his own decoys:
I aim not at uncertain joys—
Certain of vexation.

Away then with the renowned voice,
Attuned in luring measure:
I change not rest for rank, by choice,
Nor liberty for treasure.
Conceit and Pride might ruins heap
On Carthage or on Rome:
'Tis Friendship lulls my heart to sleep;
Love's cares my couch in softness steep—
What dreams affright my home?

Let idly vaunt, from top and throne,
Whom staff and sceptre choose:
The nurseling gluds at purple tone—
The soul disdains the hues.
Let cringe then who himself encurves
With gold or iron chains:
I laugh at all the haughty slaves;
I scorn the pomp of gilded knaves,
And wish to sots more brains.

[For the California Farmer.]

An Appeal to the Women of California, in Regard to a Reform in Dress.

Sisters, will you give me your undivided attention, a short time, while I attempt to portray a few of the reasons why such a reform is needed. Much has been written upon the subject of female apparel, but not enough so long as the present ruinous custom prevails. Ruinous did I say? Yes, truly, and in more ways than one, some of which I will point out, and then suggest a remedy, palliating the present ills, and preventing a recurrence of the same in the future, if I can only insure a hearty coöperation from those in bondage to the tyrant Fashion. Hark! Do I hear one whisper here, and another one there, "Is she alluding to the shortening of the skirt, if so I am with her, for that is coming in fashion, for I do abhor these trails, which are indeed ruinous to the dress itself, and to our husband's and father's pockets, and furthermore are opposed to all our sense of neatness." Yes, truly, my sisters, you have guessed it in part, but perhaps will be horrified when I say that the skirt I advocate, extends only about midway between the knee and ankle, or even less, and the lower extremities clothed with a pair of warm lined pants of the same material as the dress, and the feet incased in good high shoes, or boots if needs be, in cold weather. So much for the lower part of the dress first, because suggested by the would-be helpers, but where are they now? Methinks I can still hear them whisper, only to their own hearts, perhaps: "Well I should like even such a style of dress if everybody else wore them, but as it is, I would rather run the risk of shortening my years, than my skirt to that extent, and render myself a laughing stock. I can bear the inconvenience, and extra expense attending the present style, as well as others, and I might as well be out of the world as out of the fashion." Although you seemingly might be spared, as far as advancing the world's progress is concerned, yet all have a mission here, until called away, some by their endeavors to live according to their inner light, heralding its beams to those in darkness, and others by voluntarily choosing the darkness, only cause those onits boundaries to shun its deleterious effects, which could not be realized unless some were victims, thus securing the safety of many others.

But the subject under consideration has not been fully discussed. Now my friends and sisters, of California especially, I want a fair candid talk with you, leaving you to respond to your inner consciousness, hoping this appeal may not prove in vain. We who are wives and mothers, what are we placed here in this world for? What is the greatest and end and aim in the design or wish of the Good Fathers who placed us here. Let us each answer this query as best we may from our highest standpoint, and then ask ourselves, are we living up to such convictions of duty, while fearing to obey its dictates; from fear of what the people will say. What do we witness, in looking abroad over the land, and viewing the bonds which so fetter the women of America, as regards their dress; a much more vital question than many suppose, for not only upon us does this great wrong rest, but also upon the dear ones entrusted to our care, to whom we cannot give noble elastic bodies, so long as ours are weighed down by such undue pressure, upon the most vital parts, as those imposed by this Goddess, Fashion; also trammeling the feet, and lower limbs, impending free locomotion, and causing more exertion to carry about our mere clothing, than to perform the cares of a family, if dressed free as common sense would dictate. Let our most obsequious devotees of the present style, of the male sex, but be required to carry a pan of milk up stairs, and they will soon realize a little of our inconvenience, and if they have any pity for us poor slaves of custom, will try and help us, who need help; but alas, woman herself is the greatest enemy to her own good, I fear. True, compression at the waist is the parent of many ills, but this reform includes a dress to fit the body, instead of the body to fit it, giving free expansion to the lungs, which have such an important office to fulfill in our wonderful mechanism. The body is not the only recipient of this great benefit, but the mind receives an impetus, when freed from the tyranny of other's opinions, such as has never before been experienced, feeling that we are living for a more noble purpose, than pampering to the taste of those who care nothing for us, only as conducive to their interests. I know how to sympathize with those who feel they are living beneath their high calling, and yet have not moral strength, sufficient to induce them to step out in the world alone, in vindication of what they feel to be right, while others who perhaps lack not this trait are kept in the traces, by the fear that their only means of gaining the necessaries and comforts of life, would be supplanted by others, if they were to step so far from the track of public opinion. How many have I heard sigh for freedom, wishing it were only fashion to wear the short dress. Now do not we know that all will not simultaneously adopt any new idea, be it ever so much needed, but some more able to endure the scoffs and jeers of the multitude, must first step out before the world, showing its superiority over the old, trusting to the supremacy of right over wrong; and who will take this lead, unless it be such as feel willing to render themselves a sacrifice, in behalf of suffering humanity, both present and future. Much has been said on this subject, but what has been done in this State. If you look at the proceedings of the Dress Reform Convention, held at Rochester, N. Y., last June, as reported in a little monthly sheet (only 50c a year), devoted to this subject mostly, termed the Sybil, published at Middletown, Orange county, N. Y., edited by Drs. Lydia Sayer Hasbrouck, a staunch defender of its doctrines, both by precept and example, you will see what has been done there. Over 100 ladies were present, wearing the Reform Dress, and many of them speaking of its merits, with an eloquence, casting old prejudice to the four winds. But this is not to the point: What shall the future have to say of California in this respect; shall we who stand the leaders of the world in many ennobling and progressive qualities, be behind in this? Let us, women of this beautiful State, imprint some of its beauty upon our own enfeebled bodies, giving our cheeks the color of the rose, our limbs the buoyant, elastic step, and better than all, our minds a soaring after the moral and intellectual pursuits, fitting us to be considered companions for our husbands, fathers and brothers, by this freedom, and time, given by this change of costume.

Let us awake to our position, awake to the duties devolving upon us and to the unborn generations which will follow, deriving strength and nourishment which only we can give, and show the world that although we were not first in the race, we can win the crown, for when we get fully aroused, none can surpass us. But I would not flatter any one, that the road is lined wholly with flowers, far from it; we shall often feel the sting of the thorns of malice and scorn, where we thought were nothing but the roses of Love and Confidence, but let such only goad us on, to persevere in the good work, looking to the great gain of others, who may not have been able to make this new road, but only too thankful to follow the wake of others. But to succeed in this great work, a concentration of forces, must be effected by some means, to bring the mind and feelings of such who favor such work, in sympathy with each other, so let me propose a correspondence being opened between all, both male and female, who are in earnest on the subject, and who desire to witness the commencement of the grading and leveling process, in the year 1864, and nothing, methinks, will so much conduce to this, as each of us interested to send our 50 cents for this little Sybil, and take my word for it, you will never be sorry, and by distributing them, many prejudices will be removed ere we feel a duty to put on the whole armor, and go into the thickest of the fight. This has for many long years been calling for action on my part, and a part of the time have I endeavored to carry out my firm convictions of duty, and for nearly two years had on no other dress, and that in this State, too, traveling considerable, and ever receiving respect; but causes unnecessary to mention, induced a return to the long skirt as a public dress, but such bondage seems so irksome, after once enjoying freedom, although I still wear the short dress about my work, accomplishing much more with the same ease, and feel that the time will come when duty will demand a volunteer in the front ranks, and when such a call is made, may I not falter, is my earnest prayer. Who will join me in the work and who in sympathy? I would like your names and address, with your views and feelings on this very important subject, thus forming the nucleus around which all may be invited, or I will venture to say our noble editor, of the California Farmer, who stands ever ready to advance the interests of Woman, will be happy to receive names of volunteers, also publishing any thoughts tending to advance the cause. Hoping these few thoughts and suggestions may be the means of calling out action on this much needed reform, I close.

H. H. C.

Brier Cottage, Feb. 12th, 1864.

MY MOTHER.

Who fed me from her gentle breast,
And hushed me in her arms to rest,
And on my cheek sweet kisses pressed?
My mother.

When sleep forsook my open eye,
Who was it sang sweet lullaby,
And rocked me that I should not cry?
My mother.

Who sat and watched my infant head,
When sleeping on my cradle bed,
And tears of sweet affection shed?
My mother.

When pain and sickness made me cry,
Who gazed upon my heavy eye,
And wept for fear that I should die?
My mother.

Who dressed my doll in clothes so gay,
And taught me pretty how to play,
And minded all I had to say?
My mother.

Who ran to help me when I fell,
And would some pretty story tell,
Or kiss the place to make it well?
My mother.

Who taught my infant lips to pray,
And love God's holy book and day,
And walk in wisdom's pleasant way?
My mother.

And can I ever cease to be
Affectionate and kind to thee,
Who was so very kind to me?
My mother.

Ah! no, the thought I cannot bear,
And if God please my life to spare,
I hope I shall reward thy care,
My mother.

When thou art feeble, old, and gray,
My healthy arms shall be thy stay,
And I will soothe thy pains away,
My mother.

And when I see thee hang thy head,
'T will be my turn to watch thy bed,
And tears of sweet affection shed,
My mother.

For God, who lives above the skies,
Would look with sorrow in his eyes,
If I should ever dare despise,
My mother.

MY FATHER.

Who took me from my mother's arms,
And, smiling at her soft alarms,
Showed me the world, and nature's charms?
My father.

Who made me feel and understand
The wonders of the sea and land,
And mark through all the Maker's hand?
My father.

Who climbed with me the mountain hight,
And watched my look of dread delight,
While rose the glorious orb of light?
My father.

Who, from each flower and verdant stalk,
Gathered a subject for our talk,
To fill the long, delightful walk?
My father.

Not on a poor worm would he tread,
Nor strike the little insect dead;
Who taught at once my heart and head?
My father.

Who taught my early mind to know
The God from whom all blessings flow,
Creator of all things below?
My father.

Soon, and before the mercy-seat,
Spirits made perfect,—we shall meet!
Then with what transports shall I greet
My father.

[ANN TAYLOR.]

"Happy Homes."

To D. W. R.

I was much surprised as well as amused to read your description of how your *fancy* pictured me. I cannot boast of such beauty as your *fancy* has pictured. I am sorry to dispel such a pleasant dream, but in justice to you I am compelled to do so. I have not "bewitching blue eyes," but dark hazel, and dark hair; my complexion is not fair or brunette; the roses have never visited my cheek—but still I am, not *positively ugly*. I am afraid, as you have fallen in love with an ideal person, it would shock your nervous system in the *descent* to reality. If I could only paint my eyes blue, I would do so with pleasure, but it is among the impossibilities and I must remain content to let you worship the "blue-eyed, fair-faced" ideal.

CARRIE.

Why are good husbands like dough?—Because women *need* them.

Ladies Dress Goods.—Those who wish rich goods, need not send to Paris or London to make private purchases of rare samples of ladies' dress good, for all this trouble is saved. "If Donstinane will not go to Burnham Wood, Burnham Wood will come to Dunsinane." And so if ladies cannot go to Paris and London, Paris and London will come to them. This, Messrs Kirby & Co. have accomplished for their numerous patrons, by having the very best and richest goods, such as they know will suit their customers—made to order in England, France, and other parts of Europe, and sent to them expressly for their own trade. These up endid goods they are now opening, and ready to show them. Their courteous salesmen are ever attentive, and no urging to purchase. The pleasure, satisfaction, and approval of patrons, at this one-price house, is the ruling principle.

Rich Tea-sets, Vases, etc.—Some of the most superb Tea and Coffee sets we have ever seen, are now being opened at Haynes & Lawton's Crockery Warehouse. The beautiful blending of the colors of blue and gold, crimson and gold, green and gold, in their chaste designs, gives harmony and beauty, that is most gratifying to the eye, and adds materially to the flavor of the beverage.

The Golden Eagle Hotel.—This admirable Hotel is the popular one of the Levee City, and the ever active, Callahan, must enlarge to supply the demand on him for rooms. We speak of the Hotel as a good "House," and we are pleased to know our Legislators, many of them, find it so.

BOWEN BROTHER,

WHOLESALE AND RETAIL DEALERS IN

STAPLE AND SELECT FANCY

GROCERIES,

Ship stores, Ranch and Farm Stores

OF EVERY KIND, AT LOW PRICES.

Particular attention is always given to the selection of our stock of Goods. Many articles are prepared SPECIALITIES, for our

FAMILY TRADE,

SUCH AS—

OLD JAVA COFFEE, and all other choice kinds.

Denn & Manrow's
Combined Power
WINE PRESS.

THIS NEW PATENT PRESS IS NOW OFFERED TO the Grape Growers of this State as a California Invention. It has been designed and finished with reference to the saving of labor and expense, while the work done is more speedily accomplished and with greater results.

It is the FIRST COMPLETE WINE PRESS in the country. The power of the machine is almost unlimited. With the crank alone the power of this press is as 300 pounds to one pound of strength applied. After the crank has been worked by hand to a certain point a lever of eight feet is attached, by placing weights at the end of this lever a new power is given equal to 1,000 pounds for one. This power is continuous, a self-working power—no supervision needed.

This Press is made of solid timber, yet neat, compact, and very powerful; the wheels and gearing simple but sure; the whole weighing about 800 pounds; easily put up or taken down and easily transported; so simple yet carefully constructed that it cannot get out of order unless by extraordinary results. The cost of this machine will be less than the ordinary Screw Press; it will save the labor of six or eight men usually required, as ONE MAN can do all the work.

The quantity pressed is only governed by the size of the machine, each pressing being from 400 to 4000 pounds as the size of the machine may be, and from four to six pressings a day, thus yielding from 400 to 2,000 gallons per day.

Machines will be constructed to order, of any size. For any further information address the undersigned,

DENN & MANROW,
Patentees and Proprietors, Sacramento.

P. S.—The Editor of the Farmer having thoroughly examined this Wine Press, we are permitted to refer to him for capability and perfection, or any other information. 9

THE AUTOCRAT OF THE KITCHEN.

THE ORIGINAL P. P. STEWART.

Fuel Saving and Comfort Producing

LARGE OVEN

SUMMER AND WINTER AIR-TIGHT,

COOKING-STOVE

....FOR....

Wood and Anthracite, or Bituminous Coal.

IMPROVED IN 1859,

With New and Extra Large Fires, and by the addition of the *Celebrated Patent Double-sheet Bottom Flue.*

Attention is invited to the following points of superiority:

1st, DURABILITY—Lasting, with proper care, at least 30 years. Stoves are now in use that were set up in 1838.

2d, MANUFACTURE—Every portion of the Stove is thoroughly constructed. Each Stove is submitted to a critical test, and none leave our works unless completely and perfectly finished.

3d, CAPACITY—Baking, boiling, broiling, roasting, and all other culinary operations performed at the same time.

4th, ECONOMY—Saving the cost of the Stove in one year in the item of fuel.

5th, VENTILATION OF HEAT.—In the Stewart Stove alone, the front doors open directly into the oven (protected by letters patent), securing a direct draft through the top of the oven, by means of holes perforated in the doors and back flues. It will be borne in mind that, as the heated air always rises, this method of ventilation is the only one of any value whatever.

6th, ENTIRE CONTROL OF HEAT—The heat generated by the Stove may be held therein, and used or thrown into the room at pleasure.

7th, THE DOUBLE-SHEET BOTTOM FLUE—By which a compressed and inverting action of heat is obtained, and the oven more evenly and efficiently heated than by any other known invention.

8th, BROILING—Performed on the top, and without the possibility of smoke entering the room.

9th HOT WATER RESERVOIR AND WARMING CLOSET—Both useful and convenient, supplied by the waste heat and without extra fuel.

10th, WATER RACK—An arrangement for supplying hot water for the bath-room, equal to any range.

☞ Beware of the numerous imitations in the market, many of which resemble the Stewart only in appearance, and none of them possess any of its peculiar qualities. See that the name of P. P. STEWART, and of the Manufacturers are on each stove. None other are genuine. For sale by

CALEB M. SICKLER,

493 Kearny street, bet. California and Pine, v20-6 San Francisco.

Literary Shrubbery.

THE WILL OF MAN.

Weak is the will of man, his judgment blind;
Remembrance persecutes, and hope betrays;
Heavy is woe:—and joy, for human-kind,
A mournful thing, so transient is the blaze!
Thus might Ae paint our lot of mortal days
Who wants the glorious faculty assigned
To elevate the more-than-reasoning mind,
And color life's dark cloud with orient rays.
Imagination is that sacred power;
Imagination lofty and refined:
'Tis here to pluck the amaranthine flower
Of Faith, and round the Sufferer's temples bind
Wreaths that endure afflictions heaviest shower,
And not shrink from sorrow's keenest wind.

MATRIMONIAL EXTREMES HARMONIZED.—Being extracts from the list of bans published in the Preston churches on Whitsunday:

An aerolite lately appeared in Cork, and struck in a field in which a valuable mare was feeding. The animal was next morning missed and sought for, when a large circular hole or pit was discovered in the field, and at the bottom of this hole the mare was found standing erect, stiff and dead. The belief entertained by those who have seen the spot is, that the aerolite must have struck the earth from beneath the mare, forming this hole and burying itself deep in the ground, while the mare fell from the receding earth, and was struck dead by the fright.

CHINESE JUSTICE.—But few are aware of the fact that the Chinese of this city have Courts of their own, and have certain laws of their own which they rigidly enforce, very frequently imposing the death penalty. When the latter is the case the prisoner is sent back to China, with a record of the trial and finding of the Court. These are given to the Chinese authorities, who forthwith proceed to execute the decree of the Court. One of the greatest terrors of the Chinese thieves is to be tried by their own Courts, for their Judges seem to know by intuition when an attempt is made to cheat them by the introduction of a false witness, and, although the Chinese have no hesitation in perjuring themselves in an American Court of Justice, they are remarkably careful not to do anything of the kind when before their own Courts. Each Commercial Company has a Court of its own, and a representative of each company composes a sort of Supreme Court. Not long since a Chinese thief was brought before Judge Sheppard, upon a charge of grand larceny, but the evidence would not warrant his conviction. He was, however, immediately arrested by the Chinese, and has been convicted, and will be returned to China to suffer the penalty imposed by the Court.

The Markets.

Wholesale Produce Report.

This represents the prices paid by the dealer to the producer

Corrected weekly, by A. H. Tuns & Co., corner of Clay and Drumm Streets.] Feb. 17.

An active demand exists in the Produce Market for all kinds of Cereals. The long-continued dry spell, and uneasiness that exists among some that our crops will be short, if not a total failure, is having its effect on the offerings, our Market being but poorly supplied, and many holding back in anticipation of a further advance in prices, which, in reality, has already made our Market prices a shade firmer. Should we have our usual rains of February and March, there would be but little fear of an average crop. California is different from many of the older States of the Union: we have every description of climate and soil, and a total failure would be almost an impossibility in crops. It is natural for speculators and those who wish to advance prices, to make use of every argument, sometimes to argue, too much rain drowns the crops; at others, a want of it is to create a famine; any argument that, in their opinion, will work on the minds of the people and cause an advance or add to their profits, accomplishes the object sought. Our opinion is, that there is time enough yet for rain, and it would be our course, if prices advanced materially, to sell if we were holders. A good price and sure profit is a certainty; holding is a speculation, and oftentimes results ruinously. There is, of the old crop, now on hand, a sufficient amount to supply our wants a long time. If none should be produced of this crop, we could but illy afford to export, is true, and those holding would, in such an event realize large prices. We do not wish to create any unnecessary alarm or uneasiness, believing there is no cause for it, our object being to give our views unbiased. We hear of no new charters for breadstuffs; vessels on berth are filling up; the interior and coast demands are large, and sales of some magnitude have been made to speculators aside from the above.

Our Exports are as follows: Ex bark Rival, for Victoria, 918 sks Barley, 260 sks Beans, 114 sks Bran, 720 qr-sks Flour, 102 sks Wheat, etc. Ex British bark Mary & Edith, for Auckland, N. Z, 200 hf-sks Flour. Also, for Sidney, 6980 sks Oats, and 2940 sks Wheat.

Our receipts of Produce from around the Bay for the past week have been as follows: Wheat 15,743 sks, Barley 4283 sks, Oats 3234 sks, Flour 7530 qr-sks, Hay 184 tons, Corn 152 sks, Bran 450 sks, Potatoes 882 sks, Salt 200 sks, Beans 200 sks, Middlings 125 sks, Wool 25 bales.

Also, Coastwise: Wheat 2310 sks, Barley 1914 sks, Onions 262 sks, Potatoes 3695 sks, Oats 2770 sks, Beans 2120 sks, Flour 130 qr-sks, Buckwheat 60 sks.

Prices at Pacific Fruit Market—Feb. 18.

Messrs. Addison, Martin & Co, successors to Gould, Martin & Co., report to us the following prices as the ruling rates for fruit:

Apples 4@6c, A No. 1 7@8c ₰lb. Pears 6@10c ₰lb. Dried Plums 15@20c ₰lb. Dried Peaches 11@17c ₰lb. California Dried Figs 25@35c, New Elems 35@50 ₰lb. Lemons $7@$13 ₰box, retail 50@75c ₰doz. Oranges $4@$3 ₰100, retail 75c@$1 50 ₰ doz.

We have now on the market a very large lot of Apples in bad order, ex industry. The cargo sold from $1 25@$2 ₰ box. Some portions of the cargo were worthless.

BY CONTINENTAL TELEGRAPH.

DATES TO FEB. 18.

Over a hundred Union officers lately escaped from prison in Richmond. A few were recaptured. The others have arrived at Baltimore. The account of their escape is full of thrilling interest, but for prudential reasons many of the particulars are withheld from publication. They were fifty-one days making the tunnel, their instruments being case knives, pocket knives, chisels and files. Twice they had to abandon the work, and commence again, on account of obstructions which they could not pass. They disposed of the excavated earth by drawing it out of the hole in a spittoon, which they attached to a cord. This would be filled by the party at work in the tunnel, pulled out in the cellar by their companions, who disposed of it by spreading it in shallow layers over the floor, covering it with straw. The work was necessarily slow. So close was the atmosphere in the tunnel, that they could remain in it but a few minutes at a time, and the candle would go out. At one time they got so near the surface that a small hole broke through. Fortunately this was not discovered, and it was of great service, admitting air and light into the tunnel. When it was completed it was about sixty feet long, and opened into an old tobacco shed beyond the line of guards. As soon as they found the way clear they emerged slowly in small squads, making their way towards the Williamsburg road by the shortest route. Darkness favored them, and the fact that the rebel soldiers whom they met were clad in the army coats of Uncle Sam, which they had stolen, was a great help to them. Although many had haversacks with them, they found the National uniform a better disguise than if they had been provided with rebel uniforms.

Gen. Butler had issued an order forbidding the sale of liquor to be drank on the premises of the seller under the penalty of fine or imprisonment at hard labor. Also, an order that all the estates in his Department, abandoned or occupied by the rebels, be taken possession of by the Superintendent of Negroes, officers, or Treasury agents.

A Washington dispatch says there is an evident disposition on the part of Congress to grant authority to Secretary Chase to sell the surplus gold in the Treasury. His friends assert the receipts of the custom houses between now and July 1st would be more than sufficient to meet the specie demand that will be due by that time, and that a judicious sale of even one-half of the $22,000,000 now in the Treasury will put a stop to speculation in gold. Others, however, fear that this gold, if taken from the Treasury, will be sent abroad, and thus have a disastrous effect on our finances.

Those who escaped from Richmond prison were 12 Colonels, 7 Majors, 32 Captains, and 59 Lieutenants, obtaining their liberty without the preliminaries of a parole or exchange. The Examiner of the 13th announces the recapture of 1 Colonel, 3 Captains and 21 Lieutenants.

In the Senate, bills granting lands to Oregon, in aid of military roads, were passed. The bill repealing the Statutes of Limitations in certain cases, was called up and passed. The bill, as amended, provides that during the existence of the rebellion the time during which a person shall be beyond the reach of legal process shall not be deemed or taken as any part of the time limited by law for the commencement of an action.

The World's Nashville letter says the army of Chattanooga is preparing for immediate operations. Chattanooga is well stored with munitions of war. The roads in Georgia are improving. The writer thinks General Logan, with the Fifteenth Army Corps, which moved from Huntsville, would strike for Rome, Georgia, to operate on Johnston's flank. Assuming that to be Logan's destination, Grant will march against Johnston with 80,000 men.

Chattanooga dispatches say the information from Johnston's army is contradictory. One report is, that the entire force is around Dalton; another, that a large portion, including the artillery at Kingston, has gone to reinforce Longstreet. John Morgan is said to be in the vicinity of Dalton, with a considerable cavalry force, preparing for a raid. Governor Watts, of Alabama, has telegraphed to the citizens of Selma to prepare to receive noncombatants from Mobile, as that place will be soon attacked by the Federals. The Mobile papers say that Sherman's plan is to penetrate to central Alabama, compelling the evacuation of Mobile.

It is said that on the 22d of February Mr. Lincoln will issue a proclamation of universal emancipation including the Border States.

The Times' special says the Committee on the Conduct of the War will soon examine into the causes of the inactivity of the ironclad fleet off Charleston.

Advices from Colonel Phillips' expedition, in the Indian Territory, state that he penetrated further into the rebel territory than has yet been reached by the Federals, and is now marching on to Texas. His force consists of some Kansas troops and one Indian brigade. The rebel General Cooper's headquarters are at Fort Washita; Standwait and Addison are at Preston, Texas; and Quantrell, at Benham's.

The Memphis Bulletin of the 17th says: At last accounts, Gen. Sherman had captured Meridian, Mississippi, with but little opposition. The rebel Gen. Polk was until lately, at Meridian, but hearing of Sherman's advance, got out of the way. The report is that he reached Jackson about the time Sherman got to Meridian.

A captured rebel letter says that a secret Union Association has been formed in Virginia, and is known to number over 10,000 members. Some are wealthy and influential citizens. The letter says that Jeff Davis knows this, and has ordered several suspected parties to be arrested, and that secret agents are now on the hunt for all suspected persons.

A Washington letter says that Lee has received 30,000 recruits. Longstreet is now to be strengthened. His force is said to be 45,000 men. Breckinridge and Buckner, the writer says, are to invade Kentucky, assisted by Longstreet, either by remaining in reserve at Bull's Gap, or advancing to Central Tennessee to attempt a movement on the rear of Grant. The latter seems to be out of the question.

In the House the provision for the $300 commutation was agreed to, with a proviso that it shall not exempt for a longer period than one year; at the expiration of that time such person shall be liable to draft. The bill as reported also provides that colored persons may be drafted. Such troops not to be assigned as State troops, but mustered into the service as United States colored volunteers.

☞ **Holloway's Pills.—Pregnancy.—During** this delicate situation, ladies will experience great relief by using this mild cathartic medicine for correcting those indispositions and nauseating sickness to which they are subject at this period. They give a gentle stimulus to the circulation, and purify and expel all those humors which irritate the stomach and bowels. They are so mild that the most delicate constitution may take them with perfect safety. For sedentary females at the dawn of womanhood, or at the turn of life, they are equally adapted.

Sold by all Druggists, at 25c, 62c, and $1 per pot. 136

HOLLOWAY'S PILLS and OINTMENT may be always obtained of Messrs. CRANE & BRIGHAM, cor. Clay and Front streets, San Francisco, Cal.

☞ **Never wear a cough,** or irritation on the lungs when you can buy AYER'S CHERRY PECTORAL, the world's great remedy that cures it.

The above list embraces those that the Undersigned has proved. The WINE-GRAPES are the BEST OF THE RHINE, such as our Choice Rhine Wines are made from; and those for the Table are well known and approved. The Grapes will make Better Wine than our California Grapes, by a 100 per cent. Having cut down all my California Grapes, and instituted others, I know what I say to be true.

Orders for Rooted Vines or Cuttings at LOW PRICES, can be sent by Mail or left at the FARMER OFFICE, will be promptly attended to.

20-24-tf **B. KAMP.**

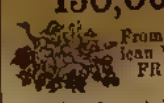
$5! Delaware Grape-Vines! $5!

PROPAGATED FROM VINES received in 1861, from Dr C W. Grant, of Iona Island, near Peekskill, N. Y. One and two year-old Vines, from $100 to $200 each! The superiority of the Delaware as a Wine Grape, will doubtless induce unprincipled Dealers to flood the Market with a Spurious Article; and as mistakes sometimes UNINTENTIONALLY occur, which cause delay and trouble to the Purchaser—

☞ **I WILL PAY IN GOLD COIN $5.**

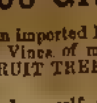
(or the same amount in Lincoln, Lenoir, Union Village, Anna, or Diana Vines, at 50c each, for the IONA at $200 each) for each Vine purchased from me, for the DELAWARE, which proves untrue to name.

I have a few IONA VINES, one year old, propagated from a Vine presented to me from Dr. Grant, the Originator of the same, which, except upon the above conditions, I do not intend to offer in Market without its permission.



Catawba Vines and Cuttings by the Hundred or Thousand, CHEAP!

O. A. CRAIG,
24-3m* Rattlesnake P. O., Placer County.



SEED, PLANTS, ETC.

THREE PREMIUMS for BEST Varieties FOREIGN GRAPES.

CALIFORNIA FARMER AND JOURNAL OF USEFUL SCIENCES.

VOLUME XXI. SAN FRANCISCO, CALIFORNIA: FRIDAY MORNING, FEBRUARY 26, 1864. NUMBER 4.

The California Farmer.

AND JOURNAL OF USEFUL SCIENCES.

COLONEL WARREN, Editor.

PUBLISHED EVERY FRIDAY MORNING.
BY J. E. PHILLIPS & CO

Office—No. 220 *Clay street (up stairs), below Battery.*
SAN FRANCISCO.

TERMS OF SUBSCRIPTION--IN GREENBACKS.

By mail, for one year, $5; for six months, 2 50. For a club of five new subscribers, a sixth copy will be sent gratis. To City subscribers, delivered by carrier, 12½ cents a number, or $6 a year in advance.

☞ Advertisements and Subscriptions must be paid for in advance.

JOB-WORK—Of every description, done with promptness, at fair rates; orders will be faithfully attended to.

☞ All letters on business connected with the office should be addressed to PUBLISHER CALIFORNIA FARMER, San Francisco, Cal.

Shall we have More Population?

RAISORTOX, Macoupin Co. Ill., Jan. 25, 1864.

EDITOR CALIFORNIA FARMER:

I take the liberty to write a few lines to you, hoping you will give me the information I ask.

1st. Do you have snow and ice in the valleys of California?

2d. Is there chances to buy small, improved farms near the Bay, and how much an acre?

3d. Is Greenbacks or Treasury Notes taken in payment for land and for the necessaries of life, or is the loyalty of the people like the Pharisees of old that make long prayers? There is quite a number of farmers that want to go to California in the Spring, but their money is Greenbacks, and we have heard that they do not pass current in California, but we can hardly believe it. I live near St. Louis, and you won't see or hear of any other money if you were there a week, unless you went to the Brokers' shaving mills.

We want to see your paper. Please send us one number. We hope sometime to be your subscribers—the Currency is the only hindrance. Please inform us, and much oblige.

Yours, S. P. TRUESDELL.

We are happy to give the above letter from Illinois, as it shows how earnest the people of other States are to come to us, and how eager they are for *information* in regard to our climate, lands, and means of living. We answer the three questions cheerfully.

1st. We have snow and ice on our mountains and in the Northern part of our State, but very seldom snow or ice in our beautiful valleys—a little frost, and sometimes a smooth, glassy kiss of "Jack Frost" congeals the waters till "Old Sol" smiles an hour or so; his genial warmth soon scatters all cold feelings that exist among the plants, flowers, and dews, and all is fair and smiling again.

2d. There are plenty of good chances to buy Improved Farms at a very reasonable rate; all that is required is to call at the FARMER OFFICE, enter the Free Reading Room and Museum, and examine the Bulletin Board, where is recorded Farms, Gardens, Orchards, Vineyards, Cattle, Sheep, etc, etc, that are offered for sale, and always on the most reasonable terms.

3d. "Is Greenbacks or Treasury Notes taken for land and for the necessaries of life? or is the *loyalty of the people* like the Pharisees of old, that made long prayers?"

We confess that such a question from abroad grieves us much. We do feel mortified, humbled, to know that California, bright, glorious, gold-gleaming California, should, of all other States, by any act of her people, cast a single doubt abroad of her *loyalty*. Yet, alas! it is so, and we grieve to know it. We are pained to know that while we are so loyal and true by *profession*, our act of *repudiation of the National Currency* has inflicted a stain upon the honor and loyalty of our State, so great and fearful that the people of other States almost fear to come and live with us.

This is an alarming truth, and all who wish to see our State *built up*, all who wish to increase the population with good and true Union-loving citizens, all who wish to see a tide of population setting toward the shores of the Pacific, must see and know that this *question of the Currency* has a mighty influence with that class of people who wish to emigrate.

Well may they ask if the "Treasury Notes will buy the necessaries of life?" This is a case in point to make up for California to act upon.

Here are a number of families who desire to come and make California their homes. Shall they sell their houses and lands, their flocks and herds, their bank stock and railroad stock, receiving the National Currency in payment, and leave their native spot and bring their wealth with them, or shall they come and leave their wealth behind? Shall they leave a State where the National Currency is honored and Treasury Notes at par, where it will buy houses, lands, and "*all the necessaries of life*," and come to a State where that National Currency is *dishonored* and sold for less than two-thirds of its value, even though the highest law of our country declares it shall be received in payment of all debts, public and private? Can we, as Californians, ask settlers to come to the Pacific shores and bring a little fortune of ten thousand dollars in the Bonds of our National Government, and sell them for *six thousand and a half*? Can settlers feel they are making a change for the better? No! no! no! they will not do this, they will not come; and this question of Greenbacks and the repudiation of our National Currency has most seriously retarded the coming of thousands of our brave and loyal citizens of other States who desire to seek a more genial clime.

We ask business men to read this letter. We ask them to reflect upon it and ask themselves how they think such a feeling on the part of hundreds of thousands who would become our citizens and would populate our State, how *their not coming* affects the business of our State?

We boldly affirm that could it be announced to the world that Treasury Notes are the circulating medium here, could it be but announced that California sustained the National Currency, Greenbacks would at once rise to 80 or 85 cents, and in a little time we should have the business of the State quadrupled; there would be an advance in the value of all produce and articles manufactured, labor would rise and be in demand, and every face would betoken days of prosperity, for it would come as a natural consequence of *wise action* on the part of the people. We hope our Legislature will look to this matter in season.

No one need fear that among honorable minds, any advantage will be taken. Old obligations will be still sacred and be paid in gold, and all trade and commerce will be based upon a new value, probably just the difference between the price of gold and greenbacks, and the change will be beneficial and all will see a large increase of business of all kinds

H. FERGUSON ALBANY.

THE MAYBERRY NEW AND IMPROVED HARVESTER.

What of the Drought?

THE long continued dry weather awakens a spirit of inquiry about the coming crops. It is important to our grain-growers all over this State that they should know the prospect of each section, and whether, if there is a short crop in one place, it is likely to be universal.

We should be very thankful to grain-growers in different sections of the State, if they would send us reliable information of the crops in their several localities, stating the prospects of the different crops of wheat, barley, oats and hay, and the effect of the dry weather upon the varied kinds of cultivation, whether it be the ordinary system of plowing and planting at the same time, or a crop upon "summer fallowed" land, or the volunteer crop, with any other facts connected with the crops the present year.

We should like to hear from the different sections of our State as to the effect of this warm, dry spell upon the fruit trees, etc. All such information will be most acceptable, and will in return benefit the writer as well as the reader, for in many cases it will only be an exchange of information mutually advantageous.

PERILOUS SITUATION.—A man out West was recently caught on a railroad bridge, during a dark night, by a train approaching close behind him: the ties were wet and slippery, it was impossible to run, to jump off or stand still was certain death, and he therefore bent down along his arms around one of the ties and swung off between the rails and the water until the train had passed. A very trying situation certainly: the fright he experienced occasioned a severe fit of sickness.

The Illustration this Week.

THE MAYBERRY HEADER.

THIS splendid Header, built with reference to the wants of California Harvesters; a Header that has eclipsed all other Headers in the great Western States, is now offered in our market with every needed improvement, so as to give it the *power, strength*, and *ease of movement*, required for service in our State.

The Mayberry Header possesses extra powers, which are manifested by ease of working, and the facility with which it *turns on-its own ground*, thus enabling the operator to keep the corners of the field square. It is all-important that our Harvesters should always secure the best Machines, and should be careful to investigate, examine, and purchase the *best*, always. The Mayberry Machine has won golden opinions among the Western farmers. Treadwell & Co. Agents.

Something for our Legislature to Consider.

THERE is in Santa Cruz, Santa Clara and San Mateo counties, situated among the mountains of the Santa Cruz Range, a large quantity—perhaps a million acres—of mountain land. This land has never been surveyed, but has been returned by the United States Surveyors as "unfit for cultivation." For the most part, it is unfit for cultivation in the ordinary meaning of the term in a new country where good and level land is cheap. Much of it consists of abrupt mountains and deep gulches inaccessable to the plow, often inaccessible to animals. It contains some valuable lumber, but mostly in places very difficult of approach. Many of the hills, however, would make splendid vineyards. All through this mountain region are found beautiful valleys, generally of limited extent. Among these valleys school land warrants have been located, the location generally being made so as to cover all that is valuable of the valley. For instance, if the valley is long and 320 acres have been located in it, the locators have chosen eight forty acre lots lying in a row and adjoining each other, in the middle of the valley. This whole region is valueless to the United States, because, if it were surveyed and thrown into market the sales would not pay the cost of the survey. It could not be sold at all for $1 25 per acre. Now if the Legislature should propose it to Congress to give these lands to the State of California upon condition that she sell them in five or ten years at 50 cents per acre, and that the remainder unsold after that time should revert back to the United States, there is no doubt Congress would donate these lands to the State. With the certainty of getting an immediate title at 50 cents per acre, nearly all these lands would find purchasers in less than five years, and in this wild district gardens and vineyards and homesteads would spring up. The gift of these lands would not at all injure the treasury of Uncle Sam, yet the sale of them by the State would be a source of considerable revenue to her. Since the public treasury is said not to be in a very plethoric condition, the subject may be worth the consideration of the Legislature and especially of the Legislators from the three counties in which these lands are situated.—[Santa Cruz Sentinel.

SEA WALLS.—The French have introduced a new system of building sea walls which promises satisfactory results. They form gigantic blocks of concrete, weighing about 25 tuns each, which are deposited in the sea along the line of a breakwater, to afford protection to their sea walls. A new mole at Algiers consists of a base of rubble 17 feet in hight and 156 feet in width, and the concrete blocks are deposited in the sea until they rise to the hight of 33 feet above the rubble, making a total hight of 50 feet. A new harbor has been inclosed at Marseilles, surmounted by a sea wall and protected by such concrete blocks.

Talk About Fruit

THE most of the talk of the Fruit Growers Club (N. Y.), Dec. 24, was upon the question of influence of soil upon fruit trees—that is, what soil do they grow best in, and what is the effect upon growth in taking nursery trees from a light to a heavy soil, and the reverse.

Dr. Ward said that, if nursery trees are stunted for want of sufficient pabulum, no matter what the after treatment or soil, they never recover in the orchard, and this faulty development of organs in the young plant may account for the degenerate condition of many trees, much more than a change of soil. I consider it just as important that a young plant should be fed suitable, nutricious, rich food, as a stock-breeder does that his young animals should be treated in the same way. Indeed, there is a great analogy between plants and animals; both are developed by a similar process of nutriment and growth, and when this development is healthy, both become vigorous, and take on the most perfect form. I would, in buying trees, look more to this than what was the character of the nursery soil, because that can be made suitable, whether naturally heavy or light. Perhaps the most suitable soil for trees, is a medium of loamy soil, which, for a nursery, must undergo a most thorough manipulation and enrichment. The soil should be naturally one that does not suffer from drought, because that gives a fatal check to growth, and it must be so thoroughly drained that water will not stagnate within reach of the roots.

Solon Robinson—If the theory of analogy between the growth of plants and animals is correct, as I believe it is, then the nurserymen should only adopt and pursue the same course that the stock-breeder does in giving the young plants nutricious food, so as to produce rapid growth and great vigor, but he should follow up the analogy and look to the seed that is to produce the trees, to be sure that it comes from perfect fruit, sound and healthy, in a fit condition to propagate its species. No stock-raiser would think of using a sickly, miserable, stunted animal, male or female, to produce a thrifty, healthy offspring; and I have no doubt about the fact that some, at least, of the diseased, stunted, good-for-nothing trees, which cannot be coaxed to grow and produce good fruit, owe their worthlessness more to their parentage than to their cultivation, or to the kind of soil in which they were grown, or to any violence done to them in changing from one kind of soil to another. We all know in regard to the apple-trees that the seeds are usually produced from the pomace of a cider-mill, and embraces those of immature and diseased fruit, as well as those that come from apples perfectly ripened, and of good quality. In cutting clons, for grafts, the kind of fruit is only looked after; not the healthiness of the tree. Now, if the stock is grown from the seed of a diseased tree, or immature fruit, and the clon is cut from a diseased tree, is it any more reasonable to expect a healthy offspring in this case, than it would be for the stock-raiser to expect healthy offspring from parents that were notoriously unfit to propagate their species? If this view is correct, a radical reform is needed in the production of all of our fruit trees. In confirmation of this theory, I have noticed that those who undertake to produce new varieties by growing seedlings are very careful to select their seed from the very finest specimens of fruit that they can obtain; and some of them contend that it is a great advantage to plant the seed in the pulp of such fruit as peaches, or at least never to allow the seeds to become dry. That is, in looking for the proper season to plant, follow nature's guide. In selecting seed, follow the course of those who produce the most highly-developed animals. Follow their course also in the care and food of the young trees. Adapt each to the most suitable soil, and give them rich food and tender care, with shelter from blasting winds, and there will be very little occasion to complain about trees not doing well because the orchard soil is different from that of the nursery.

Dr. Ward—I indorse all this. Everything depends upon the starting point, in plant, as well as animal life. Consumption is thus transmissable. The common disease of peach trees, indicated by the yellows, it is well ascertained is transmissable in seed and clons. We must study and understand better, vegetable physiology. Then we shall be more careful about seed. We are too apt to forget that the first life of the plant receives all its nutriment from the substance of the seed. That is one of the reasons why it is thought that the best time to plant the seed that is to produce the tree, is just when the fruit is perfectly ripe. The seed and earth, nature declares, are then in the most suitable condition. Who knows how much the future usefulness of the tree is injured by the first check its growth receives in injury to the seed. We know that seeds sometimes have barely enough vitality to start the germ into life.

The Rev. Wm. Clift (Stonington), said that some trees appear to have a natural affinity for sandy soil, others for clay. Some pears will never develop their excellence upon a moist soil. Very few soils are, in their natural condition, fit for a nursery or orchard. They require a deal of preparation with the fork and spade, or plow and harrow, to make a thorough pulverization; and then, upon almost all situations, the trees will need artificial fertilization. One of my neighbors has 400 pear trees growing and bearing most rigorously upon a bit of reclaimed salt marsh, upon which he carted beach sand to get a surface dry enough to plant the trees. As they grew they obtained a full supply of nutriment from below. Generally, if an orchard is full fed, it produces early and satisfactorily. In planting an orchard, the great aim should be, upon any soil, a most thorough preparation.

Wm. S. Carpenter—I have planted a good many trees, from various localities and different soils, but care less for that than I do for the way the trees are grown in the nursery. I would reject those that appeared stunted, and those, however thrifty, that were grown so closely that they had not been able to throw out any side branches. I do not want whip stalks, nor fruit trees grown like willow wands. In nursery or orchard, if the soil is not well worked, the trees will fail. They will suffer most in heavy soil. In buying nursery trees, it is a good sign to judge their value, to see that a number of stout limbs have been trimmed off when packing for transportation.

Thos. G. Field—As a grower of trees I concede this truth, but we are not allowed to grow such trees. Customers measure their value by their hight. A low, compactly grown tree, with stout side-branches, would not be a saleable one.

Mr. Carpenter said that they would be saleable to any one who had ever planted an orchard of both sorts, for he would then know that the long slender stalks were not what he wanted. As to the soil of the nursery, he did not consider it important what its character was if well prepared. For an orchard, the soil must be made light and dry. As to the theory of looking to a healthy source of the seed for trees, he could not quite agree with it.

Dr. Ward said that he would defy the gentleman to produce healthy peach trees from seed grown upon the trees that had the yellows.

Dr. Trimble—Most of the peaches sold in this city come from such trees, and the young trees grown in the nurseries come from seeds gathered in the streets, and thus the disease is spread everywhere. I was in an orchard the past season of 130 acres, that would yield 30,000 baskets of fruit. In three years all these trees will be dead, and the proprietor would not have another orchard planted upon the same land as a gift, because the trees would die before they gave a crop, and one good crop is all that is looked for, such is the diseased condition of the trees.

Mr. Carpenter insisted that the yellows in peach trees were the product of an exhausted soil.

Solon Robinson inquired how it happened, then, that the disease was found upon the richest virgin soil in the world, on the prairies and bottom lands of the West?

Thomas J. Field—Then they die of excess of richness as well as of poverty. The yellows upon peach trees, show that the tree is diseased; just as the black leaves upon pear trees show disease, and it is not traceable in either case to a defect in soil or culture. As to effect of soil, and change from one sort to another, I would prefer the nursery soil to be of moderate richness, as they do sometimes grow too rapid and with roots too long upon very deep, rich soil. I think that there is a disadvantage to trees grown in a sandy nursery, if planted out in orchard upon a clay soil: All trees become in a measure, habituated to a particular kind of soil.

MR. J. F. TAPLEY, of Springfield, has just received a patent for a bronzing machine, or a press for printing in bronze. It has received a thorough trial of several months, effects a great saving of time and material, and works equally well in letter-press and lithographic printing.

THE last novelty in the flower world is bouquet made of mother-of-pearl, that sparkle like jewels The pearly part of the shell is separated in strips as thin as paper, and with these layers trembling oat and wheat leaves are especially well imitated

MINERALOGY.

[Continued from California Farmer of February 19th, 1864.]

Silver.

REMARKS ON SILVER AND ITS ORES.

Ores from which the silver of commerce is mostly obtained are the *vitreous silver, brittle or black silver ore, red silver ore* and *horn silver* in addition to native silver. Besides these, silver is obtained in large quantities from Galena (lead ore), and from different ores of copper: and some galenas are so rich in silver that the lead is neglected for the more precious metal. This metal occurs in rocks of various ages, in gneiss, and allied rocks, in porphyry, trap, sandstone, limstone, and shales; and the sandstone and shales may be as recent as the middle secondary, as is the case in Prussia, and probably also in our own Michigan mining region. The silver ores are associated often with ores of lead, zinc, copper, cobalt, and antimony, and the usual gangue is calc spar or quartz, with frequently fluor spar, pearl spar, or heavy spar.

The silver of South America is derived principally from the horn silver, brittle silver ores, including arseniuretted silver ore, vitreous silver ore, and native silver. Those of Mexico, are of nearly the same character. Besides, there are earthy ores called *colorados*, and in Peru *pacos*, which are mostly earthy oxyd of iron, with a little disseminated silver; they are found near the surface where the rock has undergone partial decomposition. The sulphurets of lead, iron and copper, of the mining regions, generally contain silver, and are also worked.

The mines of Mexico are most abundant between 18° and 24° north latitude, on the back or sides of the Cordilleras and especially the west side; and the principal are those of the districts of Guanaxuato, Zacatecas, Fresnillo, Sombrerete, Catorce, Oaxaca, Pachuca, Real del Monte, Moran, and Pasco. The veins traverse very different rocks in these regions. The vein of Guanaxuato, the most productive in Mexico, intersects argillaceous and chloritic shale, and porphyry; it affords one-fourth of all the Mexican silver. The Valencian mine is the richest in Guanaxuato, and has yielded for many years, from one to two millions of dollars annually. In the district of Zacatecas the veins are in graywacke. In Sombrerete they occur in limestonne; and there are extensive veins of the antimonial sulphuret, one of which gave in six months 700,000 marcs (418,000lbs troy) of silver. The Pachuca, Real del Monte, and Moran districts, are near one another. Four great parallel veins transverse these districts, through a decomposed porphyry. From the vein Biscaina, in Real del Monte, $5,000,000 were realized by the Count de Regla, in twelve years.

In South America the Chilian mines are on the Western slope of the Cordilleras, and are connected mostly with stratified deposits, of a shaly, sandstone, or conglomerate, character, or with their intersections with prphyries. The chlorids and native amalgams are found in regions more towards the coast, while the sulphurets and antimonial ores abound nearer the Cordilleras. The mountains north of the valley of Huasco contain the richest silver mines of Chili. The mines of Mt. Chanarcillo produces at the present time more than 80,000 marcs of silver per year. The veins abound in horn silver, and begin to yield arsenio-sulphurets at a depth of about 500 feet. The mines of Punta Brava, in Copiapo, which are nearer the Cordilleras, afford the arseniuretted ores.

In Peru the principal mines are in the districts of Pasco, Chota, and Huantaya. Those of Pasco are 15,700 feet above the sea, while those of Huantaya are in a low desert plain, near the port of Yquique, in the southern part of Peru. The ores afforded are the same as in Chili. The mines of Huantaya are noted for the large masses of native silver they have afforded.

The Potosi mines in Buenos Ayres, occur in a mountain of argillaceous shale, whose summit is covered by a bed of argillaceous porphyry. The ore is the red silver, the vitreous ore along with native silver. It has been estimated that they have afforded since their discovery $1,300,000,000. These mines have diminished in value, though they still rank next to those of Guanaxuato.

In Europe the principal mines are those of Spain, of Kongsberg in Norway, of Saxony, the Hartz, Austria, and Russia. The mines of Kongsberg occur in gneiss and hornblende slate, in a gangue of calc spar. They were especially rich in native silver but are now nearly exhausted. The silver of Spain is obtained mostly from galena, and principally in the Sierra Almagrera in Grenada.

The mines of Saxony occur mostly in gneiss, in the vicinity of Freyberg, Ehrenfriedensdorf, Johangeorgenstadt, Annaberg and Schneeberg.

The ores of the Hartz are mostly argentiferous copper pyrites and galena, yet the red silver, vitreous silver ore, brittle silver ore, and arsenical silver, occur, especially at Andreaskreutz, and the mines of that vicinity. The rock intersected by the deposits is mostly an argillaceous shale. Carbonate of lime is the usual gangue, though it is sometimes quartz.

In the Tyrol, Austria, sulphuret of silver, argentiferous gray copper, and mispickel occur in a gangue of quartz, in argillaceous schist. The Hungarian mines at Schemnitz and Cremnitz, occur in a syenite and hornblende porphyry, in a gangue of quartz, often with calc spar or heavy-spar, and sometimes fluor. The ores are sulphuret of silver, gray copper, galena, blende, pyritous copper and iron; and the galena, and copper ores are argentiferous.

The Russian mines of Kolyvan in the Altai and of Nertchinsk in the Daouria mountains, Siberia (east of Lake Baikal), are increasing in value, and yield annually 70,500 marcs (47,800 troy pounds) of silver. The Daouria mines afford an argentiferous galena which is worked for its silver. It occurs in a crystalline limestone. The silver ores of the Altai occur in silurian schists in the vicinity of porphyry, which contain besides silver ores, gold, copper, and lead ores.

In England argentiferous galena is worked for its silver. 40,000 tons of the ore were reduced in 1837, one-half of which contained 8 to 8½ oz of silver to the ton of lead, and the other half only 4 to 5 oz of silver.

In the United States, the Washington silver mine, in Davidson county, North Carolina, had afforded up to 1845, $30,000 of silver. The native silver of Michigan is associated with copper in trap and sandstone. These mines promise to be highly productive.

The silver mines of the world have been estimated to yield at the present time (1848), $20,000,000 annually.

The annual product of the several countries of Europe is nearly as follows:

	pounds troy.
British Isles	7,200
France	4,150
Austria	63,000
Sweden and Norway	13,000
Spain	130,000
Saxony, the Hartz, and other parts of Germany	78,500
Belgium	440
Piedmont, Switzerland and Saxony	1,560

Making in all 298,150 troy pounds, or about $4,500,000 annually. With the sum from Russia, about $730,000 it becomes $5,230,000 a year. This is small compared with the amount from America, which at the beginning of the present century equalled 2,100,000 pounds, or 31½ millions of dollars, nearly six times the above sum; and it is probable that these mines will again yield this amount when properly worked. The whole sum from Russia, Europe, and America, makes nearly 2,000,000 pounds avoirdupois.

The common modes of *reducing silver ores* in the large way are two; by *amalgamation* and by *smelting*. Both mercury and lead have a strong affinity for silver, and these reducing processes are based on this fact. In amalgamation the silver ore is brought to the state of a chloride by a mixture of the powdered ore (or "schlich"), with about ten per cent of common salt; the chlorid is reduced by means of salts or sulphurets of iron, or metallic iron in filings, and at the same time mercury which has been added, combines with the liberated silver, and thus separates it in the condition of an amalgam (a compound of mercury and silver) The mixture of salt and "schlich" requires several days to become complete. Heat is employed at the Saxon mines, but not at those of Mexico, where the climate is tropical. After the mercury is put in (6 or 8 parts to 1 of silver), the mixture is kept in constant agitation until the process is finished. In the best arrangements, as in Saxony, this agitation is performed in revolving barrels, and the result is accomplished in a few hours; but in the principal mines of Mexico it is effected by the treading of mules or oxen, and requires two or three weeks or more. The amalgam, separated from the muddy mass, by a current of water or washing, is then filtered of the excess of mercury; as a last step it is subjected to heat in a distilling furnace, by which the silver is left behind, the mercury passing off in a state of vapor to be condensed in a condensing chamber or receptacle. The loss of mercury by the process is often large.

In case of the ordinary sulphurets and arseniurets of silver, or the chlorid, in Mexico and South America, the poorer ores are first fused with a flux, and the result (called the "matt") is then roasted to expel the sulphur; afterwards it is mixed with better ores, again fused, and on cooling, again roasted. This fusion and roasting is again repeated with the best ores. The result from this fusion is next mixed thoroughly with melted lead; the lead separates the silver; and the impurities which float on the surface, are removed in plates as a crust cools, to be again melted with new ores, as the slag is apt to contain some of the silver.

When the argentiferous galena is the ore, it is reduced by roasting in a reverberatory furnace in the ordinary way for lead ore; the resulting lead contains also the silver.

In large establishments several transverse section reverberatory furnaces connect with a single chimney. They are actually like large elliptical or circular ovens, of brick or stone, communicating with a common flue.

In reverberatory furnaces adapted for melting metals, the hearth is a gently inclined plane, sloping to a spot towards one end, in order that the fused metal may flow down together and be convenient for drawing off. For many other purposes, the *sole* is flat, and the depth is greater.

To separate the silver from the lead, the lead is heated in a reverberatory furnace, the hearth of which is covered with wood ashes and clay, so as to give it the nature of a cupel. The air received through an aperture on one side, passes over the metal in fusion, in a constant current, oxydizing it and changing it to litharge, which is from time to time drawn out; finally the lead is thus removed, and the silver remains nearly pure. The completion of the process is known by the metal becoming brilliant. It is again subjected to another similar operation, and thus rendered quite pure. The litharge from the latter part of the process is also subjected to another operation for the silver it usually contains.

According to Pattinson's new process, adopted in England, the silver is separated by melting the lead, and, as it begins to cool, straining out the crystals with an iron strainer. The portion left behind contains nearly all the silver. This is several times repeated, each time the remaining lead becoming richer in silver. This is then cupelled. An ore containing only 3 ounces of silver to the ton of lead (or but 1-10,000th part), may thus be profitably worked, and with little loss of lead.

When the ore containing silver is a copper ore, as is often the case with gray copper ore, the calcined, and the resulting products are either liquated to *sweat* out the silver or cupelled. In liquation, the copper is run into pigs (called *liquation* cakes), and kept above a red heat for two or three days; the lead first melts and flows in drops into cast iron troughs, carrying with it the silver, which is afterwards obtained by cupelling. The copper still contains some of the lead.

In *trials* by cupellation, a piece of lead of known weight is placed in a cup of bone-ashes, and this is subjected to heat in a small air chamber or oven, and placed in a furnace so that the air shall have free access. The lead is oxydized, and the oxyd sinks into the cupel, leaving a globule of silver behind. The globule being then weighed, and compared with the weight of lead, the proportion of silver is ascertained. Silver may thus be found in almost any specimen of the lead of commerce, however small the proportion. The weight of the globule, especially when quite minute, may also be ascertained by measurement, according to a scale given by Prof. W. W. Mather, in the American Journal of Science, volume iii, second series, page 414.

Other modes of reducing silver ores without quicksilver, have been proposed. According to one, the ore is calcined with common salt, as in Mexico, and converted thus to a chlorid. It is then removed to some proper vessel, and a hot solution of salt poured over it; this takes up the chlorid of silver and holds it in solution. The liquid is transferred to another vessel, and by means of metallic copper the silver is deposited.

Another process consists in roasting the sulphurets and converting them in a reverberatory furnace to sulphates; then by boiling water, dissolving the sulphates in a proper vessel, and finally precipitating as above by copper. This process requires the presence of a good deal of sulphur, and is the best when there is much iron and copper pyrites present.

In the assay to separate copper from silver, the alloy is dissolved in nitric acid, and the silver precipitated in the state of a chlorid by common salt. The amount of silver may then be ascertained by weighing the precipitated chlorid, and observing that 75 33 per cent of the chlorid is pure silver.

Artificial Fecundation of Grain.

A Frenchman, rejoicing in the euphonious name of Hoolbrouk, considering that Nature did not understand her business thoroughly, has conceived a plan for aiding her to overcome this defect. His idea is to accomplish fecundation of plants grain, &c., by artificial means, as according to the experimenter this is not so well done by Nature as it can be by his plan. To carry out his scheme, therefore, all Hoolbrouk uses is an apparatus which consists of a coarse worsted fringe of about a foot and a half deep, appended to a cord which is recommended to be about twenty yards long—but this must of course depend upon the width of the furrows and other local incidents of cultivation—and to the ends of which fringe are attached here and there little pellets of lead or large shot, sufficiently heavy to keep it down. The two ends are carried by two men, while a boy in the middle holds up the line with a forked stick. The worsted is slightly impregnated with honey, by dipping the fingers into the latter, and passing them lightly through the fringe. The instrument is then passed over the standing corn in flower, so to speak in such a way and at such a hight as to catch and impart a slight degree of friction to the whole of the ear. When the operation is applied to fruit trees, it is accomplished by means of a little worsted mop, slightly impregnated with honey in the same way, with which the blossoms are gently touched, or as it were dusted. This improvement upon the old order of things, which was to trust to the wind to blow the pollen from one plant to another, or to depend on insects to perform the office, is said to have been attended with good results. According to recent experiments which have been made, the difference of production, under precisely similar circumstances, between crops to which artificial fecundity has been applied, and those to which it has not, appears to be in the proportion of 41 to 30; and in the case of barley as 34 to 23.

Give the Boys Tools.

In man there is what may be termed a "making instinct," and our houses, garments, ships, machinery, and in fact, everything we use, are the practical results of this instinct. How important then that this faculty be cultivated; and that the idea be at once and forever abandoned that none but mechanics require this great element of usefulness and happiness. Whatever a man's occupation, whether he be a farmer, a merchant, an artist or a mechanic, there are hourly occasions for its practical application. Being thus general in its usefulness the cultivation of this constructive faculty should be a a primary consideration with parents. Skill in the use of tools is of incalculable advantage. It gives useful employment to many an otherwise idle hour. It prompts one to add a thousand little conveniences to the house, which but for this skill would never be made. In a word, it is the carrying out, in a fuller sense, of the design of the Creator, when he implanted this faculty of constructiveness within us. Let it then be cultivated in children. Indulge the propensity to make water-wheels and miniature wagons, kites and toy boats, sleds and houses, anything in fact which will serve to develop it and render it practically useful. Give the boys good pocket knives, and what is better, give them a good workshop. Employed in it, they will not only be kept out of mischief, but they will be strengthening their muscles, exercising their mental powers, and fitting themselves for greater usefulness, when they shall be called upon to take their place in the ranks of men.

Apple Pomace.

A correspondent of the Germantown Telegraph says that "If we take apple pomace from the press, in its green state, just as it comes from the 'cheese,' and mix with it one cask of caustic or quick lime, and two bushels of salt to the cart-load of forty bushels, adding afterwards two bushels of unleached or leached wood ashes, and one of gypsum, we shall have a manure that will exert a powerful effect in promoting the development and maturation of any cultivated product either of the field or garden. Another effectual method of reducing pomace to the condition of a salutary pabulum for vegetables, is to cast it into the hog yard, to be comminuted and macerated by the swine. It will also be here exposed to another powerful corrective and genially modifying influence—that of fermentation. Owing to these causes and priciples, apple pomace deposited in the hog yard in the autumn, even when fresh from the mill, and in possession of all its acetose principles, will come out good manure the succeeding autumn. But if you wish effectually to destroy bushes, such for instance, as alders, briars, and the like, in your fields or cultivated grounds, where their presence is always undesirable, and an obstacle to the successful cultivation of the same, treat them in autumn to crude pomace from the cider mill."

Moisture in the Air.

One of the most curious and interesting of the recent discoveries of science is, that it is to the presence of a very small proportion of a watery vapor in our atmosphere—less than one half of one per cent—that much of the beneficent effect of heat is due. The rays of heat sent forth from the earth after it has been warmed by the sun, would soon be lost in space, but for the wonderful absorbent properties of these molecules of aqueous vapor, which act with many thousand times the power of the atoms of the oxygen and nitrogen of which the air is composed. By this means the heat, instead of being transmitted into infinitude as fast as produced, is stopped or dammed up, or held back on its rapid course, to furnish the necessary conditions of life and growth. Let this moisture be taken from the air but for a single summer night, and the sun would rise next morning upon a "world held fast in the iron grip of frost." But the power of absorption and of radiation in the same body are always equal, so that at length it is poured forth into space; else our atmosphere would become a vast reservoir of fire, and all organic life be burned up.

Sprung Knees In The Horse.

The trouble does not always result from an injury of the leg, or strain of the tendons; it is more often found in horses that have bad corns in the feet, or troubled with navicular disease, than any other. The animal raising his heels to prevent pressure upon the tender parts bends the knee, which bending becomes finally, from the altered position of the limb, a permanent deformity. Horses with sprung knees are unsafe for saddle purposes, owing to their consequent liability to stumble. Respecting the treatment, it may be said that six out of every ten sprung kneed horses will be found to have corns. If these be of recent growth, there is a fair prospect of straightening the limbs by removing the corns, as directed under the head of that disease; by the removal of these the heels are brought to the ground, and the limb becomes straight. Under any other circumstances all treatment proves useless.—[Jennings on the Horse.

The Iron-clad Dictator Afloat.—The third attempt to launch this splendid vessel has resulted in complete success. She was consigned to the water from the yard of Mr. C. H. Delamater, foot of Thirteenth street, on Saturday, 2d January, at ten o'clock A. M. She was christened by Miss Delamater. The keel of the Dictator was laid one year ago last September. She is three hundred and twenty feet long, fifty-two feet breadth of beam, and twenty-two feet depth of hold. The armor of the vessel is composed as follows: Six one-inch plates outside, backed by four and one-half inch wrought iron bars running lengthwise along the vessel, making ten and one-half inches of solid iron plating, which is backed again by four feet of solid oak. The turret is built in three courses, the outside course being composed of seven one-inch plates, inside course by four one-inch plates, and middle course by segment bars five inches in thickness. This arrangement of the turret armor dispenses with bolts. The turret will carry two of Ericsson's new guns. These are thirteen-inch bore, and forged, carrying a three-hundred-and-four-pound shot. The charge of powder will be one hundred pounds, which will make these weapons the most powerfully destructive ones ever known. Six boilers are placed in the vessel, making the engines five thousand horse power. The motive horse power is then furnished by two engines, calculated to give the vessel a speed of eighteen knots an hour. Besides the motive engines, there are ten others, used for working turret, ventilation, etc. The vessel's ram extends fifteen feet over the hull, composed of solid iron and wood, built in the strongest manner, and sharp as a chisel at the end. It will now be about three months before the Dictator is ready for service. Commodore John Rogers will command. The vessel, in her entire proportions, is a perfect success, fully coming up to the expectations of her constructors, and, with ten and a half inch iron armor, and her powerful armament, will prove her right (as Captain Ericsson yesterday remarked) to the name she bears—the Dictator.

Do not be too positive.—Do not be too sure that you are always right in your opinions. Remember, if you are right in one particular, you may be wrong in others. Do not boldly contradict, but calmly express your reasons, and faithfully bear with those whose understanding is less clear or whose reason may be disturbed by passion. Rather than say,—"It is," and "It isn't," "You did," and "You didn't," say, "It seems to me," or "I think it is," or, "If I mistake not." Avoid all rude and ill-natured expressions, as calling one foolish, obstinate, or provokingly stupid. Our aim should be to advance the truth, not ourselves. It often happens that much time is wasted and temper lost in matters of no great consequence. Let us readily yield to trifles. While in all cases concerning duty and happiness we are faithful to right let us remember to hold the truth in meekness.

Opinions of Professors of Music on Jacob Zech's Pianos.

San Francisco, December 29, 1863.

Jacob Zech, Esq:

Dear Sir: We, the undersigned, musicians of the City of San Francisco, do hereby give our unbiased opinion as to the workmanship, purity, power, and brilliancy of tone, and perfectness and durability of action, of the Grand Piano manufactured and exhibited by you. We have no hesitation in pronouncing them far superior to any piano, ever placed before us for inspection. At the late exhibition of the State Agricultural Society, the Committee saw fit to denounce your instrument and award the first prize for an inferior *square piano*, which we pronounce a great injustice to you, and we do hereby give our names, and warrant your pianos to be superior to any in the State. With the greatest esteem, and the most fervent desire for your success, and a wish that the people of California may give you justice, and not be controlled by money or the opinion of any body of men who are not qualified to judge of the merits of a Piano.

We are truly yours, etc,

R. HEROLD, Professor of Music,
GEO. T. EVANS, Pianist and Organist,
GEO. F. PETTINOS, Pianist and Organist,
LOUIS SCHMIDT, Pianist and Organist,
CHAS. STADERMAN, Pianist,
STEPHEN W. LEACH, Artist,
L. T. PLANEL, Professor of Music,
A. LAPPGER, Pianist,
ALBERT STOHR, Musician,
JOSEPH B. SCHMITZ, Musician,
EMILE TOUSSIN, Pianist,
CHAS. SCHULTZ, Pianist and Organist,
J. D. KNELL, Pianist, and Organist at Cathedral,
H. HOLZHAUER, Pianist,
WM. CROOKER, Pianist.

Letter to Jacob Zech.

[The following notice of my Pianos was received by me from the gentlemen named, professors of music at Sacramento, and approving, in very flattering terms, my instrument.—J. Zech.]

Your Grand Piano was an excellent and beautiful instrument, full and rich and tone, in with all the excellencies that are desired in a Grand Piano.

Your Square Piano was one of extraordinary excellence, and beyond question the best on exhibition, having a full and powerful tone, yet, with that soft and delicate expression so desirable to an artistic ear. We feel gratified to know of your success in this art, and hope your efforts will be duly appreciated.

Wishing you all success, we are your friends,

CHARLES WINTER, Pianist,
CHAS. STADDERMAN, Pianist.
CHRISTIAN STATFIELD, Pianist,
GEORGE GREINER, Piano Maker.

Sacramento, October 6th, 1863. 21-3m

SEED WAREHOUSE

(ESTABLISHED IN 1850.)

S. W. MOORE,

IMPORTER

... AND....

WHOLESALE AND RETAIL DEALER

ALL KINDS OF

GARDEN, FLOWER, FRUIT,

Agricultural

....AND....

Ornamental Tree and Shrub

SEEDS,

NO. 408 CALIFORNIA STREET

Old Number 110,

Between Sansome and Montgomery streets,

SAN FRANCISCO, CAL.

THE UNDERSIGNED HAS ESTABLISHED SUCH a correspondence and business in Europe as to enable him to secure from the very best sources—the most skilful growers—their choicest seeds grown, of which he will always be in receipt, and in endless variety, imported directly from France and England, from well known and responsible houses; some of the most prominent of named in our catalogues

It has been the experience of our best gardeners and growers, and all others who plant seed, that seeds raised in California are not fully reliable and cannot be in advance of year, until more capital, experience and scientific knowledge shall be given to the business

FRESH

HAS FOR SALE

Alfalfa or Chile Clover;	Hungarian Grass;
Kentucky Blue-grass;	Orchard Grass;
Red-top Grass;	Sainfoin Grass;
English Rye-grass,	Timothy Grass;
Red Clover;	White Dutch Clover;
Crimson Clover,	Lucerne, &c. &c. &c.

With many entire new varieties of Garden Seeds and prepared Lawn Grasses never before offered.

EVERY VARIETY OF

BEET, CABBAGE, CARROT, RADISH, TURNIP, CUCUMBER, MELONS, LETTUCE, ONIONS, TOMATO, EARLY AND LATE PEAS, BEANS, &c., &c., &c.

Tobacco Seed.

HAVANA, VIRGINIA, CONNECTICUT SEED LEAF, AND MARYLAND TOBACCO SEED.

COTTON SEED.

Guano from Johnston's Island.

FLOWER SEEDS (300 Varieties

BULBS:

LILIES,	TULIPS,	HYACINTHS,
Amaryllis,	Anemones,	Ranunculas,
Narcissus,	Tuberoses,	Peony-roots,
	Gladiolus,	Iris,

and in endless variety, imported direct from France and Germany.

From his long experience in the Seed Business (over thirteen years), and his very extensive stock of good appertaining to an establishment of this kind, he is confident of his ability to satisfy his patrons.

Native California Evergreen

TREE AND SHRUB SEEDS

For Exportation

THE UNDERSIGNED, FROM HIS EXTENSIVE facilities and

Large Stock of Every Variety of Seed

Can offer unusual inducements to

MERCHANTS IN THE TRADE, FARMERS AND LARGE RANCH OWNERS,

Who wish to be supplied in his line.

And would recommend that Orders for Seed be sent DIRECT to the undersigned, through the Express by Mail, otherwise parties run GREAT RISK of being imposed upon, in case their Orders should be filled by some IRRESPONSIBLE ESTABLISHMENT.

☞ The Agents of Wells, Fargo & Co.'s Express are hereby authorized to act as Agents for the undersigned in taking Orders for Seeds and receipting for the same.

The undersigned is also permitted to refer to Chas. Warren, editor of California Farmer, who has had a experience of twenty years in the Seed and Nursery business, and is conversant with the high value of imported seeds, and their superiority to all other seeds

☞ Send for a Catalogue.

California Notes,

ABOUT

GRASSHOPPERS AND LOCUSTS.—No. 3

BY ALEX. S. TAYLOR.

SECOND SERIES.

Continued from the California Farmer of February 19, 1864

Notes of 1859, and 1860.

IN NEW JERSEY, 1860.

The locust, as I predicted, appeared about the first of June, and are welcomed by all the birds, chickens, turkeys, and pigs, who are making a feast upon them. Their song is heard in every grove. They leave no trace of feeding, nor will they, as they only suck the dew from off the leaves through the proboscis. Their eggs are laid in the small twigs of trees, which in due time break off, but this does little harm.

This is *not* the Gryllidæ, the dreaded grasshopper of the East, which travels in devasting armies. That is about two inches long, and more resembles the locust than any other species of grasshopper. The locust has no proper mouth, while all the grasshopper tribes have two—one like pincers to lacerate, the other to masticate—and they are all great feeders. Incredible swarms of this insect are carried from one country to another by the wind. They keep on the wing for a long time, unless it becomes calm, when they alight any where, on land or water. Travelers tell us they rise on a windy day to the hight of 500 to 600 feet, and in such numbers that they darken the sun so that one cannot see a person at a distance of 25 feet. Our first account of them is from Exodus, 10th c, 13th v:

"And the Lord brought an east wind all that day and all that night; and when it was morning, it brought the Locusts (grasshoppers, as translated by Luther)."

And and at verse 19th:

"And the Lord turned a mighty strong west wind, which took away the (Locusts) grasshoppers and cast them into the Red Sea, and they ate up every green thing that the hail, etc, had left.

Mr. Hayward of this place informs me that when he lived on the island of Madeira, 300 miles from the African coast, at one time during a strong east wind that they were brought by it from the coast in clouds, and destroyed all vegetation. The history of this species of grasshopper is the same in all ages. There are accounts of their covering 100 miles square, from one to two feet deep. They are in immense variety, color and size—yellow, brown, green, etc. One of the species in South America measures a foot from tip to tip of its wings, and is very beautifully variegated with stripes and spots.

Our 17-year (Cicada) locust, as I before remarked, is a harmless, beautiful insect, singing and enjoying a short life of six weeks, offering its body to all the feathered tribes as a morsel of exquisite delicacy, but feeding itself only upon dew. [Geo. Webb, in N. Y. Tribune.

IN MADAGASCAR.

The migratory locust appears in great swarms in some years in this island and are used for food by the natives.

Miscellaneous Notes of Other Countries.

IN ARGENTINA.

These pestilent ravagers abound in the provinces of the La Plata river, and create as much havoc as their congeners of Chile and California. Lt. Archibald McRae, attached to the coast survey of California in 1856, was employed as an assistant to Capt. Gillis in the United States Astronomical Expedition to Chile in 1850-52, and performed a scientific journey from Mendoza to Buenos Ayers in December, 1852, in connection with the expedition. He mentions having encountered in that month, immense swarms or "myriads" of locusts on the dry pampas near the Desaquedaro of San Luis. Of one species of locusts, he notes the following singular fact in natural history:

"We passed on the road a swarm of large grasshoppers or locusts, apparently at war with strange looking black flies, about the size and shape of wasps, and having *a red spot* on their tails. Their hostility to the locusts seemed to be wholly wanton, for I could not observe that they did more than kill them. We had before seen myriads of small locusts, generally feeding on young algarobas, but had not seen any as large as these."—Vide Gillis Exped.

Public advices from the Argentine States of February, 1858, mention that the provinces of Entre Rios and Corrientes, were desolated by swarms of langostas, or locusts, which had caused great injury to the cattle pastures and the commerce of the country.

IN BUENOS AYRES

In speaking of the pampas between Mendoza and Buenos Ayres, and their Indian inhabitants, Padre Ovalle says (about 1640), in his 7th chapter of 3d Book: "They make bread of the cods of a tree, which we call, in Spain, Algarobah (Mesquite), and, because that does not last long, they have invented a strange sort of bread, made of locusts; for the locusts used to be in such vast quantities in those great plains called "pampas," that, as I traveled over them, I often saw the sun intercepted and the air darkened with flights of them. The Indians observe where they alight to rest, and those plains being here and there full of thickets, they rest in them and choose the highest for shelter. This the Indians know, and approaching softly in the night they set fire to the thicket, which, with the high winds that reign in those plains, is soon reduced to ashes, and the Locusts killed; of these they make great heaps, and, as they are ready roasted, they have nothing more to do but to grind them to powder, of the flour of which they make a sort of bread which maintains them." Ovalle was a Jesuit Missionary, a native of Chili, who had resided in these countries for many years, and published his history of Chili at Rome in 1646, an abstract of which appeared in English in Churchill's Collection of Voyages, published in London in 1745.

FOSSIL GRYLLIDÆ.

It seems that in the old ages of the world the genus *Acrydium* existed, for fossil *Gryllus*, *Gryllotalpa* and *Locusta* have been found in the limestone and tertiary strata of France and Bavaria, and in the fossil amber of Prussia. *Vide Richardson's Geology*, London, 1855.

LOWER CALIFORNIA, 1735–67.

In Vinegas' *History of Lower California* is mentioned a fearful visitation of locusts to that country in 1722, which caused great distress of food and sickness, many of the Indians dying from the effects. In consequence of the neophytes of the Mission of Guadalupe (in lat. 27° N.) feeding on these locusts, a general epidemic, accompanied with malignant ulcers attacked them which carried off great numbers, among a population of some 1,800 souls. Such was the brutishness of fear induced by this sickness, that when the Indians were attacked, their fellows often *buried them alive*, or covered them with boughs and leaves, and so left the sick to perish.

In the succeeding year, 1723, a violent dysentery attacked the people of the same vicinity, and committed great havoc and death among them, and nearly cost the life of Padre Helen, the priest who had established the mission with his own funds and by his own hands. Venegas also mentions, that the Father Miguel del Barco, who wrote the account of the *Locusts* in Clavijero, was the priest in charge of San Xavier (in latitude 25½° N.) in 1748. This intelligent and indefatigable old friar made San Xavier the most splendid establishment in all Lower California, and to this day, as we are informed by people from that country, it exists in the best preservation in churches, buildings, fences and gardens, of any of the old Missions of the peninsula.

When Sebastian Viscaido returned to Acapulco, in April 1603, from his disastrous expedition of discovery along the Pacific coasts of the Californias, where he lost most of his crews by scurvy (having buried many of them under the oak trees near the beach of Monterey), he went with his remaining officers (as related by Torquemada in Venegas) to pay his compliments at the palace of Chapultepeque (or the Palace of the Grasshoppers), to the Count of Monterey, Viceroy of Mexico, who received them with great joy, and complimented them on their courage and resolution, and promoted all the surviving officers of the expedition according to their pretensions, some of whom became very distinguished in the military and naval service of Spain. It seems, that, in 1603, it only took two days to go from Acapulco to the city of Mexico. The results of this voyage, which had extended from Acapulco up to the Columbia river (as some writers surmise, though attended with great loss), were considered by the Spanish government as of immense importance, as an excellent practical knowledge of the hydrography of the coast of the Californias was obtained, which proved of great value to the galleons sailing between Manila and the west coast of Mexico, and was the guide used in the establishments of Spain on this coast subsequently to 1780.

FRIAR GAGE OF MEXICO, IN 1630.

That curious old English traveler in Mexico, Thomas Gage, who had resided in Guatemala and Mexico for more than twelve years as a Catholic friar and priest, published his new survey of the West Indies in 1648, and gives a highly interesting and curiously circumstantial account of these countries, between 1625 and 1637. Gage having accomulated his "pile" among the Indians and Spaniards of Guatemala as a Catholic curate, became very conscientious and tender in his religious scruples about sacraments, saints, sinners and images; but he took care to take his "bags" with him, when he made his escape from the country to go to England by the way of Spain. Friar Thomas de Loadres, was, however, robbed of his moneys by a buccaneer near Cuba, commanded by a mulatto captain, at which Gage expresses himself most ludicrously indignant. On his return to England, he became a puritanical chaplain to Sir Thomas Fairfax, one of the military courtiers of Oliver Cromwell. The account of Gage induced and stimulated the commonwealth government to send out expeditions under Penn and Venables against the rich colonies of Spain in the Caribbean sea, in which Gage's book was used as a guide to find out the weak places of his former friends and patrons, and to rob them of their riches. The publication of Gage's book seems to have caused great excitement and consternation in Spain and Spanish America, and the old friar was proclaimed a traitor by the king, and by the church, an apostate, etc. The result of the naval expedition was the capture of Jamaica by the English—all from a friar's book. See Bullock's *Travels in Mexico*: London, 1824. This filibustering war with Spain affected the British colonies of the Atlantic on the Southern seaboard very materially—the English from New England to Carolina being all the time in a mass of bloody squabbles with the Spaniards of Florida, and the other Spanish settlements of the Caribbean sea. Indeed, very important political events relating to those countries resulted from the war of Cromwell with the Spaniards.

IN MASILLA AND MOROCCO.

The London Illustrated News of October 13th, 1858, contains the following curious note on a visitation of the Locusts to the Phillipine Islands in 1858:

"Swarms of *locusts* have appeared in several of the Phillipine Islands, and have caused immense damage in the plantations. Public prayers are being offered up and the common people are employed in the fields in collecting and destroying them, the authorities paying so much for every basketful presented to the Alcaldes. It does not appear that the natives of the Phillipine Islands eat the locusts, as the Riff Arabs do. The latter, when they see a cloud of locusts hovering in the air and clouding the sky, watch them anxiously, and if they descend near their "adwars," receive them with shouts of gratitude to God and Mahomet, throw themselves on the ground and collect them as fast as possible. Previously deprived of their heads, legs, and wings, the locusts, well boiled in butter and served up with *alcuscus*, are considered by the Riff Arabs a delicious food." Their camels eat them greedily."

The Piano Question Again.

Letter of Jacob Zech in Answer to Mr. I. N. Hoag, S. S. A. S.

I wish to say that every letter of this gentleman (Mr. Hoag), gives me positive evidence that the affair, of *defrauding* me of the first premium, at the late State Fair at Sacramento, was made up.

1. When the committee came up to examine the pianos, I asked the Rev. Mr. Starr King whether the said committee would look at the mechanism and interior construction of my instruments, as I would take them apart for their examination, and put them together again to be tried. Rev. Mr. Starr King answered that it was not necessary, as he himself was notified only an hour previous, and that he would not act on said committee, because he did not understand anything about pianos, and would like to do justice to every person; yet his name is used on the committee, with what right I do not know; for, if Mr. King did not sign his name to the Report, there would have been only two judges, and their Report of course not complete.

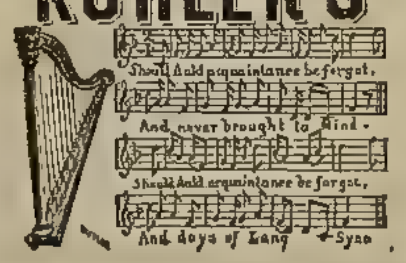
2. When, at the close of the Fair, the list of awards was read at the Pavilion, nothing of a "liberal special diploma" to Jacob Zech was said or heard by any one. Nay, more, the printed list of awards have nothing of it! How can it therefore, be otherwise than a made-up case by the Society?

3. On the 3d and 23d Oct., I published a letter or card, in the papers of Sacramento and of this city, stating the wrong that was done to me. Mr. I. N. Hoag, S. S. A. S., had not a word to say. To my formal protest to the President of the Society, of late date, published in the FARMER, said gentleman answered, that a 'special diploma" was ready for me. Now, in his letter of Jan. 6th, he says, that a "liberal special diploma" was awarded to me. All I demand is justice, not favors. I shall not accept a special diploma. That would be admitting my unworthiness of the first premium. The Society say a Grand Piano is not on the Schedule, and consequently ruled out. I ask the Secretary, is not a Grand Piano a Pianoforte? and why do the Board of Officers not accept my offer, made Dec. 18th, if they wish to do me justice? I will submit my Square Piano again before a committee of musicians, against the same Piano to which they awarded the premiums, and leave the result to their decision as a final test.

As for the proposition which Mr. Hoag makes, for the next State Fair, I must say that, for my part, I had enough of their justice, at the State Fair at Sacramento, the past year, and, unless they manage differently, I will leave it to others to exhibit there in future, and be similarly wronged, if they so desire.

JACOB ZECH.

SAN FRANCISCO, Jan. 14th, 1864.



HOME COMFORTS.—Every working man needs good things to eat; and we hope every man is a working man, whether he be a merchant, a professional man, a manufacturer, a mechanic, or a farmer. Farmers we know are working men; for if they don't work in season, and out of season, they cannot harvest. Every body should work! Work, labor is honorable; and they that will not work should not eat! Drones should not be permitted in the hive of humanity. The "busy bees" kill the drones when they cease to work, and clear them out of the hive; and we go for driving out all drones, and then there would be more food for workers. Bowen & Brothers believe this doctrine, and act upon it. They are working men. See the lots of eatables they are sending to every part of our State—hardly a county where they have not lots of customers. Lately they have been receiving fresh goods. They call them

SPECIALTIES.

We call them "goodies"—all kinds of nice things, such as nice dried and fresh fruits preserved. Goshen cheese and butter extra, Boston butter and water crackers, Bordeaux salad oil, very extra, teas, the imperial brand, coffee, chocolate, reliable. The family wines from this house are just what they should be, very superior; and these luxuries are for those who labor. "They shall eat the fat of the land."

SUPERB VASES.—The vases and statuette recently opened by Messrs Haynes & Lawton, are the most beautiful ever yet exhibited on our coast. Lovers of the exquisite in art should look at them. This must induce their possession

Purify the Blood.

NOT A FEW OF THE WORST DISORDERS THAT afflict mankind arise from the corruption that accumulates in the blood. Of all the discoveries that have been made to purge it out, none have been found which could equal in effect AYER'S COMPOUND EXTRACT OF SARSAPARILLA. It cleanses and renovates the blood, instils the vigor of health into the system and purges out the humors which make disease. It stimulates the healthy functions of the body, and expels the disorders that grow and rankle in the blood. Its extraordinary virtues are not yet widely known, but, when they are, it will no longer be a question what remedy to employ in the great variety of afflicting diseases that require an alterative remedy. Such a remedy, that could be relied on, has long been sought for, and now, for the first time, the public have something on which they can depend. Our space here does not admit certificates to show its effects. But the trial of a single bottle will show to the sick that it has virtues surpassing anything they have ever taken. Sufferers from Scrofula, Scrofulous Swellings and Sores, try it and see the rapidity with which it cures. Skin Diseases, Pimples, Pustules, Blotches, Eruptions, etc, are soon cleaned out of the system.

St. Anthony's Fire, Rose or Erysipelas, Tetter or Salt Rheum, Scald Head, Ringworm, etc, should not be borne while they can be so speedily cured by AYER'S SARSAPARILLA.

Syphilis, or Venereal Disease, is expelled from the system by the continued use of this SARSAPARILLA.

Female Diseases are caused by Scrofula in the blood, and are generally soon cured by this EXTRACT OF SARSAPARILLA. Price $1 per bottle, or 6 bottles for $5.

For all purposes of a family physic, take AYER'S CATHARTIC PILLS, which are everywhere known to be the best purgative that is offered to the American people. Price, 25 cents per box; or 5 boxes for $1.

Prepared by Dr. J. C. AYER & CO., Lowell, Mass.

Price 25 cents per box. Five boxes for $1. Sold by Crane & Brigham, San Francisco; R. H. McDonald & Co., Sacramento, and all dealers in medicine. 21ec2m

THE DAY SCHOOL BELL.

40,000 copies issued. A new Singing Book for Schools and Seminaries, called the Day-School Bell, is now ready. It contains about 200 choice songs, rounds, duets, trios, quartets, and choruses, many of them written expressly for this work, besides 32 pages of the Elements of Music, which are easy and progressive.

Among the large number of beautiful pieces may be found, "Uncle Sam's School," "Don't you hear the children coming," "Always look on the sunny side," "The little lass," and "Little Lad," "Oh, if I were a little bird," "Bird of beauty," "Pretty pair tree," "Anvil Chorus," "Meet me by the running brook," etc. It is compiled by Horace Waters, author of "Sabbath School Bell," Nos. 1 and 2, which have had the enormous sales of 625,000 copies. Prices—paper covers, 25 cents, $20 per 100; bound 30 cents, $25 per 100; cloth bound, embossed gilt, 40 cents, $33 per 100. 25 copies furnished at the 100 prices. Mailed at the retail price.

SABBATH SCHOOL BELL, NO. 1,

contains 144 pages, and nearly 200 tunes and hymns, and is the most popular S. S. Book ever issued. Among the most popular pieces are "Kind Words," "Eden Above," "Christian Hero," "Beautiful Zion," "I ought to love my Mother," "The Angels told me so," "In the Light," "Rest for the Weary," etc. Prices—paper covers, 20 cents each, $15 per 100; bound 25 cents, $20 per 100; clothbound, embossed gilt, 30 cents, $25 per 100.

SABBATH SCHOOL BELL, NO. 2,

is an entire new work of 192 pages, and nearly two hundred and twenty-five tunes and hymns. One million of these Bells have been issued and are now ringing through this and other countries. Among the many choice pieces may be found, "Shall we meet beyond the River?" "There is a Beautiful World," "Sorrow shall come again no more," "Don't you hear the Angels coming?" "Thou, God, seest me," "Sabbath Bells chime on," etc. Prices of Bell No. 2 are same as Bell No. 1. Both numbers can be obtained in one volume, price, bound copy, 40 cents, $35 per 100; cloth bound, embossed gilt, 50 cents, $45 per 100. 25 copies furnished at the 100 prices. Mailed at the retail price.

WATER'S CHORAL HARP.

A new Sunday School Book of 160 pages of beautiful hymns and tunes. It contains many gems, such as "Shall we know each other there?" "Suffer little children to come unto me," "The Beautiful Shore," "Oh, 'tis glorious," "Leave me with my mother," "He leadeth me beside still waters," etc. Price, papers covers, 20 cents; $15 per 100. Bound, 25 cents, $20 per 100. Cloth bound, embossed gilt 25 cents, $30 per 100. Mailed at the retail price. It is edited by HORACE WATERS, author of "Sunday School Bells." Nos 1 and 2, which have had the enormous sale of over 600,000 copies.

Just published by HORACE WATERS,

No. 481 Broadway, New York.

THE NEW PATRIOTIC SONG BOOK

contains 96 pages of songs, duets, and choruses, both sacred and secular, including 14 pages of prayers for sick and dying soldiers, and soldiers' Scripture Manual. It is well suited for social singing, as well as Sabbath worship. Among the many beautiful pieces may be found, "Where liberty dwells is my country," "The Christian Hero," "Three cheers for our Banner," "Come sing to me of Heaven," Columbia, the Gem of the Ocean," "Freeman's Gathering," "Columbia's King forever," "Marching Along," etc Prices—paper covers, cents, $10 per 100. Mailed at retail prices.

THE HARP OF FREEDOM

contains 32 pages of songs, duets, and choruses for Freedom. Among the choice pieces we would name, "Fair Freedom's morn," "O let my people go," "Over the mountain," "They worked me all the day," etc Price 5 cents single, 50 cents per dozen, $3 per 100; postage 1 cent each.

RUTH: A SACRED CANTATA

contains 136 pages. Words by Rev. Sidney Dyer, music by Prof. Cull. This is an excellent book for concerts for the young. Prices—paper covers, 20 cents, $15 per 100; bound 25 cents, $20 per 100.

THE REVIVAL MUSIC BOOK

contains 73 pages of tunes and hymns, designed for revival, prayer, and conference meetings. Price in paper covers single copies 10 cents, $8 per 100. Mailed at the retail price

THE ATHENÆUM COLLECTION

contains 512 pages of tunes and hymns, new and old of the choicest kinds, for church, Sunday school, revival, missionary, temperance, prayer, and conference, and all kinds of sacred and social meetings. The music in this book has life and animation in it, like "Shining Shore," "Rest for the Weary," "Shall we know each other there?" "Shall we meet beyond the River?" "There is a Beautiful World," "Kind Words," "Sweet Hour of Prayer," "There is a Land of Love," "Suffer little children to come unto me," "God save the Nation," etc. Prices—single copies, bound, 65 cents, $55 per 100; cloth bound, embossed gilt, 75 cents, $65 per 100 Mailed at the retail price.

The California Farmer.

SAN FRANCISCO:

FRIDAY.....FEB. 26, 1864.

☞ Those who receive a number of the FARMER with this paragraph marked, may understand that it is sent to them on their examination, hoping it will meet their approval and induce them to subscribe, and ask their neighbors to do so.

Postmasters and others, who may receive the paper, will oblige us by soliciting subscriptions, or putting it in the hands of those that will. Subscriptions may commence at any time.

Send for Sample Papers and get up a club. Address, PUBLISHER CALIFORNIA FARMER, San Francisco.

THE CALIFORNIA FARMER READING-ROOM AND MUSEUM OF NATURAL HISTORY.

320 Clay street—Marble Building—Up Stairs.

The Farmer's Headquarters.

The Editorial Rooms and Museum of the FARMER Office are always open, and an attendant ready to make a visit instructive to those who take an interest in the productions of our State. Samples of all productions: grains, grasses, fruits, models, inventions, minerals, and specimens in Natural History innumerable, are constantly being added.

Farmer's Reading-room.

Farmers and Mechanics, from the country, who visit San Francisco, should visit the Free Reading-room and Museum, at the FARMER OFFICE. Members of the Press, and Strangers, are particularly invited to avail themselves of these rooms. Newspapers from every State to which we have access by mails, as well as Foreign Newspapers, Periodicals, and Magazines, are upon file and on the tables for use; a Good Library of hundreds of volumes, with works illustrative of Agriculture, Horticulture, and Floriculture, works for reference upon all Sciences, with a Cabinet of Minerals, Coins, and Curiosities of interest to the Naturalist, to which we invite all.

Immigration Office.

New comers to California can always obtain all needed information about Lands, Farms, etc, at the Farmer's Reading room, 320 Clay street. Most cheerfully we bid all welcome to our Sanctum.

MY MOTHER.—There is a hope for humanity yet, amid all the dark clouds that overshadow the social life in California. We have received a very urgent call to re-publish those beautiful lines of "Florence Percy," "Rock me to sleep Mother." A bright gem in the brightest galaxy of poetry, and will be felt by every living child, the world over. We would call the attention, too, of every one who feels the truthful beauty of these lines, to a most beautiful picture now at Geo. H. Johnson's Daguerrean gallery, Clay street. It is a steel engraving, "The Prize Picture" of the London Art Union. It won the prize of one hundred guineas, it is appropriately named "Loves Labor," for it is a mother with her little babe upon her shoulders, romping over the fields in high glee. Every expression of the mother and child's face denotes love. Johnson has copies of the picture, let every mother possess one, and let the mother's love be extended till the world is purified.

A beautiful incident came to our knowledge a few days since, which is so appropriate here, we cannot omit to insert it. A mother and children were walking in a beautiful garden on one of our gorgeous mornings, lately, with a friend, and as the flowers were gathered, a sweet child of five years of age was questioned of her love of flowers. The sweet girl having been born on the 1st of June, the month of roses, she had been named "Flora;" a friend in asking her repeated questions to try to have her answer to the origin of her own name, asked her who it was that loved the flowers, who was the Goddess of flowers? The child hesitated a moment, when being asked who was the "Queen of flowers," looking up she, with a glad and joyous smile, and as with the spirit of triumph that she could answer, said: *my mother.* So should every little child's thought turn, as was said in that sweet hymn of childhood, which we published last week. We rejoice that there is a spirit abroad that yearns for the voice of a "mother's pure love."

CALIFORNIA TURPENTINE AND ROSIN.—These articles, which were not supposed would ever be the product of California to any extent, are now manufactured largely in several places. Marysville, however, seems to be the headquarters, and Yuba district sends down these products in large quantities. We have now at our Reading Room and Museum, splendid specimens of Rosin and Turpentine from the manufactory of J. Hart & Co., of Marysville. The production of these articles in our State will be a great saving to our people, and ere long we shall be enabled to export them largely. It is but justice, however, while we are making glad over our State's approaching independence in her resources, that we should not forget those who pioneer great enterprises. We therefore feel it but right to say that to J. J. Hucks, Esq., of the firm of Hucks & Lambert, belongs the honor of making the first Turpentine and Rosin in our State, and to him belongs a due meed of praise for the success which has attended this enterprise from the first, as he has always encouraged it with an honorable zeal

THE FIRST NEWSPAPER IN CALIFORNIA.—We have just had the pleasure of perusing a copy of the "California Star," published by Sam'l Brannan, Esq. It bears date January 12th, 1847, and is Vol. 1, No. 23. The newspaper is a small sized sheet, about 20 by 16, neatly printed and well got up. The article on the first page is Col. Fremont's letters relative to the war in Mexico, and others of his letters. An editorial upon the "prospects of peace with Mexico," and articles on the annexation, these with Col. Fremont's operations in California, ship news, etc, etc, and one page of advertisements in Spanish. The "California Star" was a Pioneer paper, and was creditable to Sam' Brannan, Esq., the proprietor in those early days.

STOCK EXCHANGE.—We call public attention to the card of the new Stock Exchange opened at 612 and 614 Montgomery street. One advantage of this Stock Exchange is, that the business is done openly. The public can go and bid—all they need is a knowledge of the real value, and they can act with their eyes wide open. These Rooms are spacious, and the Rules and Regulations show the way business is done. M. G. Elmore, Esq., is the Secretary, who will give all needed information.

The National Currency, and who will sustain it.

From the first moment that the United States issued "Promises to Pay," and placed the glorious "Impress of Sovereignty" upon United States Treasury notes, we accepted them as the emblem of our "Country's pledge of faith." Congress put this impress of sovereignty upon Treasury notes, and declared them to be money. Congress, by virtue of its supreme power, has declared that "The notes so issued shall be lawful, and a legal tender in payment of all debts public and private, within the United States." Shall these words be of no import to a people who claim to be the supporters and friends of the Government? Can the supreme law of the land be in anyway so changed or restricted by any Legislative enactment of a single State, as to make it a nullity? What right has a subservient power, one that has no control whatever over the Currency, to tamper with, or attempt to control or change it?' On this subject, however, we give the words of the Constitution of the United States, which speaks as follows. "This Constitution and the laws of the United States which shall be made in pursuance thereof, shall be the *Supreme Law of the Land*, and the Judges of every State shall be bound thereby; anything in the Constitution of any State to the contrary notwithstanding!"

Now, one of the laws of the United States created the Treasury notes, and what State can alter or change, or prevent their circulation or real value. Cupidity, self agrandisement, and treason, may depreciate for a time their value, but that glorious impress of sovereignty which is stamped upon them makes their value as sure and permanent as the Union itself and just as sure as this present rebellion is to be overcome and the white banner of peace and good will to man be reared its in place—just as sure as this glorious day will come when the prodigal children will return, and the fatted calf be killed, and peace, joy and prosperity flow over the East, West, North and South, just so sure will be seen the present National Currency of Greenbacks redeemed in gold at all the Treasuries of Uncle Sam. Already the National Treasury is overflowing with gold; over twenty millions of gold to spare. This is the forerunner of what is to come—rapidly. Worthless currency, rotten banks, soulless shylocks, government speculators, and leeches of all kinds, feel the coming change, and before we are aware of it, we shall wake up some morning and see written upon the very heavens: *all Government dues are paid at the several U. S. Treasuries, in Gold.* This will be the work of that mightiest financier of the present age, Salmon P. Chase, who is now preparing his army of *mint drops* to accomplish this masterpiece of financiering.

This event is sure to come, and quicker than is anticipated. Then where will be our shylocks? No more will the cry go up, "great is the goddess of the greenback changers," for "Othello's occupation is gone!" and then will the ashes of these money making leeches who have fattened on the efforts to destroy the credit of the Nation, be with their tattered garments, fit robes of humiliation, for our country will raise a credit, honor and prosperity, in despite of all her enemies, within and without. That we may ever be consistent in our support of the Government, we refer to our business card.

Physiology in our Schools.

TWENTY-EIGHT hundred years the world has been groping on in darkness and gloom, with only here and there a ray of light to illumine the hopeful soul, and here and there a great and mighty mind to illumine the world with eternal truths relative to the creation of man.

One great mind burst upon the world and presented one of the most important truths ever revealed to man, next to his knowledge of Christ.

Harvey, by the knowledge he presented to the world of the circulation of the blood, performed a deed which should wreath his name with immortal honors, and we believe that, long after the name of Napoleon, and other like great names, shall have passed into oblivion, the name of Harvey will be re-illumined with glory and honor for the good done to mankind by the knowledge of the circulation of blood, the primary source of life, the great main-spring of our being, and the motive-power of all our actions, thoughts, feelings, enjoyments, or our sorrows and death.

The true knowledge of the blood, its circulation, its power, a true knowledge of the physiology of the blood and its circulation, would revolutionize the world of mankind by showing the cause of the degeneracy of the human race.

Physiology should be taught in our schools by those who are *qualified to teach* this all important science of life, not by puny, half-made-up teachers, but by the most gifted, physically, intellectually, and morally, so that they could feel and know the truths they teach in themselves. The withholding the knowledge of physiology from the people has put the world back faster than all the schools and churches have advanced it.

Mining Studies in our Schools.

GREAT efforts are now being made to establish a Mining School in our city, after the style of the European schools. This is well; but would not many fortunes have been saved if this subject had been brought up years ago? We approve of all such schools. Some have suggested having Mineralogy a special branch of study in our schools. This is well, too, for our State, rich as she is in mineral wealth. But if the science of Minerals is to be made a *speciality*, why should not Agriculture also be made a speciality? If Mining is important, so is Agriculture.

What says the Treasurer of our State as to the income from the different counties? We learn that four-fifths of the moneys supplied to the Treasury comes from the Agricultural counties, and one-fifth from the Mining. According to this ratio, if Mining is worthy a special School, so is Agriculture; and we ask in all earnestness of our Legislators to see that these interests are both wisely cared for.

Harvesting Machines.

MESSRS. HAWLEY & CO.

We call the public attention to the various and all important interests of the harvesters of California particularly, this week, as we present the new advertisement of Messrs. Hawley & Co., with their celebrated harvesters; the celebrity of the machines, of which they are sole agents, and the great numbers sold is an evidence of the growth of our State and its prosperity as a grain growing country. Messrs. Hawley & Co., being one of the long established houses, are able to fulfil every pledge made respecting the machinery offered by them. A part of the present firm opened a place of business in April, 1849, corner of Clay and Montgomery streets, selling the goods brought with them in steamer and across the Isthmus.

MESSRS. ARTHUR & SONS.

This house have their card in our columns, and we ask the attention of the public; this house too, claim the farmers attention for a harvester famous in the annals of the grain growers of our State. They too, are a well known house, and it only needs a simple reference to facts to remind readers to make early purchases.

TREADWELL & CO.

This establishment, the earliest on this coast, and the largest, having their branches at Sacramento and Marysville, each with immense stocks of all kinds of agricultural goods, and particularly harvesting implements, appear in our columns, and show that they are ready, too, to "receive calls," the more company the better, and it is not necessary to do more than to refer to the business and the illustrations which appear to show that California Merchants have done all they could to meet the wants of farmers, and help them harvest their crops.

NOW PLANT BULBS.—The bulbous tribe of fragrant flowering gems should not be forgotten. Every one who has a "little garden spot," should by all means secure a collection of Bulbous Roots, before too late. If they have no garden spot then by all means bloom them in pots, vases and bulb-glasses. At Moore's Seed Store, on California street, every variety of these gems can be found, with glasses, pots, etc. When they blossom they speak in the following language their worth:

"Here, scattered wild, the lily of the vale
Its balmy essence breathes; here cowslips hang
Their dewy heads, and purple violets lurk,
With all the lowly children of the shade."

"Where opening roses breathing sweets diffuse,
And soft carnations shower their balmy dews;
Where lilies smile in virgin robes of white,
The thin undress of superficial light;
And varied tulips show so dazzling gay,
Blushing in bright diversities of day."

"In Eastern Lands they talk in flowers,
And they tell in a garland their loves and cares;
Each blossom that blooms in their garden bowers,
On its leaves a mystic language bears."

"The little flow'rets raise their heads,
And bloom as gaily on the grave,
As if reposing on such beds
As nature to her children gave."

These Bulbous Roots which give their pure white flowers are particulary appropriate for the grave, and now is a fitting time to plant them there.

OPPOSITION STEAMER LINE.—This company now permanently established as conveyers of passengers from New York to California, have taken their new and spacious rooms in the new building recently erected on the corner of Pine and Sansome, where they have ample accommodation for their rapidly increasing business. It is cheering to the great mass of the people to know that measures are being rapidly completed by which the Nicaragua route will be opened, and then hundreds of miles will be again saved in travel, and a short quick route, at a low price, will be made, by which tens of thousands now waiting to make California their home, can come to us. Low fares, quick and safe trips is the watchword now. The world is eager for a 2.40 race, and the best and quickest route, and cheapest, will gain the business. We have conversed with many who have come on the opposition line, they all speak well, and deny the many stories of suffering reported. The new steamers of the opposition line are splendid steamers, and the best evidences of the wants of the people is their readiness to patronize a line that goes for the people.

EARTHQUAKE.—The heart of this State had a palpitation this morning at quarter before 6, a. m. and the character of the danger may be estimated when it is supposed several thousand people sprang from their couches and awoke to an apprehension that "their time had come." These were undoubtedly the severest shocks ever experienced in this State. It was of long duration with a low rumbling sound between the first and second shakes, the latter being very heavy making the buildings sway to and fro with severity. The vibrations were from North to South. The late dry weather has been genuine earthquake weather, and if we have no rain the next one will make chandeliers swing to a merry time, and glass ware increase in numbers of pieces.

RAIN IN THE COUNTRY.—We have received news from Marysville. They have had copious rains, more or less heavy, of 30 hours' duration, which is of great benefit to vegetation. We learn from citizens of St. Helena and vicinity, that they, too, have had refreshing rains. We are receiving very cheering accounts of the crops from all quarters' and no complaint of drought from any source that causes alarm.

SANTA CATALINA.—This island, which was recently occupied by the government as a military station, is about 24 miles south-west of San Pedro harbor. The size of the island is 28 miles by 7 miles. It is for the most part rough, barren and badly watered. It contains undeveloped mines of lead, silver and copper. A company of soldiers are now stationed on it, and the government intend to erect fortifications upon it.

PLANT! PLANT! PLANT!—Improve the time and plant a tree, a shrub, a vine. Plant beautiful bulbous roots.

Letters from an Old Californian at the East.

NUMBER TWELVE.

NEW YORK, Jan. 17th, 1864.

Cold Weather Experiences.

EDITOR CALIFORNIA FARMER:

I have laughed at the idea of suffering from cold weather. All the Californians I have met with warned me of the discomforts I would have to endure the first winter, but until quite recently I enjoyed the reign of King Frost. At last I have been obliged to give up. I find that even by a stove I cannot conquer the chilly sensation that steals over me the moment I sit down. As long as I am exercising, the blood seems to flow generously enough, but when I am inactive I tremble almost continually unless I wrap up in a shawl. At night I have to sleep between blankets. I have tried hot drinks, but they only create an artificial warmth that leaves the system in a worse condition when the excitement has passed away. Violent exercise is the only relief. It is really annoying to visit, for the new-fashioned houses in New York, with their immense halls floored with marble, their stairways of polished wood uncarpeted, and their rooms heated by furnaces, or by steam, are as uncomfortable as they are splendid.

I cannot express the delight the first old-fashioned snow-storm gave me. In consequence of the chilly feeling I have described, and the necessity of exercising constantly, I do not remain in the house any more than I can help, and I enjoyed the walk in the storm. I could appreciate the excitement of the children, as I watched the soft flakes as they floated in the air, with charmed eyes, and waded through the snow-drifts with the keenest sense of pleasure. When the sleighs dashed through the streets filled with gay parties, the horses seeming to share in the excitement, I forgot all the annoyance of cold weather and could have joined with all my heart in the enthusiasm and almost unbounded revelry of the sleighing carnival. Prudence, however, requires that unacclimated people should not allow the pleasure of sleigh-riding to tempt them to expose themselves unnecessarily, and so I look on with as much satisfaction as a mere spectator can hope to feel.

Going to Hear Dr. Scott.

Last Sunday I attended, by invitation, the Presbyterian Church, on 42d street. You may remember that in a former letter I told you that this Congregation had invited Dr. Scott to fill their vacant pulpit. The attendance was quite large, but I could not help contrasting the plain little church with the one in San Francisco. When the congregation arose to sing I observed that the galleries were quite empty, and this necessarily brought to mind the crowds that used to occupy even the aisles of Calvary Church. The Doctor was as interesting as ever, and his sermon was alike remarkable for its learning and eloquence. His prayer was uttered with great fervency and when he implored the blessing of Divine Providence in behalf of our country, every word seemed to be patriotic. A number of Californians were present. I am told that Rev. Dr. Scott has changed. For the sake of his usefulness I hope he has.

Copperhead Controversy.

The celebrated Century Club proposed to oust its President, Mr. Verplanck, in consequence of his copperheadism. A violent controversy is in progress, in consequence. My sympathies are entirely with those who wish his expulsion. A man cannot be for and against his country, and if he is a traitor and occupies a position where he can use his influence in an underhand way, if he chooses, *I would not trust him.* I can feel for a Southern man; we all admire Stonewall Jackson, but a Northern man with *Southern* sympathies I would not trust any sooner than I would a rattlesnake.

Art and Artists.

The latest Art excitement is the exquisite *basso relievo* by Palmer, "Peace in Bondage." The workmanship is unusually finished. The body expresses even more dejection than the face. The gallery of Goupil you can recommend as the most agreeable place to visit in New York. In it one is always sure of seeing the latest gem in either sculpture or painting. One of the most glorious pictures I have ever seen is "Venice Victorious," a new painting nearly finished, by Leutze. It describes the reception of a victorious General by the Doge of Nobles of Venice. Like all the pictures of this illustrious artist it is full of spirit and every character is a study, while the coloring is a marvel of brilliancy. Church is engaged on a picture of "Chimborazo," which the critics say will eclipse the "Heart of the Andes." Bierstadt, who visited California last Summer, has not yet commenced working, but his sketches and studies are exquisitely beautiful. Let me copy a portion of the Report of the Fine Arts Committee of the New York Historical Society;

"Before closing their report the committee desire to say a word upon the relations between the subject which they have to some extent in charge, and the great war in which the nation is engaged. So far, the arts of design have very inadequately expressed the heroism, patriotic devotion, the noble charities of the North, or—what, alas! must in numberless cases perish from the remembrance of men without any record—the unimaginable sufferings and the glorious martyrdoms of the loyalists of the South. The pencil and the chisel have done infinitely less than the pen in perpetuation of all these things. Indeed, no war which was ever waged has been so thoroughly described in a literary way as will be this gigantic struggle. No war ever enrolled among its soldiers so many men who are skilled in the art of composition. The vast numbers of private letters, diaries, communications to newspapers, official reports, pamphlets, apologies of this or that general, besides the more ponderous and formal histories, will make the literature of this revolution more copious and affluent than that of any war that was ever waged. A distinguished gentleman of a neighboring state has already completed between thirty and forty thick folio volumes entirely filled with clippings from newspapers alone, and many other persons are making similar collections.

"But the pictorial method of preserving memorials of this war has been either neglected or abused. It is true that the illustrated newspapers are full of sketches purporting to be the pictures of important scenes; but the testimony of parties engaged shows that these representations are, when they are not taken from photographs, not always reliable. The desire of producing striking effects sometimes overcomes all other considerations, and the truth is now and then sacrificed to the demand for dramatic action or a pleasing play of light and shadow. Many of these designs are of little value, excepting as studies of costume. Some of them are positively lying and foolish. If all the terrific hand-to-hand encounters which we have seen for two or three years displayed on the pages of our popular weeklies had actually occurred, the combatants on each side would long ago have mutually annihilated each other, like the famous cats of Irish history.

"The photographers have made by far the most important additions to the pictorial history of the war. They prosecuted their undertakings under circumstances of great difficulty and even danger, running the risk of having their dark chambers converted into ambulances, or destroyed by hostile shells. But the caution and deliberation required for successful views of this sort are obviously impracticable in the confusion of a battle, and therefore it is not surprising that what we have hitherto obtained in this way has been little besides a representation of that awful "still life" which the plain shows after the conflict is over.

"We hope that more attention will be paid by the higher artists to subjects of this sort in future. It is well known that Horace Vernet, who has given the most valuable pictures of the French campaign in Algiers and elsewhere, made personal studies of the scenes he painted. We are glad to hear that one of our own distinguished painters has the intention to illustrate the famous battle of Chattanooga by visiting the spot and seeing with his own eyes the remarkable natural features of the scenery which made that conflict not only one of the boldest but also the most pictorial in the history of war.

"But so far, as we have already said, but little has been done in this way. With the exception of Leutze's clear portrait of Burnside, a few excellent groups in plaster by Rodgers, and two or three spirited drawings by Darley and Eastman Johnson, scarcely anything has been produced of an enduring character illustrating the war.

"But whatever may be the failure of this extraordinary struggle, to inspire our artists with the desire to record its history, it is a curious fact that, notwithstanding it exhausts such immense amounts of treasure and causes such wide-spread anxiety and sorrow, it has not apparently diminished the prosperity of the arts of design. On the contrary they have never been more flourishing than during the three years last past. This is shown by the facility with which the chief institution established for their benefit—the National Academy—has raised a fund amounting to nearly $110,000, and commenced the erection of a spacious and beautiful edifice to contain its schools, museums and exhibitions.

"Picture galleries are thronged with spectators, and valuable works of art find purchasers at more liberal prices than were ever paid before in this country for such commodities.

"Striking proofs of this are the disposal of a book of sketches, chiefly by New York artists, at a Fair in a neighboring city, for $4,000, and the sale of a private collection within a few weeks in New York for more than $100,000.

"In Washington, where the attention of the public and the authorities is, more than at any other place of the North, engrossed in the war, the grand plan for the extension of the Capitol advances steadily towards its completion. The bronze gates, designed by Rodgers, and embodying in a series of bas-reliefs the history of Columbus, have been hung in their places, and the colossal America, modeled by Crawford and cast in metal by Mills, has been successfully raised to the summit of the dome.

"It is a striking spectacle to see a great nation thus quietly adorning herself with the works of art amidst the very smoke of the combat, seemingly confident of her power to defend them from the profaning touch of the traitors who are seeking her life, and to show them to her children afterwards when the conflict shall be over, with all their splendors bright and untarnished."

INVENTION TO PREVENT RAILWAY ACCIDENTS.—One of the Philadelphia city railway companies has placed an apparatus on their cars which, it is expected, will prevent many accidents. It consists of a fender placed in front of the wheels, and brought down close to the rails. A strong spring allows the machine to pass over a permanent obstruction, but any movable thing is thrown pushed off or along the rail in front of the car. Experiments have demonstrated that a foot or hand placed on the rail is pushed aside, without stopping the car and without injury to person; this machine will also remove snow and other obstructions which may impede travel or throw cars from the track.

SALES OF STOCK AT THE EAST.—At a sale of blood horses at Flushing, Long Island, the property of Mr. S. R. Bowne, 37 animals brought $29,565. The highest price (for Toronto Chief) being $6,650, and the next highest (for a fast trotting mare Eureka), $5,000

At a sale at Bradford, Mass., several horses were sold, the property of Mr. L. Maynard. The highest price paid was $460, the whole amounting to about $12,000.

MANUFACTURE AND SALE OF SALT.—How few realize the value of the Salt Trade in California! Persons are apt to measure the importance of things by the quantity they themselves use or see around them, and when they sit down to a pleasant dinner and eat heartily of "Roast Beef and Plum Pudding," they little dream that the "spec o'salt" they so delicately scatter over their dish as a seasoner is a thing of such importance. Just step into the warehouse of Oakley & Jackson, on Front street, and look at what California can do in the way of seasoning the potatoes of the people, not only as a relisher for one's dinner, but for our Dairies, our Pork and Beef Packers, our Pickle Makers, and various ends to which it is appropriated (even sending the little children out with a parcel to sprinkle on the bird's tail to catch it while papa and mamma are eating breakfast). Messrs. Oakley & Jackson are now selling salt by cargoes of tons, of the various best brands now known, both domestic and foreign. They are the agents for San Quentin, and Carman Island, also import the Liverpool, and from these, principally the San Quentin, manufacture the fine Dairy and Table Salt now used largely over our State, and equal to any Salt known. Messrs. Oakley & Jackson are large manufacturers of Pickles of the best quality

MENLO PARK PROPERTY.—This property is rapidly and permanently improving in value. Purchasers of six months ago could realize a handsome advance on their purchases, and in the space of one or two years there will be scores of magnificent suburban villas erected, that will be specimens of architecture, as the lots have been secured by the wealthiest of our citizens. G. Randall, Esq, on Sacramento street, has the controlling sale of them, where maps can be seen, and the names of those who have already purchased, which is a guarrantee of success.

GARDEN CUTLERY.—New and fine garden tools, just received from Europe, for sale at Moore's Seed Store, California street.

BUCKEYE BRIDGE.—The Calaveras Chronicle has discovered that the buckeye tree makes an excellent hedge fence. It says: The cheapest and best material for hedge fences that has yet been discovered is thought to be the common buckeye, that grows so abundantly on the mountains. Every tree produces a large crop of nuts every summer. Let the nuts be gathered in autumn and planted after the first rains have fallen. Plant them about three inches deep and about four inches apart. Two rows of them, two feet distant from each other, are better than one row. The limbs intertwine and soon form a complete net-work, through which nothing can penetrate. The buckeye nut will grow about two feet high the first year. It requires no irrigation and is not easily destroyed by cattle. Two men could plant these nuts around a large ranch in a few days, and in the course of four or five years they would grow to be a hedge that would last for a life-time. Let all our mountain farmers try it; it may not yet be too late for the present season. The winter has been remarkably dry, and the nuts that lie scattered under the trees are uninjured. If planted now, they would soon spring up and grow.

LOOK TO IT, HARVESTERS.—From examinations into the causes of bronchial affections in France among grain harvesters, it has been found that the minute portions of the beards of grain and the dust inhaled by harvesters, is the cause of a large increase of bronchial diseases. To remedy this, veils or protectors are worn over the mouth and nostrils, sometimes over the whole face. It must be remembered, also, by our harvesters, how often the eyesight is affected; this is caused in part by the intense glare of the hot sun reflected from the shining grain, and partly from the dust and delicate fibers of the grain, and in all probability from rust or smut—a fungus on the grain—which, entering the delicate part of the eye, diseases it. This should be looked to.

LOSS OF LIFE ON RAILWAYS.—It would be an interesting fact to know the average loss of life on railways in all the different parts of the world. It is asserted that in France, the loss of life is only in proportion to the number carried, as one to a million—less than in any portion of the world.

A recent wind-storm in London actually blew the metal roof of a railway depot off—it was of immense weight, and braced with iron girders—overturned several locomotives, blew down sixty yards of another depot building, and inflicted many thousand pounds worth of damage.

THE Santa Cruz Sentinel received a letter last week from Santa Barbara, saying: We have had no rain here since Nov. 16th, with exception of a small shower. Nearly all the stock is dying.

THE sudden influx of large quantities of blasting powder into the San Francisco market the past month, reduced its value from $15@20 per keg of 15 lbs. down to $6@7.

THE new war steamer Eutaw coming up the Potomac, made 95 miles in six hours.

Purchasers of Farms.

WE shall now keep a complete record of *Farms, Ranches, Orchards and Vineyards*, for sale, and make it a speciality from this date. A "Bulletin Board," in our Reading Room, will contain numerous Farms, etc., on sale, and to which we invite special attention of both *Buyers and Sellers*.

THE MANGRA BEAN.—We would esteem it a great favor if any one to whom we furnished the "Mangra Bean," last season, gratis, will now furnish us a small quantity at any price, to meet the wishes of a friend or two at the east.

☞MANUFACTURERS OF MACHINERY, AGRICULTURAL *Warehouses, Seedsmen and Florists*—All such who desire to make their business known over the entire State of California, should send their business & drertisements to us, and we can spread the news for them.

TERMS OF ADVERTISING.

THE charge for Advertising in the CALIFORNIA FARMER (payable in advance), is **One Dollar** for five lines, or less of space, in nonpareil type, for one insertion, and ten cents a line for any larger space. Each subsequent insertion half these rates. This it is believed affords the cheapest and best medium of reaching the Agricultural community on this coast. As heretofore, the right is reserved to reject any advertisements deemed objectionable.

STOCK EXCHANGE.

THE UNPARALLELED DEVELOPMENT OF THE MINeral Resources of the Pacific Slope, and the daily increasing commerce of the city of San Francisco, have rendered a PUBLIC EXCHANGE—conducted on the same fair Business principles that characterize similar Institutions in Europe and America—an urgent necessity in this city. To meet this requirement, the Public are therefore informed that a suitable Building has been erected at

613 and 614 Montgomery street,

In which will be held Daily Sessions for the Sale of Stocks, Bonds, Securities, Specie, Etc, under the Management of the following Board of Directors, and subject to the following Rules and Regulations:

BOARD OF DIRECTORS.

George W. Dent.....President.

Walter Sparrow	Edward Flanagan,
Joseph Clough,	E. H. Wilson,
Henry Williams,	R. G. Sturdivant,
E. Pavilier,	D. J. Sullahan,
Thomas Wallace,	J. De Sta Marino,
M. G. Elmore,	E. W. Lindsley.

RULES AND REGULATIONS.

1st. The Business of the Exchange shall be Managed by a Board of Thirteen Directors, to be Elected Annually, and to whom applications for Membership shall be made.

Any Questions or Issue raised touching Contracts made at the Board, their Validity or Meaning, shall be referred to a Committee of Five of the Directors for Investigation and final Decision.

2d. Two Sessions of the Board shall be held from 10 o'clock m, to 1 p m, and from 3 to 4 p. m, on every Business day.

3d. Only members of the Exchange shall offer Stocks, Etc, for sale.

4th. The Public may bid upon and purchase any Stocks, Bonds, Securities, Specie, Etc, that shall be offered for sale.

5th. Buyers of Stocks, Etc, who are not Members, must either make a Deposit of ten (10) per cent of the Purchase Money at time of sale, or have their Contracts indorsed by a member.

6th. Should any Party neglect or refuse to fulfill a Contract entered into by him at a Session of the Board, he shall thereafter be debarred from the Privileges of the Exchange, at least until he shall have specifically performed such Contract.

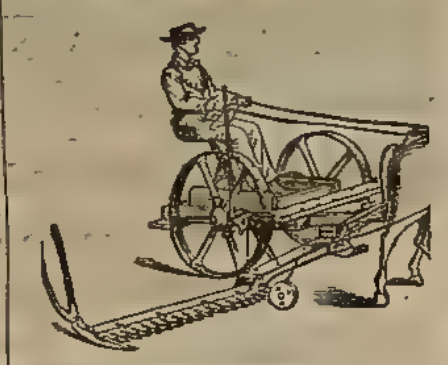
COMMISSIONS ON SALES.

Of United States, State, County and City Bonds, Railroad, Steamboat, Telegraph, Gas and Water Stocks, Certificates, Bills of Exchange, Treasury Notes, Specie, Etc, one-half of one per cent.

☞ COMMISSIONS ON MINING SHARES.

Sale at	1 Dollar up to 10 Dollars	$0 25 per foot.
Sale at	10 Dollars up to 25 Dollars	50 per foot.
Sale at	25 Dollars up to 50 Dollars	1 00 per foot.
Sale at	50 Dollars up to 100 Dollars	1 50 per foot.
Sale at	100 Dollars up to 200 Dollars	2 50 per foot.
Sale at	200 Dollars up to 400 Dollars	5 00 per foot.
Sale at	400 Dollars up to 600 Dollars	6 00 per foot.
Sale at	600 Dollars up to 800 Dollars	7 50 per foot.

From $800 to $1,000 per foot, one per cent.
Anything above $1,000 per foot, three-quarters of one per cent.



M. G. ELMORE,
Secretary,
Office, 645 Clay street.

SNOW STORM IN THE TROPICS.—Mauna Loa and Mauna Kea, the high mountain peaks on Hawaii, and Mt. Haleakala, on Maui, says the Commercial Advertiser, of January 28th (Honolulu, S. I.), are represented as now covered on their summits, with beautiful white mantles of snow, the drifts in the gulches and valleys being often from 20 to 30 feet deep. Although not very cool here in Honolulu (the thermometer ranging at night from 65° to 70°), yet the presence of snow on these mountains indicates cold weather higher up, their altitude being from 10,000 to 14,000 feet. There have been several snow storms on them during the past few weeks, and the scene is represented to be one of indescribable grandeur. Those living on the island where they occur can seldom see these storms so well as those who chance to be passing in schooners. To the former the scene is generally obscured by clouds over head; but to the latter the sight at a distance is magnificent. As the dark heavy masses of clouds, roll and tumble over and around the lofty summits, they drop their snow mantles, which lower down turn into rain or melt away as fast as it touches the surface. On some occasions the lightning, darting around, from the cold upper strata of clouds, three and four miles high, to the lower and warmer ones, is said to be splendid, and unequaled in any other country or latitude. Snow storms in the tropics are among the most beautiful sights imaginable, and the few who are privileged to see them, witness some of nature's grandest exhibitions.

WEST POINT is full again. It now contains 560 cadets, under the instruction of 25 commissioned officers; 97 have been admitted during the past year, 46 of whom were appointed from the U. S. volunteers.

BUCKEYE MOWER.

To Farmers:

WE, WITH GREAT CONFIDENCE OFFER THE BUCKEYE MACHINE, for this reason: knowing it to be Superior to any MOWER for sale, and that it will sustain the reputation it has made for the past THREE YEARS in surpassing any other Mower in the following respects:

Being better Made; much Stronger and more Durable; will Run lighter, Cut much closer with greater ease to the team, and no side draught.

We can bring twenty Farmers to say the Buckeye is SUPERIOR to any Mower, to one who can be found prejudiced against it.

The BUCKEYE MOWERS are of two sizes, cutting 4 feet, and 4 feet 8 inches.

The "Buckeye" as a Reaper.

The important advantages which belong to the BUCKEYE as a Mower are retained in the REAPER, and can be used either as a Mower or Reaper by attaching the Platform and Reel.

Though importing largely of them, we have been unable, for two years, to supply the demand.

They are better adapted to the wants of California Farmers than any Combined Machine for sale. It will adapt itself to every surface of ground, will run lighter and deliver its grain easier and better than any other Reaper. The Reaper's seat is directly over the axle of the Machine, instead of being on the Platform where it adds greatly to the draught.

We are

SOLE AGENTS

IN SAN FRANCISCO AND MARYSVILLE

FOR THE

HAINES "ILLINOIS" HEADER.

This is the ONLY HEADER, which, during the past SIX YEARS has stood the test and given satisfaction; all others, which have been tried, have proved failures, and have been withdrawn from the Market as unsaleable.

A Fine Ranch in Contra Costa County.

A FINE RANCH IN THIS COUNTY IS NOW OFfered for sale at a Bargain, if applied for soon, as it will be sold at a price worthy special attention.

The Farm contains 208 acres; 70 acres of this are fenced—the balance is well and heavy timbered. This Farm will cut 2000 cords of wood, enough to pay for the Ranch.

It is an excellent Hay and Grain Ranch and the products sell well and at good prices on the spot, this being the head of navigation and near market: 8 miles from Martinez and 4 1-2 miles from Pacheco.

The Title is good and possession given immediately. The Buildings are common, but the Land is No 1. For Price and Terms inquire of the Editor of this paper who will give all particulars.

"MENLO PARK,"

San Mateo County.

Beautiful Sites for Homes in the Country.

THE UNDERSIGNED OFFER FOR SALE THE BALance, unsold, of this choice tract. There, are few, if any, places within one hundred miles of this large and growing metropolis, which combine so many natural advantages for a country residence; the soil is excellent; it is wooded with large, splendid live oaks, and other evergreen shade trees. The climate is unsurpassed; the extremes of heat and cold are never felt and the harsh summer winds and fogs don't reach here. Good well water can be obtained here at thirty feet, independent of which, there is a Company already formed, in San Mateo County, for introducing an abundant supply of the best spring water, for this and adjacent tracts, and Redwood City; it will have a head of about sixty feet at this point. The cars of the S. F. & S. J. R. R. land passengers at their depot, at this point, in about an hour and a quarter, thus enabling business men to live here and transact their business in town, without interruption. A first class school is about being established here, with educational ability second to none in the State. There will also be a first class family hotel opened in the Spring.

Those who are alive to the importance of a home in the country, with all the advantages for health, education, etc; are earnestly requested to go and look at this lovely spot. AS AN INVESTMENT, it is worthy the attention of every one who wishes to invest SAFELY AND PROFITABLY, as it is rapidly enhancing in value. The title is unquestionable, it being a portion of the PULGAS RANCHO, the first Spanish grant finally confirmed, and the patent issued.

About thirty heads of families have already purchased, with a view of building, in the Spring.

As to the merits of this choice tract, we refer to the following gentlemen, some of whom are now living in the neighborhood, and others have purchased with a view of doing so

542 Sacramento street,

17 San Francisco.

A Fine Ranch

IN MENDOCINO COUNTY.

A FINE GRAIN AND STOCK RANCH of 800 acres under fence, in Mendocino County, will be offered at a bargain if applied for soon. Together with this is a Stock Ranch of some thousand acres of mountain land which goes with this Ranch, being Uncle Sam's land.

The Ranch is about 80 miles from Petaluma and on the great mill road to the Navarro, Albion, and Mendico & Noye's mills.

The location is pleasant, having the Redwood Hills for a back ground, with a fine valley tract—one hundred and sixty acres valley land, mostly under cultivation—yielding fine Barley, Oats, Wheat, Hay, Corn, etc. The crop of Hay is fine.

This Farm will sustain a herd of 300 Cattle, and is a grand Ranch for raising Stock, Horses, Mules, or Hogs, and a good place to raise Poultry. There is an orchard of two acres of bearing Trees. Vegetables grow well.

There is on the place a fine two-story frame Building, in which was put 30,000 feet of lumber, also Granary, Smokehouse, and Barn. The vicinity to the Redwoods gives an opportunity to improve, as Lumber is cheap and Timber handy.

There are, at present, good Tools, Implements, Harvesters, Plows, etc, on the place; also some furniture. The House has been used as a Hotel and Store, and is also the Stage House. Hay, Grain, and Produce can always be sold at good prices.

There is also a herd of 100 head of Stock which will be sold at a bargain.

This is a rare chance, and worthy the attention of those who wish a good Home, a good Farm, and a profitable business. Prices reasonable. For particulars inquire of Editor Farmer. 21-1

Farmers and Immigrants.

LAND FOR SALE OR TO RENT.

THE ANTELOPE RANCH,

(FORMERLY JOB F. DYE'S) on the East side of the Sacramento River, embraces many very superior Farms of

100 to 500 Acres each; also Vineyards, Gardens and Orchards,

above all overflows, Fenced, having Dwellings, Barns, etc., and throughout the year, large running streams, and irrigating ditches.

The soil is from 3 to 10 feet deep, very rich, and adapted to Wheat, Barley, Oats, Tobacco, Chinese Sugar-Cane, Fruits, etc.

The best market in the State is at Red Bluff, two miles above; at Tehama, three miles below the Ranch, and on the Ranch itself, for consumption in the northern portion of the State, Oregon, and the Humboldt Mines. The new Wagon Road from Red Bluff to the Humboldt Mines is within three miles of this Ranch.

Good Farmers (with families preferred) can hire these farms at low rates, or conduct them on shares, with privilege of purchase. Cash loans will be made, if desired, to assist in cultivating or holding crops, and every facility will be given.

Mowers, Headers, Thrashers, etc, are on the Ranch—"The Antelope Flour Mill," of large capacity, and high reputation, is on the Ranch, owned by the same proprietors.

☞ The "Job Dye Farm," of 250 acres—with Orchard, Vineyard, and Garden, with irrigating water, large Adobe House, and numerous out-buildings—will be rented to a satisfactory tenant.

Apply to GEO. CHAMPLIN, Red Bluff P. O, or on the Ranch, or to

E. F. NORTHAM and H. E. WOODWARD,
Dec. 17—19-2m San Francisco.

Home Miscellany.

ROCK ME TO SLEEP.

["The following very beautiful Poem, by the gifted writer, "Florence Percy," appeared in the Philadelphia Saturday Post, and has been widely copied. It is a gem of the highest order." With the foregoing comments we copied this poem in the FARMER for January, 12, 1861, which was its first publication in California. Afterwards it was sent from this State, without the author's name, to some periodical at the East (the Knickerbocker, we think), which published it with an inquiry for the author, and a commendatory prelude, with which it "went the rounds" of the press here. We republish it now at the request of a correspondent who desires to know the author. "Florence Percy," was the *nom de plume* of Lizzie A. Chase, long connected with the Portland (Me.) Transcript, and well known as one of our sweetest writers by her contributions to that paper and others, as well as by a volume of her poems published some years since. Several original articles from her pen have appeared in the FARMER from time to time, and been widely copied. A few years ago, she married Paul Akers, the celebrated sculptor (who has since deceased). Mrs. Akers, we believe, still continues her valuable contributions to the press, as "Florence Percy."]

BACKWARD, turn backward, O time, in your flight,
Make me a child again, just for to-night!
Mother, come back from the echoless shore,
Take me again to your heart, as of yore;
Kiss from my forehead the furrows of care,
Smooth the few silver threads out of my hair;
Over my slumbers your loving watch keep,
Rock me to sleep, mother, rock me to sleep.

Backward, flow backward, O tide of the years!
I am so weary of toils and of tears—
Toil without recompense, tears all in vain!
Take them and give me my childhood again!
I have grown weary of dust and decay,
Weary of flinging my soul-wealth away,
Weary of sowing for others to reap;
Rock me to sleep mother, rock me to sleep!

Tired of the hollow, the base, the untrue,
Mother, O mother, my heart calls for you!
Many a Summer the grass has grown green,
Blossomed and faded, our faces between,
Yet with strong yearning and passionate pain,
Long I to-night for your presence again;
Come from the silence so long and so deep;
Rock me to sleep, mother, rock me to sleep!

Over my heart in days that are flown,
No love like mother-love ever was shown,
No other worship abides and endures,
Faithful, unselfish, and patient, like yours.
None like a mother can charm away pain
From the sick soul and the world-weary brain;
Slumber's soft calm o'er my heavy lids creep!
Rock me to sleep, mother, rock me to sleep.

Come, let your brown hair, just lighted with gold,
Fall on your shoulders again, as of old,
Let it fall over my forehead to-night,
Shading my faint eyes away from the light,
For with its sunny-edged shadows once more,
Haply will throng the sweet visions of yore;
Lovingly, softly, its bright billows sweep;
Rock me to sleep, mother, rock me to sleep!

Mother, dear mother! the years have been long
Since I last hushed to your lullaby song;
Since then, and unto my soul it shall seem
Womanhood's years have been but a dream.
Clasped to your arms in a loving embrace,
With your light lashes just sweeping my face,
Never hereafter to wake or to weep;
Rock me to sleep, mother, rock me to sleep.

The Mother's Remorse.

The child was so sensitive, so like that little shrinking plant that curls at the breath and shuts its heart from light. The only beauties she possessed were an exceedingly transparent skin, and the most mournful blue eyes. I had been trained by a stern, strict, conscientious mother. I was a hardy plant, rebounding at every shock; misfortune could not daunt, though discipline tamed me. I fancied, alas! that I must go through the same routine with this delicate creature; so one day when she had displeased me exceedingly by repeating an offense, I was determined to punish her severely. I was very serious all day, and on sending her to her little couch, said—

"Now, my daughter, to punish you, and show you how very, very naughty you have been, I shall not kiss you to-night."

She stood looking at me, astonishment personified, with her great mournful eyes wide open. I suppose she had forgotten her misconduct till then; and I left her with big tears dropping down her cheeks, and her lip quivering. Presently I was sent for—

"O, mamma! you will kiss me; I can't go to sleep if you don't," she sobbed, every tone of her voice trembling, as she held out her hand.

Now came the struggle between love and what I falsely termed duty. My heart said give her the kiss of peace; my stern nature urged me to persist in my correction, that I might impress the fault upon her mind. That is the way *I* have been trained until I was a submissive child, and I remember how often I had thanked *my* mother since for her straightforward course. I knelt by her bed and whispered—"Mother can't kiss you, Ellen," though the words seemed to choke me. Her hand touched mine; it was very hot; but I attributed it to her excitement. I blamed myself as the fragile form shook with suppressed sobs, and saying, "Mother hopes Ellen will mind her better after this," left the room for the night.

It might have been about midnight when I was awakened by the nurse. Apprehensive, I ran to the child's chamber. I had a fearful dream Ellen did not know me. She was sitting up, crimsoned from the forehead to the throat, her eyes so bright that I almost drew back aghast at the glance. From that night a raging fever drank up her life—and what do you think was the incessant plaint poured into my anguishing heart?—'Oh! kiss me, mother, do kiss me! I can't go to sleep. You'll kiss your little Ellen, won't you? I can't go to sleep. I won't be naughty if you'll kiss me. Oh! kiss me, dear mamma! I can't go to sleep."

Holy little child, she did go to sleep one gray morning, and never woke again—no, never! Her hand was locked in mine, and all my veins icy with its gradual chill. Faintly the light faded out in the beautiful eyes—whiter and whiter grew the tremulous lips. She never knew me; but with her last breath she whispered—"I will be good, mother, if you will only forgive me!"

Kiss her! God knows how passionate and unavailing were my kisses on her cheek after that fatal night. God knows how wild were my prayers that she might know, if only once, that I would have yielded up my life could I have asked forgiveness of that sweet child.

Well, grief is unavailing now. She lies in her little tomb; there is a marble urn at her head, and a rose-bush at her feet—there grow sweet summer flowers; there waves the gentle grass; there birds sing their matins and vespers; there the blue sky shone down to-day, and there lies the freshness of my heart.

Parents, you should have heard the pathos in the voice of that sad mother, as she said: "There are plants that spring into great vigor if the heavy pressure of a footstep crush them, but oh! there are others that even the pearls of the light dew bend to the earth." Mothers and fathers, be kind to the little ones. Do not wait till the daisies grow over their bosoms before you learn to chide them in love. Kiss them before you strike them. By and by you must leave them; but leave no thorns in their memory.

At the risk of presenting what our readers have seen before, we copy this little story, because the lesson it impresses is much needed, and because it may, if taken home in time, spare many a mother-heart the infinite and unendurable pain that it pictures. Young parents, even if tender and devoted, are apt to err on the side of harshness. They are earnestly and conscientiously bent upon doing their duty. The child *must* be brought up right at any sacrifice of feeling on either side. They forget that Love—the love they trample down in grasping at perfect discipline, is *the fulfilling of the Law.*

It is stated to be in the code of Jewish belief that before a Jew is thirteen years of age his parents are responsible for his sins; after that age he is himself accountable. However this may be, it is the natural feeling of a mother when death has taken away her little one, that it has gone forth without spot or taint, straight back to the pure life of God, whence it came. However serious her child's faults may have seemed, it is not against *him* they are remembered. He goes free from the earth and the body, to which his errors now seem to belong. He is above her now—another white lamb of the Savior's flock—all shadows of his soul and his life falling like a mourning veil upon the mother's head. Reverently she bows to receive it. Gladly, amid the streaming tears of a broken and a contrite heart, she takes upon her own soul the burden he has dropped, and henceforth walks more humbly with her God. "If he did wrong, was it not through inherited defect?—or could I not, with the love that never faileth—that beareth all things, believeth all things, hopeth all things, endureth all things—with such love, could I not have prevented his fault?" How clear it all seems to her now, in the light of that dread decree that has struck down all hope of reparation, and left only remorseful thoughts, sweeping like autumn winds through the desolated home, with that mournfulest wail of the human heart—Nevermore! nevermore!

"Happy Homes."

EDITOR CALIFORNIA FARMER:

I have read, with pleasure, and some interest, the spirited correspondence on the subject of "Happy Homes." It seems to be rousing up the dormant spirits of many of our bachelors, to a true sense of their lonely and unprofitable condition—your humble servant likewise.

I see the ladies already have plenty of suitors, and if I mistake not, they are all Farmers; but as the saying is, the more the merrier. So if you think there is any earthly chance for another Farmer, please consider me a candidate.

Now, dont I wish I was a merchant (the other qualifications, I might lay claim to). I am nothing but a Farmer, and the Farmers (like robins) discover a partiality for "Cherries," so I have good reason to believe that the harvest of cherries, will soon be over. But for my own part I am not over partial, for I know that there are other fruits—if not so pretty—are quite as delicious. Now, I shall not presume to make a choice at this late hour, but will leave the subject open, and if either or all three of the Ladies will condescend to reply, all the necessary information will be forthcoming.

I want a wife, her eyes may be blue,
With lips of a roseate hue,
A form and character perfect and true;
Not for golden treasure—'tis for love, I sue.
Though if her eyes be hazel, bright,
A world of love is in their sight,
With all the beams of heavenly light,
In virtue's rays she walks upright;
Fair goddess of my heart,
Eternal goodness is thy part. PORTIUS.

["Portius" may have room: His earnest appeal we lay before the trio, and if they are not *all* provided for or engaged, he may have some influence.]

TWO WAYS.—There are two ways of dealing with our fellow men, both of which may be considered honest. One is to give his neighbor his due, and not a cent more. In shoveling the snow from your sidewalk, take care and not shovel any from before his house. Stop exactly at the line, and give him to understand that he must shovel his own snow. Pursue the same policy in everything, and let him know that he has a neighbor who will not suffer his right to be trampled on. The result is natural and certain. You stir up the same spirit in him. He looks out for his rights as jealously as you do for yours; and you soon find that you have one of the least accommodating, most obstinate and meanest neighbors in the world, while he entertains the same opinion of you. The other way is to deal not exactly, but generously. Be always willing to pay what the things you purchase are worth, and show less anxiety about paying too much than about paying too little. Shovel the snow from before both houses, when convenient, and don't look as if you expected some grateful return for the favor. Feel that it is pleasure to accommodate your neighbors in all things possible, and that in matters of slight misunderstanding it is always better magnanimously to surrender your rights than to indulge in a petty quarrel. You will soon find that in this case also you will stir up a similar spirit in those you deal with, and that, instead of jealousies and complaints of each other, which are the curse of a neighborhood, you and your friends will be emulating each other in performance of kind offices. Even if this do not result, you will still be the gainer;—you will gain a noble and serene spirit of toleration, which will be worth more to you that all the trifles there may be in dispute. Your character and generosity will be reflected upon yourself and the more liberally you treat those who use you ill, the larger and warmer will your heart become, and the sweeter and worthier will be your life.

CHRYSANTHEMUMS.

BY FLORENCE PERCY.

Once, long ago in summer's glow,
We threaded, you and I,
A garden's maze of pleasant ways
Whose beauty charmed the eye—
Where violets bent in sweet content,
And pinks stood proud and high.

And from their screen of tender green
Broad pansies, peeping through,
Wore gorgeous dyes like butterflies;—
Cool lilies kept the dew;
And fair and tall along the wall
The climbing roses grew.

The velvet bees, in fragrant ease,
Lay drunken with perfume,—
Song-sparrows made the garden's shade
Their flitting concert-room,
And all the air was music there,
And all the earth was bloom.

There grew one plant in utter want
Of bud or blossom-dower;—
I broke a spray of leaves away,
And said—"The winter hour
Will crown these stems with diadems—
This bears the Christ's sweet flower.

"It cheers with bloom the stormy gloom
By chill December nursed;
And it is told in stories old
That this fair blossom first,
On that blest morn when Christ was born,
Into white beauty burst.

"Perhaps—ah, well, we cannot tell
If truly it be so;
I but repeat the legend sweet,—
And only this I know—
That in the prime of Christmas time
The Christ's sweet flowers blow,

"More pure and clear than any here,
Their snowy discs unfold,
White as a star that melts afar
Into the morning's gold,—
And odor rare above compare,
Their fragrant fringes hold.

"This branch I break for memory's sake,
And ere descends the snow,
The slender bough I never now
Within our home shall grow;
How brightly there, all white and fair,
The Christ's sweet flow'rs shall blow!"

* * * * * *

The curtains fold away the cold,—
The bleak and drifting snow—
Red fire-gleams fall where on the wall
The pleasant pictures glow—
And fair and white beneath the light
The Christ's sweet flowers blow.

But cold and deep the snow-drifts heap
Above thy silent form;
I cannot hold my garment's fold
Between thee and the storm—
I cannot dare the bitter air,
And clasp thee near and warm.

And what to me are light and glee
When all the while I know
That cold and deep the snow-drifts heap
Above thy slumber low—
What do I care that white and fair
The Christ's sweet flowers blow?

FRENCH PLATE GLASS.

THE UNDERSIGNED IS HAPPY TO INFORM his Friends and the Trade that he has established himself in this city as an

IMPORTER AND DEALER IN

PLATE-GLASS, MIRRORS,

STAINED GLASS, ETC,

Direct from Europe, of the

BEST WHITE QUALITY,

Of all thicknesses and dimensions. Large invoices of White-glass now opened—sizes varying from 24x42 to 132x78, and larger sizes will be imported to order.

He has received the agency of

Messrs. Aug. Nyssens & Co's

PATENT FRENCH PLATE-GLASS,

Silvered, for Mirrors,

A New Article to the trade, now almost entirely used in the Atlantic States and Europe, being much whiter in appearance and superior to the old style of Quicksilvering, not being liable to stain from heat, moisture or dampness, nor injury by handling or in packing for transportation. I would invite a call of examination to the sample invoice just received. Having the sole agency for California, I am now prepared to receive orders, and can sell as low as can be imported from New York.

I am also constantly receiving large invoices of

CRYSTAL SHEET, STAINED, ENAMELED,
CUT AND GROUND WINDOW GLASS,
ROSETTES, ROUGH PLATE-GLASS
FOR SIDEWALKS, ETC, ETC.

Denn & Manrow's Combined Power WINE PRESS.

THIS NEW PATENT PRESS IS NOW OFFERED TO the Grape Growers of this State as a California Invention. It has been designed and finished with reference to the saving of labor and expense, while the work done is more speedily accomplished and with greater results.

It is the FIRST COMPLETE WINE PRESS in the country. The power of the machine is almost unlimited. With the crank alone the power of this press is as 300 pounds to one pound of strength applied. After the crank has been worked by hand to a certain point a lever of eight feet is attached, by placing weights at the end of the lever a new power is given equal to 1,600 pounds for one. This power is continuous, a self-working power requiring no supervision needed.

This Press is made of solid timber, yet neat, compact, and very powerful, the wheels and gearing simple but sure; the whole weighing about 800 pounds, easily put up or taken down and easily transported, so simple yet carefully constructed that it cannot get out of order unless by extraordinary results. The cost of this machine will be less than the ordinary Screw Press; it will save the labor of six or eight men usually required, as ONE MAN can do all the work.

The quantity pressed is only governed by the size of the machine, each pressing being from 400 to 4000 pounds as the size of the machine may be, and from four to six pressings a day, thus yielding from 600 to 2,000 gallons per day.

Machines will be constructed to order, of any size. For any further information address the undersigned,

DENN & MANROW,
Patentees and Proprietors, Sacramento.

P. S.—The Editor of the Farmer having thoroughly examined this Wine Press, we are permitted to refer to him for capability and perfection, or any other information. 9

SEED, PLANTS, ETC.

CHOICE GRAPES!

B. Kamp,

of SAN JOSE, offers the following Choice kinds of Grapes:

Grape-Vines, Cuttings, and Plants,

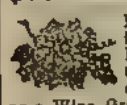
INCLUDING NINETY VARIETIES OF

NEW AND RARE KINDS!

For Wine---Rhine Grapes.

Black Gleffner, Kohlen Traube,
Johnisberger Riesling, Gray Gleffner,
Riesling Franken, Silvaner,
Traminer, Goodethel,
Rulander.

FOR THE TABLE:



Goodethel, Muscat Rose,
Black Hamburg, Muscat Alexandria,
Chasselas Musqua, Golden Chasselas,
Charlesworth Tocay.

The above list embraces those that the Undersigned has proved The WINE-GRAPES are the BEST OF THE RHINE, such as our Choice Rhine Wines are made from; and those for the Table are well known and approved The Grapes will make Better Wine than our California Grapes, by a 100 per cent. Having cut down all my California Grapes, and instituted others, I know what I say to be true

Orders for Rooted Vines or Cuttings at LOW PRICES, can be sent by Mail or left at the FARMER OFFICE, will be promptly attended to.

20-24-tf B. KAMP.

$5! Delaware Grape-Vines! $5!

PROPAGATED FROM VINES received in 1851, from Dr C. W. Grant, of Iona Island, near Peekskill, N. Y One and two year-old Vines, from $1 00 to $2 00 each! The superiority of the Delaware as a Wine Grape, will doubtless induce unprincipled Dealers to flood the Market with a Spurious Article; and as mistakes sometimes UNINTENTIONALLY occur, which cause delay and trouble to the Purchaser—

☞ I WILL PAY IN GOLD COIN $5.

(or the same amount in Lincoln, Lenoir, Union Villages, Anna, or Diana Vines, at 50c each, or the IONA at $2 00 each) for each Vine purchased from me, for the DELAWARE, which proves untrue to name.

I have a few IONA VINES, one year old, propagated from a Vine presented to me from Dr. Grant, the Originator of the same, which, except upon the above conditions, I do not intend to offer in Market without his permission

Catawba Vines and Cuttings by the Hundred or Thousand, CHEAP!

C. A. CRAIG.

Fine House and Garden in Sacramento City

A LARGE, SPACIOUS, AND CENTERL House and other buildings, with fine Garden, all finely located in the upper part of the city, containing a full half block—will be sold a bargain and on liberal terms of payment if applied for soon. Real estate is rapidly improving in Sacramento, and this is a rare chance. Inquire of editor Farmer. 15

Literary Shrubbery.

A COW SCRAPE.—An Erie paper has the following: A short time since an affair occurred in a quiet neighborhood in this city, which, though performed by a cow, has not been equaled since the performance by the "Bull in the China Shop." A family of three persons—one lady and two gentlemen—were startled from a quiet condition of mind about the time they were preparing to retire for the night, by a noise in an adjoining shed. One of the men, in his stocking feet, cautiously opened the door leading from the dining-room to the outside apartment, and discovered a cow with her head stuffed into a barrel of swill with her horns fast, and, in her efforts to extricate her antlers, she had overturned a table upon which there had been stacked a quantity of tinware, crockery, iron pots, &c. Hence the clatter, which was enough to resurrect the dead. The gentleman at once proceeded to drive away the cause of this disturbance, and in so doing brought a dog into the ring, who with a bound, fastened upon the cow, and caused her shake off her dishonestly acquired head-dress, and with a nose down and a tail askant, she made a dart through the door left open into the dining-room, where she came in contract with a table laid ready to receive the breakfast of the following morning, and sundry other things, the up-setting and banging about of which created the greatest confusion imaginable. Meanwhile the other gentleman, who had already retired into an adjoining bed-room, arose in his nether garment and opened the door of his room to see what was going on outside. The cow thought the opening of this door afforded her an opportunity to make her escape, and accordingly rushed into the bed-room. Here she met with opposition. The space in the room unoccupied by the bed was scarcely large enough to admit her in full length, and so narrow that she could not turn; besides the occupant of the room received her by the horns and endeavored to back her out. Now commenced the genuine sport of the scene. The little fellow inside was pitching and rearing and swearing at the head of the cow, first on the bed, then in the alley, and next in close proximity to the ceiling, his limbs flapping around with wonderful velocity, while the man in the dining-room had seized the animal by the tail, and pulling, tugging, laughing and yelling, and the cow bellowing and fighting desperately. Together the men see-sawed her back and forth some time before they succeeded in backing her out. Finally she was driven into the street, but no fire or moving ever created more confusion in the affairs of a household than was here created by the presence of this cow.

FOOLISH FRIGHTS.—"Oh! oh! oh! that ugly, dreadful toad," screeched little Johnny. "What are you afraid of Johnny? What harm will the toad do you? The toad is squatting in the sunshine and enjoying the pleasant weather as well as you. May be he has just eaten his dinner of grubs and worms. I hope he has, for he eats the bug which destroy the pear-tree." Some children are always in a fright. If they go into the garden, they are afraid of the caterpillars and toads. If they walk in the country, they are afraid of the cows and a flock of geese. If they run about town, they are afraid of poor little harmless dogs, who look up at them with a "bow-wow-wow," as much as to say. "Good day, little master." But little master sets up a terrible cry, as if he were bitten, and doggy walks off, wagging his tail, and wondering what it all means. When these children of foolish frights come into the house, here also they find alarms. If a mouse peeps out of its hole, they nearly go into fits. If puss runs round after her tail, they scream. We once saw a little child start and cry at the sight of a spider walking across the floor. "Oh! oh! oh!" she cried. And what a sensible question do you think her sister asked? "Why, Jessie, how you act. What do you suppose the spider will think?" Yes, we wonder what the spider did think. We suppose it thought, if it thought at all "That child is a monster to me. Its two legs can run a hundred times faster than my six legs; its little toe could crush my whole body; its big hand can sweep me to death in a minute; it could eat me up at a quarter of a mouthful. I have no way to defend myself from her. I can't sting; I won't bite; I have no claws; and yet she is afraid of me. She is a reasonable creature; and yet she is afraid of me." No wonder if the spider should walk off laughing you in her sleeve.

THE AUTOCRAT OF THE KITCHEN.

THE ORIGINAL P. P. STEWART.

Fuel Saving and Comfort Producing

LARGE OVEN

SUMMER AND WINTER AIR-TIGHT,

COOKING-STOVE

....FOR....

Wood and Anthracite, or Bituminous Coal.

IMPROVED IN 1859,

With New and Extra Large Flues, and by the addition of the *Celebrated Patent Double-sheet Bottom Flue.*

Attention is invited to the following points of superiority:

1st, DURABILITY—Lasting, with proper care, at least 30 years. Stoves are now in use that were set up in 1[illegible]

2d, MANUFACTURE—Every portion of the Stove is thoroughly constructed. Each Stove is submitted to a critical test, and none leave our works unless completely and perfectly finished.

3d, CAPACITY—Baking, boiling, broiling, roasting, and all other culinary operations performed at the same time.

4th, ECONOMY—Saving the cost of the Stove in one year in the item of fuel

5th, VENTILATION OF HEAT.—In the Stewart Stove alone, the front doors open directly into the oven (protected by letters patent), securing a direct draft through the top of the oven, by means of holes perforated in the doors and back flues. It will be borne in mind that, as the heated air always rises, this method of ventilation is the only one of any value whatever

6th, ENTIRE CONTROL OF HEAT—The heat generated by the Stove may be held therein, and used or thrown into the room at pleasure

7th, THE DOUBLE-SHEET BOTTOM FLUE—By which a compressed and inverting action of heat is obtained, and the oven more evenly and efficiently heated than by any other known invention.

8th, BROILING—Performed on the top, and without the possibility of smoke entering the room.

9th HOT WATER RESERVOIR AND WARMING CLOSET—Both useful and convenient, supplied by the waste heat and without extra fuel.

10th, WATER RACK—An arrangement for supplying hot water for the bath-room, equal to any range.

☞ Beware of the numerous imitations in the market, many of which resemble the Stewart only in appearance, and none of them possess any of its peculiar qualities See that the name of P. P. STEWART, and of the Manufacturers are on each stove. None other are genuine For sale by

CALEB M. SICKLER,

429 Kearny street, bet. California and Pine, San Francisco.

The Markets.

Wholesale Produce Report.

This represents the prices paid by the dealer to the producer.

Corrected weekly, by A. H. Todd & Co., corner of Clay and Drumm Streets.] Feb. 25.

The demand for all kinds of Cereals has been well sustained and prices continue to advance. This, however, we do not consider a healthy or a permanent matter, caused, as it is, by the the dry weather and disposition of holders not to sell at present, preferring to wait and sell at a less figure, by and by, rather than realize now. The months of December, January, and February, have been unusually dry and caused some to feel very uneasy, but, should we have rains in March and April, as we have had in years past, there need be no uneasiness. Late sowing has often produced good crops. The quantity of grain of all kinds, on hand, is large, a good shower would cause a decline in prices.

Our Exports are as follows: Ex the Hamburg bark G. C. Myer, for Shanghae, 3000 bf 4000 qr sks Flour, 2930 sks Wheat, 200 flasks Quicksilver. Ex the Enoch Train for Liverpool 54,555 sks Wheat, 212 bgs Copper Ore, Etc.

Our receipts of Produce from around the Bay for the past week have been as follows: Wheat 12,299 sks, Barley 3027 sks, Oats 1256 sks, Buckwheat 70 sks, Beans 140 sks, Flour 7059 qr-sks, Bran 536 sks, Hay 142 tons, Potatoes 1075 sks, Corn-meal 75 sks.

Also, Coastwise: Wheat 764 sks, Barley 2651 sks, Potatoes 5131 sks, Beans 743 sks, Oats 565 sks, Peas 154 sks.

BY CONTINENTAL TELEGRAPH.

DATES TO FEB. 25.

Several hundred copies of the Amnesty Proclamation have been sent to Lee's army within a week, and the effect is already perceptible in the increased number of desertions.

In the House, Mr. Garfield stated that there will be $74,000,000 of gold in the Treasury on the 1st of July, at the present rate of receipts. The pledges of the Government for coin are $22,-000,000.

Great dissatisfaction prevails among the Kentucky, Tennessee and Mississippi regiments, and all are swearing that, when their time expires, they will fight their way out if necessary. At Big Black, 40 refugees came in direct from Mobile. Some 15,000 troops are in and about the city of Mobile, and many of them are old men and boys. Quite a large Union element exists among the inhabitants, but they cannot express themselves The poorer classes, who have no property to be confiscated, and who are suffering terribly, say boldly, they would rejoice if the Yankees would take the city.

The Florida expedition was a complete success. Several points besides Jacksonville were captured, and our forces were pushing through the State.

It is estimated that 2,000 refugees and deserters have come within our lines since January 18th.

Dispatches announce the arrival of 6 more escaped prisoners, making 60 who are safe. The Richmond papers say that 48 were recaptured, leaving 11 still out.

PORTLAND, Me., Feb 23.—The Bohemian, from Liverpool, struck a rock 4 miles outside of Cape Elizabeth, last evening, and sunk 2 miles from the shore. All the cabin passengers were saved. She had about 200 steerage passengers on board, who were swamped alongside, and the drowning of several took place. The cargo was valued at $1,-000,000, mostly for the provinces of Canada. Three mail bags were saved; one of them was for California. It is thought that but few passengers were lost except those in the swamped boat. Some of the firemen perished.

At a recent session of the U. S. District Court of the Eastern District of Virginia, in Norfolk, on the 28th of December, condemnation under the confiscation law was made The decrees cover a large amount of valuable property.

The Maryland State Convention, at Baltimore, instructed its delegates to the National Union Convention to vote for Lincoln as its first and only choice for President.

Within a few weeks the Secretary of the Navy has decided to add another fleet to the National squadron. In compliance with instructions, propositions have been made to construct new vessels, to be entirely of iron, and not intended for participation in actual battle.

The Richmond Examiner of the 18th announces the despatch of the first installment of Yankee prisoners, on the 17th, to the Georgia new prison at Port Fine. 6,000 are to be sent there, at the rate of 400 or more daily.

The Army of the Potomac is to be formed into three grand divisions. Sedgwick is to command the right, Pleasanton the centre and Hancock the left, with Kilpatrick to command the cavalry corps.

The Charleston Mercury says "Secretary Chase will make every exertion to flood the South with greenbacks, which, unless immediately checked, will subvert our currency," this paper also says: The constancy of the enemy's shot and shell is telling on our part of the city.

It is thought that having failed to accumulate a force sufficient for energetic operations, Longstreet is now endeavoring to effect a junction with Johnston at Dalton. The largest estimates gave him 2,000 [32,000?] infantry and 50 field pieces. The two armies concentrated will probably muster 50,000 strong. The Provost-Marshal's report shows a total 2,276 deserters from Johnston's army in January and the first half of February.

The House Military Committee have had under consideration the question of increasing the pay of soldiers, the amount ranging from $16 to $25 per month. The Committee will probably compromise on $20.

Tunnel Hill was captured on the 24th. 300 prisoners were taken. Our loss is reported at 75 killed and wounded.

Vicksburg letters mention the arrival of a courier with news of the capture of Selma, Ala., by Sherman. It is possible, but don't vouch for it

It is officially announced that Gen Sigel is appointed to the command of the Department of Western Virginia.

Longstreet began to retire on the 20th from Strawberry Plains, towards Bull Gap, he first destroying the bridge, and report says his camp equipage. Schofield moved to the Plains, with Union forces on the 24th. There is a rumor of a raid in Longstreet's rear, now current, which is supposed will account for his precipitate retreat.

Special dispatches from Washington say of 30,-000 veterans, whose time will expire within the next nine months, 25,000 have re-enlisted.

Six more of Farragut's fleet are ready for sea. His fleet will comprise nearly 40 vessels.

The following confirmations were made in Executive session of the Senate George F Seward, U. S. Consul General at Shanghae; Benjamin F. Hall of Colorado, Consul at Valparaiso; W. B. Black, Consul at Manzanillo; Philip G. Moore of Washington Territory, to be Assessor of Internal Revenue; James W. Shanklin of California, Receiver of Public Moneys for the district of San Francisco; J. F. Swift of California, Register of the Land Office in San Francisco, and Laurens Upson, Surveyor-General of California.

EUROPEAN NEWS.—It is fully confirmed that the Danes had retreated from Schleswig, evacuated Dannewerk and blown up their works at Missundi. The Germans followed the Danes to Fluesberg, when the latter retreated to Dussel. Several severe engagements had taken place, with considerable loss on both sides. The Germans secured great booty and a large number of prisoners. According to some authorities the Danish possession of Schleswig has ended. It is thought that the Danes will make a formidable stand at Dussel, where they will be supported by the fleet. Great anxiety existed at Copenhagen, caused by the Danish retreat. The English Journals continue to be very anti-German. The Conservatives hold that Earl Russell is responsible for the Danish reverses The Prussians have occupied Fluesberg. The Austrian losses there were 1,100. The Austrian headquarters on the 9th were at Terrap, and the Prussian at Fluesburg. It was rumored that the Prussians attacked the Danes at Dussel, and lost 500 men. The Danes in great numbers had arrived at Alser.

The State Department has received advices that the Court at St. John, N B., had committed Chesapeake pirates to prison, to await a requisition from the United States authorities.

News from Cape Town to December 31st, says that the privateer Tuscaloosa has been seized by the British authorities for a violation of the neutrality laws, in landing a portion of her cargo on the coast

A Washington dispatch reports the capture of eleven blockade runners, on the lower Potomac, with a large amount of goods, and a large rebel mail.

Officers from the front report all quiet at Chattanooga and Knoxville. Refugees from Georgia South Carolina and Tennessee continue to come in daily, many of them in a starving condition.

The Herald's Key West correspondent mentions the capture of the steamer Cumberland with a cargo which cost seventy thousand pounds sterling in England. It includes one hundred barrels of gun-powder, a large quantity of Enfield rifles, army cloth, shoes, etc.

A sensation was created in the Senate, Feb 19th, by a statement of Conness, relative to the imperative necessity of sending a fleet of war steamers to the Pacific coast without delay. The authorities have positive information that the rebel steamers have left Asia for that coast, and feared that San Francisco will be menaced before the navy can afford the requisite protection.

☞Holloway's Pills and Ointment.—Universal Philanthropy.—Nearly one million boxes of Pills are every month distributed throughout the towns and villages of the United States and Canada, and an almost equal amount of Ointment accompanies these orders. It may be said with truth, that Holloway's medicines are "Messengers of Joy carrying healing on their wings" to millions oppressed by every form and type of disease.

Sold by all Druggists, at 25c, 62c, and $1 per box or pot. 197 HOLLOWAY'S PILLS and OINTMENT may be always obtained of Messrs. CRANE & BRIGHAM, cor. Clay and Front streets, San Francisco, Cal.

☞Never wear a cough, or irritation on the lungs when you can buy AYER'S CHERRY PECTORAL, the world's great remedy that cures it.

The Shawl-wool Goats of Asia.

WASHINGTON, D. C., Dec. 22, 1863.

EDITOR CALIFORNIA FARMER:

I have written you two reports from the East on the far-famed "Cashmere Goats," but receiving no reply or hearing nothing from you, and knowing your interest in everything that benefits your Farmers and State, I take it for granted you must never have received them. I regret this, the more because the one I collected through India, Persia, and Turkey, and to me valuable, I sent without being able to retain a copy, and the notes of the one from JAVA are in my trunk, on or in the sea somewhere, now one year out. But I am now willing to dismiss the subject here, and having collected other valuable information in Turkey, France and here, I propose to call your attention to the subject again, of the "Shawl-Wool Goats of Asia," and if of sufficient interest, I will furnish you further correspondence and particulars. The value of the rich "underdown" and fine silken hair or wool of the Cashmere Goat in commerce in the manufacture of the valuable Cashmere shawls, cloths, and goods known by that name, is so well established and known, that the mere reference to it is sufficient.

The flocks of sheep and goats, and camels, constitute one of the great sources of wealth, especially among the more nomadic races through Tibet, Tartary, portions of India, China, Persia, Turkey and Arabia. I have seen from one eminence, grazing on the plains below, over 100,000 sheep and goats at a time, along the banks of the Euphrates. Along the Tigris through Persia, Mesopotamia, Syria and Asia Minor, I saw immense flocks of these goats and sheep, which furnish food and milk for the people, and clothing. I do not design to enter into the different varieties of these goats and sheep, but confine myself more to the long-hair or shawl Goat, which seems to be the king of the Goat tribe in breed, beauty, dignity and value. It is found in the North and Western parts of China, in Thibet or Tibet, Tartary, Turkestan, the Northern portion of India, through the greater part of Persia, especially in the vicinity of Kerman, Kermanshah and Ecvatana, about the Caspian and Ural seas, furnishing food, milk, clothing and wealth to their possessors.

The Shawl Goat has been introduced with varying success into France and England, but with more success into the United States, in proportion to the quantity, effort and experiments made. The first seem to have been introduced into this country by Dr. Davis of Ill., in 1840, which he procured in Asia Minor, and are probably, therefore, from the Angora breed, as Cashmere is several thousand miles further East. Since that time, however, it seems true Cashmere Goats have been imported, and the breed is now spread through a number of the Atlantic, Southern and Western States, while the price for a Cashmere Buck has increased from $100 to $1,000, and much more interest is being manifested, as they are being spread over various portions of the country, but still the quantity and circulation is far too limited for the demand or general public benefit. And after a full investigation in the East, Europe, and here, I feel satisfied that no importation of any one species of animal or object of wealth to our Farmers, State, or Country, would be crowned with more eminent success and remuneration than a general importation of, say a few thousand of these far-famed Cashmere or Shawl-Wool producing Goats. They are to be found as said, in Tibet, India, Kerman, Persia, and Asia Minor, of different varieties, sizes, colors and values, accessible, and could be readily imported to California, where, from a similarity of climate, temperature and food, they would thrive and multiply, and by crossing with the common Goat, could soon cover the hills and mountains of California with flocks of immense wealth, and abundantly furnishing the material for the finest and best cloths and shawls. I therefore commend it to you as worthy a State or general enterprise that would abundantly repay either, as well as enriching and greatly benefiting our own manufacturers and merchants, as well as commerce.

France and England at present possess the monopoly of the manufacture, importation and traffic, as it is well known that France and England are doing a large and profitable business in that traffic. The rearing of the Goat is successfully established by fourteen years' experience. The Reports at the different State Fairs have always been favorable. The following is from the Ohio State Agricultural Fair, of 1861: "'John Bell,' imported by W. H. Stiles, of Georgia, at an expense of $1,000, 6 years old, weighing 185 pounds, yielded 6 pounds of wool at $8 a pound at one shearing. The general appearance of the animal for hardiness, we consider superior to any of the species heretofore seen by us. 'Sampson' clipped 4 pounds; we find the wool on him 5 inches long. 'Napoleon' weighs 110 pounds, and was awarded the second premium. 'Sultana' was a winning animal at the State Fairs, etc." The wool in fleece is now selling at from $8 50 to $10 a pound, some shearing as high as 8 pounds, yielding $80 a head. I have collected a valuable cabinet of specimens of the fleeces of these Goats and much information in regard to their management, and am satisfied of their utility and successful rearing in this country. Please inform me of your success in California. I should like to join some Californians to import a few thousand of these Goats to the Pacific coast.

Yours, respectfully,

ISRAEL S. DIEHL.

Paint for Out-buildings.

THE following discussion was held before the American Institute Farmer's Club, New York, January 12th: A farmer in Duchess County, N. Y., wants the Club to discuss the subject of painting out-buildings of the farm. He says: "The question is not whether we shall paint them in order to preserve them, but what we shall paint with. We often see in the newspapers substitutes for the oils, and lead generally used, and well recommended by the manufacturers of them. A very prominent one at this time is advertised by a manufacturing company in your city, called the Gutta Percha Paint. Now, the important question is: Is it durable—is it cheaper than the oils and lead? Your opinions and experience will be well received by the greasy mechanics and mudsills of the North."

Solon Robinson—I will give the receipt that I have given many times before, for the benefit of those "greasy mechanics," who want line upon line and precept upon precept, before they can get and retain knowledge. I hope that a few may be induced to use this cheap, durable paint, which is a better preserver of wood than oil paint, and has this advantage, that it can best be used upon unplaned boards. This is the formula: Take one bushel of good white-wash lime and slake it, and mix it into a fine smooth white-wash. It will take at least forty gallons of water. Then add the following ingredients: 20lbs of Spanish whiting; 17lbs of rock salt; 12lbs of sugar. This mixture should be well stirred, and if mixed a day or two before using, the better. Indeed it may be kept as long as desirable, and when needed for use, after thoroughly stirring, it is ready. It should be put on like any other white-wash, in a thin condition, and rough boards will require three coats to make a durable white color, which will stand the weather three or four years. It is one of the very best applications for shingles. Its color can be modified to a drab, by Rosendale cement, or to a yellowish shade by yellow ochre, and reddish by Venetian red, or any other tint, by some cheap color. I have used ashes, and so I have blue clay, to get a brownish tint.

John G. Bergen—I am very glad to have this useful information go forth to the people, but I should like to hear why the ingredients added to the lime-wash improve its value so much that it becomes a permanent paint.

Solon Robinson.—The lime and salt are both antiseptic, and the adding of the salt makes the wash more penetrating. The whiting is of the nature of clay and forms a white body on the surface, and the sugar makes the whole so adhesive that a man may rub his black coat against a wall painted with this compound, and it will not show a shade of white.

W. S. Carpenter—I painted one barn roof with oil and lampblack, and another with lime-wash and lamp-black, and the last holds the color much the best and was materially cheaper. Lime is an excellent preserver of shingles. Witness the soundness of old roofs on the lower side of chimneys.

Alderman Ely recommended dissolving about a quarter of a pound of tallow in a pailful of the hot lime as it is slaked for white-wash, which will make it adhere much better and prevent it from setting off upon everything that touched it, as is too often the case with white-wash. He also said that he had tried the "India rubber paint," but does not intend to try it again. It is not valuable.

Poverty is a bully, if you are afraid of it; but it is good natured enough if you meet it like a man.

New York Wool Market.

WALTER BROWN'S Monthly Wool Circular, issued February 1, 1864, says:

The trade in Domestic Fleece Wool, since the opening of the year, has been less active than was expected, and holders have been disappointed both in the quantity of wool sold, and the prices obtained.

Manufacturers, although light in stock, have bought cautiously; at most laying in but a few week's supply at a time. This policy is the necessary result of a judgment that any advance in Wool that may occur, would not more than pay the cost of carrying it to the period when it will be wanted for consumption.

A further rise in gold, or a very easy money market, might lead to a speculative demand, and cause an advance in rates; but the probability is that consumers will go on with purchasing in short supply, the effect of which will be a healthy regular demand at steady or slightly advancing prices, and finally an approximate exhaustion of the stock before the clip of the coming spring will be brought into market.

While gold is quoted at $150 and upwards, and all staple commodities are ruling high, we think there can be but little danger of any material decline in Wool.

The stock in market is not large, but well assorted. The supply of finer grades is better than of medium and coarser qualities.

Receipts of Wool from the West have been quite moderate, owing in part to the continued difficulties and delays of transportation.

Pulled Wools have been in fair request, and the better descriptions taken freely at slightly improving prices; the demand, however, towards the end of the month was less active, and some pullers were anxious to realize. The extreme prices of Skins make it desirable for pullers to sell promptly, as well as to get full prices.

The demand for California Wools has been moderate, with but little change in prices, and rather more inquiry at the close of the month.

Foreign Wools of all qualities have been keeping pace with domestic, and a fair business has been done. The stock continues good, particularly of the finer and medium grades.

Foreign advices report the markets in a healthy condition, with a steady demand from consumers.

We have reported the following sales during the past month: Fleeces, 820,000lbs, 73@83c; Pulled, 230,000lbs, 68@80c; 45,000lbs California, 30@62½c; 1,250 bales Cape, 40@45c; 1,060 bales Mestizo, 27@36c; 51 bales East India; 56 bales Donskoi; 460 bales African, 35@45c; 304 bales Smyrna; 45 bales Rio Grande; 204 bales Cordova, 42@52c; 1,052 bales Provence, 20@38c; 80 bales St. Iago; 240 bales Peruvian; 100 bales Austrian; 6,000lbs Hungarian; 4,500 German Pulled.

At Auction.—70 bales Damaged Cape, 28½@36.

In Boston, 1,104,000 lbs Fleeces and Pulled, 75@90c; 40,000lbs California, 35,000lbs Canada, 67@80c; 5,000lbs Washed Cape, 90@115c; 150 bales Unwashed Cape, 41@46; 2,440 bales African, Mestizo, and Mediterranean.

At Auction.—463 bales Unwashed Cape, 41@46c, 16 bales Mestizo, 23½c 82 bales Constantine, 32½c, 27 bales Varna, 36c.

In Philadelphia, 560,500lbs, Fleece, 70@85c; 3,000lbs, Pulled, 68@73c; 72 bales Donski; 72 bales African; 22 bales Cordova, 48c.

In Providence, 50,500lbs, 77½@80; 10,500 lbs Pulled, 75@82c; 41,200lbs, Foreign, 33@36c.

The imports of the past month, as published, are: From Liverpool, 916 bales; London, 486; Marseilles, 3,281; Algoa Bay, 3,169; Havre, 174; Odessa, 1,564; Buenos Ayres, 23; Aspinwall, 485; Rio Grande, 40; Gibraltar, 282; Curacao, 4; Smyrna, 634 bales, Total, 11,078 bales.

PRICES CURRENT OF CALIFORNIA WOOL.

California, Unwashed Fleece, in grades, 35@53c.
California Washed Pulled, 45@65.
California Common Washed Pulled, 35@40.
California Washed Full Clip, in grades, 35@50.

N. B.—We would advise Western dealers who may have Wools for sale, to send them forward at once, so that they may have the benefit of the current demand from consumers.

Manufacturers seemed to have resolved to buy only for immediate wants, and for this reason they will not incline to purchase in the West, which involves great delay and uncertainty in getting stock delivered, but will prefer buying in the Eastern markets where their selections can be conveyed from the Wool Warehouse to the mill in 24 to 48 hours.

The New Seed-Sower.—We call attention to the advertisement of the new Seed-Sower which appears in our columns this week. This machine is most comprehensive; will sow from the smallest garden seeds to the field of grain of a thousand acres. It can be used for a small garden or for all the various seeds of the largest farm. It has been tried here, and has been found to work admirably. This new machine is now offered for sale—the right to make and sell it—either in Counties or the whole State, and to a skilful mechanic, *a fortune can be realized.* Drawings of this machine, with a full description, can be seen at this office, also, two models of different sizes, so that the operation of the machine can be at once demonstrated. Persons desirous of purchasing the rights of this new invention, can learn the price and terms, by calling at the FARMER Office, of the editor of this journal.

Letters from an Old Californian at the East.

NUMBER THIRTEEN

New York, Feb. 1864.

THE CURRENCY QUESTION.—THE BULLETIN'S FALSE STATEMENTS.

EDITOR CALIFORNIA FARMER:

I am sorry to say that the papers, which oppose the introduction of U. S. money as currency in California, do not scruple to make false statements, and to quote from notoriously untruthful journals. I have shown a recent money article in the Bulletin to a number of leading mechanics, and they deny, and my own observation confirms the truth of what they say, that the working man is injured by the present currency. Among others, my father, who employs a large number of men, assures me that his employés have never before occupied so favorable a position. In spite of high prices, the high wages they receive enables them to provide for their families with far less exertion than before, and where they are industrious and economical they can save more money than they have ever before dreamed of doing. There is such a *press of work that they need not be idle an hour.* I have commented on the misery that meets the view of a stranger, but the suffering of the very poor was more noticeable in the flush days of the decade from 1850 to 1860 than now. No man need be idle at the present time. The fact is, there are arguments enough on both sides, without descending to false statements. The loyalty of a paper, or an individual, does not look real when it attacks the financial system of the Government in an untruthful way.

CRACK STABLES OF NEW YORK.

In company with a gentleman from New Hampshire, who is an enthusiastic admirer of trotting horses, I visited the crack stables of New York Of course, the most expensive establishment is owned by Mr. Frank Baker. His stable occupies two or three lots on 28th street, near Fifth Avenue, and is handsome enough to warrant a description He employs a company of grooms and stable boys. His best team is Ethan Allen & Honest Allen; they are both distinguished horses, and the first used to be the greatest trotting horse in America. His next best team is Plutarch & Telemachus. He has five or six celebrated horses besides, whose names I do not recollect.

We then went to the establishment of Mr. Cornelius Vanderbilt. His fast horses are Post Boy & Plow Boy (formerly Flying Dutchman), Bockingham, Lady Noah, St. Lawrence Maid, and two or three others whose names have escaped my memory. His stable outside is very handsome, but inside is inferior to Mr. Baker's.

We then went to see the fastest team in New York, belonging to Mr. Robert Bonner. Of course, everybody has heard of them, as the Ledger seems to circulate everywhere. Flatbush is certainly a well built animal, but no one would suppose that she could out-trot Ethan Allen, by looking at her in the stable. Lady Palmer, Lantern, and Lady Woodruff, take turns in trotting with Flatbush. Mr. Bonner's stable is situated in a mean neighborhood and is not cleanly, but his horses are superior. Flatbush alone is worth $30,000. Mr. Bonner is an intelligent horseman and the slovenly way in which his establishment was kept surprised me very much.

HORSEMANSHIP.

How much amused the California boys would be, could they see the ladies and gentlemen who canter through the Central Park! I used to think the Punch caricatures exaggerated, but they must be truthful, to judge by what I see here. Even Madame Tourwaire, who claims to be the most graceful and daring horsewomen in the country, is commonplace beside any number of private ladies I might mention in California.

FEELING IN THE SOUTH.

I meet with a large number of Southern refugees in New York. They tell me that Edward Everett's article in the Ledger, concerning the Union Feeling in the South, is warranted by facts that they are personally adquainted with. An Alabama lady gave me a description, the other evening, of the death of Yancey. It appears that he was bitterly disappointed at not being made President, and exhibited so much resentment that he made himself so obnoxious to the people that he did not receive a decent burial.

They give a most interesting account of the deep feeling which the conservatives exhibited at the time of the passage of the Secession ordinances, but the power was in the hands of the Fire-eaters, and the only course for the Unionists was either to leave the South or keep silent. I visit at the house of a refugee from Louisiana, who, living near Vicksburg, had $1,200,000 worth of cotton burned by order of Jeff Davis, whose house was destroyed, whose slaves were driven off by bands of robbers under the name of Confederate soldiers; her sons, to make the matter worse, are fighting against each other in the opposing armies.

Gen. Gantt, late of the rebel army, is to address the citizens of New York at the Cooper Institute.

LUXURIOUS PARTIES.

With such misery in our midst, it is, without doubt, unseemly, not to say wicked, to give such elegant balls, parties, and concerts, but the fact is New York is gayer than ever. While they are having "starvation parties" in Richmond, they are giving "luxurious parties" here. On the principle of "doing in Rome," etc, I accept as many of the invitations as my health will permit.

At a masquerade ball, the other evening, the most gorgeously dressed character was California. The dress was of alternate stripes of white satin and gold; a crown of diamonds and a gold star ornamented the head, while necklaces and bracelets, worth a small fortune, were entwined around the neck and arms. The lady was very beautiful, and for once, I thought California appropriately represented, although I would have felt better pleased if the belle, in personating the Golden State, had represented the Angel of Mercy.

I attended, the other evening, a private concert given by the young ladies of Mrs. Mears' school, at Chickering's rooms. The performance of a number of a celebrated overtures by twenty young ladies on ten grand pianos was a great treat. The audience was very fashionable, and the music, the gay colors of the dresses, and the flashing of the diamonds, made up a scene brilliant enough for a Court Painter.

WHAT A CONTRAST

are such spectacles to the return of the war-worn veterans, who march up Broadway with thinned ranks and with tattered colors! The enthusiastic cheers of the men, and the tear-dimmed eyes of the women, who watch them as they pass by, proves that the hearts of the people welcome the defenders of the Union, even if the Common Council would receive them in silence.

What a pity it is that the once glorious Democratic party should have to own such men as Wood, McCunn, and their followers for leaders! If the soldiers meet many such Democrats as they find in New York, they will repudiate the party when it needs their voice. I am ashamed to say that the terms Copperhead and Democrat, in New York city, are synonymous. If my voice could awaken them to the fact, I would tell them, what every school-boy knows, that there will be *one million of votes, at least, in the army.* Can the Democratic party afford to throw them away?

M. A. S.

The Decision in School-Land Warrants.

I MENTIONED a short time since, says the Washington correspondent of the Journal of this city, that the decision of Judge Edmonds, Commissioner of the Land Office, in the Doll case, was of a nature to only affect that particular case, and was on the mere question of priority of settlement. I had not then been able to learn the particulars of his opinion, except from unofficial sources. On applying to the Land Office, I find I was led into an error as to the main points of his decision. The Land Commission decides that California did not comply with the law under which she sold school-land warrants for those lands, and hence all such locations are void. The main point in his opinion is that these school-land locations could only be made by entry, after survey by the United States. I am promised a copy of the Commissioner's decision as soon as it can be made, and will inclose it for publication. The subject is one of vast importance to California, because immense property rights are involved in it. These School-Land Warrants were many of them sold by the State ten years since, and the purchasers located on what they supposed to be public lands and under a legal right derived from the United States Government. A bill was introduced into the House yesterday (Jan. 23d), having reference to this matter, but I have not yet been able to learn its features. I will yet see to it, and write in my next what it contemplates.

A FEW STATISTICS OF THE REAPER TRADE.—But few persons not actually engaged in the enterprise have any very definite idea of the immense proportions the business of manufacturing reapers and mowers is assuming in this country. We have reliable information that there were made for the trade of 1862, 33,000 of these machines; for that of 1863 something over 40,000, and for the business of the present year upwards of 70,000 will be made. Mark the wonderful increase since the war began. Out of the 70,000, between 14,000 and 15,000 will be manufactured in the State of Illinois.

Seventy thousand machines at an average of $130 each (combined machines selling the ensuing season at $150 to $160 or even higher, and mowers from $105 to $140), and we have the enormous amount of $9,100,000 paid by the agriculturists of the North in a single season for a single class of implements. Probably the repairs on machines, old and new, will swell the amount to nearly $11,000,000. Can any country in the world equal or even approach these figures? [Prairie Farmer.

TAKEN THE OATH.—Ashbury Harpending has taken the oath, and will be brought before Judge Hoffman, on a writ of *habeas corpus*, to-day, when he will be discharged from custody. Greathouse having been liberated the same way, and Rubery pardoned, this lets out all the pirates.

Grafting Vines.

The following article, says the Gardener's Chronicle, is well worthy the attention of all lovers of fine grapes. It is well known that some grapes are of much stronger constitution than others, and grow freely in any good border where other kinds would be weakly or probably fail. This difference is often apparent, but its cause not familiar. Even when two sorts are equally strong, one will often fail to perfect its fruit. This arises from the natural habit of the vines, one growing well in an ordinary border, while the other requires one of particular construction, warm, well drained, and dry. When, therefore, the latter are placed in the conditions of the former, they do not succeed well. It is in such cases that grafting may be adopted, to save the labor, and often the great inconvenience, of making a suitable border. The Black Hamburgh will grow in almost any good border, and upon this, those sorts which do not succeed may be grafted.

The considerations of the writer, as to affinity of stocks, are well worthy of attention, both as to grafting grape-vines and fruit-trees generally:

Ought we to graft the more tender or less vigorous varieties of the grape-vine upon stocks of the stronger-habited sorts, or is there any advantage resulting from the practice? What says theory? The effect of grafting a plant upon an older stock, that is, upon one which has attained to something like the full vigor of growth, is in a general way to render the graft more vigorous than it otherwise would have been; but there are some collateral considerations. There must be a fitness in all the circumstances of the case. The stock must be such as to suit the conditions of soil in which it is to grow; and there must be a sort of constitutional affinity between the stock and the graft. These points bring this question entirely within the range of experimental cultivation. In the case of the vine, the fitness would depend upon the hardihood of the stock in respect to its roots, and upon its degree of vigor being such as to suit the constitution of the cion. In other words, the advantage to be derived from grafting a vine would be, that a tender, delicate-rooted sort, liable to suffer from even the unavoidable coldness of the soil, might draw up its nourishment through a stem, the roots of which, belonging to a variety of hardier nature, would be less influenced by the amount of cold to which they might happen to be subjected; while, if the graft were of a sort deficient in natural vigor, a stock of moderately increased vigor would serve to impart to it the very strength it needed. We say, of moderately increased vigor, because there ought not to be too great a disparity of constitution between stock and graft, though this is perhaps of less importance in the case of the vine than in that of many other fruit trees.

Besides this influence, which it is well known to exert over the vigor of the graft, the stock also, in some cases at least, exercises an influence upon its productiveness, as well as upon the quality of the fruit. This latter result would lead us to prefer to use as a stock some sort which was known to produce fruit of good quality, as well as to possess the requisite degree of vigor in its constitution.

Such considerations as these indicate at least that grafting may be advantageous; and that beyond the benefit which it may confer by rendering possible the substitution of good for indifferent varieties with comparatively little loss of crop—and that it will do this, by reason of the rapidity with which a graft united to a healthy-established stock will replace the bearing-rods which may have been cut away to make room for it, is evident. They also seem to be suggestive, that a healthy, moderately strong variety, producing fruit itself of superior quality—such a variety, in short, as the Black Hamburgh, is one of the best that can be selected as a stock where choice is possible; and this mainly because of the comparative root-hardiness, as well as vigor, which this most estimable grape possesses. This is very well expressed in the following passage from Thompson's Gardeners' Assistant: "The hardiness of the stock is of great importance in the cultivation of trees and shrubs indigenous to southern climates, for many of such plants either perish or thrive badly on their own roots when planted in the comparatively cold soil of Britain. They are, of course, affected somewhat injuriously by the coldness of our atmosphere, but they are more than doubly so when the roots, upon which their supply of nourishment depends, are also in a colder medium than they are adapted to endure. But when grafted on a stock, the roots of which are not likely to be injured, in a properly drained soil, by the lowest ground temperature which occurs in this country, tender plants that can be properly grafted on such thrive tolerably, in consequence of being fed by roots uninjured by cold." The question of root-hardiness alone will probably explain the frequent failure of such tender-rooted sorts as the Golden Hamburgh appears to be, and on the other hand the success of such varieties when grafted on a less tender-rooted stock. This may indeed suffice to account for the different estimates which are formed of the merit of this variety.

But what says practice in answer to the question with which we set out? No doubt we can find a few illustrative cases on record. The vineries at Dalkeith furnish one such case. In Gossip of the Garden (Nov., 1863, p. 372) we read of the Muscat Hamburgh, with rods not quite ripe, bearing clusters of fruit of not less than four or five pounds weight, far more like Barbarossa than the Muscat Hamburgh as usually seen. These vines are planted inside the house, and are grafted on the Black Hamburgh. The difference between the bunches on grafted plants, and those on plants on their own roots, repeatedly seen elsewhere, is so marked, that the writer does not hesitate to recommend Mr. Thompson's plan to all gardeners. In the Florist and Pomologist (Nov., 1862, p. 168), it is stated of the valuable late black variety known as Lady Downes's Seedling, that the fruit is greatly improved by the vine being grafted on the Black Hamburgh, as Mr. Hill grows it. And not to multiply quotations, our own columns have recently recorded (October 17, p. 291), some remarkably fine examples of the Knobland Sweetwater, produced on rods which had been grafted on the Black Hamburgh. Some of the advantages which, it would thus appear, certainly do result from the practice of grafting, may be attributable to the more vigor imparted by the older and well-established stock; but it would also appear that there are in the cases of delicate-rooted and weak-growing, or perhaps even small-berried varieties, decided advantages to be derived from grafting on a comparatively hardy-rooted vigorous stock, and among these the Black Hamburgh appears to hold a prominent position.

The case is analogous to that of tender-constituted varieties of Indian azaleas, for example, which are well known to be improved by grafting on a more hardy and free-growing stock. We shall be glad, however, to hear further what is the practical experience of cultivators on this interesting subject.

Woman a Civilizer.—If God were to take the sun and moon and stars out of the heavens, the chances of husbandry would be what, if God were to take woman out of life, would be the chances for refinement and civilization. Woman carries civilization in her heart. It springs from her. Her power and influence mark the civilization of any country. A man who lives in a community where he has the privilege of a woman's society, and is subject to a woman's influence, is almost of necessity refined, more than he is aware of; and when men are removed from the genial influence of virtuous womanhood the very best degenerate, or feel the deprivation. There is something wanting in the air when you get west of the Alleghany mountains on a sultry day of summer. The air east of the mountain is supplied with a sort of pabulum from the salt water of the ocean, by which one is sustained in the sultriest days of midsummer. Now, what this salt is to the air, that is woman's influence to the virtue of community. You breathe it without knowing it. All you know is that you are made stronger and better. And a man is not a half a man unless a woman helps him to be! One of the mischiefs of camp life is that women are removed from it. The men may not know what it is that lets them down to the lower strata of feeling, or what that subtle influence was that kept them up to a higher state of refinement, but it is the absence of women in the one case, as it was the presence of women in the other. Woman is a light which God has set before man to show him which way to go, and blessed is he who has sense enough to follow it.—[H. W. Beecher.

Weight of Grain.—An English quarter of corn is eight bushels, without regard to weight. An English sack of corn contains four bushels, and two sacks make one quarter. A person going into Mark Lane Commercial Exchange (where the writer has been many times), would see the corn factors at their stands with their twenty to fifty samples of corn, either in bags or spread out before them, without regard to weight, selling only by the quarter; of course the heavier the grain, the more it will bring, as in all other kinds of merchandise the finer the article the better the price. In England the word grain is seldom used, except when growing in the field, and a Corn Exchange in market means a place for the sale of all kinds of food for horses and cattle, wheat or barley being seldom sold in the markets. Farmers growing wheat either sell to the millers, who become the flour factors, or they have it ground on their own account. For all the barley grown in that country, there are brewers enough to buy it. There is consider difference in the way goods are sold in England and America. For instance, grain is sold here by weight, there by measure. Bread here by the loaf or dozen, there by the quartern of 4 pounds; there green peas, beans, plums, gooseberries, currants, and most other fruits, by the measure; here by the weight, and so with many other articles of produce the system of weights and measures is reversed.—[Sac. Bee.

The Value of Dead Horses.—Some people will no doubt be astonished to learn that large fortunes have been made every year since the commencement of the war, out of the dead horses of the Army of the Potomac. The popular idea is that when Rosinante yields up the ghost, she is buried in some field, or left to molder into mother earth in the woods somewhere. Not so. She has made her last charge and gnawed her last fence-rail, but there is from $20 to $40 in the old animal yet. A contract for the purchase of the dead horses in the Army of the Potomac for the ensuing year, was let a few days ago, to the highest bidder, at $1 76 per head, delivered at the factory of the contractor. Last year $60,000 were cleared on the contract, and this year it is thought $100,000 can be made on it. The animals die at the rate of about fifty per day, at the lowest calculation.

At the contractor's establishment they are thoroughly dissected. First, the shoes are pulled off; they are usually worth fifty cents a set. Then the hoofs are cut off; they bring about two dollars a set. Then comes the caudal appendage, worth half a dollar. Then the hide—I don't no what that sells for. Then the tallow, if it be possible to extract tallow from the army horses, which I think extremely doubtful, unless they die immediately after entering the service. And last, but not least, the shinbones are valuable, being convertible into a variety of articles that many believe to be composed of pure ivory, such as cane heads, knife-handles, &c.

Daniel Webster's Chowder.—The chowder invented by Daniel Webster is said to have been superior to all others, and we therefore give it as copied from his own hand at the British legation:

4 tablespoonfuls of onions, fried with pork.
1 quart of boiled potatoes, well mashed.
1½ lbs sea biscuit broken.
1 teaspoonful of thyme, mixed with one of summer savory.
½ bottle mushroom catchup.
1 bottle of port or claret.
½ nutmeg, grated.
A few cloves, mace and allspice.
6 lbs fish, sea-bass, or cod, cut in slices.
25 oysters, a little black pepper, and a few slices of lemon.

The whole put in a pot and covered with an inch of water, boiled for an hour and gently stirred.

MINERALOGY.

[Continued from California Farmer of February 26th, 1864.]

Rocks.

ROCKS OR MINERAL AGGREGATES.

General Nature of Rocks.—In the early articles on Mineralogy it is stated that the rocks of the globe are mineral, in their nature, and consist either of a single mineral in a massive state, or of intimate combinations of different minerals. Limestone, when pure, is a single mineral,—it is the species calcite or carbonate of lime; common *granite* is a compound or aggregate of three minerals, quartz, feldspar, and mica. *Sandstones* may consist of grains of quartz alone, like the sands of many sea-coasts, being such a rock as these sands would make if agglutinated; it is common to find along with the quartz, grains of feldspar, and sometimes mica. *Clay slates* consist of quartz and feldspar or clay, with sometimes mica, all so finely comminuted, that often the grains cannot be observed. *Conglomerates* or *pudding-stones*, may be aggregates of pebbles of any kind: of granite pebbles, of quartz pebbles, of limestone pebbles, or of mixtures of different kinds, cemented together by some cementing material, such as silica, oxyd of iron, or carbonate of lime.

Texture or structure of Rocks.—Rocks differ also in texture. In some, as granite, or syenite, the texture is crystalline: that is the grains are more or less angular, and show faces of cleavage; the aggregation was the result of a cotemporaneous crystallization of the several ingredients. Common statuary or white building marble, consists of angular grains, and is crystalline in the same manner. But a pudding-stone is evidently not a result of crystallization; it consists only of adhering pebbles of other rocks with a cementing material which is often not apparent. Sandstones also are an agglutination of grains of sand,—just such rocks as would be made from ordinary sand by compacting it together; and clay slates are often just what would result from solidifying a bed of clay. There are therefore *crystalline* and *uncrystalline* rocks. It should be remembered, however, that in each kind of rock the grains themselves are crystalline, as all solid matter becomes solid by crystallization. But the *former* kind is a crystalline aggregation of grains, the *latter* a mechanical aggregation.

In crystalline rocks it is not always possible to distinguish the grains, as they may be so minute, or the rock so compact, that they are not visible. Much of the crystalline rock called basalt is thus compact.

Positions, or modes of occurrence of Rocks. A great part of the rocks of the earth's surface constitute extensive beds or layers, lying one above the other, and varying in thickness from a fraction of an inch to many scores of yards. There are compact limestones, beds of sandstone, and shales or clay slates, in many and very various alternations. In some regions, certain of these rocks, or certain parts of the series, may extend over large areas or underlie a whole country, while others are wholly wanting or present only in thin beds. The irregularities in their geographical arrangement and in the order of superposition are very numerous, and it is one object of geology to discover order amid the apparent want of system. Thus in Pennsylvania, over a considerable part of the State, there are sandstones, shales, and limestones, connected with beds of coal. In New York there are other sandstones, shales and limestones, without coal; and the geologist ascertains at once, by his investigations, that no coal can be expected to be found in New York. These rocks contain each its own peculiar organic remains, and these are one source of the confident decision of the geologist. The stratified rocks bear evidence in every part—in their regular layers, their worn sand or pebbles, and their fossils,—that they are the result of gradual accumulations beneath water, marine or fresh, or on the shores of seas, lakes or rivers.

Besides the *stratified rocks* alluded to, there are others which, like the ejections from a volcano, or an igneous vent, form beds, or break through other strata and fill fissures often many miles in length. The rock filling such fissures, is called a dike. Such are the *trap dikes* of New England and elsewhere; they are fissures filled by trap. Porphyry dikes, and many of the veins in rocks, are of the same kind. Similar rocks may also occur as extensive layers; for the lavas of a single volcanic eruption are sometimes continuous for 50 miles. They may appear underlying a wide region of country, like granite.

The stratified rocks, or such as consist of material in regular layers, are of two kinds. The worn grains of which they are made are sometimes distinct, and the remains of shells further indicate that they are the result of gradual accumulation. But others, or even certain parts of beds that elsewhere contain these indications, have a crystalline texture. A limestone bed may be compact in one part and granular or crystalline, like statuary marble, in another. Here is an effect of heat on a portion of the bed; heat, which has acted since the rock was deposited. Other rocks, such as mica slate, gneiss and probably some granites, have thus been crystallized.

In these few general remarks on the structure of the globe, we have distinguished the following general facts:

1. The great variety of alternations of sandstone, conglomerate, clay shale, and limestones.
2. The existence of igneous rocks in beds and intersecting dikes or veins.
3. The mechanical structure of sandstone, conglomerate, and shales.
4. The crystalline character of igneous rocks.
5. The crystalline character of many stratified or sedimentary rocks, arising from the action of heat upon the beds of rock themselves, after they were first formed.

We follow this comprehensive survey of the arrangement and general nature of rocks, with descriptions of the more prominent varieties and a mention of their applications in the arts.

[To be continued.]

Cure for a Felon.—As soon as the part begins to swell, get the tincture of lobelia and wrap the part affected with cloth, saturate it thoroughly with tincture, and the felon is dead. An old physician says he has known this to cure in scores of cases, and it never fails if applied in season.

The Base.

President Lincoln has fixed the western base of the Sierras, along the Pacific Railroad line, at Arcade Creek, on the Norris grant, some seven and a half miles from Front street, Sacramento. The Bee says he did this upon the evidence of Professor Whitney, United States Surveyor Beale, of California, Surveyor-General Houghton, of California, and others of scientific repute. In fact Professor Whitney claims that the geological base of the Sierras is at the Sacramento River, but the base for the purposes of the Pacific Railroad Bill, and within the meaning of that Act, is at Arcade Creek aforesaid. Senator Conness presented the documentary evidence to the President, and when they had examined them together, the President then and there fixed the base.

Now, although it is a matter of small consequence, in a cosmopolitan point of view, where this may be, it is of great import to the interests of the Pacific Railroad, to California, and the Pacific coast, to have the base established as near this city as possible. Why? The Act of Congress providing for the construction of this road allows $16,000 a mile in the valleys and $48,000 a mile for that part of the road most difficult of construction, commencing at the western base of the Sierras and running thence eastward one hundred and fifty miles; so that this ruling of the President gives $48,000 a mile for a portion of the distance where some supposed but $16,000 would be allowed. And it does more than this. Under the Act the first forty miles of the road, if constructed in the valley, had to be accepted before any bonds could issue, but in the mountain part the bonds are to be issued for each section of twenty miles, hence the road can demand and will receive bonds as soon as twenty-seven miles from the Sacramento river are completed. Thus the Company's hands are much strengthened by this action of the President, and the great enterprise has received a new impetus from his wise foresight and generous heart. And while that decision is generous, it is also just—for the "one hundred and fifty miles over the Sierras most difficult of completion" will, beginning at Arcade creek, carry the road into the Truckee Valley, where the construction is easier than from Arcade creek this way. If San Francisco were to act now as she should have acted long ago in relation to this road, all her sins of this character might yet be forgiven.

Utility of Coal Ashes.—We have always been of the belief that anthracite coal ashes would be found useful upon gardens as a fertilizer as well as for hardening the walks, and as soon as this fact is demonstrated we shall get rid of what is now a great nuisance in a city, standing barrels and boxes of ashes upon the sidewalk. The New England Farmer is of the same opinion as to the utility of coal ashes, and says that it is much more valuable as an absorbent for fertilizing elements in manure than is generally supposed, and may be worth something as a disinfectant. It says all the ashes and all the drains of our cities should be inexhaustible good. The effluvia of slaughter houses, it believes, could be thoroughly neutralized by the use of anthracite coal ashes, and the atmosphere rendered as pure as in any other neighborhood. It will be found, upon mixing a moderate proportion of ashes with the contents of a cesspool or hog-pen, that in a short time the offensive odor has entirely disappeared. It is not expelled as by the use of chlorides, but held in combination until, by its use, as a manure, the earth and roots of plants liberate and use it. Dry peat, charcoal dust, and other little substances have the same power. But nothing is so cheap as hard coal ashes, which have generally been considered a nuisance.—[Ex.

Coccineal insects have been imported into England alive, and have been placed in the Horticultural Gardens, in Kingston.

Opinions of Professors of Music on Jacob Zech's Pianos.

San Francisco, December 29, 1863.

Jacob Zech, Esq:

Dear Sir: We, the undersigned, musicians of the City of San Francisco, do hereby give our unbiased opinion as to the workmanship, purity, power, and brilliancy of tone, and perfectness and durability of action, of the Grand Piano manufactured and exhibited by you. We have no hesitation in pronouncing them far superior to any piano, ever placed before us for inspection. At the late exhibition of the State Agricultural Society, the Committee saw fit to denounce your instrument and award the first prize for an inferior *square piano*, which we pronounce a great injustice to you, and we do hereby give our names, and warrant your pianos to be superior to any in the State. With the greatest esteem, and the most fervent desire for your success, and a wish that the people of California may give you justice, and not be controlled by money or the opinion of any body of men who are not qualified to judge of the merits of a Piano.

We are truly yours, etc,

R. HEROLD, Professor of Music,
GEO. T. EVANS, Pianist and Organist,
GEO. F. PETTINOS, Pianist and Organist,
LOUIS SCHMIDT, Pianist and Organist,
CHAS. STADDERMAN, Pianist,
STEPHEN W. LEACH, Artist,
L. T. PLANEL, Professor of Music,
A. LAPFGER, Pianist,
ALBERT STOHR, Musician,
JOSEPH B. SCHMITZ, Musician,
EMILE TOUSSIN, Pianist,
CHAS. SCHULTZ, Pianist and Organist,
J. D. KNELL, Pianist, and Organist at Cathedral,
H. HOLZHAUER, Pianist,
WM. CROOKER, Pianist.

Letter to Jacob Zech.

[The following notice of my Pianos was received by me from the gentlemen named, professors of music at Sacramento, and approving, in very flattering terms, my instrument.—J. Zech.]

Your Grand Piano was an excellent and beautiful instrument, full and rich and tone, in with all the excellencies that are desired in a Grand Piano.

Your Square Piano was one of extraordinary excellence, and beyond question the best on exhibition, having a full and powerful tone, yet, with that soft and delicate expression so desirable to an artistic ear. We feel gratified to know of your success in this art, and hope your efforts will be duly appreciated.

Wishing you all success, we are your friends,
CHARLES WINTER, Pianist,
CHAS. STADDERMAN, Pianist.
CHRISTIAN STATFIELD, Pianist,
GEORGE GREINER, Piano Maker.

Sacramento, October 6th, 1863. 31-3m

SEED WAREHOUSE.

(ESTABLISHED IN 1850.)

S. W. MOORE,

IMPORTER

... AND....

WHOLESALE AND RETAIL DEALERS

ALL KINDS OF

GARDEN, FLOWER, FRUIT,

Agricultural

....AND....

Ornamental Tree and Shrub

SEEDS,

NO. 408 CALIFORNIA STREET,

Old Number 110,

Between Sansome and Montgomery streets,

SAN FRANCISCO, CAL.

THE UNDERSIGNED HAS ESTABLISHED SUCH a correspondence and business in Europe as to enable him to secure from the very best source—the most skilful growers—their choicest seeds grown, of which he will always be in receipt and in endless variety, imported directly from France and England, from well known and responsible houses; some of the most prominent are named in our catalogues.

It has been the experience of our best gardeners and growers, and all others who plant seed, that seeds raised in California are not fully reliable and cannot be for a series of year, until more capital, experience and scientific knowledge shall be given to the business.

HAS FOR SALE

Alfalfa or Chile Clover;	Hungarian Grass;
Kentucky Blue-grass;	Orchard Grass;
Red-top Grass;	Sainfoin Grass;
English Rye-grass,	Timothy Grass;
Red Clover;	White Dutch Clover;
Crimson Clover,	Lucerne, &c. &c. &c.

With many entire new varieties of Grass Seeds and prepared Lawn Grasses never before offered.

EVERY VARIETY OF

BEET, CABBAGE, CARROT, RADISH, TURNIP, CUCUMBER, MELONS, LETTUCE, ONIONS, TOMATO, EARLY AND LATE PEAS, BEANS, &c., &c., &c.

Tobacco Seed.

HAVANA, VIRGINIA, CONNECTICUT SEED LEAF, AND MARYLAND TOBACCO SEED.

COTTON SEED.

Guano from Johnston's Island.

FLOWER SEEDS (300 Varieties)

BULBS:

LILIES, Amaryllis, Narcissus,	TULIPS, Anemones, Tuberoses, Gladiolus,	HYACINTHS, Ranunculus, Peony-roots, Iris.

and in endless variety, imported direct from France and Germany.

From his long experience in the Seed Business (over thirteen years), and his very extensive stock of goods appertaining to an establishment of this kind, he is confident of his ability to satisfy his patrons.

California Notes,

ABOUT

GRASSHOPPERS AND LOCUSTS.—No. 4

BY ALEX. S. TAYLOR.

SECOND SERIES.

Continued from the California Farmer of February 26, 1864.

Miscellaneous Notes of Other Countries.—Notes of 1859, and 1860.

IN HONDURAS.

In Wells' Explorations in Honduras, published in New York in 1857, including original observations in the elevated mesas and valleys of eastern Honduras, the author remarks: "The civil war, in 1853 and 1854, between Honduras and Guatemala had paralyzed every branch of trade, and the distress thus caused was increased by the scourge of locusts passing in vasts clouds over Central America, sweeping away, as by a conflagration, every green thing, and leaving famine and desolation in their path. The ravages of the locusts in late years (consuming whole crops of a night) have combined with war, decay of mining enterprises, and political changes, to reduce the population of Juticalpa from 8,000 to 4,000 souls. One of the remedies for fevers and liver complaints in this district (Olancho), is of so remarkable a kind that its description here will be read as a curious entomological fact. This consists of a drink made from a juice of the sugar-cane, mixed with a powder obtained from the dust of burnt insects, and known as *la Angadera*, owing to its particular applicability to liver complaints. The little animal that contributes with its life to this beverage, is represented to be the descendant of a species of grasshopper, which, from the natural changes it undergoes, is called *el variable*. In the spring of the year, this insect, after a short-lived visit above ground, buries itself to the depth of several inches in the earth, where it dies, after depositing a number of eggs in a cocoon. On the bursting of this, several winged creatures appear, who, in turn, leave a vast quantity of eggs (like those of the ant) under the bark of trees. From these shortly issue countless small white insects, which are gathered by the natives and roasted alive for the above purposes. Of the next change in the life of the *Angadera*, I could get no definite description. The drink I tasted at El Real, and found it rather palatable."

Referring to Utah and the country of the Mormons, it is very curious that a speculation is made by Washington Irving in his account of Captain Bonneville's travels in 1830, or thereabouts, what a fine region it would make to harbor runaway thieves, out-casts, half-civilized Indians, or a new growth of American Bedouins, probably as difficult to eradicate as the Arab robbers of the Asiatic deserts. Now it seems by recent Salt-Lake advices, that poetry has broken out in the tabernacles of the Latter-Day Saints, and one Master John Jacques is blowed up with the afflatus of the defiant poetry of these religious Buncombes. For instance, Saint J. J. flashes up, as follows:

"We'll throw down all—our house, every soul shall emigrate,
And we'll organize ourselves into a roving mountain State.
From the Missouri river through to California State,
We'll dog you, and, with torch and brand, the country desolate—
Naught but mountain wilds before us; naught but fire and smoke behind us.
You may look for us till doomsday, but by Heaven you'll never find us
Has Uncle Sam ever counted what such a job will cost?
For the more you seek to find us, the more we will be lost."

Now, here is a fine threat from the American Bedouins—the Utah Mahomedans—successors to the Seminoles and Navajoes, to the Blackfeet and Utahs—and such a fine stretch of country to play their pranks in and cut up their extras, too. It seems that Irving's prophecy was about being inaugurated as something of a verity. But only think that, while Congress is quarreling about Kansas and Utah, worth a hundred thousand dollars, she is pulling the nose and kicking the fundamentals of California, Oregon, and Washington; while they, poor things, are wearying Congress to build them a railroad, so that Uncle Sam may receive his annual rentals of fifty millions of gold dollars in safety and dispatch!

Dr. Newberry, in his zoological notes to the Oregon and California expedition of Lieut. Williamson's Railroad Survey, in 1855 (vide 6th vol. Railroad Expl.), makes the following note on the singular habit of the Coyote (*Canis latrans*) of the Sacramento plains "During the summer the coyotes, in a great measure, feed on grasshoppers, and are frequently seen then, engaged in catching these insects, which they effect by springing with great quickness, 'bringing their forepaw down on the grasshoppers.'"

IN POLAND.

The Societe Entomologique of Paris has received a curious account of an invasion of locusts which occured in Poland last summer. They were in such numbers that, according to an official account sent in to the Government of Warsaw, 500 corn sacks full of dead or mutilated locusts were brought in one day. In a certain village of Gallicia, a Government official, of his own authority, imposed on every family the duty of delivering up to him one korzec (350 bushels) of locusts within a given time; and in the course of 36 days he received 600 korzecs of that commodity! In the commune of Rogozno, a grand battue of 2,530 men was organized against the locusts, and 200 korzecs were collected in six days. The Austrian Government having imposed on every peasant of the districts subject to the scourge a fine of one florin in case of his not producing a korzec of these insects, the poor people, not finding enough of them at home, actually imported them from Russian Poland to satisfy the demands of their Government.—[S. F. Herald, Mch, 1861.

The California Grasshopper in 1861.

The following notes have been made from a personal observation of the visit of this pest in the county of Santa Barbara, from February to June of 1861. Inquirers on this subject, living outside of the State, will premise that the field of observation, in its whole length of, say, 100 miles, is bathed by the waters of the Pacific Ocean. Its meteorology, soil, and other physical characteristics, conform and assimilate to Greece, Italy, Syria, and other countries of the Mediterranean shores; but its more precise similitude is in the Republic of Chile, north of Valparaiso.

ITS NAME, STYLE, AND TITLE.

The insect is known, by the Mexicans and Central Americans, as chapull, and chapuls, derived from the Aztec, whence the name of Cerro of Chapultepec, where the royal gardens of Montezuma were situate, and known for several hot battles between Indian and Indian, Spaniard and Indian, Mexican and Spaniard, American and Mexican, and, since 1820, fraternal slaughters of creole and creole until the old Montezuma blood has become overpoweringly infiltrated into the weaker vessels of the Iberian Caucassians.

The grasshopper is one of the symbols of Aztec mythology, and also in their reckoning of time. By the Indians of Sta. Barbara town it is called "tuc." The Spaniards also call it "langosta"—before it is fledged they call it "saltón"—Anglice, Jumper. To the Americans of California, it is known as the locust or brown grasshopper. It may, with little hesitation, be assumed to be as only another *variety* of the Syrian or Egyptian species, as described in the Hebrew Testament from Moses to Maccabees. Scientific naturalists, however, would pronounce it a *distinct species*, as in some of its colors, markings, and dimensions, it is different from that of Palestine, but its quantitatives and qualitatives are precisely those of the Holy Land scourge. It is conjectured that several varieties of the insect exist in California, Upper and Lower, as that of the peninsula is said to be green, while that of Sacramento is said to be dark brown, with flaming-red under wings, as shown when flying; that of Sonora is larger than that of Santa Barbara, and said to be similar to the Sacramento variety.

ITS DIMENSIONS, METAMORPHOSIS, FIGURE AND WEIGHT.

The young, when recently hatched from the egg (in Santa Barbara county) is in the form of a small grub-worm, about the size of a grain of wheat. In two or three days, it issues from a depth in the ground, of from one to two inches, as a diminutive brown jumper the size of a small fly, without wings, hind legs, or antennæ from the eye, but in this form it rarely issues to the surface except in the hottest part of the day; at this stage it can jump but two or three inches.

Its third stage is when the antennæ from the eyes appear, about which time sprout the germs of the wings and the hind legs, or jumping apparatus, which is then completed; the four arms of the throat are seen as it issues from the grub. In this third stage it can jump from one to four feet with great agility; its colors, all shades of yellowish brown, and its size that of a small bee. At this third change they also issue from cracks and fissures in the ground in countless thousands, according to their periodical visits more or less numerous, to dry themselves in the heat of the meridian sun. They may be seen jumping on all sides of a center when disturbed, or, when undisturbed all traveling one general direction across road, field, and meadow. At this time it will weigh from two grains to four grains troy-weight; its dimensions from one-eighth to that of half an inch, as its growth, dimensions, and weight, are very capricious, and according to temperature, soil, etc.

Its fourth change is when the wings are developed, but not yet full-grown, which seems to take place in from eight to twelve days from its birth and according to heat and exposure. They then begin to moult their entire skin, like a snake, and these skin casts may be easily found in the places affected by them. This metamorphosis is effected by setting themselves against a stick, stone, etc, and working, twisting, and wriggling till they cast off their old coats, from which they emerge in a feeble state. But these changes do not all take place simultaneously among their numerous colonies, but they marry and are given in marriage, hatched, legged, winged, and fly, from the first week in February to the first week in June, or a space of 120 days, though their great issuances as young are in all April, and their aggregations of *flying strength* in all May, in all June they may be said to be mostly migratory on the wing, and are either driven off by heavy winds, or die after the laying season.

After they cast their first skin, they are very weak and then dry themselves in the sun. Their weight is then from five to eight grains, and their color all shades of a speckled yellowish russet brown. They can now fly several yards, and jump from five to seven feet according to strength and heat of the day.

They now commence to cover the whole country, and over-run gardens, sowings, and green pastures, and are very destructive both a few days before fledging and a few days after their full wings appear. At about the twentieth to the twenty-fifth day from their birth, they cast, either their entire skin, or only the covering of their wings, and after drying themselves in the sun, they commence to fulfill the perfect functions of their nature, intent, and existence, which is that of the *greatest enemy* of the human race known in the shape of animated nature, if we only except *himself*—man, whose mentalities and brutalities seem an immensely enlarged edition of the langostas.

At the casting of their second skin they will measure all sizes from half an inch to an inch in length, and weigh from seven to nine grains. They do not attain their full strength of wing or body till from 30 to 35 days from birth, when they will weigh from 10 to 16 grains and measure one to one and a half inches in length, the entire animal of a general yellowish brown, or speckled ochrous yellow, mottled with brown spots and lines, the upper wings umber brown with lines of buff yellow, the abdomen straw color, the hind legs yellowish, spotted black. A pound troy of full-fledged locusts, estimated from weighing an ounce of them average sizes, will number 770 separate insects.

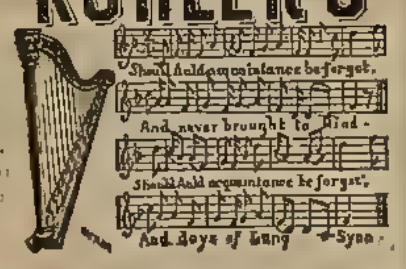
The Piano Question Again.

Letter of Jacob Zech in Answer to Mr. I. N. Hoag, S. S. A. S.

I wish to say that every letter of this gentleman (Mr. Hoag), gives me positive evidence that the affair, of *defrauding* me of the first premium, at the late State Fair at Sacramento, was made up.

1. When the committee came up to examine the pianos, I asked the Rev. Mr. Starr King whether the said committee would look at the mechanism and interior construction of my instruments, as I would take them apart for their examination, and put them together again to be tried. Rev. Mr. Starr King answered that it was not necessary, as he himself was notified only an hour previous, and that he would not act on said committee, because he did not understand anything about pianos, and would like to do justice to every person; yet his name is used on the committee, with what right I do not know; for, if Mr. King did not sign his name to the Report, there would have been only two judges, and their Report of course not complete.

2. When, at the close of the Fair, the list of awards was read at the Pavilion, nothing of a "liberal special diploma" to Jacob Zech was said or heard by any one. Nay, more, the printed list of awards have nothing of it! How can it therefore, be otherwise than a made-up case by the Society?



3. On the 3d and 23d Oct., I published a letter or card, in the papers of Sacramento and of this city, stating the wrong that was done to me. Mr. I. N. Hoag, S. S. A. S., had not a word to say. To my formal protest to the President of the Society, of late date, published in the FARMER, said gentleman answered, that a 'special diploma" was ready for me. Now, in his letter of Jan. 6th, he says, that a "liberal special diploma" was awarded to me. All I demand is justice, not favors. I shall not accept a special diploma. That would be admitting my unworthiness of the first premium. The Society say a Grand Piano is not on the Schedule, and consequently ruled out. I ask the Secretary, is not a Grand Piano a Pianoforte? and why do the Board of Officers not accept my offer, made Dec. 18th, if they wish to do me justice? I will submit my Square Piano again before a committee of musicians, against the same Piano to which they awarded the premiums, and leave the result to their decision as a final test.

As for the proposition which Mr. Hoag makes, for the next State Fair, I must say that, for my part, I had enough of their justice, at the State Fair at Sacramento, the past year, and, unless they manage differently, I will leave it to others to exhibit there in future, and be similarly wronged, if they so desire.

JACOB ZECH.

HORACE WATERS, Ag't,

No. 481 Broadway, N. Y

THE DAY SCHOOL BELL.

40,000 copies issued. A new Singing Book for Schools and Seminaries, called the Day School Bell, is now ready. It contains about 200 choice songs, rounds, duets, trios, quartets, and choruses, many of them written expressly for this work, besides 32 pages of the Elements of Music, which are easy and progressive.

Among the large number of beautiful pieces may be found, "Uncle Sam's School," "Don't you hear the children coming," "Always look on the sunny side," "The little lass," and "Little Lad," "Oh, if I were a little bird," "Bird of beauty," "Pretty pair tree," "Anvil Chorus," "Meet me by the running brook," etc. It is compiled by Horace Waters, author of "Sabbath School Bell," Nos. 1 and 2, which have had the enormous sales of 325,000 copies. Prices—paper covers, 25 cents, $20 per 100; bound 30 cents, $25 per 100; cloth bound, embossed gilt, 40 cents, $35 per 100. 25 copies furnished at the 100 price. Mailed at the retail price.

SABBATH SCHOOL BELL, NO. 1,

contains 144 pages, and nearly 200 tunes and hymns, and is the most popular S. S. Book ever issued. Among the most popular pieces are "Kind Words," "Eden Above," "Christian Hero," "Beautiful Zion," "I ought to love my Mother," "The Angels told me so," "In the Light," "Rest for the Weary," etc. Prices—paper covers, 20 cents each, $15 per 100; bound 25 cents, $20 per 100: clothbound, embossed gilt, 30 cents, $25 per 100.

SABBATH SCHOOL BELL, NO. 2,

Is an entire new work of 192 pages, and nearly two hundred and twenty-five tunes and hymns. One million of these Bells have been issued and are now ringing through this and other countries. Among the many choice pieces may be found, "Shall we meet beyond the River?" "There is a Beautiful World," "Sorrow shall come again no more," "Don't you hear the Angels coming?" "Thou, God, seest me," "Sabbath Bells chime on," etc. Prices of Bell No. 2, are same as Bell No. 1. Both numbers can be obtained in one volume, price, bound copy, 40 cents, $35 per 100; cloth bound, embossed gilt, 50 cents, $45 per 100. 25 copies furnished at the 100 prices. Mailed at the retail price.

WATER'S CHORAL HARP.

A new Sunday School Book of 160 pages of beautiful hymns and tunes. It contains many gems, such as "Shall we know each other there?" "Suffer little children to come unto me," "The Beautiful Shore," "Oh, 'tis glorious," "Leave me with my mother," "He leadeth me beside still waters," etc. Price, papers covers, 20 cents, $15 per 100. Bound, 25 cents, $20 per 100 Cloth bound, embossed gilt 35 cents, $30 per 100 Mailed at the retail price. It is edited by HORACE WATERS, author of "Sunday School Bells," Nos 1 and 2, which have had the enormous sale of over 600,000 copies.

Just published by HORACE WATERS,

No. 481 Broadway, New York.

THE NEW PATRIOTIC SONG BOOK

contains 96 pages of songs, duets, and choruses, both sacred and secular, including 14 pages of prayers for sick and dying soldiers, and soldiers' Scripture Manual. It is well suited for social singing, as well as Sabbath worship. Among the many beautiful pieces may be found, "Where liberty dwells is my country," "The Christian Hero," "Three cheers for our Banner," "Come sing to me of Heaven," Columbia, the Gem of the Ocean," "Freeman's Gathering," "Columbia's King forever," "Marching Along," etc Prices—paper covers, cents, $10 per 100. Mailed at retail prices.

THE HARP OF FREEDOM

contains 32 pages of songs, duets, and choruses for Freedom. Among the choice pieces we would name, "Fair Freedom's morn," "O let my people go," "Over the mountain," "They worked me all the day," etc. Price 5 cents single, 50 cents per dozen, $3 per 100; postage 1 cent each.

RUTH: A SACRED CANTATA

contains 126 pages. Words by Rev. Sidney Dyer, music by Prof. Call. This is an excellent book for concerts for the young. Prices—paper covers, 20 cents, $15 per 100; bound 25 cents, $20 per 100.

THE REVIVAL MUSIC BOOK

contains 73 pages of tunes and hymns, designed for revival, prayer, and conference meetings. Price in paper covers single copies 10 cents, $8 per 100. Mailed at the retail price

THE ATHENÆUM COLLECTION

contains 512 pages of tunes and hymns, new and old of the choicest kinds, for church, Sunday school, revival, missionary, temperance, prayer, and conference, and all kinds of sacred and social meetings. The music in this book has life and animation in it, like "Shining Shore," "Rest for the Weary," "Shall we know each other there?" "Shall we meet beyond the River?" "There is a Beautiful World," "Kind Words," "Sweet Hour of Prayer," "There is a Land of Love," "Suffer little children to come unto me," "God save the Nation," etc. Prices—single copies, bound, 65 cents, $55 per 100; cloth bound, embossed gilt, 75 cents, $65 per 100 Mailed at the retail price.

HORACE WATERS, Ag't

481 Broadway, New York,

Publisher of the above Books.

Members of the Press, and Strangers, are particularly invited to avail themselves of these rooms. Newspapers from every State to which we have access by mails, as well as Foreign Newspapers, Periodicals and Magazines, are upon file and on the tables for use; a Good Library of hundreds of volumes, with works illustrative of Agriculture, Horticulture, and Floriculture, works for reference upon all Sciences, with a Cabinet of Minerals, Coins, and Curiosities of interest to the Naturalist, to which we invite all.

Immigration Office.

New comers to California can always obtain all needed information about Lands, Farms, etc, at the Farmer's Reading room, 320 Clay street. Most cheerfully we bid all welcome to our Sanctum.

TO READERS AND CORRESPONDENTS.

We would call the attention of naturalists to the excellent Essays we are now publishing from the pen of California's able historian Dr. A. S. Taylor. No one man, of the Pacific Coast, has done more than Dr. Taylor, to secure to posterity a valuable history of our State; all honor to him.

We can with pleasure call the attention of our readers to the happy letters of our New York correspondent. His letters are always read with interest by his many friends.

The mining interest will always be cared for, and valuable essays upon ores, found in our columns.

We return thanks to Hon. F. M. Smith, for a copy of his speeches on the Repeal of the Specific Contract Law. His speeches are full of unanswerable arguments. They will have influence.

ARTICLES RECEIVED AT THE CALIFORNIA FARMER EXHIBITION ROOMS, No. 320 Clay Street.

We have again to acknowledge the receipt of a fine collection of new music from Horace Waters, Esq., of the Music Rooms and publisher, 481 Broadway, N. Y. Among the new pieces were: "The Beauties of Terpsichore," a collection of dance music, by Johann Munck—choice pieces. "Angel Mary," a beautiful ballad. "Hymn of the Nation," patriotic chorus, words by George P. Morris—a superb Hymn. "The Sweetest Flower," a song with chorus. "Weep no more for Lilly," song and chorus. Also "Foster's Melodies," including Mr. & Mrs. Brower (Comic Duett), "If you've only got a Moustache," "Wilt Thou be True," "When old Friends were here," and other new and valuable songs and select pieces.

President Lincoln's Emancipation Proclamation. We have received from the hands of the young artist—Master F. S. Butler, aged 14 years—a *fac simile* of his most superb piece of workmanship, "*The Emancipation Proclamation.*" As an artistic work, as a most superb and finished piece of penmanship we do not believe it can be surpassed, and rarely has it been equaled. The original, in a rich frame, can be seen at the office of the artist's father, the real estate rooms of A. G. Randall & Co., on Sacramento street, near the Alta office. Everybody should see it, and it was by the urgent wishes of the author's friends that it was copied so as to scatter it abroad, as a meritorious work, in honor of the young artist.

Wine from Hock Farm.—If good wine maketh glad the heart of man, then ours should be glad, for we have been most kindly favored with a goodly sized cask of wine, rolled to our door from that memorable spot, "Hock Farm;" and could our wishes and prayers be answered, the heart and life of the good old pioneer, General Sutter, should find his last days his best and happiest days. The wine so kindly sent us will rank with the finest offered in any market. Such wine as this, the simple pure juice of the grape, is what—

"Cheers the sad, revives the old, inspires
The young, makes weariness forget her toil,
And fear her danger! Opens a new world,
When this, the present, palls."

"Still more wine, and still good wine." Favors, sometimes, like misfortunes, never come single, and so it happened. A cask of very superior wine came to us from our good friend, H. D. Smith, of Smith & Brother, Bright Side, near Oroville, whose ranch we visited last Summer. This sample box is rich ruby-colored wine, clear and excellent, and much better than the average of the Burgundy wines sold in our market at high price. Smith & Brother are new beginners in wine-making; but they have done themselves much credit. We thank them for their kind and generous remembrance.

A Gift and a Pleasant Surprise.—We found upon our door knob, one evening last week, a neat square box, which upon opening very carefully (lest we should be blown *sky-high* by some *useful* explosive as editors sometimes are), we found a very beautiful Hydraulic Inkstand of the most approved pattern, and with it a very pretty note, every word most delicately printed by some one skilled with that which is "mightier than the sword." These were the words of the note:

"*Words* are things; and a small drop of *Ink* falling like dew upon a thought, produces that which makes thousands, perhaps millions think." [Signed.] NIGHT.

In our weariness, after hard labor, we could only exclaim "God bless the giver—may heaven's blessings come to thee, not in *small drops*, but a constant shower of big drops."

Death of Rev. T. Starr King.

LIKE some fearful calamity that startles the human soul—so came the overwhelming announcement to-day that Starr King was no more. As suddenly as the sky is sometimes overcast with dark clouds, so quickly were the countenances of our citizens changed to-day from their customary calmness to sadness and sorrow by the great calamity which our whole State and the nation has sustained in the death of one of our best and noblest of men. As an eloquent divine he ranked among the first of the land. His lofty eloquence was unsurpassed.

"His words had such a melting flow
And spoke of *truth* so sweetly well,
They dropped like heaven's sereenest snow,
And all was brightness where they fell."

To his mighty eloquence as a divine teacher was added his high devotion to his country in the hour of her calamity. Never on earth can the full measure of the wide-extended good he has done in his country's cause be realized. More than to any other man on this coast do we owe to Starr King, who, by his deep devotion, has aroused and kept alive the fire of Patriotism and deep-abiding interest for the sick and wounded soldiers of our land. Countless and priceless are his deeds, pure and eternal the truths he has uttered in the cause to which he devoted much of his soul's energy. His country and her perils were the uppermost thoughts of his mind. His every wish seemed to say—

"Sweet clime of my kindred, blest land of my birth!
The fairest, the dearest, the brightest on earth!
Where'or I may roam—howe'er blest I may be,
My spirit instinctively turns unto thee."

But his labor is over as a shepherd, and he has gone to his reward. As a Christian pastor, the tears and love of his devoted people will be his greatest monument, and deep and long as our grief may be—

"Can storied urn or animated bust
Back to its mansion call the fleeting breath?
Can honor's voice provoke the silent dust,
Or flattery soothe the dull, cold ear of death?"

No! He has finished his earthly career with glory and honor. Suddenly has he been called from us, like some bright meteor that flashed upon us for a brief time and then left us in darkness: so has his coming and his exit been.

Rarely has it been the lot of one man to accomplish so much good in all the varied duties that has devolved upon him. As a Citizen, Christian, Pastor and Patriot, his name stands high on the scroll of fame and in the hearts of our people. In the midst of his usefulness, in the very prime of life, at the age of 40, he has been called away—leaving a loved wife heart-stricken at her calamity, and children to mourn a devoted parent—the wife the best of husbands.

We cannot find suitable words to express a fitting eulogy, in the brief moments just as we go to press, but we know eloquent voices, choral anthems and poesy, will weave unfading garlands of truth and beauty for him, who gave his life for his people, his country and humanity. Our deepest sympathies will mingle with thousands for the bereaved ones. While we speak our saddened thoughts, we can join in those fitting words of the poet Halleck—

"Green be the turf above thee,
Friend of our earlier days;
None knew thee but to love thee,
None named thee but to praise."

OBITUARY.

Another Pioneer Gone!

JOSEPH RASSETTE, Esq, one of the early pioneers of California, and well known as the proprietor of the celebrated Rassette House, is no more. It is with unfeigned sorrow that we are called upon to announce his death, which occured by the falling into a shaft at Virginia City, Feb. 29, where he was interested in mining.

There is a strange fate attending many of the old Pioneers of California, strange misfortunes, peculiar trials, and innumerable hardships; and when they have had more than seems the share of mortal toils, and trials, some new calamity, and they leave us. This is but the history of hundreds.

Joseph Rassette was a man of indomitable energy and perseverance. No man ever labored harder and with better will; noble, generous, and kind, he won many friends to him in grateful remembrance, and while we deeply sympathize with those who mourn his sudden calling away, there is a balm, for those who weep for him, in knowing that his struggles are over, and he sleeps peacefully. His grave will be green in the memory of many friends.

Joseph Rassette sleeps!
Where the "weary are at rest."
O'er his grave, affection weeps;
Thus his memory will be blest.

The Unfermented Bread Factory.—This establishment is now in the full tide of success, having a large increase of business in every department. The success attending the *Pork and Beans* and *Brown Bread* department has been so great that hundreds of orders come from all quarters. The Pastry and Cake department, being under careful hands, is being largely patronized, and the whole establishment is now giving an immense number of patrons full satisfaction.

New Music.—We have been favored by Kohler, from his music store, Washington street, with a large parcel of new music. Among the prominent pieces we find "Rock me to Sleep Mother,"—that beautiful song of Florency Percy—every mother should have this song. Also, "Erin shall be Free," a song for the Fenian Brotherhood. Kohler is sending out many new songs, and "Charlie" dispenses music right and left.

Life Insurance.—Be sure that you have a Policy of Insurance on your Life. $10,000 insurance on your life is just as good as $10,000 in Bank, *i. e.*, for those who may be left behind you; those you love and wish to provide for.

We call the attention of stock-raisers to the advertisement of a thoroughbred *Jack*, in another column of to-days paper.

The Drought—Speculation.

THE signs of the times indicate a speculation in breadstuffs; but let all be wise, think before they act, and then act wisely. *We have bread enough and to spare;* but a steady and gradual rise in the price of grain will do our farmers good, provided *the farmers* get the benefit of it. For some time past there has been quite a quantity of grain purchased for shipment abroad, but it was not *all* shipped; we *guess* it was reserved here for the hungry mouths of our famishing——*speculators.* This is just the weather for croakers, wire-pullers and speculators, a class of men who would speculate upon a famishing people. There may be a short crop, there will be less than last year, but who knows the immense amount of wheat and flour on hand? We believe we have breadstuffs enough on hand for one year's supply, and we cannot make a famine. The time was, in years past, that wheat and potatoes were our great crops, now we have a varied product of all the eatables in the known world. If we did not raise a pound of wheat this year we could not starve! We have corn, rye, beans, peas, potatoes, and every species of vegetables, and an abundant crop of fruits of all kinds; these would give us a supply, for let it be remembered that the great portion of these crops are not depending on irrigation for a harvest, but grown by careful, deep and constant cultivation, these crops are perfected.

Let it be remembered, also, that this drought is not so universal over our State. We have news of rains, as will be seen, good refreshing showers, in various sections, and we have it from authentic sources that in very many places the crops never looked finer, and while we are fully aware that the present season is a remarkable one for the absence of rain, and while we would not check any wise precautionary means of a preparation for a short crop this year, we cannot withhold the fact from all, that we have still in our State a very large amount of breadstuffs, on hand, of the last year's crop. We shall rejoice, always, to see the farmers and the producers realize good prices, but we do not desire to see an unnatural rise that must result in ruin to those who attempt a speculation on a false basis. There is one rule that is established: When good prices are realized for breadstuffs based on actual crop, when the rise in price is truthful, when it is gradual according to demand and supply, all business is favorably affected thereby; but when alarmists affect the market, it unsettles business, makes a market unsteady, shakes confidence, leads to speculation, and the result is always disastrous.

It is this kind of trouble we would guard against; every day and week we can see the effect of the season upon the crops, and if the farmers would but furnish us with a true statement of the condition of their crops; if they will lay aside all desire to sell at too high a figure, but aim to realize only the true value, they would be the gainers in the long run. When the producers become adepts in speculation with the buyers, it is the "tallest pole that knocks the persimmon," and often both parties suffer; the one may hold on too long; the other may buy too late. Ten years' experience in watching the wire-pulling has convinced us that a steady market is always best for the producers, and if they are prosperous then the State is safe.

May we not claim from our farmers and grain-growers, from all parts of the State, a report from them of the condition of their crops in all their vicinity. Each report from them will come back to them with great benefits.

The Mission Woolen Mills.

WE paid a visit, the present week, to this now most prosperous manufactory. The whole surroundings and the interior of the mill bear the unmistakable signs of triumph to the manufacturing interest of our State.

Since the mills have been under the management of Messrs. Lazard Freres, with their capital and influence, many excellent and substantial improvements have been made in the buildings. A new stone warehouse 125 feet long by 50 wide, and two stories high, has been erected for wool, dye stuffs, etc, of which they keep several months' supply always on hand. This requires an immense capital to do so. These mills now consume about 100,000 pounds of wool a month, or nearly one and a half million pounds a year. Two hundred hands are constantly employed in these mills.

It is the aim of the agents to secure for their mills every new improvement in machinery, so that the goods manufactured by them shall always be of the best character. The Blankets of the Mission Woolen Mills are in all their qualities equal to any blankets ever made. The Cloths, Kerseys, Flannels, and other goods made by this Company, all rank high and command a very ready sale, with a largely increasing demand.

What a contrast within the brief space of six years! Then the crop of Wool of our State was a mere cipher; now it counts in millions. Then the idea of Woolen Mills was hardly dreamed of by capitalists; now these Mills wield a capital of hundreds of thousands of dollars, with prospective increase.

The whole establishment is like clock-work, order and system everywhere, and the establishment, as it is now seen in full working order, presents a beautiful appearance, alike creditable to our young State and the firm of Messrs. Lazard Freres, the present agents, under whose auspices they have now reached their present prosperous state.

FROM ELDORADO CANON.—The Los Angeles News has received information that about seven feet of the finest pay ore had been reached in the Tecattucup lode; work was still progressing favorably. Also, that the Queen City lode had been opened to about the same width as that of the above, and is proving to be very rich. Large numbers of miners were flocking into the cañon; the work of opening other lodes was going on briskly. Parties were daily entering upon their claims and commencing work.

Ingratitude to the Dead.

LONE MOUNTAIN, with all the mementos that love and affection can place around the tombs and graves of those whose memory will long be treasured by the living, Lone Mountain speaks, in many instances, of the ingratitude and neglect of some of the most noble and generous of humanity, whose remains are now reposing there without a stone to mark the spot where their ashes rest. It is a sad lesson for old Californians who have passed through fiery trials, to wander over the burial ground of Lone Mountain, and read the lessons offered there.

Among many graves that show neglect and forgetfulness, there is one that is a lasting reproach to our city, or those who are responsible for it. J. L. Folsom, of San Francisco, was numbered among our earliest settlers and our wealthiest men. Report says, he died rich and was buried at Lone Mountain, died in the prime of life surrounded by all the appliances of wealth, and the troops of friends that wealth ever brings. The stranger who visits Lone Mountain to learn where the mighty dead repose, may look in vain among the stately monuments and lofty obelisks, expecting to find the sculptured marble, showing where repose the remains of J. L. Folsom, but alas! he will look in vain. No stone, or tablet, marks the grave of one, at whose step thousands were moved, at whose coming heads were uncovered.

Where has all the wealth of the rich man gone? Where are his *friends?* Is there no one who will rear a simple slab, no one among the hundreds he made rich? Oh Ingratitude, thou art a monster! Not only dost thou make living hearts wretched, but thou defilest the grave where thy benefactor sleeps.

"If there be a crime
Of deeper die than all the train
Of human vices, 'tis Ingratitude."

THE SILK MANUFACTURE IN PATERSON.—The Paterson Daily Press has an interesting article presenting the statistics of the silk manufacture in that city. The silk consumed is chiefly from China or Japan, and the fabrics produced are coat and other linings, flags, plain goods, braids, a combination of silk and mohair, ribbons, neck-ties, sewing twist and floss silks, fringes, embroidery, silks, &c. The Press claims that Paterson is the headquarters of the silk manufacture in America, and has the prospect of two new first-class establishments, which will make the silk industry of Paterson equal that of all the rest of the United States. The total number of operatives employed is 1,025, exclusive of officers in charge. Three-fourths of the operatives are females, and children of very tender years are also employed. The lowest rate of wages is one dollar a week to learners, and from this point rises to $4 for females, and $5 and $5 50 a week to males—the average wages being $3 a week. The total amount paid out to Operatives per annum is about $150,000.

DOWNIEVILLE BURNED DOWN.—The entire business portion of Downieville was destroyed by fire on the evening of the 27th ult. The fire caught near the centre of the town, and spread with such rapidity that but a small amount of property was saved, many persons having scarcely time to get away themselves. The loss will reach full $200,000, very little of which was insured. The firemen made every effort to save the town, but owing to the high wind prevailing at the time, their efforts were without avail. The contents of several cellars, considered fireproof, were destroyed; others damaged by water. But three houses remain standing in the business part of the town, in all of which considerable damage was sustained. Notwithstanding houses on Durgan and Jersey Flats caught fire several times, no material damage was sustained by residents in those localities. Both printing offices were destroyed, with a major part of the material.

FIRE AT CLAYTON.—An extra from the office of the Contra Costa Gazette, Pacheco, states that on Sunday morning, about two o'clock, a fire broke out behind the bar of the Clayton Hotel, which quickly resulted in the destruction of the building and its contents, and thence spread with great rapidity until a large part of that flourishing village was laid in ruins. But the saddest feature of the calamity was the burning of a man named Henry Kerr, in the Clayton Hotel. The charred remains were recovered and an inquest held by Justice Phillips of this place. The loss of property, as near as can be estimated at present, is as follows: Rhine & Clayton's store, $4,000; Clayton Hotel, $3,000; Union Hotel, $2,000; A. Sinderman's store, $4,000; Perry Cram's livery stable, $1,500; James Curroy's house, $800. Two other small buildings were burned. Upon the above the only insurance we have learned is $1,500 on the furniture, etc. of the Clayton Hotel, and on Sinderman's stock, amount unknown.

ON A WAR FOOTING.—The Golden City, which sailed yesterday morning, went out with increased armament, having had an 11-inch Parrott gun placed upon her forward deck. This gun will throw a 100-pound ball a distance of three or four miles, and would play the deuce with the Alabama or any other pirate that should happen to come across her bows. Besides the cannon, a guard of twenty soldiers, under the command of a Lieutenant, has also been furnished the vessel. These soldiers are armed with Colt's pistols and breech-loading Minnie rifles, and will be constantly on guard, to prevent any attempt that may be made by the passengers to capture the ship. The passengers were searched, as was also their baggage, after the vessel had hauled out in the stream, and all arms taken in charge by the soldiers until the arrival of the vessel at its destination. Hereafter all passengers will be subjected to the same treatment, and every precaution taken to prevent a recurrance of a Chesapeake affair.

FRUIT trees (peach and apricot we presume) are announced as being in bloom in various portions of the State. This is about the average season, though two or three weeks earlier than in some years.

THE MANGOA BEAN.—We would esteem it a great favor if any one to whom we furnished the "Mangoa Bean," last season, gratis, will now furnish us a small quantity at any price, to meet the wishes of a friend or two at the east.

Greenbacks! Greenbacks!

We receive Greenbacks for subscriptions to the California Farmer, and allow the ruling premium on Gold!

IT is a well known fact to all conversant with newspaper publishers, that since the war commenced the cost of publishing a paper has been greatly increased, so much so as to stop hundreds of papers, over the United States. Yet it has been our pride not to add cost to our subscribers, but to relieve them although we have made sacrifices of thousands to carry out our principles and do what we esteemed our duty to uphold the credit of our country both by precept and example. From the first we announced that we would receive Treasury Notes at par for *Subscriptions to the Farmer.* But the notes were rejected, here, as currency and many of our subscribers have, in conformity with the custom, continued to pay us in gold; yet we have never refused greenbacks at their face value when sent us by subscribers, though it has subjected us to serious loss from so being obliged (from the rejection of the currency as mentioned), to pay gold in our disbursements. At the present cost of all articles, we could not do a paying business by receiving greenbacks at par at our present rates. But to make the thing work equally for all our subscribers, as well as conform to what we think our duty, we propose to adopt the greenback basis, and raise our subscription price to $5 a year, payable in greenbacks.

As it is evident to us now that the people of California are determined to sustain the National Government and make Treasury Notes the medium of trade, generally, we announce as follows:

The price of subscription to the CALIFORNIA FARMER, hereafter, will be $5 a year, payable in U. S. Legal Tender notes; this being a safe and easy medium of transmission, by mail; and we will allow the ruling premium when gold is tendered in payment.

We also announce, to all who are indebted to us for *Subscriptions* to the CALIFORNIA FARMER send along your *Greenbacks.* They will come to us with the glorious impress of our country's sovereignty, and every pecuniary sacrifice we may make we cheerfully lay upon the altar of the country whose faith stands pledged in these notes and whose integrity *we dare not question.*

We make this change in the terms of our subscription *not to advance the present cost* of our journal, but rather to make it cheaper to all, for at the *present nominal* value of the notes it will cost the subscriber but $3 25.

We do hope also that all to whom we have sent bills, all who are indebted to us, will now see how easy we make it for them to pay their dues. It must be remembered also that all who owe for this paper, a bill of six month's standing should, by the terms already heretofore announced, remit us $5, and g. b.'s to that amount will be very acceptable.

We shall now have the consciousness of having taken a true step to sustain the National Currency and we shall know who will "go and do likewise."

We do hope that the friends of a good, sound National Currency will give us their aid and co-operate by sending us their names for the FARMER.

OCULAR DEMONSTRATION.—Upon one occasion when the Rev. Mr. Robinson, a Dissenting minister at Cambridge, was preaching, he dropped the immediate discourse, and made this observation: "It is a rule with me never to use an expression which the humblest of my hearers cannot understand—I have just made use of the term *ocular demonstration*—I will explain it to you—I look into the table-pew, and I *see* a young man *fast asleep!*" On pronouncing the last two words he raised his voice considerably, and, all eyes being attracted to the unfortunate sleeper, he added, in a lower tone: "Of that I have *ocular demonstration.*" He then resumed his discourse in his accustomed manner.

MENLO PARK PROPERTY.—This property is rapidly and permanently improving in value. Purchasers of six months ago could realize a handsome advance on their purchases, and in the space of one or two years there will be scores of magnificent suburban villas erected, that will be specimens of architecture, as the lots have been secured by the wealthiest of our citizens. A. G. Randall, Esq, on Sacramento street, has the controlling sale of them, where maps can be seen, and the names of those who have already purchased, which is a guarrantee of success.

THE EAGLE IS FLYING STILL.—Collins the hatter, one of our good old pioneers—the proprietor of the "Eagle Hat Store," San Francisco, and Sacramento—the "times that tried men's souls," lifts up the "Eagle" again, and opens his doors at 550 Clay street, one door below Montgomery, so that his friends may know "he still lives," and if they will but call on him often their heads will feel better, they will make a better appearance on the street when they leave him, and their friends will recognize them quicker when they "lift the beaver" to them. Collins deserves well for his industry.

STAINED GLASS, PLATE GLASS, SPLENDID MIRRORS, ETC.—Those who may be planning new homes, beautifying their pleasure grounds with temples and summer houses, or who may be desirous of finding a splendid mirrore, can be happily supplied by calling on F. Rosenbaum on Sacramento street, whose importations now are large and of the richest kind. Those who are building conservatories, can always be supplied to order with any size glass, any size or design in colored or stained can always be had to order, Mr. Rosenbaum having such arrangements as to supply to any extent.

THOSE NEW LAMPS.—Reader have you seen those new and beautiful lamps received by Stanford Brothers? To the student, the professional man, all who read, or use a lamp, we say, by all means, go and provide a lamp, and the fluid that will not only be clear and brilliant but protect and preserve the eyes.

GARDEN CUTLERY.—New and fine garden tools, just received from Europe, for sale at Moore's Seed Store, California street.

Purchasing Agency.

Having had the experience of over thirty years in dealing in Trees, Plants, Seeds, and Agricultural Implements, we feel that we are fully competent by our experience in purchasing such articles to make a saving of from five to fifteen per cent for the great mass of purchasers. We will, therefore offer to make purchases for all who wish our services, of any of the articles named, or for any articles of merchandise for the Farmers or Ranchmen, and ship the same as they shall direct.

In order that we may do their business in the most satisfactory way for them and ourselves, we shall wish that all who send orders should be as explicit as possible as to their wants—describing as minutely as they can, and where left to our desire our judgment, we will do our best to suit them.

Our charge will be Five per cent, together with the cost of packing, freight, drayage, etc. Orders should include satisfactory references or the Cash; or bills could be sent by Express, to be collected on delivery.

We shall be happy to attend to the purchase and shipment of Trees, Seeds, Plants, etc., as this is our especial "hobby," and we know we can satisfy all that send us their business to attend to.

LATEST.

A Messenger, who left Kilpatrick 10 miles south of Hanover Junction on Wednesday morning, says: Our command has most thoroughly and effectually destroyed the Virginia Central Railroad from Hanover Dam to Hanover Junction, and the Richmond and Fredericksburg Railroad from Mattapony Bridge to the Pamunkey river. The entire distance destroyed is over 40 miles. Some skirmishing occured during the advance. If the destruction of the road is so complete as represented, Lee will be compelled to move his army from its present position to subsist it, for unless the rebels have facilities far greater than any we possess for constructing railroads, it will take at least four weeks to repair the damages. All reports concur in estimating that at no time has Lee's army had a larger supply than from six to ten day's rations on hand.

The Tribune's special dispatch says Kilpatrick was to have been at Richmond on Wednesday morning. Confidence in his success was weakened only by the arrival at Richmond of Longstreet's veterans. Kilpatrick has 5,200 picked men and several mounted batteries, and for rapidity of movement marches in three columns. Another Washington dispatch reports that Kilpatrick was expected to return to-day, via one of the fords, near Stevensboro. The dispatch discredits the rumor of his being at White House.

Still another dispatch reports the arrival of one of Kilpatrick's scouts, who left our forces within 14 miles of Richmond, and states that a junction had been formed with Butler's force.

EUROPEAN NEWS.—The Germans were repulsed on the 18th, in a general attack on the whole line of the Danish position. The French policy seems to be setting in favor of Denmark, and some journals contain warnings to Prussia.

A Thoroughbred "Jack" For Sale.

TO STOCKRAISERS AND BREEDERS: For Sale, at Mr Allen's stable, corner of Kearny and Pine streets, a "JACK," lately imported from France, age three years, black, bred in the celebrated stud of Alphonse Lee, Esq., Ruffec Poitou, by *Mars*, a thoroughbred Castilian Ass which received the Gold Medal at the Annual Agricultural Fair at Paris in 1860, out of *Augustine*. Pedegree guaranteed. For particulars apply at Mr T. Bearwald's cigar store, 714 Kearny street, opposite the Plaza. 21-5

NEW AGRICULTURAL INVENTION.

Sower for all Kinds of Grains.

A NEW SEED-SOWER of large capability is now offered for sale—the Right of Manufacture and Sale of it for the State of California, or for Counties.

The Machine can be made with

Three, Five, or Seven Tubes,

and arranged to sow any kind of grains at any given distance, and to sow a greater or less quantity, to seed thick or sparce, as may be desired.

By the construction of this Machine it can be made to sow on level ground or on ridges, and every variety of seed, from the smallest kind to Beans, Peas, Grain, Corn, etc.

THE SIMPLICITY,

as well as the accuracy, with which this Machine works, is wonderful. Every farmer can regulate it to suit every purpose and plan.

The Evenness and Precision

with which it sows the seed without wasting it, will secure great benefit to the farmer, as it makes a great saving of seed—enough in a short time to pay for the Machine.

These Machines can be made expressly for the sowing of COTTON,

HIGHLAND RICE,
TOBACCO,
SUGAR-CANE,

and all the new crops, of which this State will, ere long, become famous.

For all particulars of the Machine, call at Farmer Reading Rooms, where the Machine can be seen, and where the price and terms of the Patent Right can be ascertained. 5-3m

New York and San Francisco.

The "Mabury Header."

THIS SPLENDID HEADER HAS COMPLETELY eclipsed all others in use in the Western States.

The advantages are, EASE OF WORKING, and the facility with which it TURNS ON ITS OWN GROUND, enabling the operator to keep the corners of his field square. Other Machines are being laid aside in order to avail of the advantages of the MAYBURY HEADER.

For sale by
TREADWELL & CO.,
San Francisco, Sacramento, and Marysville.

THE CALIFORNIA FARMER.

A FIVE Dollar Treasury Note will pay for the FARMER *one year*. Now is your time to make a saving; it makes the cost of the FARMER, to *new subscribers*, only $3,25 per year. See our card.

Purchasers of Farms.

We shall now keep a complete record of *Farms, Ranches, Orchards and Vineyards*, for sale, and make it a specialty from this date. A "Bulletin Board," in our Reading Room, will contain numerous Farms, etc., on sale, and to which we invite special attention of both *Buyers and Sellers*.

☞ MANUFACTURERS OF MACHINERY, AGRICULTURAL *Warehouses, Seedsmen and Florists*—All such who desire to make their business known over the entire State of California, should send their business advertisements to us, and we can spread the news for them.

TERMS OF ADVERTISING.

THE charge for Advertising in the CALIFORNIA FARMER (payable in advance), is One Dollar for five lines, or less of space, in nonpareil type, for one insertion, and ten cents a line for any larger space. Each subsequent insertion half those rates. This it is believed affords the cheapest and best medium of reaching the Agricultural community on this coast. As heretofore, the right is reserved to reject any advertisements deemed objectionable.

STOCK EXCHANGE.

THE UNPARALLELED DEVELOPMENT OF THE MINeral Resources of the Pacific Slope, and the daily increasing commerce of the city of San Francisco, have rendered a PUBLIC EXCHANGE—conducted on the same fair business principles that characterize similar Institutions in Europe and America—an urgent necessity in this city. To meet this requirement, the Public are therefore informed that a suitable Building has been erected at

612 and 614 Montgomery street,

In which will be held Daily Sessions for the Sale of Stocks, Bonds, Securities, Specie, Etc, under the Management of the following Board of Directors, and subject to the following Rules and Regulations:

BOARD OF DIRECTORS.

George W. Dent.....President.

Walter Sparrow	Edward Flanagan,
Joseph Clough,	E. H. Wilson,
Henry Williams,	R. C. Sturdivant,
E. Parfitler,	D. J. Callahan,
Thomas Wallace,	J. De Sta Martina,
M. G. Elmore,	E. W. Lindsley.

RULES AND REGULATIONS.

1st. The Business of the Exchange shall be Managed by a Board of Thirteen Directors, to be Elected Annually, and to whom applications for Membership shall be made.

Any Questions or issue raised touching Contracts made at the Board, their Validity or Meaning, shall be referred to a Committee of Five of the Directors for Investigation and final Decision.

2d. The Sessions of the Board shall be held from 12 o'clock m, to 1 p. m, and from 3 to 4 p. m, on every Business day.

3d. Only members of the Exchange shall offer Stocks, Etc, for sale.

4th. The Public may bid upon and purchase any Stocks, Bonds, Securities, Specie, Etc, that shall be offered for sale.

5th. Buyers of Stocks, Etc, who are not Members, must either make a Deposit of ten (10) per cent of the Purchase Money at time of sale, or have their Contracts indorsed by a member.

6th. Should any Party neglect or refuse to fulfill a Contract entered into by him at a Session of the Board, he shall thereafter be debarred from the Privileges of the Exchange, at least until he shall have specifically performed such Contract.

COMMISSIONS ON SALES.

Of United States, State, County and City Bonds, Railroad, Steamboat, Telegraph, Gas and Water Stocks, Certificates, Bills of Exchange, Treasury Notes, Specie, Etc, one-half of one per cent.

COMMISSIONS ON MINING SHARES.

Sale at	1 Dollar up to 10 Dollars.....	$0 25 per foot.
Sale at	10 Dollars up to 25 Dollars.....	50 per foot.
Sale at	25 Dollars up to 50 Dollars.....	1 00 per foot.
Sale at	50 Dollars up to 100 Dollars.....	1 50 per foot.
Sale at	100 Dollars up to 200 Dollars	2 50 per foot.
Sale at	200 Dollars up to 400 Dollars.....	5 00 per foot.
Sale at	400 Dollars up to 600 Dollars.....	6 00 per foot.
Sale at	600 Dollars up to 800 Dollars.....	7 50 per foot.

From $800 to $3,000 per foot, one per cent.

Anything above $3,000 per foot, three-quarters of one per cent.

A Fine Ranch in Contra Costa County.

A FINE RANCH IN THIS COUNTY IS NOW OFfered for sale at a Bargain, if applied for soon, as it will be sold at a price worthy special attention.

The Farm contains 208 acres; 70 acres of this are fenced—the balance is well and heavy timbered. This Farm will cut 2000 cords of wood, enough to pay for the Ranch.

It is an excellent Hay and Grain Ranch and the products sell well and at good prices on the spot, this being the head of navigation and near market: 8 miles from Martinez and 4 1-2 miles from Pacheco.

The Title is good and possession given immediately. The Buildings are common, but the Land is No. 1. For Price and Terms inquire of the Editor of this paper who will give all particulars.

SPECIAL NOTICE!

THE STORE OF
Kerby, Byrne & Co.
Closes at 7 o'clock, p. m.

Farms for ale!

THAT VALUABLE TRACT OF LAND IN SONOma County, lying between Sonoma and Petaluma Creeks, and bounded on the south by the San Pablo Bay, known as the property of G. P Swift, Esq., containing fourteen thousand acres of land, is offered for sale in Lots or Farms to suit purchasers.

Most of this tract of land is suitable for cultivation, and has soil of the best quality. It is accessible to market, being adjacent both to the Sonoma and Lakeville landings—is well watered, has an unexceptionable climate, and is not surpassed in any respect by any tract of the same size in the State.

No better opportunity, it is believed, will ever be offered for the purchase of desirable farms at a low price and upon easy terms.

There is a very large amount of fencing on the tract, the entire body of land being enclosed.

The Petaluma Boat touches daily, each way, at the Lakeville landing, which is about a mile from the nearest point.

In addition to the regular Steamer landing places, there are numerous suitable landing places along the entire water front of the tract.

The Sonoma Embarcadero is at one side, thus furnishing a convenient access to the San Francisco market at all seasons.

Persons desiring to purchase farms of any required size may apply to the undersigned, at the office of Haight & Pierson, 622 Clay street, San Francisco, or at the store of Mr. Paulo, Sonoma. WILLIAM BIHLER.

BUCKEYE MOWER.

To Farmers:

WE, WITH GREAT CONFIDENCE OFFER THE BUCKEYE MACHINE, for this reason: knowing it to be Superior to any MOWER for sale, and that it will sustain the reputation it has made for the past THREE YEARS in surpassing any other Mower in the following respects:

Being better Made; much Stronger and more Durable; will Run lighter, Cut much closer with greater ease to the team, and no side draught.

We can bring twenty Farmers to say the Buckeye is SUPERIOR to any Mower, to one who can be found prejudiced against it.

The BUCKEYE MOWERS are of two sizes, cutting 4 feet, and 4 feet 8 inches.

The "Buckeye" as a Reaper.

The important advantages which belong to the BUCKEYE as a Mower are retained in the REAPER, and can be used either as a Mower or Reaper by attaching the Platform and Reel.

Though importing largely of them, we have been unable, for two years, to supply the demand.

They are better adapted to the wants of California Farmers than any Combined Machine for sale. It will adapt itself to every surface of ground, will run lighter and deliver its grain easier and better than any other Reaper. The Reaper's seat is directly over the axle of the Machine, instead of being on the Platform where it adds greatly to the draught.

We are
SOLE AGENTS
IN SAN FRANCISCO AND MARYSVILLE
FOR THE
HAINES "ILLINOIS" HEADER.

This is the ONLY HEADER, which, during the past SIX YEARS has stood the test and given satisfaction; all others, which have been tried, have proved failures, and have been withdrawn from the Market as unsaleable.

"MENLO PARK,"
San Mateo County.

Beautiful Sites for Homes in the Country.

THE UNDERSIGNED OFFER FOR SALE THE BALance, unsold, of this choice tract. There are few, if any, places within one hundred miles of this large and growing metropolis, which combine so many natural advantages for a country residence; the soil is excellent; it is wooded with large, splendid live oaks, and other evergreen shade trees. The climate is unsurpassed; the extremes of heat and cold are never felt, and the harsh summer winds and fogs don't reach here. Good well water can be obtained here at thirty feet, independent of which, there is a Company already formed, in San Mateo County, for introducing an abundant supply of the best spring water, for this and adjacent tracts, and Redwood City; it will have a head of about sixty feet at this point. The cars of the S. F. & S. J. R. R. and passengers at their depot, at this point, in about an hour and a quarter, thus enabling business men to live here and transact their business in town, without interruption. A first class school is about being established here, with educational ability second to none in the State. There will also be a first class family hotel opened in the Spring.

Those who are alive to the importance of a home in the country, with all the advantages for health, education, etc., are earnestly requested to go and look at this lovely spot. AS AN INVESTMENT, it is worthy the attention of every one who wishes to invest SAFELY AND PROFITABLY, as it is rapidly enhancing in value. The title is unquestionable, it being a portion of the PULGAS RANCHO, the first Spanish grant finally confirmed, and the patent issued.

About thirty heads of families have already purchased, with a view of building, in the Spring.

As to the merits of this choice tract, we refer to the following gentlemen, some of whom are now living in the neighborhood, and others have purchased with a view of doing so.

542 Sacramento street,
17 San Francisco

A Fine Ranch
IN MENDOCINO COUNTY.

A FINE GRAIN AND STOCK RANCH of 800 acres under fence, in Mendocino County, will be offered at a bargain if applied for soon. Together with this is a Stock Ranch of some thousand acres of mountain land which goes with this Ranch, being Uncle Sam's land.

The Ranch is about 80 miles from Petaluma and on the great mill road to the Navarro, Albion, and Mendico & Noye's mills.

The location is pleasant, having the Redwood Hills for a back ground, with a fine valley tract—one hundred and sixty acres valley land, mostly under cultivation—yielding fine Barley, Oats, Wheat, Hay, Corn, etc. The crop of Hay is fine.

This Farm will sustain a herd of 300 Cattle, and is a grand Ranch for raising Stock, Horses, Mules, or Hogs, and a good place to raise Poultry. There is an orchard of two acres of bearing Trees. Vegetables grow well.

There is on the place a fine two-story frame Building, in which was put 30 000 feet of lumber, also Granary, Smokehouse, and Barn. The vicinity to the Redwoods gives an opportunity to improve, as Lumber is cheap and Timber handy.

There are, at present, good Tools, Implements, Harvesters, Plows, etc, on the place; also some furniture. The House has been used as a Hotel and Store, and is also the Stage House. Hay, Grain, and Produce can always be sold at good prices.

There is also a herd of 100 head of Stock which will be sold at a bargain.

This is a rare chance, and worthy the attention of those who wish a good Home, a good Farm, and a profitable business. Prices reasonable. For particulars inquire of Editor Farmer. 21-1

Farmers and Immigrants.

LAND FOR SALE OR TO RENT.

THE ANTELOPE RANCH,

(FORMERLY JOB F. DYE'S) on the East side of the Sacramento River, embraces many very superior Farms of

100 to 500 Acres each; also Vineyards, Gardens and Orchards,

above all overflows, Fenced, having Dwellings, Barns, etc., and throughout the year, large running streams, and irrigating ditches.

The soil is from 3 to 10 feet deep, very rich, and adapted to Wheat, Barley, Oats, Tobacco, Chinese Sugar-Cane, Fruits, etc.

The best market in the State is at Red Bluff, two miles above; at Tehama, three miles below the Ranch, and on the Ranch itself, for consumption in the northern portion of the State, Oregon, and the Humboldt Mines. The new Wagon Road from Red Bluff to the Humboldt Mines is within three miles of the Ranch.

Good Farmers (with families preferred) can hire these farms at low rates, or conduct them on shares, with privilege of purchase. Cash loans will be made, if desired, to assist in cultivating or holding crops, and every facility will be given.

Mowers, Headers, Threshers, etc, are on the Ranch—"The Antelope Flour Mill," of large capacity, and high reputation, is on the Ranch, owned by the same proprietors.

☞ The "Job Dye Farm," of 320 acres—with Orchard, Vineyard, and Garden, with Irrigating water, large Adobe House, and numerous out-buildings—will be rented to a satisfactory tenant.

Apply to GEO. CHAMPLIN, Red Bluff P. O, or on the Ranch, or to
E. F. NORTHAM and R. B. WOODWARD,
Dec. 17—12-2m San Francisco.

Home Miscellany.

(For the California Farmer.)

LEARNING LESSONS.

BY C. FRENCH RICHARDS.

Three little folks played in a meadow,
Where the meadow sloped down to the sea;
Two old folks reclined in a shadow,
A-dreaming of the future of three.

Maud, with her gold-hair, had buttercups,
Pressing each chubby hand to her chin,
And boy Will, the barefooted sailor,
Was watching for his ship to come in.

While May, the demurest of maidens,
A rush-pencil in her artist hand,
With her cheeks aglow like the sea-shells,
Pencilled etchings on the drifted sand.

Maud's buttercups faded in the noon,
Will's ship was bewrecked in the rushes,
And the great sea dashed upon the strand,
With a roar that frightened May's blushes.

"Bean sire," asked Maud with pouting lips,
Does everything like buttercups fade,
The bright, the beautiful buttercups—
Must all things wither that God has made?"

"Gran-sire," said Will, with tearful lashes,
As he gazed afar to the seaward,
"Do all great ships go down on the rocks
When the gale blows in to the leeward?"

"Gran-pa," asked May as she sought his knee,
Pressing her thoughtful brow to his cheek,
"Say, will it always be thus with me,
Does the strong always conquer the weak?"

* * * * *

"Three questions ye ask, my little folk,
Three answers I give my little band:
Faith doth not fade, nor hope wreck a ship,
Nor charity paint pictures on sand."

SAN FRANCISCO, Feb. 22, 1864.

TO "RENA."

WELCOME, welcome to thee, "Rena,"
Glad thou hast come, once more,
Through the columns of the FARMER,
We hail thee, as before,
With the Beautiful.

To the ways of God mysterious,
We bow and deeply feel;
Still the "Earth, it hath no sorrow
That Heaven cannot heal,"
With the Beautiful.

Though we pass through fiery trials,
And part with those we love,
We will bless our God in Heaven;
They dwell with him above,
With the Beautiful.

May thy future, like thy teachings,
Be ever beautiful and bright,
May celestial spirits guard thee,
In advocate of right,
With the Beautiful.

RICHLAND, Feb. 22, 1864. A. B. C.

Situations Reversed.

A Colored Soldier Guarding His Former Master. A correspondent of the Cincinnati Commercial, with the army of the Cumberland, narrates the following incident:

A certain wealthy old planter, who used to govern a precinct in Alabama, in a recent skirmish was taken prisoner, and at a late hour brought into camp, where a guard was placed over him. The aristocratic rebel, supposing everything was all right—that he was secure enough any way as a prisoner of war—as a committee of the whole, resolved himself into "sleep's dead slumbers." Awakening about midnight, to find the moon shining full into his face, he chanced to "inspect his guard," when horror of horrors, that soldier was a negro! And, worse than all, he recognized in that towering form, slowly and steadily walking a beat, *one of his own slaves!*

Human nature could not stand that; the prisoner was enraged, furious, and swore he would not. Addressing the guard, through clenched teeth, foaming at the mouth, he yelled out:

"Sambo!"

"Well, massa."

"Send for the Colonel to come here immediately. My own slave can never stand guard over me; it is a d——d outrage; no gentleman would submit to it."

Laughing in his sleeve, the dark-faced soldier promptly called out, "Corp'l de guard!" That dignitary appeared, and presently the Colonel followed. After listening to the Southerner's impassioned harrangue, which was full of invectives, the Colonel turned to the negro with:

"Sam!"

"Yes, Colonel."

"You know this gentleman, do you?"

"Ob course; he's Massa B., and has big plantation in Alabam'."

"Well, Sam, just take care of him to night!" and the officer walked away.

As the sentinel again paced his beat, the gentleman from Alabama appealed to him in an argument:

"Listen, Sambo!"

"You hush, dar: it's done gone talkin' to you now. Hush, rebel!" was the negro's emphatic command, bringing down his musket to a charge bayonet position, by way of enforcing silence.

The nabob was now a slave—his once valued negro the master; and think you as he sank back upon a blanket, in horror and shame that night, that he believed human bondage was a divine institution, ordained by God?

WHAT IS POETRY?—A smile, a tear, a glory, a longing after the things of eternity! It lives in all created existence, in man, and every object that surrounds him. There is poetry in the gentle fullness of love and affection, in the quiet broodings of the soul over the memories of early years, and in the thoughts of that glory that chains our spirits to the gates of Paradise. There is poetry, too, in the harmonies of nature. It glitters in the wave, the rainbow, the lightning and the star; its cadence is heard in the thunder and the cataract; its softer tones go sweetly up from the thousand voice-harps of the wind, and rivulet and forest; and the cloud and sky go floating over us to the music of its melodies. There is not a moonlight ray that comes down upon the stream or hill; not a breeze sailing from its blue air, thrown to the birds of the summer valleys, or sounding through midnight ruins, its low and mournful dirge over the perishing flowers of spring; not a cloud bathing itself like an angel-vision in the rosy blushes of autumn twilight, nor a rock glowing in the yellow starlight, as if dreaming of the Eden land, but is full of the beautiful influences of poetry. It is the soul of being. The earth and heaven are quickened by its spirit; and the heaving of the great deep, in tempest and in calm, are but its accent and mysterious workings.—[George D. Prentice.

An Englishman's Revenge.

A late Parisian paper tells the story of a wealthy Englishman, who may constantly be seen at the grand opera and the Italian opera, and who enjoys a great reputation, not only as being a great connoisseur of music, but further, as being a great amateur of painting. How the latter reputation was acquired you will presently see. He was, he is, one of those Sedouin Englishmen, who live alternately in all the European capitals, except when they are on an occasional jaunt to Egypt, or to China, or to India, or to the Holy Land. He never traveled alone; his wife was with him, his *bona fide* wife, for notwithstanding his errant life (so apt to weaken one's morals), he had all the English respect for the sex, and a true Englishman's love for his wife. She was a beautiful woman, one of those "keepsake" beauties, that, once seen, make a man dream forever. Her social success was very great in all cities they visited. In Rome after some years' marriage they became acquainted with a German artist, of a good deal of reputation, who to his art, joined the learning of Benedictine, and knew the city of Rome as well as Winkleman or Visconti. The German volunteered to be their cicerone in the Eternal City; they gladly accepted his offer. Many were the hours they passed with him in the museum of the capital, in the Vatican, in St. Peter's, and in the delightful excursions they made in the environs of Rome. The artist became in love with the English lady; she reciprocated his affection. The husband was a long while in seeing the stain upon his honor; several years passed away before he perceived it for he was very much pleased with the artist, and they had long been on the most intimate footing. Although stung to the quick by such base faithlessness and such gross violation of the laws of hospitality and friendship, he said nothing; he disliked scenes; he was, nevertheless, determined upon a complete revenge, and he appealed to cooler reflections to furnish forth a suitable punishment. The passions are bad counselors. He left Italy and retired with his wife to England, saying nothing but *au revoir* to the artist. When he reached England, he told his wife of the painful discovery he had made, and he gave her back into her father's hands. He then returned to the continent alone, and visited Germany, Russia and France, where he purchased a great many paintings; he then went to Italy, meanwhile continuing to purchase paintings, and at last—two years had now passed away since their last meeting—he called on the German painter, who still lived in Rome, and demanded satisfaction from him. His challenge was accepted, and the Englishman, according to the European custom—being the offended party, selected the weapons. He chose pistols. During the past two years he had practiced daily for several hours, and his known address with the pistol had become an unerring certainty of shot. He sent the shot wherever he wished it to go. The parties went on the ground—they were placed at thirty paces apart, and with the privilege of advancing ten steps before firing. The signal was then given. One! Two! Three! Fire! The word fire was scarcely out of the second's mouth, when the Englishman fired without moving: his antagonist's pistol fell from his hand, and was discharged by the fall, the ball burying itself in the ground. The Englishman's ball had shattered the artist's arm, and amputation was necessary! his career of artist was ended—and forever. A few days after the amputation the Englishman called on him, and without noticing the angry reception he met, said to the suffering artist—"If you think my vengeance is satisfied with your shattered hand and the wreck of your artist's career, you strangely underrate the agony of a deceived, dishonored husband. Though I have condemned you to a life of vain regrets, to a never-ending series of impotent sighs, to a total oblivion by all amateurs and historians of art—" "Oh, no, sir," interrupted the artist, his face beaming with a ray of hope, "the last you cannot do. My Madonna, at St. Petersburg; my Luther, at Berlin; my Flight into Egypt, at Paris; my—" The Englishman interrupted him in turn—"Spare me," said he "the names of your works, but look over this catalogue and see if I have not the exact list of them all." "Yes, they are all there—even the paintings I finished the day before the duel." "So I was persuaded. All the paintings on this catalogue are my property, I do with them what I please; I please to burn them, aye, to burn every one of them, that your name shall be effaced from the glorious roll of artists. In two hours from this time, your toil, your conceptions, your skill, will be as completely effaced from the world as the lines which the urchin traces in the sand are effaced by the rising tide; fire is as destructive as water." In vain the poor artist begged for mercy; the wronged husband was insensible to his supplications; and in two hours the servant brought to the artist's room a large earthen vessel commonly used to contain oil, filled with ashes—it was all that remained of his paintings.

THE BENEFITS OF EXERCISE.—Exercise is health-producing, because it works off and out of the system its waste, dead, and effete matters; these are all converted into a liquid form, called by some "humors," which have exit from the body through the pores of the skin, in the shape of perspiration, which all have and which all know is the result of exercise, when the body is in a state of health. Thus it is that persons who do not perspire, who have a dry skin, are always either feverish or chilly, and are never well and never can be as long as that condition exists. So exercise, by working out of the system its waste, decayed, and unless matters, keeps the human machine "free"—otherwise it would soon clog up, and the wheels of life would stop forever! Exercise improves the health, because every step a man takes tends to impart motion to the bowels; a proper amount of exercise keeps them acting once in every twenty-four hours. If they have not motion enough, there is constipation, which brings on very fatal disease; hence exercise—especially that of walking—wards off innumerable diseases, when it is kept up to an extent equal in inducing one action of the bowels daily. Exercise is healthful, because the more we exercise the faster we breathe faster, we take that much more air into the lungs; but it is the air we breathe which purifies the blood, and the more air we take in the more perfectly is that process performed. The purer the blood is, the better the health must be. Hence, the more the consumptive stays in the house, the more certain and speedy is his death.—[Hall's Journal of Health

It has been calculated that 20 cents worth of coal applied to the steam-engine will raise 56,000,000 pounds one foot high; the same coal applied to horse-power only 3,000,000 pounds; to electro-magnetism 900,000 pounds, and to manual power only 600,000 pounds.

THE Sophomore Class, at Amherst College, is paying particular attention this year to the manual of arms. Faithful drilling in the use of the musket is substituted twice a week for the regular gymnastic exercises.

THE LAST CHARGE.

BY OLIVER WENDELL HOLMES.

Now, men of the North! will you join in the strife
For country, for Freedom, for honor, for life?
The giant grows blind in his fury and spite—
One blow on his forehead will settle the fight!

Flash full in his eyes the blue lightning of steel,
And stun him with cannon-bolts, peal upon peal!
Mount, troopers, and follow your game to its lair,
As the hound tracks the wolf and the beagle the hare!

Blow, trumpets, your summons, till sluggards awake!
Beat, drums, till the roofs of the faint-hearted shake!
Yet, yet, ere the signet is stamped on the scroll,
Their names may be traced on the blood-sprinkled roll!

Trust not the false herald that painted your shield;
True honor *to-day* must be won on the field!
Her escutcheon shows white with a blazon of red—
The life-drops of crimson for liberty shed!

The hour is at hand, and the moment draws nigh!
The dog-star of treason grows dim in the sky!
Shine forth from the battle-cloud, light of the morn!
Call back the bright hour when the Nation was born!

The rivers of peace through our valleys shall run,
As the glaciers of tyranny melt in the sun;
Smite, smite the proud parricide down from his throne—
His scepter once broken, the world is our own!

Swarming of the Medical Hives.

CONSOLATION FOR THE SICK.—Considering the enormous number of young M. D's that our medical colleges turn out every year, we certainly ought (if there be any virtue in "regular physicking") to be a much healthier people than we are. But the bills of mortality do not shorten as the list of doctors lengthens. Quite the reverse! Shall we say, then, with Macbeth, "Throw physic to the dogs, I'll none of it?" No, that will not do. Nature when attacked by a disease, needs an ally to sustain her. An ALLY, remember; not a depleting agent, that helps the disease and exhausts her energies. We verily believe that most of the drugs administered in acute diseases have this effect. Such, however, is not the operation of one medicine now generally used in this country for complaints of the stomach, liver, and bowels. We mean HOLLOWAY'S PILLS. Of course our readers are aware that both the Ointment and Pills which bear the name of that distinguished physician and philanthropist are in the highest possible repute all over the world; but we have only had an opportunity to witness the effects of the Pills. It gives us pleasure to testify to their efficacy. In dyspepsia and liver complaints they unquestionably work the most marvelous cures. Nay, we will even go so far as to say that, with this remedy within their reach, no man or woman need ever be long troubled with dyspepsia. The pills remove distress at the stomach, and restore the strength and appetite with a rapidity that is really astonishing. The curative action seems to be the same in all cases, without reference to age, constitution, or sex. Such, at least, is the conclusion to which our experience and observation points.—[N. Y. Advocate.

"THE LIFE OF THE FLESH IS IN THE BLOOD," was said by inspiration long before Harvey's discovery of its circulation had brought to light its purposes and uses. Now we know not only that "life is in the blood," but that disease inhabits it also. Many of the disorders that pervade the human frame, have their home in it, thrive and grow in it. The celebrated Dr. J. C. Ayer, of Lowell, has had regard to this important fact in making a remedy to cure these disorders. His Extract of Sarsaparilla purges out the impurities of the blood and influences a healthy action in it that expels disease. This looks reasonable, and it is true, for we know by our experience. Seldom as we take any medicine, we have, nevertheless, several times been under obligations to the skill of Dr. Ayer for the relief which his remedies never fail to afford us when we were obliged to have recourse to them.—[Catholic, Halifax, N. S.

FRENCH PLATE GLASS.

THE UNDERSIGNED IS HAPPY TO INFORM his Friends and the Trade that he has established himself in this city as an

IMPORTER AND DEALER IN

PLATE-GLASS, MIRRORS,

STAINED GLASS, ETC,

Direct from Europe, of the

BEST WHITE QUALITY,

Of all thicknesses and dimensions. Large invoices of Plate-glass now opened—sizes varying from 24x48 to 132x78, and larger sizes will be imported to order.

He has received the agency of

Messrs. Aug. Nyssens & Co's

PATENT FRENCH PLATE-GLASS,

Silvered, for Mirrors,

A New Article to the trade, now almost entirely used in the Atlantic States and Europe, being much whiter in appearance and superior to the old style of Quicksilvering, not being liable to stain from heat, moisture or dampness, nor injury by handling or in packing for transportation. I would invite a call of examination to the sample invoice just received. Having the sole agency for California, I am now prepared to receive orders, and can sell as low as can be imported from New York.

I am also constantly receiving large invoices of CRYSTAL SHEET, STAINED, ENAMELED, CUT AND GROUND WINDOW GLASS, ROSETTES, ROUGH PLATE-GLASS FOR SIDEWALKS, ETC, ETC.

Orders received for CHURCH WINDOWS, Ornamented and Plain, in any style or of any dimensions. Designs can be seen at the office. Any Society furnishing dimensions for Windows, or Glass, can have their patterns or designs made to order. All styles and sizes of

Glass for Conservatories,

GREEN-HOUSES,

and

GARDEN BUILDINGS,

To order. Also a large invoice of

SUPERIOR MIRRORS,

Framed, of an Entire New Pattern,

Suitable for Hotels, Parlors, Saloons, etc. These goods can offer on the most favorable terms.

By keeping constantly a full assorted stock of the above goods, I hope to merit a share of your patronage.

Fr. H. Rosenbaum,

221 Sacramento street,
SAN FRANCISCO.

Denn & Manrow's Combined Power WINE PRESS.

THIS NEW PATENT PRESS IS NOW OFFERED TO the Grape Growers of this State as a California Invention. It has been designed and finished with reference to the saving of labor and expense, while the work done is more speedily accomplished and with greater results.

It is the FIRST COMPLETE WINE PRESS in the country. The power of the machine is almost unlimited. With the crank alone the power of this press is as 300 pounds to one pound of strength applied. After the crank has been worked by hand to a certain point a lever of eight feet is attached, by placing weights at the end of this lever a new power is given equal to 1,000 pounds for one. This power is continuous, a self-working power—no supervision needed.

This Press is made of solid timber, yet neat, compact, and very powerful; the wheels and gearing simple but sure; the whole weighing about 800 pounds; easily put up or taken down and easily transported; so simple yet carefully constructed that it cannot get out of order unless by extraordinary results. The cost of this machine will be less than the ordinary Screw Press; it will save the labor of six or eight men usually required, as ONE MAN can do all the work.

The quantity pressed is only governed by the size of the machine, each pressing being from 400 to 4000 pounds as the size of the machine may be, and from four to six pressings a day, thus yielding from 400 to 2,000 gallons per day.

Machines will be constructed to order, of any size. For any further information address the undersigned,

DENN & MANROW,
Patentees and Proprietors, Sacramento.

P. S.—The Editor of the Farmer having thoroughly examined this Wine Press, we are permitted to refer to him for capability and perfection, or any other information. 9

ARTIFICIAL BONE FILLING

For Decayed Teeth,

Put in while soft, without pressure or pain. Aching Teeth, or mere Shells can be filled with it, and restored to health and usefulness, by the discoverer, DR. PEARSON (late Pearson & Crane), at his rooms No. 653 (old No. 187) Clay Street, San Francisco.

Dr. Pearson having spent the last six years in New York, Philadelphia, Baltimore, London, and Paris, is prepared to supply at short notice, and at reasonable prices, Artificial Teeth on the most approved methods, including Vulcanite Rubber Work, rendering the Extraction of roots wholly unnecessary.

DR. PEARSON'S NERVINE

Cures the severest Tooth-ache, and serves as a temporary filling—any one can apply it by observing the directions. Price $1, sent by express.

ALL DENTAL OPERATIONS will receive the personal attention of Dr. Pearson, as he has no partner, and INTENDS having none in future. His office has been established thirteen years—being one of the oldest, if not the oldest Dental Office in the State of California.

SEED, PLANTS, ETC.

CHOICE GRAPES!

B. Kamp,

of SAN JOSE, offers the following Choice kinds of Grapes:

Grape-Vines, Cuttings, and Plants,

INCLUDING NINETY VARIETIES OF

NEW AND RARE KINDS!

For Wine---Rhine Grapes.

Black Gleffner, Kohlen Traube,
Johnisberger Riesling. Gray Gleffner,
Riesling Franken, Silvaner,
Traminer, Goodethel,
Ruländer.

FOR THE TABLE:

Goodethel, Muscat Rose,
Black Hamburg, Muscat Alexandria,
Chasselas Musque, Golden Chasselas,
Charlesworth Tocay.

The above list embraces those that the Undersigned has proved. The WINE-GRAPES are the BEST OF THE RHINE, such as our Choice Rhine Wines are made from; and those for the Table are well known and approved. The Grapes will make Better Wine than our California Grapes, by a 100 per cent. Having cut down all my California Grapes, and instituted others, I know what I say to be true.

Orders for Rooted Vines or Cuttings at LOW PRICES, can be sent by Mail or left at the FARMER OFFICE, will be promptly attended to.

20-24-tf B. KAMP.

$5! Delaware Grape-Vines! $5!

PROPAGATED FROM VINES received in 1861, from Dr C. W. Grant, of Iona Island, near Peekskill, N. Y. One and two year-old Vines, from $1 00 to $2 00 each! The superiority of the Delaware as a Wine Grape, will doubtless induce unprincipled Dealers to flood the Market with a Spurious Article; and as mistakes sometimes UNINTENTIONALLY occur, which cause delay and trouble to the Purchaser—

☞ I WILL PAY IN GOLD COIN $5.

(or the same amount in Lincoln, Lenoir, Union Village, Anna, or Diana Vines, at 50c each, or the IONA at $2 00 each) for each Vine purchased from me, for the DELAWARE, which proves untrue to name.

I have a few IONA VINES, one year old, propagated from a Vine presented to me from Dr. Grant, the Originator of the same, which, except upon the above conditions, I do not intend to offer in Market without his permission.

Catawba Vines and Cuttings by the Hundred or Thousand, CHEAP!

Fine House and Garden in Sacramento City

A LARGE, SPACIOUS, AND GENTEEL House and other buildings, with fine Garden, all finely located in the upper part of the city, containing a full half block—will be sold a bargain and on liberal terms of payment if applied for soon. Real estate is rapidly improving in Sacramento, and this is a rare chance. Inquire of editor Farmer. 15

Literary Shrubbery.

"WHEN OUR SHIP COMES IN."

A little child dwelt by the flowing sea,
And her home was the home of poverty.
She ran with bare feet o'er the golden sands,
And gathered shells with her small brown hands.

Gay strangers came in rich robes dight,
But the little maiden shunned their sight;
And, shaking her curls o'er her blushing face,
Sped away like a fawn that flies the chase.

When the strangers were gone, said the mother mild,
"What was it dismayed thee, my darling child?"
"O, mother! my feet were bare and brown,
I had no bonnet, and then—this gown!"

She held up the skirt of her faded frock,
Sadly rent by the jagged rock,
And she said with a deep and a long-drawn sigh,
"Will I have such dresses as they, by and by?"

Her mother smiled with a grave, sweet grace,
As she smoothed the curls from the half-grieved face,
And said, "When our ships come in from sea,
You shall have garments and all things free."

"When our ship comes in!" said the little one,
And away to the highest rock she run,
And watched till night-shadows dimmed the shore,
For the freighted ship and its treasured store.

Long and often she watched in vain,
No ship for her sailed over the main.
How many watchers in life there be
For the ship that never comes over the sea!

"WEARING the breeches" is a term of great antiquity, significant of control in the household. In Germany, several hundred years ago, when there was contention in a house and both man and wife were quarreling for superiority, it was customary to invite the neighbors into a court, and a pair of breeches having been thrown down, the disputants contended for them, the victor being proclaimed "boss." Terrific fights often took place, and a man sometimes broke his wife's ribs before he could bring her to subjection.

SOMETIMES a girl says "no" to an offer, when it is as plain as the nose on her face she means yes. The best way to judge whether she is in earnest or not, is to look straight into her eyes, and never mind her nose.

A strong-minded woman, up town, was heard to remark, the other day, that she would marry a man who had plenty of money, though he was so ugly she had to scream every time she looked at him.

THE idle should not be classed among the living; they are a sort of dead men not fit to be buried.

A YOUNG man advertises his desire for a wife thus: "Pretty, and entirely ignorant of the fact!"

Jebb's Patent Churn.—We invite those who want a churn to call at the FARMER office and see the best churn ever made. One that gives them butter from cream in five minutes, or butter from new milk in ten to fifteen minutes. Seeing is believing, and the trials furnish facts that are not to be gainsayed. Patent rights for counties for sale, from which a fortune can be made. Single churns can be purchased also.

AUTOCRAT OF THE KITCHEN.

THE ORIGINAL P. P. STEWART.

Fuel Saving and Comfort Producing

LARGE OVEN

SUMMER AND WINTER AIR-TIGHT,

COOKING-STOVE

....FOR....

Wood and Anthracite, or Bituminous Coal.

IMPROVED IN 1859,

With New and Extra Large Flues, and by the addition of the *Celebrated Patent Double-duct Bottom Flue.*

Attention is invited to the following points of superiority:

1st, DURABILITY—Lasting, with proper care, at least 30 years. Stoves are now in use that were set up in 1838.

2d, MANUFACTURE—Every portion of the Stove is thoroughly constructed. Each Stove is submitted to a critical test, and none leave our works unless completely and perfectly finished.

3d, CAPACITY—Baking, boiling, broiling, roasting, and all other culinary operations performed at the same time.

4th, ECONOMY—Saving the cost of the Stove in one year in the item of fuel.

5th, VENTILATION OF HEAT.—In the Stewart Stove alone, the front doors open directly into the oven (protected by letters patent), securing a direct draft through the top of the oven, by means of holes perforated in the doors and back flues. It will be borne in mind that, as the heated air always rises, this method of ventilation is the only one of any value whatever.

6th, ENTIRE CONTROL OF HEAT—The heat generated by the Stove may be held therein, and used or thrown into the room at pleasure.

7th, THE DOUBLE-SHEET BOTTOM FLUE—By which a compressed and inverting action of heat is obtained, and the oven more evenly and efficiently heated than by any other known invention.

8th, BROILING—Performed on the top, and without the possibility of smoke entering the room.

9th HOT WATER RESERVOIR AND WARMING CLOSET—Both useful and convenient, supplied by the waste heat and without extra fuel.

10th, WATER BACK—An arrangement for supplying hot water for the bath-room, equal to any range.

☞ Beware of the numerous imitations in the market, many of which resemble the Stewart only in appearance, and none of them possess any of its peculiar qualities. See that the name of P. P. STEWART, and of the Manufacturers are on each stove. None other are genuine. For sale by

CALEB M. SICKLER,

428 Kearny street, bet. California and Pine.

v20-6 San Francisco.

MARRIED

In this city, Feb. 18th, to the wife of T. W. Lockwood, a daughter.

The Markets.

Wholesale Produce Report.

This represents the prices paid by the dealer to the producer.

Corrected weekly, by A. H. Todd & Co., corner of Clay and Drumm Streets.] Mar. 4.

The demand for Cereals of all kinds continues unabated. Speculation is rife, and prices have materially advanced since our last weekly report. Barley, Wheat, Oats, Corn, and Hay, have been sought and seller's views realized. Wheat, that in September last would have sold from 1 35 to 1 40 now commands from 1 85 to 1 90, and many holding for a higher price. Barley and Oats are offering in sparing quantities, and command, for the former from 2 to 2 25, while Oats sell readily from 2 25 to 2 50. Corn is used extensively for feed purpose, and Hay, by the cargo, has materially advanced. Beans and Potatoes rule at a low figure, although sales are more free than they have been for a long time.

Our Export buyers have left the market, and we hear of their turning sellers; doubtless prices now ruling here pay a better profit than shipping to Liverpool. As is generally the case, Farmers are not the fortunate ones to realize present prices, they, mostly, or many of them, having sold their crops before the advance. We reiterate our predictions in our last report, that this advance is not a healthy one. Speculation may temporarily advance prices, but a little rain, our usual storms of March and April, will cause prices to decline more rapidly than they advanced. Some argue that it would be too late to plant if we had plenty of rain this month. For their benefit, we will state that in 1862 we sold one crop, the best of the season for yield and quality, that was planted on the 23d day of April.

Our Exports are hardly worthy of note. They consist of the bark Architect, for Victoria, with 5490 qr and 100 bf-sks Flour, 183 sks Wheat, etc.

Our receipts of Produce from around the Bay for the past week have been as follows: Wheat 17,807 sks, Barley 5387 sks, Oats 1639 sks, Potatoes 3251 sks, Flour 6372 qr-sks, Beans 790 sks, Corn 1200 sks, Hay 165 tons, Salt 200 sks, Bran 330 sks, Corn-meal 250 sks.

Also, Coastwise: Wheat 1013 sks, Barley 2332 sks, Potatoes 9245 sks, Beans 525 sks, Wool 2 bales, Oats 1506 sks, Onions 68 sks, Flour 190 qr-sks.

Prices at Pacific Fruit Market—Mar. 4.

Messrs. Addison, Martin & Co. report to us the following prices as the ruling rates for fruit:

Apples 3@5c, A No. 1, 6@7c ₱lb. Dried Plums 15@20c ₱lb. Dried Peaches 11@15c ₱lb. Dried Nectarines 20@30c ₱lb. Pears 8@20c ₱lb. California Dried Figs 20@35c, ₱lb; new crop imported 35@50c ₱lb. Strawberries $1 25@1 50 ₱lb. Lemons $6@8 10 ₱box, retail 50@75c ₱ doz. Oranges $6@8 ₱ box, retail $1@1 50 ₱doz. California Black Walnuts 15@20 ₱lb

Apples per Sierra Nevada were quite inferior, sold for $1 25@2 75 ₱ box. The Gleaner brought 5000 lbs Chestnuts, they are very good, but held at too high price. Pacific arrived this morning from Los Angeles with 86 boxes Oranges they are very fine, as there are no others in market they bring good prices.

BY CONTINENTAL TELEGRAPH.

DATES TO MARCH. 4.

With the opening of spring, news comes of active movements in the armies of the Union. A large cavalry expedition under the celebrated leader Kilpatrick left the army of the Potomac last week, with the supposed intention of making a dash on Richmond (after cutting off Lee's communications) in conjunction with an infantry force sent up the Peninsula. At the same time Meade's forces are advancing on Lee, to engage his attention in front. Kilpatrick quickly placed himself between Lee and Richmond, and was getting along famously at last accounts. The attack on Mobile has commenced. Accounts from Sherman are conflicting. He was reported to have reached and captured Selma, Alabama, after a sharp battle; but later rebel accounts throw some doubt on this by stating that he had only reached Meridan, and was returning on account of being unable to obtain supplies. Some accounts state that Sherman's destination was Mobile, and that the object of Smith's and Grierson's cavalry expedition was not to effect a junction with Sherman, but to draw off the enemy from him. Others state that the object was to capture Selma, which has important manufactories of cannon and small arms, and destroy all means of communication with Mobile by which supplies and reinforcements could be forwarded to it. Meantime Smith's cavalry expedition met the enemy in large force, were nearly surrounded, and after some sharp fighting, returned to Memphis. Longstreet is said to be falling back towards Richmond. The Florida expedition has met with a check. On the 20th our troops under Seymour met the enemy in large force 15 miles beyond Jacksonville, and after a desperate fight of three hours, being overpowered by numbers retired, taking most of the wounded. The enemy's loss was large. They captured five guns. Our loss is estimated at over 500. Our force consisted of 4,500 infantry and 400 cavalry, with 20 pieces of cannon. The enemy's strength is reported at 13,000, well posted between swamps, protected by earthworks and rifle-pits, and commanded by Gen. Gardner, of Port Hudson fame. The report that no skirmishers were thrown out is untrue. After our defeat we retreated in good order. Gen. Vegas had arrived in Jacksonville and would take charge of the defenses there.

The Star says that Gen. Custar has returned to this side of the Rapidan from his cavalry expedition, having successfully accomplished the part of the work which he started out to do. He harassed the flank of Lee's army considerably, and near Staunardsville, surprised the rebel camp, which he burned and totally destroyed. He captured also a number of prisoners and horses. Gen. Custar did not lose a man.

A Mobile dispatch of the 23d ult. says fire was opened that day upon Fort Powell. Six monitors and four gunboats shelled all day. The Florida affair is made much of, and with reason, but rebels concede severe losses on their side. Editorials of the journals before us are full of brag about the bright prospects of the South, the desperation, demoralization, bankruptcy and utter helplessness of the North.

A correspondence between Gen. Butler and the rebel Commissioner, Gen. Ould, relative to the exchange of prisoners, resulted in a declaration of exchange, in which it is agreed that all persons delivered at City Point up to January 24th, 1864, are exchanged.

We have New Orleans dates to the 23d of March. The total vote in the Louisiana State election was 9,293. Michael Hahn's majority over Flanders was 3,595; over Fellows (Conservative candidate) 3,542. The other candidates on Hahn's ticket are elected by about the same majority.

A band of sixty guerrillas dressed in Federal uniforms, surprised a company of the First Mississippi colored regiment, who were standing guard about a mile and a half from the main body of a foraging party, fourteen miles below Grand Lake, and were captured and disarmed before assistance could reach them. All were killed or mortally wounded, except two.

A dispatch from the headquarters of the Army of the Potomac, Feb. 29th, says: "Kilpatrick, at the head of a large force of cavalry, left this place on Saturday evening, on a grand expedition. The strength of the entire command we do not deem judicious to publish at present. On Saturday night his command encamped at Old Verdersville, on the Fredericksburg and Orange Court House plank road, eight miles south of the Rapidan. On Sunday morning the force demonstrated in front of the enemy's works upon Mine Run, deploying as infantry in order to cause the enemy to mass in that locality to resist an attack. In this capacity they acted all the day. At night they rested in a retired position between Verdersville and Robinson's Tavern. At 3 o'clock Monday morning Kilpatrick took up his line of march southwards towards the junction of the Virginia Central, Richmond and Fredericksburg Railroad, arriving at Spottsylvania Court House just at dark. From this point Colonel Dahlgreen, with a detachment of cavalry, was dispatched to Fredericksburg Hall, midway between the junction of the above named roads and Gordonsville, where had been parked the whole rebel reserve of artillery. Colonel Dahlgren was to have destroyed the artillery roads, the telegraph lines, and rejoin Kilpatrick. A dispatch dated the 1st says: 'Last evening the expedition was heard from, and then everything was going on swimmingly and according to the programme, at Frederick's Hall, forty miles per rail from Richmond.

The Washington Star says: We have information to the effect that Kilpatrick, with a force of picked cavalry, arrived at White House, and had formed a junction with the forces sent up from the Peninsula. This news were brought by two scouts and is believed in the army.

The gunboat Waterce went to sea yesterday. Supposed destination, San Francisco.

The Richmond Examiner, of the 24th, says an official dispatch was received at their War Department from Polk, stating that Sherman's forces had evacuated Meridian, and were retreating in two columns towards Vicksburg. It is supposed that, finding his designs on Mobile thwarted and the cavalry reinforcements intercepted, and being in distress for supplies, he was forced to abandon the expedition, and take a desperate expedient of retreat through a country stripped of supplies and laid waste by his advance. Whether he can retreat successfully, remains to be seen.

In the House, Mr. Wilson of Iowa, introduced a bill that of all indebtedness to the United States, prior to the 1st of July, 1865, on account of duties on imports, one tenth may be paid in legal tenders.

Orders have been issued to the Provost Marshal General in each of the several Atlantic States, to be fully prepared to commence the draft on the 10th of March, and make it in every sub district which shall not have raised its quota before the 1st of March. Volunteers between the 1st and 10th of March may be deducted after the draft.

A bill to provide protection to the overland emigration to the Pacific passed the Senate to-day. The joint resolution of thanks to the officers and soldiers who have re-enlisted, and the bill supplementary to the act of March 3d, 1863, for the support of the Government, providing for the issue of two hundred million of five-forty bonds, were also passed.

Of the cavalry expedition which left Memphis, three weeks since it is stated that on the 25th the column marched fifty-two miles, and General Smith reached Memphis at 11 o'clock at night. Most of the expedition stopped at Collierville. It is estimated that the expedition destroyed over a million bushels of corn, tore up and destroyed a number of miles of the Mobile and Ohio Railroad, burned many bridges and trestle work, and brought in over fifteen hundred horses and mules, two thousand negroes, and three hundred prisoners. The expedition was successful in every point, except the important one of forming a junction with General Sherman, which is attributable mainly to the slow movements of the New Jersy and Pennsylvania cavalry regiments, causing a delay of one week in starting. The President's Amnesty Proclamation and Gen. Grant's order were extensively circulated throughout the country.

☞ **Holloway's Pills.—Costiveness.**—The bowel become torpid and powerless under continual purgation. Holloway's Pills penetrate to the nucleus of the disease and eradicate it. They evacuate the foul and vitiated particles from the intestines, by a mild aperient operation and recuperate their exhausted energy, by restoring tone and vigor; they induce a healthy action and prevent a relapse of the malady. For Piles, Fistulas, Dyspepsia, and all disorders of the viscera, they stand without a rival.

Sold by all Druggists, at 30c, 70c, and $1 10 per box. 13S

HOLLOWAY'S PILLS and OINTMENT may be always obtained of Messrs. CRANE & BRIGHAM, cor. Clay and Front streets, San Francisco, Cal.

☞ **Multitudes of People** require an Alterative, to restore the healthy action of their systems and correct the derangements that creep into it. Sarsaparillas were used and valued, until several impositions were palmed off under this name. AYER'S SARSAPARILLA is no imposition.

Continuance of the Drought.

The long-continued dry weather is creating great anxiety, and with many persons, alarm; and it is evident that speculation will be rampant. Already prices of Flour and Grain have greatly advanced, and Hay has jumped up briskly, but we can see no cause for any alarm.

The Wheat crop now on hand is ample for 1864. In addition to this, the present too rapid rise in Breadstuffs must necessarily bring down large quantities from Oregon. Should California by any circumstance, demand Grain, Oregon can give her an ample supply, so that with her *excess of crop* she can join ours, and this will afford us food for *two years*. In this statement we of course include all kinds of Breadstuffs.

We must confess our surprise at the great rise in Breadstuffs, for it must necessarily make a rush to this market, for surely every wise man will *sell. Now* is the time to realize, and those Farmers who now hold back for still higher prices, though there may be more fictitious prices—yet those that play for too high a figure, will lose all.

Rain is not far off. We think before we go to press again, we shall have rain freely.

Farmers Plant Oats.

Many of our farmers may have lands upon which they have gathered their new potatoes, or other vegetable crops. We would earnestly urge them to plant every acre of such land, and any and all land, now possible, in Oats, as an article of food for stock, as in the present rage of speculation the prospect is for good prices for hay all season; Oats will mature and pay well. We would also urge attention to cutting such grain crops as may have the sure appearance of going back. Such a crop cut now, or say in a short time, for hay, will pay as much for hay as grain, at the ordinary prices. While we suggest these precautions, we would urge all to avoid the present furor of speculation, and rest assured that we have an abundance of produce on hand to feed our people for two years.

The Season.—The Tuolumne Courier of Feb. 20th, remarked:—The present winter is undoubtedly the dryest since 1851-2. The rains so far this year have not penetrated the earth more than 18 inches, and mining and farming prospects for next summer look rather discouraging. We may have plenty yet, but the grain crop will soon be past salvation, if it is not already. Almond trees here have been in bloom for two weeks; all the peach trees are in flower, and a sharp frost now would ruin the crop. A few pear trees are also in blossom, and plums are preparing to give Jack Frost a fair chance for mischief.

"Stretches" in Sheep.—The cause of "stretches" in sheep is costiveness of the bowels. Feeding turnips, or anything else, that will keep the bowels in a good condition, is a preventive. The cure requires remedies that will relieve the constipation. Simple physic, and often a mere injection of warm water will answer the purpose. In a case where the intestines are turned over so as to form a stoppage, rising high and jerking the hind legs may loosen the knot. So says an exchange.

Large Sale of Illinois Wool.—The Rockford Register of the 9th Jan., says: We learn that Mr. Shepherd Leach, of Rockford, has just sold his wool clip for this season, realizing for it at 70c a pound, $9,540 46. Mr. Leach is the largest wool-grower in the country, and has also one of the most extensive farms—cultivating near a thousand acres. During the past year he kept an average of about 2,400 sheep, but has at the present time about 3,000. These are mostly grade Spanish Merinos, which he considers the best in this section.

The Stockton Independent relates that a tule hunter, while searching for game, fell in with a victim of the '62 flood, in the form of the outward habiliment of a cow (vulgarly called a cowhide), from the antipodes of which, observing the hovering and buzzing of bees, to his astonishment discovered he had found a patent bee-hive overflowing with honey.

Rain Record.

The following table, showing the fall of rain in San Francisco prior to and after the 11th of March of each year since the "rainy winter" of 1849-50, has been prepared by Dr. Henry Gibbons, of this city:

Year.	Total to March 11.	March.	April.	May.	Total after Mh. 11.
	Inches	Inches.	Inches.	Inches	Inches
1851	3 20	1.88	1.14	0 69	3.71
1852	17 81	0 63	0.19	0 89	1.17
1853	22 93	4 67	5 05	0.35	10 05
1854	15.68	2.95	3 31	0.00	6 26
1855	12 84	2 70	5.29	2.14	10 43
1856	13.09	1 64	3 14	0.88	5.66
1857	12.46	1 54	0.00	0.08	1 69
1858	14.27	3 94	1 14	0.11	5.11
1859	15.44	2.96	0.73	2.03	5.32
1860	12.62	2 41	1.79	2.50	6 69
1861	00 06	3.48	0.26	0.66	4 32
1862	3 19	0.78	1 11	0 91	2.80
1863	9 42	2.42	2 93	0 41	5.75
1864	5 69				
Mean	14 84	2 47	2.00	0.83	5.22

This record shows two dry seasons after the date of March 11th, viz: 1852 and 1857. Should we have no more rain this spring than in either of those years, the effect would be ruinous. But it must be borne in mind that, in both those seasons, the earth was so completely saturated by prior rains, that the drought of the spring months did not interfere with agriculture. In the first ten days of March, 1862, the rains had been so heavy as to produce destructive floods all over the State. In 1857, there had been in the month of February the extraordinary quantity of 8.66 inches of rain. The third season, in the order of dryness, was that of 1862, following the memorable winter of floods.

To those who are praying for rain, there will be some consolation in the comparison of the present season with that of 1851, which it closely resembles. There had then fallen but 3.30 inches at this date. We have now had 5.69 inches—almost twice as much. From the 7th of January to the 18th of March, in that year, a period of ten weeks, there were five light rains, amounting in the aggregate to less than half an inch. The miners and farmers were ruined,[?] and the rainy season was considered as spent; but on the 18th of March it rained freely, and from that date to the 19th of April, rain fell on seventeen days—not in profusion, but sufficient in quantity to allow of tillage, and to keep the soil in an excellent condition for the growth of vegetation, till May. On the 18th, 19th, and 20th of May, also, there were copious rains. Let us hope that there are similar blessings in store for us now. The summer of 1851, I think, supplied good crops. Grain was not extensively raised in those days, but the potatoes of that year were certainly superior to any that have been produced since the American flag was run up on the Coast.

The occurrence of three or four warm days in succession is the best indication of rain that my record for thirteen years exhibits. It sometimes fails, however, as it did in the last week of February past. We have again had three warm days, the 8th, 9th, and 10th of March. The time when the rain mostly comes is from three to five days after the last warm day of the series. At the close of the drought of 1851, there were three days, commencing with the 15th of March, when the thermometer stood at 66°, 74° and 74°. On the 18th, the rain began, and on the 19th, there fell showers of hail and snow. Mount Diablo donned his white cap on the occasion, and on the 30th of March he again saluted us in like manner. H.G.

How to Prevent Horses Kicking in Harness.

Attach a stout piece of ash stick to the collar at the breast, fix it under the horse's chin so that he cannot bend his head towards his breast, and he cannot kick high enough to injure anything; if a good horse, and worth the trouble, a bit of bright steel may be fixed on his collar, with a claw to catch him under the chin; this will answer the purpose and look well. If a mare, part with her, or turn her to the stud; her foals may not kick when well brought up; if fillies, I fear, no matter what education they get, they will have the kick in them. Sometimes mares kick from ticklishness; it is a ticklish thing to deal with them, and I fear their daughters will be ticklish. Kicking, I am satisfied, is hereditary "in the female line." I had a mare that was dangerous to look at, she had such an ugly use of her hind legs, and by buckling a stick under her chin, fastened to the collar in the way I have described, I defied her. I defy any horse to kick so as to injure the vehicle or himself. This is certainly better than tying up one fore leg, as a horse could not trot upon three. I had two fillies out of this mare, and they were both kickers. I know many instances of kicking being hereditary.—[Iroquois Rep.

Home-Made Yeast.—Take a handful of loose hops (a pinch only of pressed ones), and tie in a bit of muslin; boil twenty minutes in two quarts of water; take them out, and throw in four sliced potatoes, and boil till soft; strain all through a sieve, and add a half teacup of salt, and the same of brown sugar; scald these, and let it stand till lukewarm; add sufficient yeast to rise it. When quite light, or when it ceases to bubble up, put it in a jug or covered jar, set in a cool place, and it will keep good a fortnight in hot weather, and a month or more in cold. Try it.

Report of the Superintendent of Public Instruction.

We have received a copy of the Thirteenth Annual Report of the Superintendent of Public Instruction, John Swett. It is for the year 1863, and is quite full. We can allude to only a few features of the report.

The total number of white children in the State, between the ages of 4 and 18, is 78,055. Of these, 29,000 attend public schools, and 9,000 private schools. 12,000 attend no school, and about 6,000 are not accounted for in the returns. The total number of white children under 18 years of age, is 117,136. The whole number of children and youth under 21 years of age is 121,265, seventy-four thousand eight hundred and thirty-five of whom were born in California. A more liberal provision must be made, according to these figures, for the public schools.

The average number of pupils belonging to the public schools is set down at 22,965. Average daily attendance, 19,092.

The average salary of teachers, throughout the State, is found to be $80 per month, but as the average time for which schools are maintained is only six months, and as teachers are paid only for time actually employed, the average annual salary is only $480. The total amount paid for teachers' salaries during the year, was $328,000. Divided, it would give to each $357. Out of this, they must board and clothe themselves and pay their income tax. An average servant girl receives $300 a year and her board. The teacher boards himself or herself. An average farm-hand gets the same. Even a Chinaman can get $300 a year. "What kind of talent," says Mr. Swett, "can be commanded at such rates? The average length of time of the employment of teachers in the same school in Yuba county, is one year and one-fourth; in the counties of Tuolumne, Shasta and Santa Cruz, one year; San Francisco made no returns, but the average would probably be about one year and a half. The longest time any teacher has taught the same school is returned by San Francisco—eleven years; and the next longest by Yuba—nine years—Mr. D. C. Stone, of Marysville. The number in the State who have taught the same school two years and over, is seventy-seven. The number of teachers who subscribe for an educational journal is returned at two hundred and seventy-seven—one-fourth of the whole number in the State. The preceding statistics show why the number is so small—the teachers never remain long enough in one place for their post office address to reach them."

The "State Institute" is one worthy of all regard. The number of teachers who attended this institute in 1863, was 308, ninety-two less than the number of names on the institute record. Two hundred and forty-two teachers attended the county institutes. The number of teachers allowed and paid for their time, while attending institutes, was only 86!

"A satisfactory reason why the reports of County Superintendents have been returned so full of imperfections, is found in the columns of their salaries. Their average annual pay is only $400. Stanislaus carries off the palm of economy, paying $26 a year, or $1 67½ per month. Three counties pay only $100 per annum; three $150; four $200; four, $250; one, $300; four, $400; five, $500; five, $600; one, $800; three, $1000, and two, $1200. El Dorado and Los Angeles pay $1200 each—a fair compensation; Nevada, Placer, and Sacramento, each $1000. San Francisco $4000 per annum, but the offices of the City and County Superintendents are united. Sonoma county, with fifty-four school districts—the largest number of any county in the State—pays only $800; and Santa Clara county, one of the most populous and most wealthy, allows the munificent salary of $600. Have these counties any right to expect their superintendents to devote their time to the office, when they pay only the wages of day laborers? In either of these counties an able man could devote every hour of his time to his official duties, and then fail to perform them fully. No wonder that these counties are filled with school-houses which "disgrace the State"—the schools ornamented with rate bills, and the school-houses overgrown with wild mustard. Many of the farmers in these counties would not keep their blood stock in the shanties where the children attend the "three month schools." San Joaquin county, with forty-seven schools pays only $550. Yolo county only $400, and Yuba only $500. Butte county, with twenty-eight schools, allows the extravagant salary of $100—a sum which would not pay for a saddle mule for the superintendent to visit each school once a year. Contra Costa county is equally economical, paying only $150."

Seventy-nine teachers have failed to make reports to the County Superintendents. Nevertheless, contrary to law, these teachers are paid.

The School Trustees of 120 districts failed to report.

We cannot, for want of space, further notice this very lucid and able report, but we recommend a careful perusal of it to all the true friends of education in this State. Members of the Legislature would do well to examine it carefully, and give good heed to its suggestions.

The Oakland News says that work on the Oakland and San Francisco Railroad is progressing steadily, and in a short time the citizens of San Antonio will have the benefit of railroad communication with outside barbarians. We may expect to see considerable building going on in Brooklyn the coming season. The railroad has done more good for the improvement of Oakland than everything else combined, and there is no reason why San Antonio should not benefited proportionally.

On Wednesday week the Pioneer stages made the trip from Virginia City to Placerville in thirteen hours, including stoppages—running time, eleven hours. The stages were loaded with passengers, baggage and bullion.

The Timber Act.

An Act to prevent the destruction of Timber on the Public Lands in this State. The People of the State of California, represented in Senate and Assembly, do enact as follows:

Section 1. It shall not be lawful for any person to cut or girdle any tree on any land within this State, belonging to this State or the United States, so as to remove the bark on such tree more than one-eighth of its circumference, nor more than three inches in depth into the wood of the same.

Sec. 2. Any person who shall cut a tree contrary to the provisions of this Act shall be deemed guilty of a misdemeanor; and, upon conviction thereof, shall be find in a sum not more than $500, or be imprisoned in the county jail not more than 250 days; or both such fine and imprisonment.

Sec 3. Any person who shall gather pitch, or other substance discharged from a tree which has been cut contrary to the provisions of this Act, shall be deemed *prima facie* to have cut the same.

Sec. 4. All the lands within this State shall be deemed lands of this State or of the United States, unless the party accused of the violation of this Act shall prove on trial that the land on which he cut the trees, contrary to the provisions of this Act, belonged to the person so accused, or that he cuts the same by permission of the owner of the land.

Sec. 5. This Act shall not apply to persons who cut trees, in good faith, for the purpose of manufacturing the same into lumber, firewood, for agricultural, mining or tanning purposes; provided, that, where timber is wanted for tunnels and for mining uses generally, the persons having such wants may cut down and work up economically, from time to time, so many trees as may suffice, but it shall not be lawful for any person to fell trees on the public lands in anticipation of future needs, and which may not be required for future use; nor shall any person fell trees for the use of the limbs for firewood, for the purpose of manufacturing charcoal, while having no use for the trunk or body of the tree. Whoever may violate the provisions of this section shall become liable to the pains and penalties as set forth in section two of this Act.

Sec. 6. This Act shall not be held to apply to the clearing of mineral lands for the purpose of working the same, or to the cutting of timber for lumbering purposes.

Sec. 7. This Act shall take effect from and after the 15th day of March, 1864.

Expenditures for the Military.

The Bulletin's Sacramento correspondent, under date of March 5th says: The Board of Military Auditors this morning sent into the Senate, in accordance with a resolution of that body, a statement of the annual cost of the military encampments, camps of instruction, etc. The items may be condensed as follows: Camp Stanford, for transportation and subsistence, $30,531 43; for pay of officers and men, $9,245 26; total, $39,776 69. Second Brigade Encampment—Camp Alton—for transportation and subsistence, $37,651 86; pay of officers and men, $9,899 40; total, $47,551 26. Third Brigade Encampment—Camp Gilmore—for transportation and subsistence, $19,032 31; pay of officers and men, $4,055 24; total, $23,087 55. Fourth Brigade Encampment—Camp Kibbe—for transportation and subsistence, $19,452 51; pay of officers and men, $6,326 58; total, $25,779 09. Fifth Brigade Encampment—Camp Ellis—for transportation and subsistence, $12,083 10; pay of officers and men, $2,454 04; total $14,537 14. Grand total of audited accounts, $121,271 25. of unaudited accounts, $29,460 48. The whole amount of cost, $150,731 73. There has been expended the additional amount of $40,141 94 for camp equipage, which is now on hand and serviceable, the same being sufficient to supply 6,000 troops in active service.

This is a rather expensive sum ($190,873 67) to pay for 20 day's encampment of 6,000 men. In view of this great expense, Mr. Pierce introduced in the Senate (March 9), a bill to amend the Militia law. It provides for three annual parades—instead of encampments—at the discretion of the Government and repeals the provision allowing payment of expenses. In answer to inquiries why the pay allowed officers and soldiers for attending the encampment at Oakland, is not forthcoming, or has not been given them, it is stated: "There are two or three good reasons why no payment has been made, the most convincing of which is there is no money to pay with, and what is more, there will be none for months to come. Besides this very important reason, the Board of Examiners has not yet passed upon and allowed the claims; and if money was on hand, the Controller cannot draw a warrant on the Treasury for money to pay any account, unless such account has been passed by the Board."

As it is the easiest thing in the world to be mistaken; mankind should never form an adverse opinion of a person without such proof as places conviction beyond all doubt or question. Many an innocent bosom bleeds through the inhumanity of hasty conclusions.

The Great Sanitary Fair.

Woman, with her great heart, now speaks at the metropolis of the nation—we mean the great business metropolis of our Union, New York. Chicago instituted the first great fair, for the Sanitary Commission, and won by the noble charity the splendid sum of $60,000. Boston espoused the cause, made a magnificent demonstration and the result was *one hundred thousand dollars*. This was a noble and grand success, an honor to all connected therewith.

New York now speaks The metropolis of the Empire State throws down her gage and challenges the world. Her appeal has reached every part of the Union and found a ready response. Even here, on the gold shores, her appeal is responded to, and already liberal contributions are on the way. We learn that it will be in time to send by the next steamers, and the friends are called upon to make up their gifts and forward as directed; let the Pacific State be manifested by a liberal transmission of whatever will contribute to the cause. So great is the enthusiam that we do not doubt but that the New York Fair will realize *two hundred thousand dollars*.

In order that this noble effort, of the women of New York, may be properly appreciated and understood, we here give the Circular sent us and hope every heart and hand will contribute according to their several abilities, for all their gifts are for the patriotic soldiers, who suffer, bleed and die for their country. The Fair is expected to last over a month:

Metropolitan Fair, for the United States Sanitary Commission.

The Great Exhibition of 1850, in England, was called into being by Prince Albert, who invited all Nations to come together, and do honor to his Sovereign Queen and Lady, Victoria.

All the Nations of the Earth responded nobly to the call, and so well was the world represented, that it was called the World's Fair.

New York—herself a Queen—asks, in the name of a greater than Victoria—yes, in the name of Humanity—that her children come together with the works of their hands; the results of their enterprise; the achievments of their talents, and the flowers of their genius, to do her honor in a Great Exhibition, of Art, of industry, of Commerce, of American Prosperity. New York, the Queen City of the United States, presenting at this time of civil war, perhaps, the most remarkable spectacle the world ever saw, of energy, of prosperity, and of untiring benevolence,—stretching out her arms to the poor of all Nations; and, if they clog her thoroughfares too much, sending them on, by her own munificence, to the abounding prairies of the West. New York, sending thousands of her sons to the war; New York, building palaces for her children; New York, building ships for foreign navies; New York, untiring, undiscouraged, ever improving, never going back, calls eloquently to her sons and daughters to do her honor with a superb Fair—larger, as she is larger; richer as she is richer; more beautiful, as she is more beautiful, than aught which has preceded her in this great work.

She would beg of them all to do the work which is given them to do, with a spirit of love and patriotism, remembering no private grief, no unworthy animosities; remembering only those bleeding sons of the Republic, who threw themselves, in their youth and strength, into the yawning gulf which opened before them—hoping that, propitiated by such a sacrifice, it might close again—willing to die, or live maimed, and suffering, that a happy, a peaceful, and a united people, might again possess the fairest and most generous land which Providence has given to mankind.

The Fair is to be managed by a Committee of Twenty-five Ladies, aided and advised by an equal number of Gentlemen.

Mrs. Hamilton Fish.....*President.*
" David Lane.....*Vice President.*
" Ellen R. Strong.....*Treasurer.*
" John Sherwood.....*Secretary.*

Mrs. J. J. Astor,	Mrs. Sam'l B. Courtney,
" Marshall O. Roberts,	" Dr. Lieber,
Miss Leonora Jones,	" B. Nathan,
Mrs. Daniel Le Roy,	" Alfred Schermerhon,
" Richard M. Hunt,	" Alexand'r Hamilton,
" James F. Colgate,	" Jonthan Sturges,
" A. V. Stout,	" Frederick Billings,
" W. P. Fitzgerald,	" Ogden Hoffman,
Miss Catharine Hone,	" T. F. Meagher,
Mrs. General Dix,	" Dr. Buck,
" D. D. Field,	" W. H. Van Buren.

The ladies have obtained, through the generosity of Mr. Charles H. Russell, the house lately occupied by him, No. 2 Great Jones street, which they will use as a Receiving Depot. It is earnestly asked that all money be sent to Mrs. Ellen R. Strong, Treasurer, No. 2 Great Jones street, and all articles for the Fair, to the Receiving Depot where a receipt will be given for them. The Rooms will be opened on January 4th, 1864.

All communications to be addressed to Richard Grant White, Esq., Secretary of the Gentlemen's Committee, or to Mrs. John Sherwood, Secretary of the Ladies' Committee, at the Receiving Depot.

The Fair will commence EASTER MONDAY, March 28th, 1864.

☞ *Receiving Depot, No. 2, Great Jones street.*

The Water of the Dead Sea.—A French gentleman, M. Roux, publishes a paper on the composition of the waters of the Dead Sea,—showing that it contains about 9½ per cent of the chloride of magnesia, 6 per cent of chloride of sodium, 3 per cent of chloride of calcium, 1½ per cent of chloride of potassium, and traces of bromide of magnesium, sulphate of lime, oxide of iron, alumina, and 70½ per cent of pure water.

At New York, March 3, a public sale of California and Cape, wools was fairly attended, but lacked spirit. California ranged from 15½@ 45½ for unwashed; 60@64½ for washed.

How to Shoe Horses.

As MANY valuable animals are ruined by careless farriers, we give the folowing article, from the Irish Country Gentleman's Journal, in the hope that it will be the means of some reformation in this respect:

"To shoe horses with ordinary feet we would suggest the following directions to the farrier: With your drawing-knife take off from the ground surface of the crust as much as may present a month's growth. Remember that there is generally a far more rapid growth of horn at the toe than at either the heels or the quarters. More, therefore, will require to be taken off the toe than off other parts; in other words, shorten the toe. Be careful to make the heels level. Having lowered the crust to the necessary extent with the knife, smooth it down level with the rasp. Do this carefully and thoroughly. If a sharp edge be left, the crust will be apt to split and chip. The preparation of the foot is now complete. It remains to fit the shoe to the foot. Let the shoe be made with a narrow web (⅜ inch), or even width all round, except at the heels, flat toward the sole, and concave to the ground. Turn up the toe of the shoe on the horn of the anvil. The degree of the "turn-up" must be regulated by what you find necessary in each horse to make the wear nearly even all over the shoe. It will be found in practice that most horses take much about the same degree of "turn-up." Make five countersunk nail-holes in each shoe viz: three on the outside, and two on the inside. Make the anterior hole on each side immediately posterior to the "turn-up." Let the second and third holes on the outside divide evenly the remaining space on the heel. Let the second hole on the inside be opposite to the second hole on the outside. Let the nail-holes be punched coarse, *i. e.* nearly in the center of the web, brought out straight through to the other side. This may be done with safety where a good crust has been preserved. Fit the shoe accurately to the foot. It must be as large as the full unrasped crust, but no part must project beyond. The shoe must be continued completely round toward the heels, as far as the crust extends. The web must be narrowed at the heels, so that its inside edge may cover the line of the bars and no more. Slope off the heels of the shoe in the same direction as the heels of the crust, so as to prevent the possibility of their catching in the hind shoe. Select nails that will exactly fit and completely fill the nail-holes. Twist off the clenches as short and stubby as possible, and lay them down flat with the hammer, and let the pincers during this time be firmly pressed against the heads of the nails. The clenches are not to be filed either before or after turning down, nor is a ledge to be made in the crust to receive the clenches. For ordinary hind feet the pattern of shoe in common use is recommended, but with a clip on each side, immediately anterior to the first nail, instead of one only at the toe. This double clip keeps the shoe steadier in its place than the single. The web should be made somewhat wider at the toe than at other parts, in order to allow space for the thorough sloping of its inner edge. For reasons which have been already explained, the hind foot does not require to be shortened at the toe like the fore foot; but the other directions given above—namely, as regards lowering the crust, rounding its lower edge, accurately fitting without rasping, punching the nail-holes coarse, nailing and clinching, with the total absence of rasping, paring, opening the heels, cutting away the frog or bars, etc.—apply equally to hind as to fore feet. Six nails—viz: three on each side—are needed for the hind shoe. Without the third nail on the inside, shoes are apt to "twist" on the feet. The horse is now shod. Nothing more must be done for the sake of what is called appearance. The best iron only should be used for shoes. Good iron makes a light shoe wear as long as a heavier one of inferior metal.

Cultivation of Teasels.

There are two kinds of teasels says a writer in the Country Gentleman, which flourish in this county: the wild teasel, which is worthless, and a nuisance on the farm, and the *fuller's* teasel, *Dipsacus fullonum*, which is cultivated to a large extent in many localities, for the burs or prickly heads which the plants produce, which are used in the manufacture of flannel or woolen cloth, for the purpose of raising a nap on the surface of the cloth. These burs or teasel heads are provided with very fine, sharp hooks, which subserve a purpose in the manufacture of cloth which machinery could not accomplish. Teasels are biennial plants, or, in other words, it requires two years for them to come to maturity from the seed. A field of them presents the appearance of a field that has been abandoned to the growth of large bull thistles, and the first thought is, when we see a field of them, that they are a nuisance, and a disfiguring blotch on the farm.

On the farm of W. J. Townsend, Skaneateles, there were, when I visited his residence, some eighteen acres of teasels, and it was no uncommon occurance to see large fields of them in that locality; and the profit arising from the sale of the heads usually exceeds the amount which would be realized from a good crop of cereal grain.

The seed is usually sown in drills, so that the plants may be cultivated with a horse hoe; and as the plants can only be started the first year like the plants of a bull thistle, the seed is sometimes sowed in the rows of Indian corn, and the young plants cultivated with the corn. In some places in the county I perceived that the worms had about destroyed the corn, and the teasel seed had been planted, and was being cultivated instead of corn. In such cases the plants would become large and strong, and would yield a large crop of good heads the next season.

It is said that the teasel does not flourish luxuriantly on all kinds of soil, and that a clayey loam well cultivated, and in a good state of fertility, is best adapted to their growth. Where soil is too wet to raise winter wheat, and where red clover is liable to be lifted out by freezing and thawing in winter, the teasel plants will also be injured more or less, by being thrown out by frost.

The heads are cut at various intervals during the summer, according to the maturity of the blossoms, or about the time when the blossoms begin to fall from the heads. The heads are dried assorted, and packed in boxes for market. The largest and finest heads are called kings, which, command a superior price. The second quality are called middlings, and the unripe and inferior quality are denominated scrubs.

A ready market is usually found for the heads, and the assorting and packing can be performed at times when the labors of the field are not demanding the immediate attention of all the laborers.

Here is another consideration which is worthy of notice, which is, that a crop of teasels might be grown without exhausting the soil but little, as teasels will take up those substances from the soil which would not be taken up by those plants which produce cereal grain. Therefore, taking this view of the subject, we may raise a profitable crop from the soil, without injuring its fertility for a crop of Indian corn, wheat, oats or barley.

Cotton from Utah and the Lower Country.

The Los Angeles News, of February 17th, says: Some two weeks since a few bales of cotton, from Southern Utah, arrived at San Pedro, *en route* for San Francisco; during last week, as we learn from a citizen of Wilmington, thirteen mule teams and wagons, ladened with cotton from the above named locality, also arrived at our port for shipment. It is stated by those who have seen the article, that the Utah cotton is white, of fine texture, and generally of the character of the finest upland cotton of Texas, and other Atlantic States; and resembles the samples which have been raised in the vicinity of Los Angeles, by Messrs. Workman, Temple, Watson and Holt. The above exportation forms a new feature in our trade which is destined to increase, as we understand that a large quantity of the staple was raised in Utah last season; that enlarged preparation is being made for planting the present year. We find also, that many of our citizens are turning their attention to the culture of cotton; experiments thus far, have proved most successful. This section of California is well adapted to the growth of cotton, as experiment has shown, which must ere long become a leading commodity for shipment. The Colorado bottoms, as also thousands of acres of the "desert waste" lying between here and the Colorado river, are peculiarly well adapted to the growth of cotton; fields of which will eventually cover an area which is now known only as a desert. A cargo of cotton, like the one mentioned above, will, by its unexpected arrival in San Francisco, open the eyes of all—lead to almost endless inquiry. A large number of merchant-trains are yet to arrive here for their Spring supply of goods for the Utah trade, many of which may bring further instalments of cotton. The number of bales, in the above cargo, is one hundred and thirty-nine—weighing upwards of eleven thousand pounds; it was forwarded to San Francisco by Ransohoff & Bros.

The same paper in a later issue says: On Saturday last, H. D. Barrows, Esq., presented us with a fine sample of cotton grown on his place in the suburbs of town. It is pronounced by those who have lived in cotton-growing countries to be a fine specimen of that valuable article. As yet but little cotton has been sown but what has thrived most finely, showing, we should think, most unmistakably, that the staple can be raised in large quantities in Southern California. If cotton will grow in Utah in such abundance as to become an article of commerce, why will it not grow as well and better in our warm climate? Plant it extensively, some of you large landholders.

Fruit or Wood.

There are two principles in fruit trees; the growth of fruit and the growth of wood. It is the fruit-grower's business to attend to these and see that they are properly directed. It is in his power to divert the growth as he wishes. He has the reins of the sap, so to speak, in his hands. It is his business, when the tree is young, to grow all the wood he can. But when the time for bearing has come (and that may come early), he must give the reins a turn, and direct the work of the tree to growing fruit. To this end (as has already been frequently stated in this Journal) he is to pinch off the tips of his main shoots, of all the shoots, if he wishes a general and generous bearing. This will have a tendency to develop fruit spurs; the tree's attention is directed towards maternity. Next year there will be a prospect of fruit, if the thing is not prematurely done: a tree cannot bear before it is fit to bear.

Pear Stocks How to Handle them.

A New York Nurseryman experienced in handling pear stocks, gives the following advice:

"When pear stocks arrive, dig a trench about a foot deep and two feet wide. Heel stocks in the bottom of this trench, leaving a space of eight inches between top of earth in trench and surface of ground. Cover whole trench with boards and then earth to a suitable depth to keep from freezing. Soon as warm weather is like to come in spring, graft them, tying joint with flax or soft bass bark, and never let them dry in the least degree, using a short root and long clon, and planting out immediately in open ground.

"He also advises to plant pear stocks or grafts over trenches dug twenty inches deep, and a spade or so in width—the trenches being filled full of surface soil, made rich with rotten manure."

THE DATE.—There is no fruit that can be eaten so constantly, or with so much impunity, as the date. It is like bread, and is bread to whole nations of orientals. And what a delicious bread, baked by the sun, and showered in profusion upon the earth, to be gathered and laid up for the future, either dry or in huge corbels or pressed into a conserve, which, when cut into slices, looks and eats like plum pudding. Immense quantities of this conserve are exported from Egypt and Arabia into all the neighboring countries, where it is much prized, especially in the harems, where the women and children may almost be said to eat it incessantly.

MINERALOGY.

[Continued from California Farmer of March 4th, 1864.]

Rocks.

GRANITE.—SYENITE.

Granite consists of the three minerals, quartz, feldspar, and mica. It has a crystalline granular structure, and usually a grayish-white, gray, or flesh-red color, the shade varying with the color of the constituent minerals. When it contains hornblende in place of mica, it is called *syenite*; hornblende resembles mica in these rocks but the laminæ separate much less easily and are brittle.

Granite is said to be *micaceous*, *feldspathic*, or *quartzose*, according as the *mica*, *feldspar*, or *quartz*, predominates.

It is called *porphyritic* granite, when the feldspar is in large crystals, and appears over a worn surface like thickly scattered white blotches, often rectangular in shape.

Graphic granite has an appearance of small oriental characters over the surface, owing to the angular arrangement of the quartz in the feldspar, or of the feldspar in the quartz.

When the mica of the granite is wanting, it is then a granular mixture of feldspar and quartz, called *granulite* or *leptynite*.

When the feldspar is replaced by albite, it is called *albite* granite. The albite is usually white, but otherwise resembles feldspar.

Granite is the usual rock for veins of tin ore. It contains also workable veins of pyritous, vitreous, and gray, copper ore, of galena or lead ore, of zinc blende, of specular and magnetic iron ore, besides ores of antimony, cobalt, nickel, uranium, arsenic, titanium, bismuth, tungsten, and silver, with rarely a trace of mercury. The rare cerium and yttria minerals are found in granite, and most frequently in albitic granite. It also contains emerald, topaz, corundum, zircon, fluor spar, garnet, tourmaline, pyroxene, hornblende, epidote, and many other species.

Granite is one of the most valuable materials for building. The quality of rock selected for this purpose, should be fine and even in texture, as the coarser varieties are less durable; it should especially be pure from pyrites or any ore of iron, which on exposure to the weather will rust and destroy, as well as deface, the stone. The only certain evidence of durability, must be learned from examining the rock in its native beds; for some handsome granites which have every appearance of durability, decompose rapidly from some cause not fully understood. The more feldspathic are less enduring than the quartzose, and the syenitic (or hornblendic) variety more durable than proper granite itself. The rock, after removal from the quarry, hardens somewhat, and is less easily worked than when first quarried out.

Massachusetts is properly the granite state of the Union. New Hampshire and Maine also afford a good material. The Quincy quarries in Massachusetts, south of Boston, have for many years been celebrated. Besides this locality, there are others in the eastern part of this State, between Cape Ann and Salem, in Gloucester, at Fall River, in Troy, in Danvers; also south between Quincy and Rhode Island, where it is wrought in many places, as well as in Rhode Island, even to Providence. The so-called Chelmsford granite comes from Westford and Tyngsborough, beyond Lowell, and an excellent variety is obtained at Pelham, a short distance north in New Hampshire. Masses 60 feet in length are obtained at several of the quarries. They are worked into columns for buildings, many fine examples of which are common in Boston, New York, and other cities.

Good granite is also quarried in Waterford, Greenwich, and elsewhere, in Connecticut.

The granite is detached in blocks by drilling a series of holes, one every few inches, to a depth of three inches and then driving in wedges of iron between steel cheeks. In this manner masses of any size are split out. There is a choice of direction, as the granite has certain directions of easiest fracture. Masses are often got out in long narrow strips, a foot wide, for fence posts. The granite in a rough state brings 12 to 15 cents the superficial foot; ordinary hewn granite 20 to 40 cents the foot; worked into columns 50 cents to 1 dollar the foot, according to the size.

Granite is also used for paving, in small rectangular blocks neatly fitted together, as in London and in some parts of New York and other cities. The feldspathic granite is of great value in the manufacture of porcelain.

Granite was much used by the ancients, especially the Egyptians, where are obelisks that have stood the weather for 3000 years.

GNEISS.

Gneiss has the same constitution as granite, but the mica is more in layers, and the rock has therefore a stratified appearance. It generally breaks out in slabs a few inches to a foot thick. It is hence much used both as a building material and for flagging walks. The quarries in the vicinity of Haddam, Conn., on the Connecticut river, are very extensively opened, and a large amount of stone is annually taken out and exported to the Atlantic cities, even as far as New Orleans. There are also quarries at Lebanon and other places, in Connecticut; at Wilbraham, Milbury, Monson, and many other places in Massachusetts.

MICA SLATE.

Mica slate has the constitution of gneiss, but is thin slaty, and breaks with a glistening or shining surface, owing to the large proportion of mica, upon which its foliated structure depends. Gray or silvery-gray is a common color.

The thin even slabs of the more compact varieties of mica slate are much used for flagging, and hearth stones; also for lining furnaces. The finer arenaceous varieties make good *scythe stones*.

It is quarried extensively of fine quality, in large even slabs, at Bolton in Connecticut; also in the range passing through Goshen and Chesterfield, Mass. It is worked into whetstones in Enfield, Norwich, and Bellingham, Mass., and extensively at Woonsocket Hill, Smithfield, R. I. The south part of Chester, Vt., affords a slate like that of Bolton. Mica slate is used at Salisbury, Conn., for the inner wall of the iron furnace.

Hornblende slate resembles mica slate, but has not as glistening a lustre, and seldom breaks into as thin slabs. It is more tough than mica slate, and is an excellent material for flagging.

TALCOSE SLATE.—TALCOSE ROCK.

Talcose slate resembles mica slate, but has a more greasy feel, owing to its containing talc instead of mica. It is usually light gray or dark grayish-brown. It breaks into thin slabs, but is generally rather brittle, yet it often makes good fire-stones.

A talcose slate in Stockbridge, Vt., is worked for scythe stones and hones, and is of excellent quality for this purpose.

Talcose rock is a kind of quartzose granite, containing more or less talc, and often quite compact. It is usually very much intersected by veins of white quartz. Much of it contains chlorite (an olive-green mineral) in place of talc, here and there disseminated and there is a *chlorite slate*, of a dark green color, similar in general characters to talcose slate. Talcose rock passes in to a flinty quartz rock.

The talcose rocks are to a great extent the gold rocks of the world, especially the quartzose veins, as mentioned under Gold. It contains the topaz of Brazil, and also euclase, and many other minerals.

STEATITE OR SOAPSTONE.

Steatite is a soft stone, easily cut by the knife and greasy in its feel. Its color is usually grayish-green; but when smooth and varnished it becomes dark olive-green. It occurs in beds, associated generally with talcose slate.

Owing to the facility with which soapstone is worked, and its refractory nature, it is cut into slabs for fire stones and other purposes, as stated. The powder is employed for diminishing friction, and for mixing with black lead in the manufacture of crucibles. It is also used as observed by Dr. C. T. Jackson, for the sizing rollers in cotton factories, one of which is 4½ feet long and 5 to 6 inches in diameter. The most valuable quarries in Massachusetts are at Middlefield, Windsor, Blanford, Andover, and Chester; in Vermont, at Windham and Grafton; in New Hampshire, at Francestown and Oxford; in Orange county, North Carolina. The Francestown soapstone sells at Boston at from $36 to $42 the ton, or from $3 to $3 50 the cubic foot.

Steatite often contains disseminated crystals of magnesian carbonate of lime, dolomite and brown spar; also crystals of pyrites and actinolite.

Uses. Steatite may be sawn into slabs and turned in a lathe. It is used for fire-stones in furnaces and stoves, and for jambs for fire-places. It receives a polish after being heated, and has then a deep olive-green color. It is bored out for conveying water, in place of lead tubes. Steatite is also used in the manufacture of porcelain; it makes the biscuit semi-transparent, but brittle and apt to break with slight changes of heat. It forms a polishing material for serpentine alabaster and glass; and removes grease spots from cloth. When ground up, it is employed for diminishing the friction of machinery. Potstone is worked into vessels for culinary purposes, at Como in Lombardy.

Potstone is a compact steatite. Rensselaerite is another compact variety, found in Jefferson and St. Lawrence counties, N. Y., and used for inkstands.

SERPENTINE.

This dark-green rock is usually associated with talcose rocks and often also with granular limestones. It often contains disseminated a foliated green variety of hornblende called diallage. A compound rock consisting of diallage and feldspar, has been called *diallage rock* or *euphotide*.

Uses. Serpentine forms a handsome marble when polished, especially when mixed with limestone, constituting *verd-antique* marble. Its colors are often beautifully clouded, and it is much sought for, as a material for tables, jambs for fire-places, and ornamental in-door work. Exposed to the weather it wears uneven, and soon loses its polish. Chromic iron is usually disseminated through it, and increases the variety of its shades. Dr. C. T. Jackson of Boston has lately shown that Epsom salts (sulphate of magnesia) may be profitably manufactured from serpentine.

[TO BE CONTINUED.]

Opinions of Professors of Music on Jacob Zech's Pianos.

SAN FRANCISCO, December 29, 1863.

JACOB ZECH, ESQ:

Dear Sir: We, the undersigned, musicians of the City of San Francisco, do hereby give our unbiased opinion as to the workmanship, purity, power, and brilliancy of tone, and perfectness and durability of action, of the Grand Piano manufactured and exhibited by you. We have no hesitation in pronouncing them far superior to any piano, ever placed before us for inspection. At the late exhibition of the State Agricultural Society, the Committee saw fit to denounce your instrument and award the first prize for an inferior *square piano*, which we pronounce a great injustice to you, and we do hereby give our names, and warrant your pianos to be superior to any in the State. With the greatest esteem, and the most fervent desire for your success, and a wish that the people of California may give you justice, and not be controlled by money or the opinion of any body of men who are not qualified to judge of the merits of a Piano.

We are truly yours, etc,

R. HEROLD, Professor of Music,
GEO. T. EVANS, Pianist and Organist,
GEO. F. PETTINOS, Pianist and Organist,
LOUIS SCHMIDT, Pianist and Organist,
CHAS. STADERMAN, Pianist,
STEPHEN W. LEACH, Artist,
L. T. PLANEL, Professor of Music,
A. LAPPGER, Pianist,
ALBERT STOHR, Musician,
JOSEPH B. SCHMITZ, Musician,
EMILE TOUSSIN, Pianist,
CHAS. SCHULTZ, Pianist and Organist,
J. D. KNELL, Pianist, and Organist at Cathedral,
H. HOLZHAUER, Pianist,
WM. CROOKER, Pianist.

Letter to Jacob Zech.

[The following notice of my Pianos was received by me from the gentlemen named, professors of music at Sacramento, and approving, in very flattering terms, my instrument.—J. ZECH.]

Your Grand Piano was an excellent and beautiful instrument, full and rich and tone, in with all the excellencies that are desired in a Grand Piano.

Your Square Piano was one of extraordinary excellence, and beyond question the best an exhibition, having a full and powerful tone, yet, with that soft and delicate expression so desirable to an artistic ear. We feel gratified to know of your success in this art, and hope your efforts will be duly appreciated.

Wishing you all success, we are your friends,
CHARLES WINTER, Pianist,
CHAS. STADDERMAN, Pianist.
CHRISTIAN STATFIELD, Pianist,
GEORGE GREINER, Piano Maker.

SACRAMENTO, October 6th, 1863. 21-3m

SEEDS,

NO. 408 CALIFORNIA STREET

Old Number 110,

Between Sansome and Montgomery streets,

SAN FRANCISCO, CAL.

THE UNDERSIGNED HAS ESTABLISHED STE a correspondence and business in Europe as to en him to secure from the very best source—the most su ful growers—their choicest seeds grown, of which h always be in receipt, and in endless variety, impo directly from France and England, from well known responsible houses; some of the most prominent n named in our catalogues.

It has been the experience of our best gardeners a growers, and all others who plant seed, that seeds rai in California are not fully reliable and cannot be fo series of year, until more capital, experience and sci tific knowledge shall be given to the business.

HAS FOR SALE

Alfalfa or Chile Clover; Hungarian Grass;
Kentucky Blue-grass; Orchard Grass;
Red-top Grass; Sainfoin Grass;
English Rye-grass, Timothy Grass;
Red Clover; White Dutch Clover,
Crimson Clover, Lucerne, &c. &c. &c.

With many entire new varieties of Gra Seeds and prepared Lawn Grasses never before offered.

EVERY VARIETY OF

BEET, CABBAGE, CARROT, RADISH, TURNI CUCUMBER, MELONS, LETTUCE, ONIONS, TOMATO, EARLY AND LATE PEAS, BEANS, &c., &c., &c.

Tobacco Seed.

HAVANA, VIRGINIA, CONNECTICUT SEED LEAF, AND MARYLAND TOBACCO SEED.

COTTON SEED.

Guano from Johnston's Island.

FLOWER SEEDS (300 Varieties

BULBS:

LILIES, Amaryllis, Narcissus,
TULIPS, Anemones, Tuberose, Gladiolus,
HYACINTHS, Ranunculus, Peony-roots, Iris,

and in endless variety, imported direct from FRAN and GERMANY.

From his long experience in the Seed Business (o thirteen years), and his very extensive stock of go appertaining to an establishment of this kind, he is c fident of his ability to satisfy his patrons.

California Notes,

ABOUT

GRASSHOPPERS AND LOCUSTS.—No. 5

BY ALEX. S. TAYLOR.

SECOND SERIES.

Continued from the California Farmer of March 4, 1864.

The California Grasshopper in 1861.

THE UNION OF THE SEXES, BREEDING, AND FAMILY ECONOMY.

The mature female, in most of the many specimens noted, is full one-third larger and longer than the male, but its other etceteras are the same in both sexes. It begins to lay from the first of March, and continues at this office till the first week of June. The functions of love and maternity are principally developed in the heat of the day, from 10 to 3 o'clock, and during the hottest, dryest days of April, May, and June, when their animal developments are rapidly eliminated. The union of the sexes is after the same manner as we see every day, in male and female fowls and duck and drake, and is completed from thirty to forty minutes, when *macho* and *hembra* will struggle to disjoin by jumping and pulling, and hauling tail from tail, in a state of great desperation till they separate. Before the union the eggs of the female seem to be in a crude, grainey, orange-colored mass, but after a day or two, the eggs become full formed, of the size of a canary seed, straw colored and are easily pressed out with a small stick. They number eighteen, and are ejected one by one in a stringy mass, in a white, glutinous spume, and arranged by the female in the form of a pea, all upright, inside of the gummy substance as an envelop. The eggs are laid in a perfectly round hole in the hard ground of the diameter of a pea, and at the depth of a full inch in the earth, generally at the roots of grass or in cracks in the soil. It is not known if the same female lays more than once in the same season, or if they keep breeding, hatching, and perfecting within the 120 days of their general appearance or periodical visitations. They do not appear in such hosts every year, but at spaces of from five to ten years. Some years they only make their appearance in small numbers and do no damage, and so diminish annually, and then begin again and increase in one place more and more every year, and then thin off again, year by year. The eggs, however, begin to bring forth early in February and March of each year, and the animal's existence, in this country, is nearly all by the 4th of July.

Each egg has its shell or skin inclosing the germinating fluid, which is burst by the grub at its birth. When the egg is left in the ground two or three days, it turns to an orange-red color, and it quickly dries, in the air or sun, as hard as grains of wheat in the milk. When ready to deposit its eggs, the female will weigh from 12 to 16 grains, and is then very fat—before impregnation it will weigh from 8 to 10 grains. The eggs, when fresh, will weigh three grains in the mass, when dry they are of half weight and size, and can be easily separated, dry or moist, as was observed in numerous instances. When about depositing its eggs, the female makes a hole in the ground with its feet and tail, and when ready to drop the eggs, it will insert the end of the tail in the nest and gradually elongates the abdomen to twice its usual length. Three, four, or six males (or smaller grasshoppers) will then mount the female and assist the process of expulsion by pressing and rubbing the abdomen of the struggling mother with their tails, when after working for some 30 to 60 minutes the eggs will be all dropped into the hole, which is then seemingly covered up, as I have noticed but three or four of them open. Their breeding places, or crederas, are generally in a hot, dry place of hard earth; they will commence, apparently, from a common center, and spread out into a *colony* of the diameter of from twenty to a hundred yards, when they will thin off at the circumferences till they meet the frontiers of other breeding colonies, until their *squattarias*, or *rancherias*, will cover the face of a whole district of country, as has been the case to June 1861 in all the coast land of the length of Santa Barbara county. After laying its eggs, the female *seems* to die in from 30 to 50 hours. We saw several instances of the union of the sexes before *either of them* had their wings developed (25 May), and the males and females full fledged were often found of half size. From the first to the thirtieth of May seems to be the busiest time in the laying of their eggs. The eggs fill the abdomen of the female from the thorax to the tail when in the act of depositing, and all birds then feed on them and their eggs; besides sheep, horses, pigs, chickens, ducks, turkeys, sea-gulls, and when blown into fresh or salt water, the fish snap at them greedily.

At the breeding season, many species of the ichneumon-fly family appear, and are always to be found among them, and are said to lay their eggs in the ovary of the grasshopper, and its grub will generate there until they are born, eating out the fat paunches of the luckless locusts. These ichneumons of several species, have been very abundant this year. Sea-gulls will sometimes arrive in immense flocks at the egg season, making great slaughter of them, snapping them up greedily and then spitting them out. They, no doubt, bite out only the eggs. It is yet to be proved in a season of their general visitation, whether the female does not lay several times in the 120 days of its life, or if immense numbers of the eggs laid within the 120 successively hot days (10 to 3 o'clock), are not in continual process of metamorphosis from the grub to the full fledged, which, as stated before, is effected from 20 to 30 days, according to exposure and temperature. At any rate, very few defunct ones are seen *naturally dead* until after the 15th of May.

THE APPEARANCE, STRENGTH, MOTIONS, FEEDING, ETC.

After emergence from the grub, their general appearance assimilates in aspect till they are full fledged. Before the wings appear they are all saltones or jumpers. Before fledging they are mostly of a buff reddish brown, but their colors are rapidly changed by heat, food, age, and exposure, to all shades of yellow and brown, and in all stages from infancy to maturity. The young are precisely like the perfect insect, but without the wings. When winged, he is like an armed warrior of the crusades, his head and mouth covered with plates of mail, his throat with a jacket of mail; he has four wings, two outside of buff umber, and strong, and two inside of gossamer, of sulphur yellow, with a black fringe at the extremities. When flying, he spreads all wings and moves rapidly, and usually with his legs folded to his sides though not always. The plates which cover his head are hard scales of armor, moveable in all its parts, but the jacket of mail, which is also a crustaceous covering from the top over the throat, is an entire triangular piece. The mouth is armed with two forcep-like teeth immediately it leaves the grub; the mouth seems to be armed with four or more feelers which appear to answer as tongues in bringing the food to the teeth. The throat is furnished with two arms on each side; the eye is round, black, of the size of a pin's head, and similar to that of a bee, and can probably see on all sides. From near the eyes, proceed two upright antennæ, or horns, which seem to answer as nose and ears. The four throat legs, and the mouth feelers, appear designed as much for feeding, as for assisting the hind legs in creeping, standing, hanging, tugging, pulling, hauling, jumping, or fighting each other—for they are as bellicose, spiteful, and cruel as the Greeks and Arabs, and of a pattern of ruffian temper of the renegade boys of Bowery, Plugugles, Hoosiers, Texans, and Mexicans, such as we have seen every day in California since the golden epoch, and as murderous as the hosts of Syria, from the time of Abraham to Napoleon the Third. The hind legs are an inch long, with a thick, club-shaped thigh, long shanks armed with spines or teeth like a saw, and a bent foot armed with two hook-like claws, or toes. These hind legs are as long as the entire body, and possess great vitality and elasticity. At maturity, their strength is considerable, and we made one pull a piece of paper and string weighing 33 grains.

The abdomen is formed of rings, and will draw in together like a telescope. The animal seems to chew the cud in movement like the goat, and it may have more than one stomach like the ruminating animals. In the process of laying, the abdomen becomes very flexible and soft. In many instances observed, we could discern no signs of an oriposition, but it expels the eggs immediately at the terminus of the egg sack at the upper part of the tail. Its tail is armed with two upper and two lower black points, which are most likely used in assisting the female to lay its eggs, and in the female as a fulcrum and digger in making its hole to deposit its eggs.

THE TEETH AND JAWS.

These are formidable weapons in the locust, and enable it, at times, to completely devastate all the growing crops of immense districts of country. In the act of eating, the teeth and jaws move, like those of the goat, with a half-rotatory motion. The teeth are two separate, moveable, polished, hard, black forceps, serrated on the edges and concave inside, like the nipping end of a dentist's forceps. With these they can gnaw, gouge, dig, saw, bite, grind, or file. The forceps in form of a jaw, is full one-sixteenth of an inch long. They eat green food very rapidly, digest it very quick, and expel it plentifully, in pellets of the shape of rice grains, the integra of which is in a comminuted state, like that of a sheep or a goat. When feeding on succulent plants, their droppings will cumber the ground as thick as that of goats, and when eating dry food the earth will be covered as with the black grains of ergot or spurred rye.

If the locust is dropped into hot water, spirits, or salt water, it turns red. After depositing its eggs, the female becomes very lean, and in a day or two (as seems) it dies. The fact of how many hours or days it goes impregnated before laying, or how long it lives after the eggs are dropped, and of the *precise time* necessarily fixed between the different stages of its metamorphosis and developments, to death, are still in obscurity, as items of scientific acquisition.

A FIFTY THOUSAND DOLLAR REWARD.—In 1858, says the Alta, a gentleman walking on the outer end of Meiggs' wharf had his hat blown off his head by a summer afternoon gust of wind, and in trying to catch it before it went overboard, he tripped on the planking and tumbled head foremost into the waters of the Bay. The tide was running a strong flood at the time, and as he came up to the surface, Special Officer Van Ness, who happened to be on the dock at the time, and seeing the man was in danger of drowning—not being a swimmer—plunged in after him, and rescued him from death. This was not accomplished without great peril to the officer; but both men succeeded in being landed on the dock. The rescued man gave the officer his name as Charles Bernard Egerson, and offered to handsomely reward him, but Mr. Van Ness refused to accept anything for his humane act. A short time since, Mr. Egerson died in Liverpool, and left Officer Van Ness a legacy of $50,000.

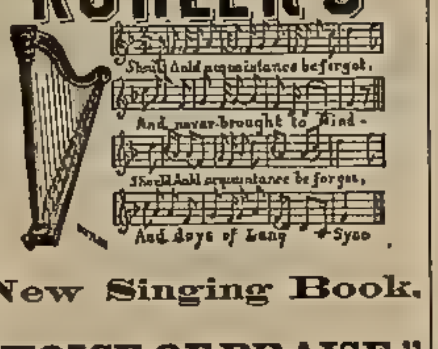
The Piano Question Again.

Letter of Jacob Zech in Answer to Mr. I. N. Hoag, S. S. A. S.

I wish to say that every letter of this gentleman (Mr. Hoag), gives me positive evidence that the affair, of *defrauding* me of the first premium, at the late State Fair at Sacramento, was made up.

1. When the committee came up to examine the pianos, I asked the Rev. Mr. Starr King whether the said committee would look at the mechanism and interior construction of my instruments, as I would take them apart for their examination, and put them together again to be tried. Rev. Mr. Starr King answered that it was not necessary, as he himself was notified only an hour previous, and that he would not act on said committee, because he did not understand anything about pianos, and would like to do justice to every person; yet his name is used on the committee, with what right I do not know; for, if Mr. King did not sign his name to the Report, there would have been only two judges, and their Report of course not complete.



2. When, at the close of the Fair, the list of awards was read at the Pavilion, nothing of a "liberal special diploma" to Jacob Zech was said or heard by any one. Nay, more, the printed list of awards have nothing of it! How can it therefore, be otherwise than a made-up case by the Society?

3. On the 3d and 23d Oct., I published a letter or card, in the papers of Sacramento and of this city, stating the wrong that was done to me. Mr. I. N. Hoag, S. S. A. S., had not a word to say. To my formal protest to the President of the Society, of late date, published in the FARMER, said gentleman answered, that a 'special diploma" was ready for me. Now, in his letter of Jan. 6th, he says, that a "liberal special diploma" was awarded to me. All I demand is justice, not favors. I shall not accept a special diploma. That would be admitting my unworthiness of the first premium. The Society say a Grand Piano is not on the Schedule, and consequently ruled out. I ask the Secretary, is not a Grand Piano a Pianoforte? and why do the Board of Officers not accept my offer, made Dec. 18th, if they wish to do me justice? I will submit my Square Piano again before a committee of musicians, against the same Piano to which they awarded the premiums, and leave the result to their decision as a final test.

As for the proposition which Mr. Hoag makes, for the next State Fair, I must say that, for my part, I had enough of their justice, at the State Fair at Sacramento, the past year, and, unless they manage differently, I will leave it to others to exhibit there in future, and be similarly wronged, if they so desire. JACOB ZECH.

SAN FRANCISCO, Jan. 14th, 1864.

BUCKEYE MOWER.

To Farmers:

WE, WITH GREAT CONFIDENCE OFFER THE BUCKEYE MACHINE, for this reason: knowing it to be Superior to any MOWER for sale, and that it will sustain the reputation it has made for the past THREE YEARS in surpassing any other Mower in the following respects:

Being better Made; much Stronger and more Durable; will Run lighter, Cut much closer with greater ease to the team, and no side draught.

We can bring twenty Farmers to say the Buckeye is SUPERIOR to any Mower, to one who can be found prejudiced against it.

The BUCKEYE MOWERS are of two sizes, cutting 4 feet, and 4 feet 6 inches.

The "Buckeye" as a Reaper.

The important advantages which belong to the BUCKEYE as a Mower are retained in the REAPER, and can be used either as a Mower or Reaper by attaching the Platform and Reel.

Though importing largely of them, we have been unable, for two years, to supply the demand.

They are better adapted to the wants of California Farmers than any Combined Machine for sale. It will adapt itself to every surface of ground, will run lighter and deliver its grain easier and better than any other Reaper. The Reaper's seat is directly over the axle of the Machine, instead of being on the Platform where it adds greatly to the draught.

HORACE WATERS, Ag't, No. 481 Broadway, N. Y

THE DAY SCHOOL BELL.

40,000 copies issued. A new Singing Book for Schools and Seminaries, called the Day-School Bell, is now ready. It contains about 200 choice songs, rounds, duets, trios, quartettes, and choruses, many of them written expressly for this work, besides 32 pages of the Elements of Music, which are easy and progressive.

Among the large number of beautiful pieces may be found, "Uncle Sam's School," "Don't you hear the children coming," "Always look on the sunny side," "The little lass," and "Little Lad," "Oh, if I were a little bird," "Bird of beauty," "Pretty pair tree," "Anvil Chorus," "Meet me by the running brook," etc. It is compiled by Horace Waters, author of "Sabbath School Bell," Nos. 1 and 2, which have had the enormous sales of 825,000 copies. Prices—paper covers, 25 cents, $20 per 100; bound 30 cents, $25 per 100; cloth bound, embossed gilt, 40 cents, $35 per 100. 25 copies furnished at the 100 price. Mailed at the retail price.

SABBATH SCHOOL BELL, NO. 1,

contains 144 pages, and nearly 200 tunes and hymns, and is the most popular S. S. Book ever issued. Among the most popular pieces are "Kind Words," "Edon Above," "Christian Hero," "Beautiful Zion," "I ought to love my Mother," "The Angels told me so," "In the Light," "Rest for the Weary, etc. Prices—paper covers, 20 cents each, $15 per 100, bound 25 cents, $20 per 100; clothbound, embossed gilt, 30 cents, $25 per 100.

SABBATH SCHOOL BELL, NO. 2,

is an entire new work of 192 pages, and nearly two hundred and twenty-five tunes and hymns. One million of these Bells have been issued and are now ringing through this and other countries. Among the many choice pieces may be found, "Shall we meet beyond the River?" "There is a Beautiful World," "Sorrow shall come again no more," "Don't you hear the Angels coming?" "Thou, God, seest me," "Sabbath Bells chime on," etc. Prices of Bell No. 2, are same as Bell No. 1. Both numbers can be obtained in one volume, price, bound copy, 40 cents, $35 per 100; cloth bound, embossed gilt, 50 cents, $45 per 100. 25 copies furnished at the 100 prices. Mailed at the retail price.

WATER'S CHORAL HARP.

A new Sunday School Book of 160 pages of beautiful hymns and tunes. It contains many gems, such as "Shall we know each other there?" "Suffer little children to come unto me," "The Beautiful Shore," "Oh, 'tis glorious," "Leave me with my mother," "He leadeth me beside still waters," etc. Price, papers covers, 20 cents; $15 per 100. Bound, 25 cents, $20 per 100 Cloth bound, embossed gilt 35 cents, $30 per 100 Mailed at the retail price. It is edited by HORACE WATERS, author of "Sunday School Bells," Nos 1 and 2, which have had the enormous sale of over 800,000 copies.

Just published by HORACE WATERS, No. 481 Broadway, New York.

THE NEW PATRIOTIC SONG BOOK

contains 96 pages of songs, ducts, and choruses, both sacred and secular, including 14 pages of prayers for sick and dying soldiers, and soldiers' Scripture Manual. It is well suited for social singing, as well as Sabbath worship. Among the many beautiful pieces may be found, "Where liberty dwells is my country," "The Christian Hero," "Three cheers for our Banner," "Come sing to me of Heaven," Columbia, the Gem of the Ocean," "Freeman's Gathering," "Columbia's King forever," "Marching Along," etc Prices—paper covers, cents, $10 per 100. Mailed at retail prices.

THE HARP OF FREEDOM

contains 39 pages of songs, ducts, and choruses for Freedom. Among the choice pieces we would name, "Fair Freedom's morn," "O let my people go," "Over the mountain," "They worked me all the day," etc. Price 5 cents single, 50 cents per dozen, $3 per 100; postage 1 cent each.

RUTH: A SACRED CANTATA

contains 126 pages. Words by Rev. Sidney Dyer, music by Prof. Cull. This is an excellent book for concerts for the young. Prices—paper covers, 20 cents, $15 per 100; bound 25 cents, $20 per 100.

THE REVIVAL MUSIC BOOK

contains 73 pages of tunes and hymns, designed for revival, prayer, and conference meetings. Price in paper covers single copies 10 cents, $8 per 100. Mailed at the retail price

THE ATHENÆUM COLLECTION

contains 512 pages of tunes and hymns, new and old of the choicest kinds, for church, Sunday school, revival, missionary, temperance, prayer, and conference, and all kinds of sacred and social meetings. The music in this book has life and animation in it, like "Shining Shore," "Rest for the Weary," "Shall we know each other there?" "Shall we meet beyond the River?" "There is a Beautiful World," "Kind Words," "Sweet Hour of Prayer," "There is a Land of Love," "Suffer little children to come unto me," "God save the Nation," etc. Prices—single copies, bound, 65 cents, $55 per 100; cloth bound, embossed gilt, 75 cents, $65 per 100 Mailed at the retail price.

HORACE WATERS, Ag't 481 Broadway, New York,

Publisher of the above Books.

The California Farmer.

SAN FRANCISCO:

THURSDAY ..... MARCH 11, 1864.

☞ Those who receive a number of the Farmer with this paragraph marked, may understand that it is sent to them for their examination, hoping it will meet their approval and induce them to subscribe, and ask their neighbors to do so.

Postmasters and others, who may receive the paper, will oblige us by soliciting subscriptions, or putting it in the hands of those that will. Subscriptions may commence at any time.

Send for Sample Papers and get up a club. Address, Publisher California Farmer, San Francisco.

THE CALIFORNIA FARMER READING-ROOM AND MUSEUM OF NATURAL HISTORY.

320 Clay street—Marble Building—Up Stairs.

The Farmer's Headquarters.

The Editorial Rooms and Museum of the Farmer Office are always open, and an attendant ready to make a visit instructive to those who take an interest in the productions of our State. Samples of all productions: grains, grasses, fruits, models, inventions, minerals, and specimens in Natural History innumerable, are constantly being added.

Farmer's Reading-room.

Farmers and Mechanics, from the country, who visit San Francisco, should visit the Free Reading-room and Museum, at the Farmer Office. Members of the Press, and Strangers, are particularly invited to avail themselves of these rooms. Newspapers from every State to which we have access by mails, as well as Foreign Newspapers, Periodicals, and Magazines, are upon file and on the tables for use. A Good Library of hundreds of volumes, with works illustrative of Agriculture, Horticulture, and Floriculture, works for reference upon all Sciences, with a Cabinet of Minerals, Coins, and Curiosities of interest to the Naturalist, to which we invite all.

Immigration Office.

New comers to California can always obtain all needed information about Lands, Farms, etc, at the Farmer's Reading room, 320 Clay street. Most cheerfully we bid all welcome to our Sanctum.

ARTICLES RECEIVED AT THE CALIFORNIA FARMER EXHIBITION ROOMS, No. 320 Clay Street.

We are indebted to D. J. West, Esq., of Antioch, for a handsome large specimen of *Petrified Wood*, taken from the Teutonia Coal Mines, at Monte Diablo, being the out-croppings, 75 feet below the surface good coal is found; the specimen is very curious, yet a fine one.

We have received the Annual Report of the Superintendent of Public Instruction of the State, by John Swett, Esq. This is one of the most valuable documents yet issued in our State, and must awaken a new and deeper interest in the cause. The statistical tables are of great moment, from which we make extracts.

The Downieville Fire.—We see by the letter sent by our friend Langton, from Downeville, that the fire has not burned out the energies of the citizens, and never can. We are glad to see them rise again like the "Phenix from the ashes."

Downieville, March 3d, 1864.

Our town is again in ashes, all the business portion of the town, together with many private residences on the hill sides, supposed to be out of danger. The fire commenced about 7 o'clock on the evening of the 27th of February, and for some time after it broke out, everybody seemed confident that the Fire Companies would subdue and confine it to one or two buildings, or at least to one side of the street; but a heavy wind sprang up, and so rapid was the progress of the flames, that very few articles were saved. Everybody supposed that the residence of S. W. Langton was a safe place, and quantities of valuable goods were sent up there and all consumed, the family not even saving their clothing. The great heat of Asher's Lumber Yard, the Livery Stable and Odd Fellows' Hall, set fire to the Roman Catholic Church, which was entirely destroyed, together with the Parsonage. The building was not a very good one. I understand they will build again, soon, and as they are a wealthy institution, I hope they will build handsomely. It was the pioneer Church of the place, commenced in 1852 by the Methodists, and afterwards sold for debt.

Many of the fruit-trees were destroyed. We do not look for much fruit up here, this year, as we have peach-trees in bloom, and if this fine weather continues much longer, other kinds will be destroyed by frost.

The town will be built up again pretty well during the summer, although it seems discouraging to build again the third time in 12 years.

Herewith the Standard, printed on Adams' Cottage Press, containing a list of losses, etc.

Ossian E. Dodge, Esq.

We had the pleasure of a call from this gentleman, this morning, and we gladly welcome him to our shores. We need something new *to stir us up*, we have had nothing but *earthquakes* lately and they are getting to be *common* affairs, so that people dont mind them; when they come, people that live in four-story houses can *Dodge earthquakes*, i. e., if they don't shake the buildings down before they leave it. But our friend Ossian E. Dodge intends to *Dodge right into the affections of the people*, and stir them up with many thoughts. We extend the hand of welcome, to our friend. Mr. Dodge is one of the regular correspondents of the Saturday Evening Express, Boston, Mass., Sunday Mercury, N. Y., Daily Herald, Cleveland, O., and other papers, and hope he will so report our good State as to win thousands to our shores.

London Art Union.—By the notice of G. H. Bell, Esq, on Washington street, the agent of the Union, it will be seen that there is still a little time to secure membership to the Art Union and thus secure chances to the distribution of the splendid prizes of this association. Every member is sure of one superb engraving, as this is secured to every member first, and they may draw a painting worth $1,000. Book and catalogues can be had of G. H. Bell, who will explain. But little time is left, and all who wish should call at once.

Josiah Johnson was re-elected "Trustee" in Sacramento, by a decided majority over his opponent. Both are good Union men, but the issue was high grade or low grade, and high grade won.

Mining Stock Speculation.

We have always looked for the sad results that are now upon our community in the ruin of many persons and families from the mania for speculation, which has at last become like all other species of infatuation for riches, *gambling!* The many revealments, of late, of numerous companies whereby great and serious charges of *fraud* are made against the managers, and the numerous exposures of sharp practice in stocks, show the sad results to our business men and our country. When the wild excitement of this rabid fury for "feet" is over, and the "wildcat" stock swept out of existence and only remembered as among the things that were, and men, good men, who were once among our careful merchants, shall *awake* and find themselves penniless, they will find another *evil* added to the train beside bankruptcy: they will find with sorrow that they have lost besides their wealth and their standing, all business habits and desires, and have become almost wholly unfitted for any good, legitimate business, and this loss will be greater than all others. These and facts we can see witnessed every day, in those persons who are now casting about like Macawber, for something to turn up.

Among the prominent mines that have caused more or less ruin to individuals and revealed how loosely and madly such enterprises have been and are now conducted, we recall the famed "Santiago," "Wide West," "Real del Monte," and many others, which should bring men back to their senses, and show them the folly of this ruinous species of gambling, for it is nothing more nor less than *gambling*. In addition to the loss of property and business habits, must come the loss of self-respect to many who once stood well with this world's riches, and even more: the ruin that has fallen on some, has also brought the loss of friends and friendship, and among the crowds of speculators on the Montgomery pave, although there may have been years of friendship and kindly acts in former times, friendship is now all merged in the success which attends the *trade in feet*.

Look at the record of our Courts, the civil and criminal cases growing out of these speculations; see friend arrayed against friend, and the many sad and unhappy revealments that have come to light, in regard to mines that never existed but in the imaginations of men; see the ruin that has fallen on thousands, and then ask, can such a spirit of speculation and gambling result in anything but wretchedness?

We might refer to prominent cases before the community, the purchase and sale of *real estate* and other property for the Santiago mine, by our prominent men, then again in the Real del Monte, and latterly in the famed Wide West, for which important suits are now before our Courts—we might refer, perhaps, to the Tucker and Garrison case, and one would very naturally ask, if this exposé would have occurred, had the Wide West "gone up to a high figure?" It is but a fair question, yet we do not see it made. Would Mr. G. have arrested Mr. T. if the Wide West had *doubled in value?* Have not hundreds of cases of a similar character been performed on numberless parties, and yet no exposé came, because the purchaser, even under the so-called sharp practice, proved a *lucky one*.

We have heard from various sources of numerous cases of madness in speculation, and this case of Garrison vs. Tucker, will bring up matters upon other mines beside the famous Wide West. We shall probably hear from the Virginia, the Ophir, and other suits, before the storm is over. One thing is very certain, that those who have dealt sharply in mining stocks, should not assail others. Those who make charges of *fraud* should have clean hands—they at least should never have been subject to the charge of being too sharp themselves.

We have known Mr. Tucker for *fourteen years*, and we think we can assure our readers that when this case is closed, Mr. Tucker will leave it with clean hands.

This state of things is, indeed, most unfortunate for our City and State, and for our whole business and prosperity. It has deranged not only our business men, but created a state of things that years cannot repair. The same spirit will be rife in a Breadstuff speculation, unless speedily arrested. We already see by the "signs of the times" the coming storm, and regret the cause most sincerely. Already our markets are under the *maelstrom of madness*, and soon all will be a wild, delirious gambling in Breadstuffs. The result will be to all such mad speculators, the same as the Wide West, Real del Monte, and Santiago—the evil must cure itself.

Sacramento Alive Again.—Every word we hear from this city shows the undying energy of the real citizens. The buildings and streets are being raised and elevated beyond chance of flood. We think Sacramentans deserve all the good that can be said of them. Fire cannot destroy them, floods cannot drown them, heavy taxes nor bad officials entirely ruin them. They know no such word as die. Therefore we say "All honor to the "Queen City of the Plains."

We Shall Have Rain.—"The rain shall fall upon the just and upon the unjust." There can therefore be no long-continued drought, for we are sure that God will keep his promise. Had the promise been made that the rain would fall only on the just, then as everybody is so immersed in self, we could have cause of fear,—but as it is to fall upon the *unjust* as well as the just, we can very safely count upon an abundance of rain before the season is over.

Chestnuts.—We have received a nice package of the Japanese Chestnuts, brought by the bark Glencoe, from Japan. They were kindly sent us by Messrs. Addison, Martin & Co., who we are glad to notice have them for sale. They have a large establishment in the Pacific Market, opening on Clay street. All who wish nice fruit can always find it there.

The Condition of the State.

The Sacramento Bee in a late issue remarks: "One fact is becoming patent, and should receive the earnest attention of every man who has property in this State, and who intends to make this his future home. It is this: Not a town or locality in the State, with perhaps half a dozen exceptions, besides San Francisco, shows marks of improvement and progress. Not only this, but on all hands there are marked evidences of decay. Those towns of the interior which not long since were all life and bustle and full of business, are now nothing but ragged, lifeless hamlets. Stagnation and depletion seems to pervade the interior everywhere. The State at large grows poorer from day to day, while its commercial emporium seems to advance in wealth. Such a condition of affairs is unhealthy in the extreme." So it is, and one of the causes, is our unnatural and absurd position relative to the currency; yet in the late contest the Bee opposed the adoption of the National Currency, which we believe would have contributed largely to remedy the evils complained of. As another effect of this State's policy on the currency question, the Sacramento correspondent of the Call, in his letter of the 10th says: "Letters are daily arriving here from all parts, from the soldiers, complaining bitterly of the action of the Legislature in refusing to repeal the Special Contract Act; also, of the decision of the Supreme Court in relation to the soldiers's vote. Because of these acts nine-tenths of the soldiers, it is stated, will refuse to reënlist when their time of services expires, which is some time during the next Fall. A petition came into the Assembly today from citizens of Butte county, asking for the repeal of the Specific Contract Act."

Reaction Must Come.

We regret to see the present wild speculation in all articles of produce, it will prove ruinous to many. Already it has changed the current of trade, stopped shipping produce, prevented the exchange of produce for gold, holding all stocks here, and the result will be making us poorer instead of richer. A gradual, steady rise can only do good, while sudden fluctuations only lead to evil results. Already the mania has got hold of Beans and Potatoes and every available article. This will bring produce from Oregon, Mexico and other places; then down tumbles every article, potatoes will rot on the wharves and stocks will accumulate. This speculation is only an offshoot from the mining mania, that has stopped, and the men have changed their base of operations from "feet" to produce. We think we can see the end of the speculation; it will be like the Real del Monte, Wide West, etc.

New Music.—*A Monody on the Death of Starr King.*

A star has left its native sphere
For brighter realms to shine,
Its halo light so bright and clear,
Now beams from worlds divine.

These are the opening words of this beautiful new music on the death of Rev. T. Starr King, composed by P. R. Nichols. This composition is one most appropriate to the occasion, and should be the anthem of every true heart. Published and for sale by Kohler. Also received, *O Think of Me*, a new and beautiful ballad of the "Wood Minstrels," words by Russell, music by Nichols. *Christabelle*, another fine ballad, by Haynes, music by Nichols. *Silvery Moonlit Hill*, composed and set to music by Nichols. All new and beautiful, all for sale at Kohler's, Washington street.

The Steamship America, about the safety of which some anxiety was felt, arrived at her dock, from Panama, Wednesday morning. She brought 852 passengers. The memoranda from the Purser, says: Feb. 10th, on the down trip, overtook and passed the steamer St. Louis, one day north of Acapulco. On the up trip, since leaving Acapulco, experienced severe northwesterly gales; was detained 14 hours at Monterey for fuel.

Price on Gold.—Private dispatches received here on Wednesday night and Thursday morning, mention that the gold market was in a very excited state on Wednesday at New York, the quotations closing at 168 and 169. Private dispatches say that Gold was quoted yesterday, in New York, at 164½.

We learn from Mr. Cheney, of San Diego, that they have had good rains there lately, as much as 2½ inches. This will give a start to the grain, and give good feed so as to carry stock through the season. The rains, says another person, extended across to the Colorado river, giving a refreshening to everything over a large extent of country.

Asparagus for Market.—When will men grow wise? The *Bleached Asparagus* is not fit to eat, as we have often said. It is not healthy nor palatable, but tough and hard and contains more or less poison, while the *green* is delicate and palatable. Try both and judge by tasting.

The New Seed Sowers.—These fine implements—the sample machines—have arrived, and are now at our rooms. We invite all interested to call and examine them—as per advertisement. "Patent Rights" are for sale and a handsome sum can be made by purchasing.

The Draft in this State.—Those who write about the draft commencing in this State on the 10th inst. don't know much about their own writing. It cannot in no event take place until the enrollment, just completed, goes to Washington, and the proper officers fix upon the quota. The enrollment of the three districts left on the 3d instant, and at best, if the business is hurried, the orders for a draft cannot reach here before the middle of May. So says the Marysville Appeal.

The Benicia correspondent of the Solano Press speaking of the sale of camels, says they cost our venerable Uncle Samuel several thousands each, and brought under the hammer in greenbacks about fifty dollars a piece. The name of the intelligent and enterprising "hombre" who bought them is unknown to us. We guess it is Muggins.

There is this difference between hatred and pity: pity is a thing often avowed, seldom felt; hatred a thing often felt, seldom avowed.

Trip of the Steamship America, Opposition Line of Steamers.

We make the following extracts from a private letter received from a lady passenger, whose ability to give a true statement of the condition of the steamer, is undoubted. Like many others, she is very anxious to secure to our State the opportunity of *low prices*, quick and safe passages. The card of the passengers, referred to, as signed by them, is given in our columns, and will be found of interest to the public. The lady's letter is dated Feb. 15th, 1864, and says:

* * * We are now crossing the Gulf of Fonseca. With the exception of an accident that took place day before yesterday, we have had a most delightful trip. It seems that one of the firemen went down to the store-room to draw whisky, and very imprudently took the lamp out of the lantern, and as the carpenter withdrew the auger, the liquor spouted out and took fire, burning him some, but not seriously. The second Steward had the presence of mind to get wet blankets and throw over the barrel, and soon extinguished the flames.

Now, my friend, you have the simple statement of the occurrence. It has given some dissatisfaction, and I have no doubt many have written home and have pictured it out worse than it really ——.

The Captain, officers, and attendants, certainly deserve a great deal of credit for the good order, cleanliness, and general comfort of the passengers. I have visited the different parts of the ship at different times, and I can truly say there is more order and neatness than is generally found on steamships. I suggested to my friend, Mr. Miner, and he has drawn up a paper, and all have signed to whom it has been presented, freely and willingly tendering a vote of thanks to the Captain, officers and crew. I hope this line will be sustained, if not only is a great advantage to California in bringing more people to her shores, and giving the inhabitants of California a chance to visit their old homes again, but it makes it so much more healthy and comfortable while passing through the tropics and taking such a long journey, not to be crowded and stinted of water and food, as it often has been the case on the old line.

Tuesday Afternoon. Still pleasant. We have now entered the Bay of Panama, hoping to reach there to-night or to-morrow.

Wishing you health and happiness, I remain
Yours, S. S. R.

Sutter and Sutter's Foar.—On Feb. 19th, says the Sacramento Bee, for the first time in six years the venerable pioneer, Gen. John A. Sutter, paid a visit to what is left of that old landmark in the early days of California, "Sutter's Fort." The adobe walls which once surrounded the fort have disappeared, but the General went through and examined the main building, which still stands a monument of the past. To the few friends who accompanied him he explained the uses to which the different rooms had been devoted when he was "lord of the manor," and dealt out genial hospitality with a lavish hand. This was the dining room—that the hospital—on this side, the kitchen—on that, the armory. If the old pioneer's voice did grow tremulous once or twice as he spoke of old associations, and as scenes of long ago crowded upon his vision, those who witnessed the exhibition of feeling had sincere respect for it. The visit to the old familiar spot did not seem to give him much pleasure. It appeared to be a relief, when he turned to leave. On his return, the General stopped at Camp Union, where he was most kindly and courteously received by the officers at that post. The General informs us that he has leased out the greater portion of Hock Farm—being convinced that the charge of so large a place was more than his age and increasing infirmities would permit. He has let his land at fair prices, and the result will be a handsome income. May he live long to enjoy it. The old gentleman looks well; but he will point to his white hairs as unmistakeable evidence that "Time rolls his ceaseless course." Gen. Sutter tells us that on the first day of next month he, a native of Canton Berne, Switzerland, will be sixty-one years of age.

Resolution Relative to Starr King.—The following is a copy of the resolution relative to the death of Starr King, adopted by both Houses:

Whereas, It has pleased Divine Providence to terminate the earthly career of one of our most eminent citizens, Rev. T. Starr King, whose very name has been a tower of strength to the great cause of our country, and from whose great ability learning and eloquence the people of the State have derived the most enduring benefits; therefore,

Resolved, by the Assembly, the Senate concurring, That, in honor of the memory of the deceased orator, divine and patriot, when we adjourn on Saturday March 5th, we adjourn to meet on Tuesday, March 8th, and that the flag at the Capitol be displayed at half mast.

Both Houses adjourned to attend the funeral.

For the Benefit of Soldiers.—The following new proposition in the postal law passed in January last should be widely known, and well understood by postmasters: "Articles of clothing, being manufactured of wool, cotton or linen, and comprised in a package not exceeding two pounds in weight, addressed to any non-commissioned officer or private serving in the armies of the United States, may be transmitted in the mails of the United States at the rate of eight cents, to be in all cases prepaid, for every four ounces, or any fraction thereof, subject to such regulations as the Postmaster-General may prescribe."

The Methodist Conference.—The Baltimore Conference of the Methodist Episcopal Church was in session March 8th, and adopted a report, by 48 to 10 which declares that we owe exclusive allegiance to the Government of the United States in war and in peace, and to the Constitutional Administration in every department thereof; that we exhort our people, who, by position, kindred or interest, may have been tempted to sympathize with those who seek to overthrow this Government, not to esteem loyalty to the Government as optional, or a matter of taste, sympathy, or preference, but one of divine injunction, and in the language of the Disciples, use all laudable means to enjoin obedience to the powers that be; that we will not receive into Conference or elect to ministerial orders, either from local or itinerant ranks, any man of known disloyalty; that in view of the great change which is taking place in the public mind in the direction of emancipation in the State of Maryland elsewhere, we believe that the time is not far distant when the Baltimore Conference will no longer be embarrassed in maintaining the well known principles of the Methodist Episcopal Church upon this subject.

Protection against Borers.—Last week we published an item copied from a Stockton paper stating that many of the trees in San Joaquin county had been destroyed by borers, which entered the tree on the south side near the ground. An observing friend, who is never slow to profit by the hints which nature gives, confirms this fact in regard to the peculiar habit of the borer, and adds that their ravages may be entirely prevented by simply placing a shingle in the ground in such a manner as to shade the south side of the tree where they are accustomed to enter. We are assured that the remedy is effectual, and cheerfully give our readers the benefit of the information.—[Contra Costa Gazette.

P. A. Athearn, Esq., whose orchard is on the Mokelumne river, San Joaquin county, reported to the Visiting Committee, of the Stockton Fair, for 1861, on the 10th of August, on the subject of "borers" (as published in the report of that year) as follows:

"The orchard contains 1,500 trees 2 to 5 years old, mostly apple and peach; did not irrigate the year—irrigated previously at great expense. Experience proves that trees on light sandy soil, and river bottoms, do better without surface water. Many apple trees were killed by the "borer." This, says Mr. A., who is an intelligent observer and experimenter in tree growing, is caused by the heat of the afternoon sun eroding the bark, and thus hatching the worm, or producing the disease in the tree. After numerous experiments, he is satisfied that the evil can be remedied by keeping the body of the tree shaded; the plan to effect this, which he adopts, is to leave water sprouts growing around the base of the tree, thus completely shading the bark. The borer invariably starts in the bark, about four inches from the ground, and works upward. The same degree of heat that will produce the borer, will also cause the weevil in wheat—a similar insect, equally as destructive in its operations. Many of the trees were injured by the wood-pecker ringing the trees just below the branches; we noticed one or two which had died from this cause. This could be prevented by setting horse-hair loops on the trees as the bird invariably operates just under the first limbs, entirely scoring the bark around the tree."

Tobacco Culture.—That tobacco can be successfully and profitably cultivated in this State we have not the slightest doubt, says the Nevada Transcript. In and near Nevada town, many persons unacquainted with the cultivation of the plant have tried it, and we do not know a single instance of failure to raise an excellent article. The difficulty has been in "curing." We were shown, by Mr. Shortridge, some tobacco grown on his ranch, about 10 miles below Grass Valley. The leaves are thin, large, and lighter in color and weight than Kentucky tobacco. Mr. Shortridge raised about 600 pounds to the acre—not a large yield by any means. We are satisfied that a better article and larger amount to the acre can be raised any where around Nevada. But Mr. Shortridge was more successful in "curing" than any one we know of. He used the "fire cure." After the tobacco was ripe it was cut and hung closely together in the open air. It was kept in this place for five days when it turned a rich orange color. It was then hung in a close room, and fire kept under it for ten days. He then paid no more attention to it until ready for "stripping." Tobacco is indigenous in this State, and we do not see why the cultivation of it should fail. We believe that the hills around Nevada will produce as good tobacco as can be raised in Maryland or Kentucky.

Night and Day Traveling.—Many people are averse to traveling on railways by night, having the impression that there is greater liability to accident. Statistics tend to show the reverse to be true. A writer in the Railroad Advocate sums up the case for night trains pretty strongly: "At night all work on the track ceases, and there are but few trains running. Draw-bridges are generally all closed; switches are not so liable to be misplaced, as they are less used; the signals for trains are more certain, for lights are used and can be seen further. The engineer has nothing to divert his attention by night. Rocks and trees are no more liable to fall upon the track by night than by day; nor are cars more likely to break at one time than another. The passenger in a night car is more apt to keep his seat and remain quiet by night; and that is the safest thing he can do in a railway car."

Complimentary Vote of Thanks of the Passengers on board the Steamship America.

We, the undersigned, passengers on the Steam Ship America, tender our thanks to Capt. Morton, and the other Officers of the Steamer, for the Comforts we have enjoyed during our passage from San Francisco to Panama, and particularly for the neatness and good order on the Boat, and for the sumptuous fare, and kind attention we have received. While expressing our entire satisfaction with the Boat and its management, we heartily commend it to the attention and patronage of the public.

Dated at Panama, Feby 17th, 1864.

On Thursday last, says the Napa Reporter, a young man in the employ of Mr. [illegible], on his way to within a few miles from town, while endeavoring to manage a rather unruly mare to a carriage, the animal became unmanageable, broke loose from him, ran away, smashed the buggy and running against a tree, one of the shafts was forced into her breast, killing her almost instantly. The mare was a valuable brood animal.

SOAP.—Some prospectors have found a vein of what is pronounced to be excellent soap, in Esmeralda. The vein is ten feet wide, six hundred feet long, and as deep as China. The soap when taken from the mine is soft as putty, but hardens on exposure to the air, and has all the properties of the best manufactured article.

Agency for the Art Union of London. Subscriptions received for the Annual Distribution of Paintings and other Works of Art. Any Newspaper, Magazine, Review, or other Periodicals not mentioned in the above list will be furnished to order. Special attention will be paid to importing Books that may be wanted and cannot be otherwise obtained. A general assortment of Books always on hand, including all the New Publications. 21-6

English Steward, or Gardener.

A PERSON JUST ARRIVED FROM CANADA IS DESIROUS of securing a place as Steward or Superintendent of a Farm. The very best references can be given of his character and capability for the situations. Apply at the office of Editor of Farmer, or by letter. 21-6

PATENT RIGHTS FOR SALE.

THE FOLLOWING PATENT RIGHTS OF NEW AND valuable inventions (of which we have models to show their value) are now offered for the States of California and Oregon, and Utah and Washington Territories.

NO. 1. THE MECHANIC'S SPIRIT LEVEL.

Patented September 13, 1859.

This Implement will be of great value to Contractors and Builders, being one of the most valuable inventions yet out. Builders will do well to examine the model.

NO. 2. IMPROVED CLOTHES REEL AND BAR.

Patented January, 3, 1860.

This valuable domestic piece of furniture can be used in the Laundry, the Kitchen, the Nursery, or Chamber, and can be made plain or ornamental; standing in the same relation as a piece of important furniture as does Wheeler & Wilson's Sewing Machines, neat when used and ornamental when not in use.

NO. 3. A CORN CULTIVATOR.

With this implement the soil is first thoroughly plowed and deeply pulverized, and on the return it smoothly and perfectly hills up and harrows the ground between the rows. A very new and valuable implement.

NO. 4. A MUSKETO BAR.

This will be much wanted in California. It is simple in its contrivance, perfect in its working, and can be affixed very cheap to all styles of bedsteads. Hotels, public houses and private families will find it a useful invention.

NO. 5. HYDE'S PATENT POST-DRIVER.

A most excellent labor and money-saving machine, for which we offer rights.

NO. 6. SEED-SOWER.

This is a new inventions, and one of great importance to all who sow grain, or any garden seeds. The working model can be seen at the Farmer's Reading-room.

Holding the rights to all these new inventions, we invite the public to call and see the models. All persons who may be desirous to purchase either County, City, Town, or Individual Rights, can do so on application to

COL. WARREN, Editor Farmer.

A Thoroughbred "Jack" For Sale.

TO STOCKRAISERS AND BREEDERS: For Sale, at Mr. Allen's stable, corner of Kearny and Pine streets, a "JACK," lately imported from France age three years, black, bred in the celebrated stud of Alphonse Lavalé, Esq., Ruffec Polton; by Sfuro, a thoroughbred Castilian Ass which received the Gold Medal at the Annual Agricultural Fair at Paris in 1860, out of *Augustine*. Pedigree guaranteed For particulars apply at Mr T Bearwold's cigar store, 714 Kearny street, opposite the Plaza. 21-5

NEW
AGRICULTURAL INVENTION.

Sower for all Kinds of Grains.

A NEW SEED-SOWER of large capability is now offered for sale—the Right of Manufacture and Sale of it for the State of California, or for Counties.

The Machine can be made with

Three, Five, or Seven Tubes,

and arranged to sow any kind of grains at any given distance, and to sow a greater or less quantity, to seed thick or sparce, as may be desired.

☞ The construction of this Machine it can be made to sow on level ground or on ridges, and every variety of seed, from the smallest kind to Beans, Peas, Grain, Corn, etc.

THE SIMPLICITY,

as well as the accuracy, with which this Machine works, is wonderful. Every farmer can regulate it to suit every purpose and plan.

The Evenness and Precision

with which it sows the seed without wasting it, will secure great benefit to the farmer, as it makes a great saving of seed—enough in a short time to pay for the Machine.

These Machines can be made expressly for the sowing of COTTON,
HIGHLAND RICE,
TOBACCO,
SUGAR-CANE,

and all the new crops, of which this State will, ere long, become famous.

For all particulars of the Machine, call at Farmer Reading Rooms, where the Machine can be seen, and where the price and terms of the Patent Right can be ascertained. 5-3m

Ayer's Pills.

ARE YOU SICK, FEEBLE, AND COMPLAINING? Are you out of order with your system deranged and your feelings uncomfortable? These symptoms are often the prelude to serious illness. Some fit of sickness is creeping upon you, and should be averted by the timely use of the right remedy. Take Ayer's Pills, and cleanse out the disordered humors—purify the blood, and let the fluids move on unobstructed to health again. They stimulate the functions of the body into vigorous activity, purify the system from the obstructions which make disease. A cold settles somewhere in the body, and obstructs its natural functions. These, if not relieved, react upon themselves and the surrounding organs, producing general aggravation, suffering and disease. While in this condition, oppressed by the derangements, take Ayer's Pills, and see how directly they restore the natural action of the system, and with it the buoyant feeling of health again. What is true and so apparent in this trivial and common complaint is also true in many of the deep-seated and dangerous distempers. The same purgative effect expels them. Caused by similar obstructions and derangements of the natural functions of the body, they are rapidly and many of them surely cured by the same means. None who know the virtue of these Pills will neglect to employ them when suffering from the disorders they cure, such as Headache, Foul Stomach, Dysentery, Bilious Complaints, Indigestion, Derangement of the Liver, Costiveness or Constipation. As a Dinner Pill they are both agreeable and effectual.

Price 25 cents per box; or 5 boxes for $1.

Prepared by Dr. J. C. AYER & CO., Lowell, Mass.

Price 25 cents per box. Five boxes for $1. Sold by Crane & Brigham, San Francisco; H. H. McDonald & Co., Sacramento, and all dealers in medicine. 6eo2m

CALIFORNIA THE FARMER.

A FIVE Dollar Treasury Note will pay for the FARMER *one year*. Now is your time to make a saving; it makes the cost of the FARMER, to *new subscribers*, only $3,25 per year. See our card.

Purchasers of Farms.

We shall now keep a complete record of *Farms, Ranches, Orchards and Vineyards*, for sale, and make it a speciality from this date. A "Bulletin Board," in our Reading Room, will contain numerous Farms, etc., on sale, and to which we invite special attention of both *Buyers and Sellers*.

☞ MANUFACTURERS OF MACHINERY, AGRICULTURAL *Warehouses, Seedsmen and Florists*—All such who desire to make their business known over the entire State of California, should send their business a advertisements to us, and we can spread the news for them.

TERMS OF ADVERTISING.

THE charge for Advertising in the CALIFORNIA FARMER (payable in advance), is **One Dollar** for five lines, or less of space, in nonpareil type, for one insertion and ten cents a line for any larger space. Each subsequent insertion half these rates. This it is believed affords the cheapest and best medium of reaching the Agricultural community on this coast. As heretofore, the right is reserved to reject any advertisements deemed objectionable.

STOCK EXCHANGE.

THE UNPARALLELED DEVELOPMENT OF THE MINeral Resources of the Pacific Slope, and the daily increasing commerce of the city of San Francisco, have rendered a PUBLIC EXCHANGE—conducted on the same fair Business principles that characterize similar Institutions in Europe and America—an urgent necessity in this city. To meet this requirement, the Public are therefore informed that a suitable Building has been erected at

612 and 614 Montgomery street,

In which will be held Daily Sessions for the Sale of Stocks, Bonds, Securities, Specie, Etc, under the Management of the following Board of Directors, and subject to the following Rules and Regulations:

BOARD OF DIRECTORS.

George W. Dent.....President.

Walter Sparrow	Edward Flanagan,
Joseph Clough,	E. H. Wilson,
Henry Williams,	R. O. Sturdivant,
E. Pavillier,	D. J. Oulahan,
Thomas Wallace,	J. De Sta Marina,
M. G. Elmore,	E. W. Lindsley.

RULES AND REGULATIONS.

1st. The Business of the Exchange shall be Managed by a Board of Thirteen Directors, to be Elected Annually, and to whom applications for Membership shall be made.

Any Questions or Issue raised touching Contracts made at the Board, their Validity or Meaning, shall be referred to a Committee of Five of the Directors for Investigation and final Decision.

2d. The Sessions of the Board shall be held from 12 o'clock m, to 1 p. m, and from 3 to 4 p. m, on every Business day.

3d. Only members of the Exchange shall offer Stocks, Etc, for sale.

4th. The Public may bid upon and purchase any Stocks, Bonds, Securities, Specie, Etc, that shall be offered for sale.

5th. Buyers of Stocks, Etc, who are not Members, must either make a Deposit of ten (10) per cent of the Purchase Money at time of sale, or have their Contracts indorsed by a member.

6th. Should any Party neglect or refuse to fulfill a Contract entered into by him at a Session of the Board, he shall thereafter be debarred from the Privileges of the Exchange, at least until he shall have specifically performed such Contract.

COMMISSIONS ON SALES.

Of United States, State, County and City Bonds, Railroad, Steamboat, Telegraph, Gas and Water Stocks, Certificates, Bills of Exchange, Treasury Notes, Specie, Etc, one-half of one per cent.

COMMISSIONS ON MINING SHARES.

Sale at	1 Dollar up to 10 Dollars	$0 25 per foot.
Sale at	10 Dollars up to 25 Dollars	50 per foot.

A Fine Ranch in Contra Costa County.

A FINE RANCH IN THIS COUNTY IS NOW OFfered for sale at a Bargain, if applied for soon, as it will be sold at a price worthy special attention.

The Farm contains 208 acres; 70 acres of this are fenced—the balance is well and heavy timbered. This Farm will cut 2000 cords of wood, enough to pay for the Ranch.

It is an excellent Hay and Grain Ranch and the products sell well and at good prices on the spot, this being the head of navigation and near market: 8 miles from Martinez and 4 1-2 miles from Pacheco.

The Title is good and possession given immediately. The Buildings are common, but the Land is No 1. For Price and Terms inquire of the Editor of this paper who will give all particulars.

SPECIAL NOTICE!
THE STORE OF
Kerby, Byrne & Co.
Closes at 7 o'clock, p. m.

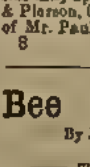
Farms for Sale!

THAT VALUABLE TRACT OF LAND IN SONOma County, lying between Sonoma and Petaluma Creeks, and bounded on the south by the San Pablo Bay, known as the property of G. P. Swift, Esq., containing fourteen thousand acres of land, is offered for sale in Lots or Farms to suit purchasers.

Most of this tract of land is suitable for cultivation, and has soil of the best quality. It is accessible to market, being adjacent both to the Sonoma and Lakeville landings—is well watered, has an unexceptionable climate, and is not surpassed in any respect by any tract of the same size in the State.

No better opportunity, it is believed, will ever be offered for the purchase of desirable farms at a low price and upon easy terms.

There is a very large amount of fencing on the tract, the entire body of land being enclosed.



The Petaluma Boat touches daily, each way, at the Lakeville landing, which is about a mile from the nearest point.

In addition to the regular Steamer landing places, there are numerous suitable landing places along the entire water front of the tract.

The Sonoma Embarcadero is at one side, thus furnishing a convenient access to the San Francisco market at all seasons.

Persons desiring to purchase farms of any required size may apply to the undersigned, at the office of Haight & Pierson, 622 Clay street, San Francisco, or at the store of Mr. Paulo, Sonoma. WILLIAM BUHLER.

FOR SALE, TO LEASE, ETC.

"MENLO PARK,"
San Mateo County.
Beautiful Sites for Homes in the Country.

THE UNDERSIGNED OFFER FOR SALE THE BALance, unsold, of this choice tract. There are few, if any, places within one hundred miles of this large and growing metropolis, which combine so many natural advantages for a country residence; the soil is excellent; it is wooded with large, splendid live oaks, and other evergreen shade trees. The climate is unsurpassed; the extremes of heat and cold are never felt, and the harsh summer winds and fogs don't reach here. Good well water can be obtained here at thirty feet, independent of which, there is a Company already formed, in San Mateo County, for introducing an abundant supply of the best spring water, for this and adjacent tracts, and Redwood City; it will have a head of about sixty feet at this point. The cars of the S. P. & S. J. R. R. load passengers at their depot, at this point, in about an hour and a quarter, thus enabling business men to live here and transact their business in town, without interruption. A first class school is about being established here, with educational ability second to none in the State. There will also be a first class family hotel opened in the Spring.

Those who are alive to the importance of a home in the country, with all the advantages for health, education, etc; are earnestly requested to go and look at this lovely spot. AS AN INVESTMENT, it is worthy the attention of every one who wishes to invest SAFELY AND PROFITABLY, as it is rapidly enhancing in value. The title is unquestionable, it being a portion of the PULGAS RANCHO, the first Spanish grant finally confirmed, and the patent issued.

About thirty heads of families have already purchased, with a view of building, in the Spring.

As to the merits of this choice tract, we refer to the following gentlemen, some of whom are now living in the neighborhood, and others have purchased with a view of doing so

A. C. RANDALL & CO.,
542 Sacramento street,
17 San Francisco

A Fine Ranch
IN MENDOCINO COUNTY.

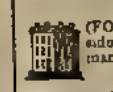
A FINE GRAIN AND STOCK RANCH of 600 acres under fence, in Mendocino County, will be offered at a bargain if applied for soon. Together with this is a Stock Ranch of some thousand acres of mountain land which goes with this Ranch, being Uncle Sam's land.

The Ranch is about 80 miles from Petaluma and on the great mill road to the Navarro, Albion, and Mendico & Noyo's mills.

The location is pleasant, having the Redwood Hills for a back ground, with a fine valley tract—one hundred and sixty acres valley land, mostly under cultivation—yielding fine Barley, Oats, Wheat, Hay, Corn, etc. The crop of Hay is fine.

This Farm will sustain a herd of 300 Cattle, and is a grand Ranch for raising Stock, Horses, Mules, or Hogs, and a good place to raise Poultry. There is an orchard of two acres of bearing Trees Vegetables grow well.

There is on the place a fine two-story frame Building, in which was put 30,000 feet of lumber, also Granary, Smokehouse, and Barn. The vicinity to the Redwoods gives an opportunity to improve, as Lumber is cheap and Timber handy.



There are, at present, good Tools, Implements, Harvesters, Plows, etc, on the place; also some furniture The House has been used as a Hotel and Store, and is also the Stage House. Hay, Grain, and Produce can always be sold at good prices.

There is also a herd of 100 head of Stock which will be sold at a bargain.

This is a rare chance, and worthy the attention of those who wish a good Home, a good Farm, and a profitable business. Prices reasonable. For particulars inquire of Editor Farmer. 21-1

Farmers and Immigrants.
LAND FOR SALE OR TO RENT.

THE ANTELOPE RANCH,

(FORMERLY JOB F. DYE'S) on the East side of the Sacramento River, embraces many very superior Farms of

100 to 500 Acres each; also Vineyards, Gardens and Orchards,

above all overflows, Fenced, having Dwellings, Barns, etc., and throughout the year, large running streams, and Irrigating ditches.

The soil is from 3 to 10 feet deep, very rich, and adapted to Wheat, Barley, Oats, Tobacco, Chinese Sugar-Cane, Fruits, etc.

The best market in the State is at Red Bluff, two miles above; at Tehama, three miles below the Ranch, and on the Ranch itself, for consumption in the northern portion of the State, Oregon, and the Humboldt Mines. The new Wagon Road from Red Bluff to the Humboldt Mines is within three miles of this Ranch.

Good Farmers (with families preferred) can hire these farms at low rates, or conduct them on shares, with privilege of purchase. Cash loans will be made, if desired, to assist in cultivating or holding crops, and every facility will be given.

Mowers, Headers, Threshers, etc, are on the Ranch—"The Antelope Flour Mill," of large capacity, and high reputation, is on the Ranch, owned by the same proprietors

☞ The "Job Dye Farm," of 320 acres—with Orchard, Vineyard, and Garden, with irrigating water, large Adobe House, and numerous out-buildings—will be rented to a satisfactory tenant

Apply to GEO. CHAMPLIN, Red Bluff P. O, or on the Ranch, or to

Home Miscellany.

(For the California Farmer.]

TO MY MOTHER.

BY CELIA BAXTER BRIGHAM.

Mornin, oh! what years of trial,
Years of earnest self-denial—
Years when pain its anguished vial
Filled to overflowing;
Oh! the griefs thy soul hath tasted
When thy frame by sickness wasted,
Still to toil and struggle hasted,
Scarcely respite, knowing.

Mother! hast thou heedless thought us!
By the patience thou hast taught us,
By the life, thy sufferings wrought us,
By thy love, undying,
Thoughtless—we could prove, oh, never!
And thy memory forever
Warms our hearts, though distance sever,
Time and change, defying.

Mother! in thy meekness grieving,
Over errors past retrieving,
May thy spirit rest, believing
On a Friend in Heaven;
All is wise, of His ordaining,
All is right, of His sustaining,
All is love, where He is reigning,
All mistakes forgiven.

Mother! could we soothe thy sorrow,
Love, and Faith, and Hope, should borrow
For thy skies a brighter morrow,
Free from tempests dreary;
Humbly, when our souls are bending
In each fervent prayer ascending,
Thy dear name is ever blending—
"Father, bless the weary."

Mother! love hath many a token,
And the golden chain unbroken
Trembles when thy name is spoken,
Soft, and still, and lowly;
Peaceful be thy sun's declining—
Angel hands a wreath are twining,
Gemmed 'till every leaf is shining
With thy tear-drops, holy.

MAY ROSE. N. Y., Jan. 1860.

[For the California Farmer.]

THE BATTLE-FIELD.

The dawn of the morning breaks over the plain,
And the vultures afar sniff the blood of the slain,
Uncoffined, unknelled, unshrived, there they lie,
No mother, no wife to list the last sigh.

In yesterday's vigor, and young lusty life,
They eagerly fought in the stern field of strife,
The ear-piercing fife and inspiriting drum
Was heard mid the carnage of grape-shot and bomb.

On the morn of yest'reen the command of the host
Was the pride of the hero, who fell at his post
On the eve of the conflict, the pulses were stirred
While he rallied his warriors with eloquent word—

"March forward my braves, to do, and to dare,
Each man to his post, and let him beware
That he fights for his country's honor and Flag,
And never let valor or discipline lag.

For our country we'll yield our blood and our breath,
Unshrinking we'll challenge the sentinel Death,
Sound trumpet and charge, shun each coward knave
Who'd ignobly sink in a foil traitor's grave.

Press forward undaunted and danger defy
Till the blue arch re-echoes with victory's cry;
The blessing of Freedom shall hallow the sod,
Then conquer or die, for your leader is God."

Low on the battle-field, stooped in red gore
A warrior reposes in sleep evermore,
One hand to his heart is rigidly prest
On the image of one whom in life he loved best.

That fair boy who so valiantly yielded his breath,
Saw visions of home in the embrace of death,
His mother afar his absence is weeping,
While a victim of war her darling lies sleeping.

St. Aubyn.

Humbug Number One—Church.

EDITOR CALIFORNIA FARMER:

Do not be alarmed at the title of this communication; far would it be from me to undervalue the ministrations of religion, or any particular sect. I honor all conscientious believers, and while attached to my own denomination, I still think

"For words of faith let graceless bigots fight,
He can't be wrong whose life is in the right."

But I allude to the want of life-giving energy, both in preachers and hearers. Do not some preachers humbug themselves, and their followers, when they imagine they have the ability to reclaim the wanderer from virtue's paths, convince the skeptic, and strengthen the feeble hearted? Will the dreamy, dogmatical sermons, uttered, Sabbath after Sabbath, have that effect? Have they not, too often, become ministers, as they would have undertaken any other profession for a living? And is not a member of the congregation valued in proportion to his means of aiding the church funds, and social influence? Are not the tithe and cumin of more value than the weightier matters of guiding the lowly sinner to Him who is Mercy, Truth, and Love? Even in this enlightened age, do we not hear discourses arrogating perfection to one set of doctrines, and consigning those of opposite belief to the tender mercies of the Prince of Darkness? They pretend to search the scriptures of Him, whose law was love, but, too often, scatter broadcast the seeds of dissension. Go into the interior of this State, and what class of spiritual instructors will you too often find? Why, frequently, they are utterly destitute of education, dignity, or any of the essentials to command respect. I have listened to some who could scarcely read, and as to grammar, they courageously ignored that requisite.

Then again, how do not the hearers humbug themselves in their pharisaical, hebdomadal attendance at church? They think they are on the road to Zion while they serve Satan all the week and hear him abused on Sundays, Paner, being clairvoyant, able to watch the thoughts of the would-be listeners.

"Some, 'tis said, go there to sleep and nod,
But few go there to worship God."

Observe that self-satisfied gentleman, how gingerly he treads the aisle, how he drops his eyes into the lining of his hat, and, having finished the survey, he adjusts himself in his seat and is quickly immured in thought and speculation foreign to the place, unless his reverie is disturbed by some Bonnerges with pulpit drum and fist ecclesiastic. Observe that over-dressed woman, with what an air she sweeps into her richly-cushioned pew, and glances over her handsome bound hymn-book at the bonnets of her neighbors. With men of respectability, and in supposed possession of affluence, perhaps sits one, who, during the coming week, shall startle the community with the success of deep-laid schemes of fraud. That pretty girl, whose voice rises in a hymn of praise, is thinking who is admiring her, and if she will see Charles as she leaves church. Another hearer, with reverend air, rises and joins in singing "I'm bound for the land of Canaan," when, in reality, the only voyage that engrosses his thoughts is, if the good ship Enterprise will soon come in with a cargo of butter. Again, the minister—perhaps one who knows that it is his duty to reach the hearts and conscience of his hearers—makes an application, which rouses Mrs. Pryem to think how well that suits Mrs. Synwell, and hopes it will do her good. Little children at church, wearied with sitting upright and performing pious, reason that if heaven is to be one long Sabbath, as the minister says, they do not want to go there, and think the bad place must be the merriest. Early piety is dreadfully unnatural. Some little sinners like church and Sabbath School because they can go there in all the gloss of new clothes, so, even they are humbugged in thinking they are good children, when vanity and a desire of going out are the ruling motives.

Many go to church from habit, because they do not know how else to occupy themselves; some for a walk; some because it is respectable and gives them worldly influence; and some few because they think it right and really wish to be pious. For the latter, if even intolerant of other's feelings, we have respect, though sometimes they humbug themselves with thanking their Maker that they have their title deeds to Heaven, while, in secret, they hug the sin they are inclined to, and condemn that they have no mind to.

Again, many think they are religious when they are excited by the solemn organ's peal sounding through fretted roofs and long drawn aisles, and quirks of music, broken and uneven, make the soul go dancing in light jigs to Heaven. This self deception is but sensuousness. In tracing religious humbuggery, I have no particular Mr. "Stiggins" in my ideas, but only general views. I humbly venerate the sincere worshiper of any creed, and I admire such ministers as think more of the flock than the fleece, and whose sterling influence is such, "that fools who come there to scoff, remain there to pray." St. Aubyn.

A Few Words of Exhortation to the Young Men of California.

EDITOR CALIFORNIA FARMER:

As Friend Harriet is appealing to the women on a reform in dress, I will appeal to the men in a reform in manners, address, etc. It seems to me that there are many young men in California, who scarcely pay proper respect to their parents, their best earthly friends and counselors. How boorish it seems to hear a young man say, when addressing his father or his mother, "old man," or "old woman," or, what is more vulgar still, "dad" and "mam." I love to meet with a young man who can hold his head up and say, "I never use strong drink, and never use tobacco."

O, young men, remember that women take notice of you, and are looking about to see the evil, and the good, that they may teach their sons to speak and act properly, and that they may secure to their children kind and loving companions to journey with them through the downhill of life, and teach them to read the scriptures of divine truth. O, remember the exhortation of Paul to Timothy, and learn ever to be frugal and industrious, then, when the days of boyhood and youth are past, you will be prepared to see a happy old age surrounded by your children, and children's children. This advice may seem very stale to you, but I never take up the bible without finding some pearl to enrich the store of memory, and you cannot read the scriptures without feeling that our best men reverenced the bible. And when you read the bible you will be constrained to read other good books, and to compare scripture with scripture. Rosa.

Night Study.

Most literary men are convinced that very late study at night is injurious to health, but few seem to have any idea that it is equally hostile to the most vigorous and successful exertion of mind. Yet such is the fact; and if a man will review in the morning the mental labors of the preceding night, more especially if they were performed under the influence of any artificial stimulus, such as tea, coffee, wine, he will find, that although there is exhibited evidence that the mind was in operation, yet the balance was gone, and the movements were too irregular to be useful. We should predict that the mind's vigor and calmness would be affected at night by the bodily exhaustion, and the final result shows this to be a true prediction. We notice this particularly in the far greater retentiveness of the memory in the morning than at night, although probably there is a difference equally great in the exercise of the other mental powers. The scholar, therefore, who wishes not only to preserve his health, but to bring forth the full strength of his powers, must choose the early part of the day for the burden of his intellectual labors. His most severe efforts should be over before dinner. In the afternoon, indeed, gentle application to studies requiring no great abstraction of mind, is not particularly injurious; and the same may be said of the evening, until nine or ten o'clock. But to throw the principal and most severe studies into this part of the day, is slow but effectual suicide; and especially to spur up the mind to intense action after nine o'clock in the evening, is aiming a blow not only at health and life, but at all the budding hopes of literary distinction. "The tired brain," says an eminent physician, "can no more repose than the overstrained muscles after violent exertion; hence the studies of the day rise in incoherent images at night, or drive away sleep altogether."

A most painful case of self-immolation, by immoderate night study, was that of Henry Kirk White. Burning with an ardent desire for distinction in the literary world, and full of that self-confident presumption which leads many students to despise all the advice of their seniors, and to expect that their constitutions are strong enough to render all attention to health unnecessary, he persisted in an almost incessant application to study, until the delicate machinery of his system gave way, and left him only time enough in this world, while flesh and body were consuming, to pour forth the unavailing regret: "How have I hated instruction, and my heart despised reproof!" He allowed himself no time, scarcely, for relaxation, or meals, or sleep. He used to study till one, two and even three o'clock in the morning, and then devote but only two or three hours to sleep. His kind mother remonstrated, wept, entreated, and prayed in vain. She used to go every night to his study, at a certain hour, to extinguish his lamp, when he would conceal the light, and springing into bed feign to be asleep, but rise again to his self-immolating work as soon as she had gone. The sacrifice was soon completed, and the victim has left his blood sprinkled over the vestibule of science, as a warning to every ardent youth who attempts to enter in an unlawful manner.

An Iron-clad Man of the Past.—An exchange says: "We examined, a few days ago, in the office of Attorney-General Galbraith, a very interesting historical relic, being a portion of the armor of one of the Spanish Knights who first invaded and explored the wilds of this Western continent. The armor was found in the neighborhood of Monticello, Jefferson county, in the State of New York. The portions preserved are the helmet, the vizor and gorget, and coverings for the arms. We understand that the rest of the armor was found, but has been inadvertantly lost or destroyed. This armor is one of the most solid and substantial character, that for the head alone weighing fifteen or twenty pounds, and being impenetrable to musket or rifle balls. It is possible that the armor belonged to one of the expeditions of Pamphilo de Narvaez, which was lost in the country, or to one of the army of De Soto, and is about 350 years old—perhaps much older. The frame that could bear this iron incasement must have known the discipline of arms, and been strengthened in the battle and the breeze. The armor is of complete workmanship, strong rather than fine; and must have been as complete a covering for the human form as the armor of the ocean monsters that bid defiance to the rifle cannon shot of the present day. Probably, in future times, the ironclads of our own day will be regarded as the curiosities of a past age, the utility of which will hardly be perceptible to our descendants."

A New Question.—"Ma," said a little girl to her mother, "do men want to get married as much as the women?"

"Pshaw! what are you talking about?"

"Why, ma, the women who come here are always talking about getting married—the men don't do so."

THE BOARDMAN, GRAY & CO.

PIANOFORTES.

The subscriber, late a member of this well-known Firm has established a

Wholesale and Retail Depot

At 726 Broadway, New York City,

Where he will be happy to receive orders, and especially to hear from his friends, and the patrons of the late firm.

Denn & Manrow's
Combined Power
WINE PRESS.

THIS NEW PATENT PRESS IS NOW OFFERED TO the Grape Growers of this State as a California Invention. It has been designed and finished with reference to the saving of labor and expense, while the work done is more speedily accomplished and with greater results.

It is the FIRST COMPLETE WINE PRESS in the country. The power of the machine is almost unlimited. With the crank alone the power of this press is as 500 pounds to one pound of strength applied. After the crank has been worked by hand to a certain point a lever of eight feet is attached, by placing weights at the end of this lever a new power is given equal to 1,000 pounds for one. This power is continuous, a self-working power—no superrision needed.

This Press is made of solid timber, yet neat, compact, and very powerful; the wheels and gearing simple but sure; the whole weighing about 800 pounds; easily put up or taken down and easily transported; so simple yet carefully constructed that it cannot get out of order unless by extraordinary results. The cost of this machine will be less than the ordinary Screw Press; it will save the labor of six or eight men usually required, as ONE MAN can do all the work.

The quantity pressed is only governed by the size of the machine, each pressing being from 400 to 4000 pounds as the size of the machine may be, and from four to six pressings a day, thus yielding from 400 to 2,000 gallons per day.

Machines will be constructed to order, of any size. For any further information address the undersigned,

DENN & MANROW,
Patentees and Proprietors, Sacramento.

P. S.—The Editor of the Farmer having thoroughly examined this Wine Press, we are permitted to refer to him for capability and perfection, or any other information. 9

ARTIFICIAL BONE FILLING

For Decayed Teeth,

Put in while soft, without pressure or pain. Aching Teeth, or more Shells can be filled with it, and restored to health and usefulness, by the discoverer, DR. PEARSON (late Pearson & Crane), at his rooms No. 653 (old No. 187) Clay Street, San Francisco.

Dr. Pearson having spent the last six years in New York, Philadelphia, Baltimore, London, and Paris, is prepared to supply at short notice, and at reasonable prices, Artificial Teeth on the most approved methods, including Vulcanite Rubber Work, rendering the Extraction of roots wholly unnecessary.

DR. PEARSON'S NERVINE

Cures the severest Tooth-ache, and serves as a temporary filling—any one can apply it by observing the directions. Price $1, sent by express.

ALL DENTAL OPERATIONS will receive the personal attention of Dr. Pearson, as he has no partner, and intends having none in future. His office has been established thirteen years—being one of the oldest, if not the oldest Dental Office in the State of California.

JAMES PEARSON, M. D.

SEED, PLANTS, ETC.

CHOICE GRAPES!

B. Kamp,

of SAN JOSE, offers the following Choice kinds of Grapes:

Grape-Vines, Cuttings, and Plants,

INCLUDING NINETY VARIETIES OF

NEW AND RARE KINDS!

For Wine---Rhine Grapes.

Black Gleffner, Kohlen Traube,
Johnisberger Riesling. Gray Gleffner,
Riesling Franken, Silvaner,
Traminer, Goodethal,
Rulander.

FOR THE TABLE:

Goodethal, Muscat Rose,
Black Hamburg, Muscat Alexandria,
Chasselas Musque, Golden Chasselas,
Charlesworth Tussy.

The above list embraces those that the Undersigned has proved. The WINE-GRAPES are the BEST OF THE RHINE, such as our Choice Rhine Wines are made from; and those for the Table are well known and approved. The Grapes will make Better Wine than our California Grapes, by a 100 per cent. Having cut down all my California Grapes, and instituted others, I know what I say to be true.

Orders for Rooted Vines or Cuttings at LOW PRICES, can be sent by Mail or left at the FARMER OFFICE, will be promptly attended to.

20-24-tf B. KAMP.

$5! Delaware Grape-Vines! $5!

PROPAGATED FROM VINES received in 1861, from Dr C. W. Grant, of Iona Island, near Peekskill, N. Y. One and two year-old Vines, from $1 00 to $2 00 each! The superiority of the Delaware as a Wine Grape, will doubtless induce unprincipled Dealers to flood the Market with a Spurious Article; and as mistakes sometimes UNINTENTIONALLY occur, which cause delay and trouble to the Purchaser—

☞ I WILL PAY IN GOLD COIN $5.

(or the same amount in Lincoln, Lenoir, Union Village, Anna, or Diana Vines, at 50c each, or the IONA at $2 00 each) for each Vine purchased from me, for the DELAWARE, which proves untrue to name.

I have a few IONA VINES, one year old, propagated from a Vine presented to me from Dr. Grant, the Originator of the same, which, except upon the above conditions, I do not intend to offer in Market without his permission.

Catawba Vines and Cuttings by the Hundred or Thousand, CHEAP!

C. A. CRAIG,

A LARGE, SPACIOUS, AND GENTEEL House and other buildings, with fine Garden, all finely located in the upper part of the city, containing a full half block—will be sold a bargain and on liberal terms of payment if applied for soon. Real estate is rapidly improving in Sacramento, and this is a rare chance. Inquire of editor Farmer. 16

Literary Shrubbery.

THE GOLDEN SUNSET.

The golden sea its mirror spreads
Beneath the golden skies,
And but a narrow strip between
Of land and shadow lies.

The cloudlike rock, the rocklike clouds,
Dissolved in glory, float;
And midway of the radiant flood
Hangs silently the boat.

The sea is but another sky,
The sky a sea as well;
And which is earth, and which the heavens,
The eye can scarcely tell.

So when from us life's evening's hour,
Soft fading shall descend,
May glory, born of earth and heaven,
The earth and heaven blend. [LONGFELLOW.

Josh Billings' Essa.

This is the name of a newly risen star in the literary firmament which promises to outshine Artemus Ward, Doesticks, and his bosom friend Dan Phool.

PIGS.

As the white rose wakens into buty, so duz the white Pig cum to gladden us. His ears ar like the lilac leaf, played upon by the young zephurz at eventide, his silk is the woof of buty, and his figger is the outline ov lovliness. His food is white nectar, drawn from the full fountain ov affekshun. He waxes fatter and more silk every da, and hangs from the buzzum of his mother like an image of alabaster. He laffeth at forms, and curseth his tale still closer, and his feast goeth on, then he riseth with gladness, and wandereth with his kindred, beside the still waters. His brothers and sisters are as like him as flakes ov snow, and all the da long among the red klover and beneath the white thorn, he makes his joy, and leadeth a life arkadian. His words are low musik, and his language the natutored freshness of natur. His pastime is the histry ov innocence, and his lezure is eleganse. He walketh where grase leadeth, and gambles few the dalliuns ov dewey fragranse. He gathereth straws in his mouth, and hasteth awa on errants ov gladness. He listeneth few the reproof ov his parent; his ackshuns are the laws ov perliteness, and his logic is the power of instinkt. His datime is peace, and his even is gentle forgitfulness. As he takuth on years, he loveth kool plases, and delveth in liquids, and stirreth the arth to fatness, and painteth himself in dark cullers, a refluge from flies, and the torments ov life. He forgeteth his parents, and bekometh his own master, and larneth the mystery of food, groweth hugely. Men gaze at his porkyness, and kount his vallu by pounds, and is in wate for him, and sacrifise him, and give his flesh salt for its safety. * * * This is Pig life.

STRATEGY.

Strategy is trying to reduoce a swamp by katching the fever and ager out ov it. The only rezon why McClellan failed in reduoeing the Chickahominy was that, noomerikally speking, the swamps had more agers than Little Mac had men to ketch them. It is doo to the truth of history [to the printer of the Pukepsee Eagle: don't mewtilate mi spelling and print that "his story," for that is loner'n the moril law, if yu know how long that is]—as I was remarking, it is doo to the trooth ov history to state that Mac did remarkably well, awl things konsidered. He kot so meany ov the agers that he was called the Seizer of the Chickahominy.

BOLOGNY SAUSAGE.

Take an eelskin and stuff it with ground cat; sesin it with Scotch snuf and persimmin ile; la it on a hog pen to dri, and then hang it up by the tale in a Dutch grossery for aft months for the flies to give traid marx, then it is reddy for use and can be cut up into rite lengths and sold for perlice klubs.

LIFE.

Awl ov us komplain of the shortness ov life yet we awl waste more than we uze.

A jolly old fellow had an office next door to a doctor's shop! One day an elderly gentleman of the old fogy school blundered into the wrong shop and asked, "Is the doctor in?"

"Don't live here," said the lawyer, who was in full scribble over some old documents.

"Oh! I thought this was his office."

"Next door."

"Pray, sir, can you tell me has the doctor many patients?"

"Not living."

"The old gentleman told the story in the vicinity, and the doctor threatened the lawyer with a libel.

THE

AUTOCRAT OF THE KITCHEN.

THE ORIGINAL P. P. STEWART.

Fuel Saving and Comfort Producing

LARGE OVEN

SUMMER AND WINTER AIR-TIGHT,

COOKING-STOVE

....FOR....

Wood and Anthracite, or Bituminous Coal.

IMPROVED IN 1859,

With New and Extra Large Flues, and by the addition of the *Celebrated Patent Double-Sheet Bottom Flue.*

Attention is invited to the following points of superiority:

1st, DURABILITY—Lasting, with proper care, at least 30 years. Stoves are now in use that were set up in 1838.

2d, MANUFACTURE—Every portion of the Stove is thoroughly constructed. Each Stove is submitted to a critical test, and none leave our works unless completely and perfectly finished.

3d, CAPACITY—Baking, boiling, broiling, roasting, and all other culinary operations performed at the same time!

4th, ECONOMY—Saving the cost of the Stove in one year in the item of fuel.

5th, VENTILATION OF HEAT.—In the Stewart Stove alone, the front doors open directly into the oven (protected by letters patent), securing a direct draft through the top of the oven, by means of holes perforated in the doors and back flues. It will be borne in mind that, as the heated air always rises, this method of ventilation is the only one of any value whatever.

6th, ENTIRE CONTROL OF HEAT—The heat generated by the Stove may be held therein, and used or thrown into the room at pleasure

7th, THE DOUBLE-SHEET BOTTOM FLUE—By which a compressed and inverting action of heat is obtained, and the oven more evenly and efficiently heated than by any other known invention

8th, BROILING—Performed on the top, and without the possibility of smoke entering the room

9th HOT WATER RESERVOIR AND WARMING CLOSET—Both useful and convenient, supplied by the waste heat and without extra fuel.

10th, WATER BACK—An arrangement for supplying hot water for the bath-room, equal to any range.

☞ Beware of the numerous imitations in the market, many of which resemble the Stewart only in appearance, and none of them possess any of its peculiar qualities. See that the name of P. P. STEWART, and of the Manufacturers are on each stove None other are genuine. For sale by

CALEB M. SICKLER,
422 Kearny street, bet. California and Pine,
v20-6 San Francisco.

The Markets.

Wholesale Produce Report.

This represents the prices paid by the dealer to the producer.

Corrected weekly, by A. H. Todd & Co., corner of Clay and Drumm Streets.] Mar. 11.

To say that our Grain and Produce Market is active, would fail to convey a correct opinion. But a more expressive term—that speculation is running wild and almost a panic exists—is near the state of things at present. Within a very short time, heavy advances in prices have been submitted to, and buyers apparently better satisfied than at the low and ruinous prices that at a time did rule. The wind and weather are closely watched, and every change noted; the "oldest inhabitant" consulted, and past dry seasons compared. Stories and comparisons now, as they always have done, do not grow any less by being re-narrated, and all tend to add to the excitement. Our belief is, that there is much unnecessary uneasiness and alarm. That Stock are suffering for the want of feed, we are led to believe from the general tenor of reports. Let us ask the question, Which is worth the most, at present, Stock, or Hay and Grain? and in the answer we can solve the problem of so much suffering among Stock. It is not our wish, nor is it our belief, that we are doing right to add to the present excitement. Should there be a total failure of our Crops, starvation prices need not be feared. Oregon has a large supply of Wheat and Flour, and can spare of her surplus a large amount. Those of us who were here in 1855 and 1856, recollect to what prices Flour and Wheat were forced by the work of speculation, and the course things took afterwards. The result was the ruin of many. Flour fell from $15, $17, and $20, to $7 and $8. Even a large shipment of it to Australia, by a combination of speculators, did not relieve our market. Prices fell and kept falling, until $4 was reached. Actual sales are, and have been made, reports to the contrary, notwithstanding, at prices showing a heavy advance above last week's markets. Many even now prefer to hold, rather than sell. We cannot, situated as we are, advise, but we speak our views, leaving holders to act for themselves. Our experience has been gained by the past, in this State. Large prices, big profits and sure things, are always, in our opinion, better than risks and uncertainties.

Our Exports have been as follows: Ex the ship Ellen Sears, for Liverpool, 30,036 sks Wheat, 571 hf-sks Flour, 677 sks Copper Ore, etc, etc. Ex the British bark Constance, for Auckland, N. Z., 4,558 sks Wheat 4,440 sks Oats, 240 sks Potatoes, etc, etc. Ex the bark Emily Banning, for Shanghae, 2,000 sks Wheat, 2,533 qr-sks Flour, 344 hf-sks Flour, etc, etc.

Our receipts of Produce from around the Bay for the past week have been as follows: Wheat 5033 sks, Barley 8329 sks, Oats 1122 sks, Salt 607 sks, Hay 118 tons, Potatoes 1957 sks, Flour 9765 qr-sks, Bran 557 sks, Corn 375 sks, Corn-meal 50 sks.

Also, Coastwise: Wheat 1834 sks, Barley 3164 sks, Beans 1409 sks, Buckwheat 53 sks, Potatoes 2991 sks, Oats 508 sks.

BY CONTINENTAL TELEGRAPH.

DATES TO MARCH. 10.

A special dispatch says: General Grant, on his way to the East, in conversation with a distinguished Ohio officer, expressed himself entirely satisfied with the situation of military affairs, and spoke in the highest terms of Sherman's expedition which had given the rebellion the severest blow since Vicksburg. Sherman had destroyed forage and provisions enough to subsist the rebel army from three to six months. In one place he destroyed over $2,000,000 worth of property. At other places an immense store of thousands of bushels of corn and large quantities of wheat were consumed. He brought in large droves of cattle and several thousand head of mules: 8,000 negroes and over 400 prisoners, with trifling losses of men and materials on our side. In addition to this, by the destruction of the very important railroad lines. Sherman has released McPherson's corps from guard duty along the Mississippi and restored it to active service.

In U. S. Senate, March 9th Mr. Sherman reported from the Finance Committee a joint resolution to authorize the Secretary of the Treasury to anticipate the payment of interest, which was amended so as to authorize him to dispose of any gold in the Treasury, not necessary for the payment of the interest on the public debt. It is thought that, in consideration of the sudden rise of gold in New York yesterday, the amendment will pass, and the majority in the House against it will be overcome. The House has passed the bill for the protection of Overland emigrants.

Lord Palmerston announced that orders had been sent to the Cape of Good Hope to release the privateer Tuscaloosa, international law not justifying the detention. Rumor says Victoria is to abdicate, and that the Prince of Wales will ascend the throne as Edward the Seventh.

A Key West letter has a rumor that one of Farragut's steamers has passed Fort Morgan under a terrible fire. There was another rumor that he had captured the works.

A special dispatch from Washington says: Gen. Grant left to-day on a visit to the Army of the Potomac, and is expected back to-morrow. He will soon return West, to continue there his inspection of all the armies of the Union, but will make Washington his headquarters.

Many a man thinks it a virtue that keeps him from turning a rascal, when it is only a full stomach. One should be careful and not mistake potatoes for principles.

Gen. Rosecrans has issued a special order requiring all persons attending religious conventions held in his department to take the most stringent oath of allegiance. Any violation of the order will subject the assemblages to dispersion by any Provost Marshal.

The British blockade running steamer Don was captured on the 4th by the gunboat Pequot off Wilmington. The night before, a white painted side-wheel blockade runner went ashore, twenty-five miles south of Bean Fort. Three of our cruisers had gone in search of her. Another blockade runner, name unknown, was captured on the 22d in lat. 50°, lon. 79° 30'. A dispatch from Wilmington, the 7th, says a blockade steamer was sunk off Cape Fear yesterday.

The Richmond Whig of the 7th announces the arrival of 860 prisoners, for exchange, under the stipulations of the cartel. Hopes are entertained that the regular exchanges will be resumed.

A Washington correspondent says it is understood that Gen. Grant protests against further attempts to penetrate the Confederacy until Richmond is taken. He disagrees with Halleck and places the highest value upon the rebel capital, declaring that Cincinnati, as well as Washington, is threatened by it. Another correspondent says, in view of the "On to Richmond" movement that he thinks it probable that Grant will command the main column, with Sherman, Meade and Hooker as chief subordinate Generals. General William Smith reached here to-day, which gives rise to the renewal of reports that he will supercede Meade. It is claimed that Grant urges his appointment.

The House unanimously passed the bill increasing the pension of revolutionary survivors, twelve in number, to one hundred dollars additional per annum, to cease at their deaths.

A Chattanooga dispatch says: All is quiet in the front, except an occasional exchange of shots between the advanced cavalry pickets. To-day a large force of cavalry appeared before Nickajack Gap, and pressed our cavalry. A dispatch of the 7th says: Our cavalry has retired. Our forces now hold Nickajack Gap. It is not unlikely that the rebels may assume the offensive. A large cavalry force attacked a detachment of the Third Tennessee, at Panther Spring, East Tennessee on the 5th. Our loss is 22 killed, wounded and captured. The rebel loss is 50 killed and wounded.

The Richmond Sentinel, of the 6th, says "Sherman was at Canton on Wednesday last, and our cavalry was fighting him on all sides. There was heavy cannonading at Canton all that day. Sherman leaves the country perfectly impoverished wherever he has been." Reports generally agree that Sherman returned to Jackson about the 3d. An officer who has arrived at Cairo, says a portion of his forces were marching to Vicksburg, with a small army of negroes and a large lot of mules, horses, hogs, and cattle. Late arrivals confirm the report of the return of Sherman's expedition to Vicksburg. His cavalry penetrated thirty-six miles beyond Meridian. About 5,000 negroes, all men, followed the army on its return, women and children not being allowed to accompany them. About 1,000 prisoners were brought in. Considerable skirmishing occurred, but it is said that not more than a thousand rebels were seen at any one place. The Federal loss in killed, wounded and prisoners, is estimated at five hundred. We hope to have full details of the expedition in a day or two.

The following California Postmasters were confirmed: Elisha B. Smith, Georgetown; D. S. Turner, Columbia; and Harlow J. Street, Sonora. Elijah Steel was confirmed as Indian Superintendent of the Northern District, of California. The Committee on Public Lands reported back the bill to confirm certain land claims in California.

Secretary Chase has accepted the action of the Union members of the Ohio Legislature in recommending the renomination of Lincoln as decisive in recommending him to withdraw his candidation for the Presidency, and he is desirous that the harmony of the Union Party shall not be disturbed; so he expresses the wish that his name shall be considered withdrawn from the canvass.

A dispatch from Nashville the 6th says the main purpose of Smith's expedition, which was 7,000 strong, was to destroy the railroad and army stores, and this was accomplished. It was not essential to join Sherman, although the object of the expedition was delayed ten days by heavy freshets. The Mississippi State forces, under Gen. Johnson, are reported at 11,000, and are located in the region traversed by vast swamps, so that Gen. Smith determined to return. In the heavy skirmish at Joy's Farm, which Forrest claims as a complete victory, the rebels were completely routed. The rebel loss in the various engagements was not less than 600. Our total loss is set down at 150, chiefly stragglers captured. The damage done the enemy's railroads is irreparable, and the destruction of Government stores very great.

A dispatch from Concord, N. H., the 8th, says 77 towns give Gilmore 3,500 majority. He will be elected by about 4,000 majority. All but five Republican Councillors are elected, and probably nine out of twelve of the Senators elected are also Republican, and the majority of the Representatives. Heavy Union gains are reported in every town heard from.

At Fortress Monroe, the flag-of-truce steamer arrived March 9th, from City Point with 700 prisoners, exchanged for an equal number of Confederates taken up.

☞**Holloway's Pills and Ointment.**—Falling of the womb. During the early stages of gestation, many young married females are subject to a sinking of the womb, which causes them considerable trepidation and uneasiness. The Ointment will be found invaluable in these emergencies as it entirely dispenses with the necessity for "pessaries" or mechanical agencies. The Pills will brace the enfeebled organs, strengthen the system and secure the invalid from a future relapse. These medicines are valuable in all complaints incidental to the female sex.

Sold by all Druggists, at 30c, 70c, and $1 10 per box or pot. 199
HOLLOWAY'S PILLS and OINTMENT may be always obtained of Messrs. CRANE & BRIGHAM,
cor. Clay and Front streets, San Francisco, Cal.

☞**Multitudes of People** require an Alterative, to restore the healthy action of their systems and correct the derangements that creep into it. Sarsaparillas were used and valued, until several impositions were palmed off under this name. AYER'S SARSAPARILLA is no imposition.

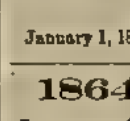
Farm Superintendent Wanted.

AN ACTIVE, PRACTICAL FARMER, WHO IS QUALified to take charge of a large and valuable Farm—a man who, by education, is fitted for this duty. None need apply unless they have a practical knowledge of farming in all its branches, with a good education, manners, and morals, to fit them for a responsible position. The salary will be liberal. No theoretical fancy man, but a good, plain, honest, working man is wanted. Apply to the Editor of the Farmer. 20-2

San Francisco Cordage Company.

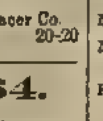
CONSTANTLY ON HAND, A FULL AND COMplete assortment of

CORDAGE.



Any particular size, length, or description, of Cordage MANUFACTURED TO ORDER At short notice.

TUBBS & CO.,
11615 and 613 Front street.



SEED, PLANTS, ETC.

THREE PREMIUMS for BEST Varieties FOREIGN GRAPES.

150,000 Grape-Roots

From imported Foreign, and American Vines of my own importation, FRUIT TREES, Etc., Etc.

Having imported myself from France, Germany, Italy, and Dr. Grant of N. Y., I offer for sale this season, as choice a lot of FOREIGN GRAPE ROOTS and CUTTINGS as can be had in this State, and as cheap as any reliable nurseryman will sell. All the Vines and Trees have borne fruit with me, and I guarantee everything I sell to be TRUE TO NAME, or refund the money.

AMERICAN VARIETIES GRAPE-ROOTS, 1 and 2 years old, and Cuttings:

Delaware, Diana, Concord, Iona, Union Village, Lincoln, Anna (white), Catawba, Isabella, etc.

EUROPEAN VARIETIES GRAPE-ROOTS, 1 and 2 years old, and countless numbers of Cuttings:

True black, red, and white Burgundy (Pineaux), Traminer, Rulander, Madeira Winegrape, Riesling, white, red, and black Frontignan, Malaga, Parsley, Cannon-Hall and White Muscat of Alexandria, and over 100 varieties more.

ALSO:—10,000 rooted vines 2 and 3 years old, LOS ANGELES, very cheap, and any amount of Cuttings of all varieties.

Also a limited lot of
DOWNING'S EVER-BEARING MULBERRY TREES
1 year from bud, extra large
French, German, and Swiss Prunes (Fellenberg's Zwetsche).

....ALSO....

Pear, Apple, Plum, Peach, etc; Lawton Blackberries, English Gooseberries, and all kinds of Trees, and Shrubs. Cions unlimited, and cheap, of the above.

I intend to close out the Nursery Business, and sell as low as the lowest. For prices or orders, send per Wells, Fargo & Co, or mail, to

TRAVELING.

SAN FRANCISCO AND SAN JO
RAILROAD.

Two Trains Daily, Each W

CHANGE OF TIME.

ON AND AFTER FEBRUARY 15, 1864, Francisco and San Jose Railroad Company will run trains each way, daily, leaving the Depot on Branna between Third and Fourth, for San Jose and intermediate stations, as follows:

Leave San Francisco at 8 a. m., and 4 p. m.
Leave San Mateo at 8, 55 a. m. and 4:55 p. m.
Leave Redwood City at 9:20 a. m. and 5:20 p. m.
Leave Santa Clara at 10:10 a. m. and 6:10 p. m.
Arriving at San Jose at 10:20 a. m. and 6:20 p. m.

RETURNING.

Leave San Jose at 7:30 a. m. and 3:30 p. m.
Leave Santa Clara at 7:40 a. m. and 3:40 p. m.
Leave Redwood City at 8:30 a. m. and 4:30 p. m.
Leave San Mateo at 8:55 a. m. and 4:55 p. m.
Arrive at San Francisco at 9:50 a. m. and 5:50 p. m.

FREIGHT.

Our road being completed from the City of San Francisco to the City of San Jose, we are prepared to take Freight to either end of the line, or to and from any Station on the Road, at the lowest rates.

COMMUTATION TICKETS.

Parties wishing to commute between here and San Jose, or between Stations, can procure tickets at greatly reduced rates, by applying to any Station Agent, or at the office of the Company.

☞ Passengers can reach the Depot by either the Third or Fourth street lines of city cars.

A. H. HOUSTON,

Good Crops yet! Rain! Rain!

The blessed rain is with us, and the countenances of men beam with glad looks of joy, gratitude, and thankfulness. All are happy, save those whose schemes of speculation have been thus early nipped in the bud.

God's promises are with us—"there shall be the early and the *latter* rain." *His* promises are sure, and our State is safe. These rains will stimulate the crops that were in a suffering condition, will awaken them into new life and vigor, and make them valuable. A continuance of this rain, which is almost certain for several days, will set the plows at work and induce considerable planting of grain still, for grain has been put in in many locations as late as April, and has done well in many years.

The appearance is that the rain has only yet begun, and by reason of the long dry spell, we can and should expect a regular old stormy time, and that the clouds will burst upon us in all their pent-up power, and drop of their richness upon the earth. This present rain will be felt to a wide extent over our State, and we shall have *good crops yet.*

Grain and produce has had *one* tumble—it will have another. Well is it if the growers of produce took the golden opportunity and sold last week—that was their time, and we urged them to seize it—that was the flood-time for them; if they have allowed it to pass they will regret it; for, we repeat, rains are upon us, just such copious rains as we had in the spring time of 1853, when Sacramento was flooded in March.

We do most earnestly hope our farmers will seize the auspicious moment and improve every acre of land possible while the soil can be plowed, and put in some varied crop. All need not plant to grain, other crops will do as well and even better, for we have grain enough on hand for the year 1864. Let all that can, plant "root crops"—sugar beets, rutabagas, etc, for dairy stock, and carrots for horses—these are cheaper and better than hay.

Look to the grain-market and see the fall in grain as the clouds come to give of their fatness in rain; so do some men's faces darken with sadness at lost prospects of speculations that would have filled them with fatness. There is this difference, however—the clouds of heaven give of their fatness to the great masses of the people, and they are blessed; the speculation mania give of their riches *to the few*, and the people—the great masses—mourn. So let the people all rejoice, for the blessed rains are with us, and God's promises that never fail, are making the whole people rejoice.

THE SUPPLY.—Says the Colusa Sun of March 12th: "Flour has gone up, at Marysville and Sacramento, we learn, to five dollars with a prospect of going still higher. We believe, however, that the rise is spasmodic, and that it is not based on a scarcity. If there is not a grain of wheat raised in the State this year there will still be plenty to supply the wants of the people. In this county, last year, the crops were short, but there is now wheat and flour enough in the county to supply the consumption for eighteen months more—that is aside from what will be sown. It has not been long since we read of immense quantities of wheat in store at Napa, Petaluma, San Francisco and other points. Then there will not be an entire failure of crops throughout the State, as many are so situated as to be able to flood their lands, and in places along the coast and bay the fogs will prevent an entire failure. Then our neighboring State of Oregon will have good crops and will be glad of an opportunity of supplying us at a small advance. Besides this it is not too late for rains to do good, even in this county."

SET THE PLOWS AT WORK.—Every wise farmer will put the plows to the soil as quickly as possible without injury to the soil, as soon as the land is in order. Plow deep as possible and get in some crops, and then continue to plow. Plow every acre possible beyond the wants of the present year, and have that land fallow, ready for next year. Be wise—keep plowing.

The Season.

Notes from Correspondents.

A writer from Oroville, Columbia Hill, asks:—"What is to become of our county? The crops are all leafing out, and the ground is so dry that it cannot be plowed, and if we have rain and then a frost, no wine will be made in this section of the State." We answer—nature is always right. When we watch the seasons and adapt ourselves to natural laws in the cultivation of the earth. Then we shall always succeed. We say to our friend at Oroville, never fear, work on in faith, rain is near by, and in abundance.

LOWER LAKE, Lake, Co, Cala, March 9, 1864.

EDITOR CALIFORNIA FARMER:

As you request the farmers to send you an account of the condition, and prospect of the crops, I will try and give you a small item from this place. The wind blows a gale to-day from the N. E. and it is some cloudy, but we dont expect rain from that direction. Rain would be, very welcome, as you may be well aware, as we have had none of any account for a long time. We do not suffer as much yet, as some other places.

Grain that was sown in good season looks very well, and does not appear to suffer much yet. Feed is middling, for the time of year, and stock doing accordingly. Fruit trees, of course, put forth sooner on the account of so much sunshine. Peaches in bloom some two or three weeks earlier than usual, but the dry North wind, with a nip from Jack Frost, has killed the most of them. Pears beginning to blossom. Apricots are behind Peaches this year, as only now and then a blossom opens and I think there will be no general bloom unless we have rain. Most of the garden seeds planted are quietly resting and waiting for moisture to bring them up. If we get rain plenty in a week or ten days, we will have an average crop, and we will scarcely remember the dry winter. Without rain we will raise scarcely anything.

Respectfully, O. N. C.

Cattle Starving.

Who will Try the Experiment?

OAKLAND, March 14th, 1864.

EDITOR CALIFORNIA FARMER:

Do you know whether the "tule" root (fresh water), has been used or experimented upon as food for cattle? It is known that hogs will grow fat on the root, and will not horses and cattle eat it before they will starve? I hope the experiment may be thoroughly tested immediately and the results published without delay. It will be worth millions if successful, and cost but a trifle. I would suggest to dig and wash the roots, and cut them up with a common hay cutter. Try the roots green and dried. D. C. KEYES, M. D.

We ask the attention of our readers to the above letter. It is important, and we hope it will be acted upon.

Further from a Pennsylvania Fruit Grower.

NAZARETH (Pa.), February 15th, 1864.

EDITOR CALIFORNIA FARMER:

I sent you a short communication a few weeks ago, in which, as I believe, I stated that I had sent the Basylicum grape to Mr. Smart, only, but I find that to be an error, finding now in the list of grapes sent to Mr. E. J. Jarvis, at Columbia, that grape also. I believe it to be my duty to correct the accidental error.

In regard to those apples which I mentioned in my former letter, I will yet say, that if they had not grown with Mr. Jarvis, I will send cions of the same, gratis, to any one who will pay the expense of forwarding them, and I repeat it here, again, that the Boradorper apple is the best apple in existence, for a climate like Oregon. The Riesling and Basylicum grapes, are the best for wine, both grapes pressed together, but let them get over-ripe. Yours truly, GEO. H. BUTZ, M. D.

P. S.—That early German apple I recommend, also, as excellent and beautiful.

GROWING CUCUMBERS.—Take a large barrel, or hogshead; saw it in two in the middle, and bury each half in the ground even with the top. Then take a small keg and bore a small hole in the bottom; place the keg in the center of the barrel, the top even with the ground, and fill in the barrel around the keg with rich earth, suitable for the growth of cucumbers. Plant your seed midway between the edges of the barrel and the keg, and make a kind of arbor-a foot or two high for the vines to run on. When the ground becomes dry, pour water in the keg in the evening—it will pass out at the bottom of the keg into the barrel and rise up to the roots of the vines, and keep them moist and green. Cucumbers cultivated this way will grow to a great size, as they are made independent both of drought and wet weather. In wet weather the barrel can be covered, and in dry the ground can be kept moist by pouring water in the keg.

MINERAL SALT is now brought in ballast from Russia; it sells for $20 a ton. It is mined in blocks that to the eye appear to be quartz. A thirty-pound block of it, placed in a box in a field, will supply a herd of cows for some weeks. It is as hard as stone. Ordinary salt would dissolve in one-fourth the time. No other country yet known yields this peculiar product. It is quarried precisely as we quarry marble.

The Shawls of Cashmere.

To what is the beauty of the Cashmere shawl to be attributed? To the delicate herbage of Tibet? to the waters of the Hydaspes? or to the skill of the weavers of Happy Valley, as the land of Roses has often been most inappropriately designated? Formerly, a gentleman of the name of Bogle, who wrote a paper for the Philosophical Transactions, assured the world that the exquisite material of which the cashmere shawls are made was the wool of a broad-tailed sheep, living somewhere about the sources of the Brahmaputra. By degrees, however, it was discovered that the animal was not a sheep, but a goat of diminutive size, with straight horns, and long, shaggy hair, but light and beautiful in form, which browses amid the vast solitudes north of the Himalaya, where he is occasionally found in company with large herds of cattle, deer, musk-deer, hares, and innumerable foxes. Nature has by no means proved herself a step-mother to the shawl-goat. If she has located him in a cold region, where men, however carefully clad, find it difficult during winter to face the piercing blasts, she has bestowed on him, in addition to a heavy felt of hair, an abundant coat of soft down, impenetrable to the keenest air, so that, without the slightest inconvenience, he can frisk and sport in January around the banks of frozen lakes, on whose surface the most vigorous skaters can hardly keep up the vital heat. No portion of our planet's surface is more wild or picturesque in aspect than the original country of the shawl-goat, which forms the southern extremity of the immense table-land that abuts the Himalaya. Here, as you approach the edge of the platform, you look down, through rents or cliffs in the mountains, upon brown heathy declivities, which conduct the eye to a girdle of snowy peaks, divided by unfathomable ravines, lying in ridges behind each other, till the summits of the more distinct pierce beyond the clouds. Wherever the snow melts, the goats find pasture.

The chamois, found in the Upper Alps of Savoy, Berne, and Bavaria, is considered by gourmands the most delicate eating in the world, because the grass on which it feeds springs from thin soil, on which the moisture never settles long enough to impart rankness to it. In proportion to its far greater elevation, the soil of Tibet is still more productive of a sweet and delicate pasturage. In winter, it is difficult to perceive the twisted and withered blades from which the goats derive sustenance. You discover them perched high among the rocks, black, gray, fawn-colored, white, or of a light bluish tinge, nibbling at something which you assume to be grass, and leaping from ledge to ledge, where no other animal could find a footing. Thence they descend carefully, as the storms come on, which in those terrible solitudes are sometimes violent beyond description, appearing, as they rave through the chasms and fissures of the mountains, almost to lift and whirl along the very surface of the earth. No chemical analysis has yet been able to detect and classify the ingredients which go to the formation of a delicate soil which runs over the earth's surface in strips and bands, here and there dovetailing into other soils, but elsewhere terminating sharply, like the edge of a fine ribbon. This is the case with some of the best vineyards in Burgundy, as you detect by the size and flavor of the grapes—small, rich, and delicious on one side of a thin wall of loose stones; large, coarse, and watery on the other. In some parts of the African desert, if you rise before the sun, and glance along the mammilated mounds of golden sand, you may frequently discern a slight coating of emerald blades as fine and sharp as needles, which are so frail and evanescent that they melt and disappear on the approach of the sun. In some parts of Tibet the herbage is little less diminutive and fragile, since in summer, if you take up a handful, it crumbles into dust between your fingers. Yet these lean pastures are preferred by all graminivorous animals to the luxuriant meadows of the south. Hence it is that the shawl-goat loses its fine down when attempted to be acclimated in any other land. It has been introduced into Bengal, into Cashmere, into Punjab, into Persia, and into several parts of Europe, and undergone different modifications at each remove. In the rank plains of Bengal, it has lost not only its fine down, but nearly all its hair, and been afflicted by a skin disease, exhibiting itself in offensive eruptions. In fact, the shawl-goat of Tibet wherever it may be transplanted, soon degenerates into the common goat of the country, just as the mouflon, supposed to be the original stem of all sheep, assumes in every region a new character, so as in many cases to be no longer recognized as the bold, fierce creature which nothing can terrify or subdue. The number of goats in this region must be prodigious, since the supply of down to the weavers of Cashmere appears to know no limit but that of demand. When served from the animal, it is packed into small, neat bales, and transported through the passes of the snowy mountains of Balti and Ladakak on the backs of sheep into Cashmere

When Bernier wrote two hundred years ago, the splendor of the dyes was attributed to the waters of the Jhylum or Hydaspes, and the very latest observers concur in strengthening the opinion. To the same cause is assigned the great softness of the wool, which seems to lose its delicacy when dipped in the Jumna, or even in the more sacred Ganges. Anciently, chintzes of Masulipatam were supposed to owe the brightness of their colors to the waters of the small streams issuing from the Krishna and the Godavery, which gave them a superior reputation throughout the East, though now they have been eclipsed by the manufacturers of Europe. The shawl of Cashmere, however, appears likely to remain unrivaled, since the efforts of near three hundred years have failed to produce any fabric which approaches it in excellence or beauty. It has been found next to impossible to obtain correct information respecting the number of shawls produced, or of the looms employed, because, under an ignorant and jealous government, persons are afraid to speak what they think, or to disclose what they know. In the age of the Mogul emperor there are said to have been forty thousand looms at work in the whole valley, and of these, a majority were to be found in the capital. Upon an average, five shawls issue annually from each loom, so that the entire number formerly manufactured amounted to two hundred thousand in the year. Owing to a variety of causes, among which the principal is the diminution of that class of persons who could afford to pay so large a sum for a single article of dress or ornament, there has been a great falling off in the shawl trade. The last computation of Cashmere looms made them amount to sixteen thousand, which sent into the market eighty thousand shawls, of which the far greater number were exported. But to what countries? Certainly not to Europe. Neither do they find their way to India, though a very superior article, which pays an *ad valorum* duty of twenty per cent, finds its way to Calcutta, where it commonly sells for three hundred pounds. Gholab Singh therefore obtains from each shawl of this class a duty of sixty pounds sterling, which, if the trade were extensive, would render him one of the richest princes in the East. Even the dancing-girls of northern India often possess shawls valued at a hundred pounds; and the ladies of the harems of Western Asia twist around their heads or waists shawls worth six times that sum. The young wife of a Turkish Pacha used to pride herself on a scarf of extraordinary richness and beauty, said to have cost her husband seven hundred pounds sterling. It has a border at either end eighteen inches deep, displaying a parterre of the most splendid flowers—roses, anemones, narcissuses, tulips—as fresh and gorgeous of hue as those which drooped or nodded in his own gardens in the Valley of the Sweet Waters. When she wore it around her waist, allowing the borders to depend down her left side, each fold was so disposed as to exhibit in succession a rose, a tulip and a narcissus, enveloped in a galaxy of buds, especially of the moss rose, which seemed to project from the surface of the fabric, fresh and steeped in the dews of morning. The wild and forward beauty who owned it sometimes took it from her waist and twisted it around the head of a favorite, in order to behold the splendor of the flowers set off by contrast with his black beard. Along the sides of the scarf run a border of about four or five inches in depth, resembling in richness of colors the most gorgeously painted windows in an old cathedral, and though what may be called the field, there ran long stems or wreaths of fanciful blossoms, fading away towards the centre into an opal tinge, which surrounded like a halo the circle of a damask rose, it may well be doubted whether the shawls manufactured for the Russian and Persian ambassadors, which cost twelve thousand rupees, exceeded in magnificence and loveliness that of the Turkish lady we have described. To suggest more completely the ideas of a garden, parts of the scarf had been dipped in one perfume and parts in another, so that as she moved along, the scent of jasmines, roses, or violets fell upon the sense alternately.

Occasionally the workmen of a whole shop produce only one shawl in a year, and when they make most progress, advance no more than at the rate of a quarter of an inch a day. The foreman, with the pattern before him, drawn and colored in the most careful manner on paper, sits in front of the artisans, whose fingers and threads he directs, while they toil on in silence, darting their shuttles to and fro and nodding their heads at every movement. It has sometimes been doubted whether they were more conscious than their shuttles of the beauty they were creating; but though they require the directions of the foreman, they are possessed of far too much intelligence and skill to work like mere machines. They evidently throw themselves with enthusiasm into their employment, and the pride they take in their productions is their chief reward, since the wages they receive are barely sufficient to keep body and soul together.

Over the whole of Central Asia, on the setting in of fine weather, the animals of those cold regions begin to experience extreme irksomeness at the presence of their winter clothing, which nature gradually detaches from the skin so as greatly to facilitate its removal. To expedite the process the dogs roll upon the ground, the yaks rub themselves against the trunks of trees, and the shawl-goat would doubtless exhibit similar ingenuity and impatience if man were not too anxious to come to his assistance. Beginning at the head, the native cuts off his long hair with a knife, so as to render easy the introduction of a comb made like a Pandean pipe of fine twigs with diverging teeth, which is passed between the hair against the grain, and soon delivers the goat from his down, and occasionally, also, from parts of his skin. However, no sooner is he freed from the attentions of his tormentors than he gives a glad shake to the hair that remains, and bolts away to the mountains, where he dwells in peace, browsing or frisking at his leisure till the following spring. Considering the habitual humanity of the Tibetans, whom the worship of the lama appears to render gentle and timid, we may be sure that the rough usage of the goat is rather a matter of accident than of design. A caravan of shawl merchants exhibit a truly comic appearance when returning from the upper country towards the south, driving before them numbers of long-legged sheep, laden with small packs of goats' wool, weighing about thirty pounds, with which they wearily toil along, bleating with distress and fatigue. On their arrival in the valley, the looms, which are of the most simple and primitive construction, are all set to work, and the wretched artisans have the satisfaction of learning that they may hope to eat bread for the next year.—[Chamber's Journal.

SQUIRREL KILLERS.—A large number of these implements are in use in Contra Costa county. The Gazette says they consist of a sheet iron cylinder, about two feet long and three inches in diameter. One end is tapering with a small hole in it, and at the other is a bellows. The cylinder is partly filled with charcoal and sulphur, and inserted in the squirrel hole. The sulphur and charcoal is then ignited, and by means of the bellows the fumes are forced into the subterranean habitations. If there is another outlet it is easily detected and stopped, and there is no chance of escape. The extermination of squirrels is carried on relentlessly.

The United States Mint and Coinage.

THE "Annual Report of the United States Mint and its Branches," for the year ending June 1863, has just been published. From it we learn that the amount of bullion received during the year was gold, $23,149,495 41; silver, $1,674,605 90; total, $24,824,101 31. Deducting the bars made at one branch of the Mint, and deposited at another for coinage, the amount is $23,701,-837 31. The coinage for the same period has been gold coin, $20,695,852; fine gold bars, $1,949,377 90; silver coins, $390,204 42; cents coined, $478,450; number of pieces of all denominations of coin, $51,980,575; total coinage, $24,688,477 12.

The amount of bullion received and coined at the Mint and its branches is shown to have been: At Philadelphia, gold deposits, $3,401,374 65; gold coined, $3,184,892; fine gold bars, $166,-030 74; silver deposits and purchases, $386,-189 73; silver coined, $358,217 80; silver bars, $6,897 83; cents coined, $478,450. The total deposits of gold and silver have been $3,787,-564 28. Total coinage, $4,184,497 37. Numbers of pieces, 49,108,402.

At the Branch Mint, San Francisco, the gold deposits were $17,936,014 26; gold coined, $17,-510,960; silver deposits and purchases, $962,-879 95; silver coined, $816,875; silver bars, $224,763 68. Total coinage of gold and silver, $18,551,598 68; number of pieces, 2,872,173.

The Assay Office in New York received during the year $1,812,106 60 in gold bullion; and in silver, $325,536 22. Fine gold bars stamped at that office, 1,488; value, $1,793,838 16; silver bars, 1,916; value, $158,542 91; total value of gold and silver bullion, $264,137 83.

The Branch Mint established at Denver, Colorado Territory, was not opened until the close of last September. Its operations are, for the present, confined to melting, refining, assaying and stamping bullion, which is returned to the depositor bearing the Government stamp of weight and fineness. Idaho is now yielding large quantities of very fine gold; and the gold workings in Oregon and Washington Territory are on the increase. Arizona is yielding both gold and silver and the natural supplies are unlimited.

Up to the close of the present fiscal year there have been 104,011,000 nickel cents coined; and the profits arising from these have paid all the expenses of coinage and distribution. It is recommended (in the Report) that the use of such a valuable metal as nickel may be dispensed with, and its place supplied by tin and zinc. The Report states that all of the silver which has gone into the three, five, and perhaps ten cent pieces, might have been reserved for larger coin, and the circulating value of these pieces have not been lessened thereby. Aluminum can be advantageously substituted for silver in small change, and thereby supplant the present postal currency. The Report urges that the mottoes upon our coinage should be "expressive of a national reliance upon divine protection, and a distinct and unequivocal national recognition of the divine sovereignty."

Rabbits Eating Fruit Trees.

We take the following from the Valley Farmer: Kill a rabbit and cut it in two pieces, and rub the bark of each young tree with it. The rabbit will not trouble these trees any more that season. The flesh side of the hide of the opossum is equally as good to rub the trees with. I have tried it and have not had a tree injured that was treated in this manner, while those that were left unrubbed were eaten by the rabbits.

Blood is also a safe, effectual and easy remedy to prevent rabbits from eating the bark off of young trees. Take two or three quarts of blood, and thoroughly mix it with about six of water in a bucket; then, with a short-handled whitewash brush, put it on. One stroke on each side of the tree is sufficient. One application is enough, without heavy rains occur during the winter; in that case it would be better to go over them a second time. An active man will wash nearly 1000 in a day.

FRUIT TREES ON LOW GROUND.—A friend set apple trees on a low spot of ground, near his dwelling. All died except those that were set near the top of the ground and had earth wheeled in and around them to make a mound. In this manner the standing water of wet seasons was turned away from immediate contact with the trees. This spot is difficult of drainage, but the owner thinks he will have no trouble in growing trees on it, by setting them on the surface, and filling in soil over the roots, making a mound to turn away the water. We recollect of reading, some years ago, of a New England Farmer having good success in growing apples on low ground, by cutting off the tap-root of the young tree, planting upon the surface and covering with the soil derived from between the rows of the trees. Perhaps it would be worthy of trial by those having wet grounds, very difficult to drain.

GARGET IN COWS.—Garget is a troublesome complaint. It affects the udder and produces a morbid action of the system, but more particularly of the secretory and lactescent glands. If taken in time, common linseed oil rubbed carefully over the teats and udder, will effect a perfect cure. In stubborn cases, from two to three applications may be necessary. As a preventive, a few doses of saltpetre, per month, administered in dough or mash—a tablespoonful at a time, is highly valuable.

Clover Hay For Horses.

Dr. McClure is one of the leading veterinary surgeons of Philadelphia, and we may add, of the United States. His opinion, therefore, on any matter connected with the food and health of the horse, can be quoted with confidence. In a recent article in the Culturist he advocates the feeding of clover hay to horses, and thinks it would prevent a disease now prevailing among the horses of this city, during which they will not eat timothy hay; so little of it being brought to market. He then proceeds to say:

Why is this the case? Simply because there is a prejudice existing among all classes of horsemen, and from them communicated to the owners of horses, against feeding this kind of hay. First, because it is said that clover hay produces heaves and secondly, because it is said that it is not respectable to be seen feeding with clover hay, as it looks parsimonious. These opinions concerning this article are so widely and firmly fixed in the mind of almost every groom and stableman, as well as horse owner in Philadelphia, that I believe it has been the cause why most farmers are not found giving clover cultivation to the extent it ought to be, or as its superiority as an article of provender demands. Let us now examine in brief, the objections that are laid against it. It is said it will produce heaves in horses. The idea is as false as it is preposterous. If broken wind is produced by an article of food, it certainly is not from food but from the quantity given. In like manner heaves may be caused by a too great quantity of water, oats, or any kind of hay whatever, given at an improper time, as when the animal has journey to perform. In a word, it is the person's fault in giving too much food at an improper time, and not the character of the food that thus produces heaves in the horse. The man, who, when feeding a horse, would fill its manger with oats and corn, would not be considered a very fit man to feed and care for horses, neither is that man who would fill a large rack full of clover hay; as the animal will not stop eating until it has hurt itself; as every horse is fond of it, and as before stated, sick horses will eat it when they will not eat anything else. Without another word the argument is complete.

For argument's sake, let us see what there is in the other objections of clover hay. It savors meanness. Does this opinion arise from the idea that the queenly cow eats and feeds upon it in all our large cities? How much inferior is she to the horse, and which adds most to our domestic happiness as well as health? Is it mean to purchase for horse feed, hay which is superior to any other, and sold forty cents to half a dollar less than the best kinds reported in the market? Or, is it a generosity in the department or character of any man, to feed his horses upon that which the animals do not seem to relish, trample a large portion of it under their feet, to be carried thence to the dung hill, when another article superior to it, in point of nutriment, and costing from forty to fifty per cent, less may be obtained?

The whole may be summed up in a few words, as follows:

Good clover hay contains forty-five per cent more fattening matter than timothy hay, and about forty per cent more than the English rye-grass hay; about ten per cent less than dried lupins or vetches which are extensively used in Europe for the feeding of both horses and cattle, and which are second only to the *Trifolium hybridum, or Alsike* clover, so named from a district in Sweden called Alsike. Alsike clover contains the properties of both the red and white clover, and was first introduced into Great Britain about 1854 or 5. This variety of clover has for the last few years engaged the attention of agriculturists in Scotland and various parts of England to a great extent. Its reputation is now so firmly established, that more of it has been sown the last year than ever before. It is said by many agriculturists that animals will leave any other grass or clover to feed on the Alsike, and they say farther that the more it becomes known the greater will be its cultivation.

We may add to the foregoing that thirty years ago farmers never raised timothy for their own use, and upon many farms, even within reach of the Philadelphia market, not a pound of timothy hay was produced. Farmers fed clover exclusively to their horses, with cut straw and shipstuff, and moderately with whole corn. These horses were put to all kinds of work, were ridden and driven at all times; and we venture to say, backed by our recollection, that the horse at that period was not subjected to one-half the diseases that it is now. The truth is we will have to go back to clover, probably of the new variety named, to a considerable extent.—[Ger Tel.

Boiling Food for Hogs.

At a recent meeting of the Farmers' Club, Prof. Mapes made the following remarks in regard to boiling food for hogs: The proof of the saving of food by boiling has been given here, and, as it can be stated in very few words, we may as well have it. Mr. Mason was a watchmaker in Camden, N. J., and among other fancies he liked to keep hogs. He has his hog-pen just back of his shop, so that he could sit at his window and watch his hogs. Every spring he bought some pigs and fed them through the season. Just opposite to Mr. Mason was the store of Mr. Van Arsdale, and every pound of food that Mr. Mason gave to his pigs he bought at this store. At the end of six months he got his bill from Mr. Van Arsdale, and he always slaughtered his hogs at that time, so that he knew exactly how much his pork cost. For several years it figured up about 13 cents a pound. At length some one advised him to boil his corn. He accordingly got a large kettle and cooked all the food which he fed to his pigs. Then his pork cost him 4½ cents a pound! We also had the experience of Mr. Campbell, which was about the same as Mr. Mason's. Henry Ellsworth made some extensive experiments in the same thing, and his statement is that 30 pounds of raw corn make as much pork as 13 pounds of boiled corn.

A pack train went through Napa, the other day, bound for the States. The persons who had charge of the train recently arrived here from the East, but, it appears, didn't like the dry state of affairs which prevail, and accordingly retraced their steps. They came from the vicinity of Sonoma.

Cheese Making.

The Agricultural Board of the State of Massachusetts held a meeting lately at Springfield, in that State, when the Secretary of the Board read a paper on the subject of cheese-making. The following extract from it may be found of interest in California. At all events, it presents some important facts and statistics which will be new to many:

"Eight and a half pounds of milk, on an average, make a pound of cheese. In Herkimer county, N. Y., the cows average 600 pounds of cheese per annum. A cow that will make less than her dressed weight of cheese, in Scotland, is sent to the butcher. England is our great cheese market, for the English eat more cheese than we. 200,000 cows are kept in a single county of Cheshire. Herkimer county, N. Y., first taught England to use American cheese, and now we ship there over forty million pounds a year. Cheese factories are modern but labor-saving inventions. They require the milk of at least 500 cows to make them profitable, and a force of five or six persons to do the work. There are more than thirty such factories in Oneida county, N. Y., and the cheese commands a higher price than that made in families. Carrying milk from one to five miles in a wagon, improves it for cheese as much as it hurts it for making butter. There is little difference in the labor for a pound of cheese or a pound of butter, and the milk necessary for a pound of the latter will make two and a half pounds of the former. Hay cheese is less valuable than that made from grass."

Training Grape-Vines to Stakes.—A correspondent of the Valley Farmer, writing upon this subject, says: "My plan is to cut my stakes about seven feet long, and set them one foot apart, by first making a hole with a crowbar, and then driving the stake in with a mallet—vines from six to eight feet apart in the rows, according to variety. I think the renewal, the best and simplest system of training. If your vines are six feet apart, you will have six stakes to each vine, three on each side. Have your arms within a few inches of the ground, and grow three canes from each arm, tying one to each stake. Allow only every other one to bear fruit, growing canes for next year's fruiting upon one-half of the canes, and fruit upon the other half. The process is simple, and I think as good as any. Stakes, no doubt, are the cheapest, where you are starting a new place and clearing land; but in course of time I think we shall have to trellis. Grow the golden willow for ties—nothing so good or so cheap—they will grow almost anywhere. It is by no means necessary that they should be planted in a wet place. I have seen cuttings make a growth of six and seven feet on high sandstone soil."

California Pork Packing.—The Nevada Transcript notes the extensive pork packing establishment of Davis & Co. Their place of business is on the Grass Valley Road, near the Town Talk. They commenced work on the 9th of November last, and since that time, though the season has been very unfavorable, they have cured 90,000 pounds of ham, and about the same quantity of sides and shoulders. The establishment is supplied with steam boilers for heating water, and every facility for expediting work. During the winter 11 hands have been constantly employed. With that force they can kill, cut, and salt 40 hogs per day. The smoke house attached to the establishment will hold 8000 pounds of pork. The department for making lard is furnished with a kettle for "rendering" which holds 15,000 pounds. They have, in this part of the establishment, put up 4000 eight-pound cans, and 5300 ten-pound cans and kegs, amounting in all to about 100,000 pounds. The hogs killed are all fattened on grain, and the hams and bacon that they cure are unequaled by any brought into the California market. They have a large stock now in store awaiting shipment to the Territory, where, no doubt, it will find ready sale.

Breathing Apparatus.—At a late meeting of the Academy of Sciences, M. Galibert described an apparatus for securing free and complete breathing to persons obliged to stay some time under water, or to penetrate into places filled with deleterious gases or smoke. This apparatus consists of a piece of wood, having the form and dimensions of the human mouth when open. To this piece of wood 2 India-rubber tubes are fixed, of any length, according to the exigencies of the case. The man engaged in the operation is further provided with a nose-pincher, or instrument for compressing the nostrils, so as to prevent the introduction of deleterious gas or of water, as the case may be. The operator puts the piece of wood into his mouth, and puts on the nose-pinchers; he stops one of the orifices with his tongue and inhales pure air from the other; after which he shifts his tongue to the latter orifice, and exhales his breath through the other. He continues thus regularly shifting his tongue from one orifice to the other, in the order of the inspirations and expirations; but even a mistake would be of little consequence. A man easily learns the use of the apparatus by a few minute's exercise. This contrivance has the merit of requiring no preparation, thus affording a speedy means of giving assistance in the case of fires or of suffocation by water or gases. It might also be used in medicine for the complete immersion of patients in a bath, which might sometimes be advisable.

How to Cure a Smoky Chimney.—"I have just succeeded," says Mr. C. Butler-Clough, in the Mining Journal, "in curing an obstinate smoky chimney by the aid of a zinc covering outside a common earthenware chimney-pot, having two openings in the zinc, one east and the other west. There are also two partitions or stoppers, north and south, to prevent the draft from escaping by the opposite opening. By the aid of this contrivance an upward current of air is carried outside the flue to its top, on the windward side of the chimney. I have now had the plan in use for some time, and in the face of several most violent storms, not a particle of smoke or soot has come down the flue. In other rooms, the soot was blown on the floor to a large extent."

MINERALOGY.

[Continued from California Farmer of March 11th, 1864]

Rocks.

TRAP.—BASALT.

Trap is a dark greenish or brownish-black rock, heavy and tough. Specific gravity 2·8—3·2. It has sometimes a granular crystalline structure, and at other times it is very compact without apparent grains. It is an intimate mixture of feldspar and hornblende. It is often called *greenstone*; and when consisting of albite and hornblende, it is called *diorite*.

Amygdaloid (from the Latin *amygdalum*, an almond), is a trap containing small almond-shaped cavities, which are filled with some mineral: usually a zeolite, quartz, or chlorite.

Porphyritic Trap is a trap containing, like porphyritic granite, disseminated crystals of feldspar.

Basalt is a rock resembling trap, but consisting of augite and feldspar. It varies in color from grayish to black. In the lighter-colored, which are sometimes denominated *greystone*, feldspar predominates; and in the darker, iron, or a ferruginous augite. It often contains chrysolite (or olivine) in small grains of a bottle-glass appearance. Magnetic or titanic iron are also frequently present in the rock. When feldspar crystals are coarsely disseminated, it is called porphyritic basalt; and when containing minerals in small nodules, it is amygdaloidal basalt; when consisting of labradorite and augite, it is called dolerite.

Wacke or *toadstone* is an earthy basalt, or a sedimentary rock of trap or basaltic material.

Both trap and basalt occur in columnar forms, as at the Giant's Causeway and other similar places.

Trap and basalt are excellent materials for macadamizing roads, on account of their toughness. Trap is also used for buildings. It breaks into irregular angular blocks, and is employed in this condition. For a Gothic building it is well fitted, on account of an appearance of age which it has.

PORPHYRY.—CLINKSTONE.—TRACHYTE.

Porphyry consists mainly of compact feldspar, with disseminated crystals of feldspar. Red or brownish-red and green, are common colors; but gray and black are met with. The feldspar crystals are from a very small size to half or three quarters of an inch in length, and have a much lighter shade of color than the base, or are quite white. It breaks with a smooth surface and conchoidal fracture. The specific gravity and other characters of the rock are the same nearly as for the mineral feldspar; the hardness is usually a little higher than in that mineral.

Porphry receives a fine polish, and has been used for columns, vases, mortars, and other purposes. Green porphyry is the oriental verd antique of the ancients, and was held in high esteem. The red porphyry of Egypt is also a beautiful rock. It has a clear brownish red color, and is sprinkled with small spots of white feldspar.

Clinkstone or Phonolite is a grayish-blue rock, consisting, like porphyry, mainly of feldspar. It passes into gray basalt, and is distinguished by its less specific gravity. It rings like iron when struck with a hammer, and hence its name.

Trachyte is another feldspathic rock, distinguished by breaking with a rough surface, and showing less compactness than clinkstone. It sometimes contains crystals of hornblende, mica, or some glassy feldspar, mineral. It occurs in volcanic regions.

LAVA.—OBSIDIAN.—PUMICE.

The term *lava* is applied to any rock material which has flowed in igneous fusion from a volcano. Basalt is one kind of lava; and when containing cellules, it is called *basaltic lava*. Trachyte is also a lava. There are thus both feldspathic and basaltic lavas. The feldspathic are light colored, and of low specific gravity (not exceeding 2·8); the basaltic vary from grayish-blue to black, and are above 2·8 in specific gravity. The general term basaltic sometimes includes doleritic lava, which is closely allied. Chrysolite is often present in basaltic lavas; and they are not unfrequently porphyritic, or contain disseminated crystals of feldspar.

The light cellular ejections of a volcano are called scoria or pumice.

Pumice is feldspathic in constitution; it is very porous, and the fine pores lying in one direction make the rock appear to be fibrous. It is so light as to float on water. It is much used for polishing wood, ivory, marble, metal, glass, etc., and also parchment and skins. The principal localities are the islands of Lipari, and Ponza, Ischia, and Vulcano, in the Mediterranean between Sicily and Naples. Both scoria and pumice are properly the scum of a volcano.

Volcanic ashes are the light cinders, or minute particles of rock, ejected from a volcano in the course of an eruption.

Obsidian is a volcanic glass. It resembles ordinary glass. Black and smoky tints are the common colors. In Mexico, it was formerly used both for mirrors, knives and razors. Pinchstone is one perfectly glassy in its character, and has a pitch-like luster. Otherwise it resembles obsidian. *Pearlstone* has a grayish color and pearly luster. *Spherulite* is a kind of pearlstone, occurring in small globules in massive pearlstone. *Marekanite* is a pearl-gray translucent obsidian from Marekan in Kamschatka.

ARGILLACEOUS SHALE, OR CLAY SLATE.—ARGILLITE

Slate is an argillaceous rock, breaking into thin laminæ; shale a similar rock, with the same structure usually less perfect and often more brittle; schist includes the same varieties of rock, but is extended also to those of a much coarser laminated structure. The ordinary clay slate has the same constitution as mica slate; but the material is so fine that the ingredients cannot be distinguished. The two pass into one another insensibly. The colors are very various, and always dull or but slightly glistening.

Roofing slate is a fine grained argillaceous variety, commonly of a dark dull blue or bluish-black color, or somewhat purplish. To be a good material for roofing, it should split easily into even slates, and admit of being pierced for nails without fracturing. Moreover, it should not be absorbent of water, either by the surface or edges, which may be tested by weighing, after immersion for a while in water. It should also be pure from pyrites and every thing that can undergo decomposition on exposure.

Roofing slates occur in England, in Cornwall and Devon, Cumberland, Westmoreland.

In the United States, a good material is obtained in Maine at Barnard, Piscataquies, Kennebec, Bingham and elsewhere; also in Massachusetts, in Worcester county, in Boylston, Lancaster, Harvard, Shirley, and Peperell; in Vermont, at Guilford, Brattleborough, Fairhaven, and Dummerston; in Hoosic, New York; on Bush creek and near Unionville, Maryland; at the Cove of Wachitta, Arkansas. At Rutland, Vermont, is a manufactory of slate pencils, from a greenish slate.

These slate rocks are also used for gravestones; and we cannot go through New England cemeteries without frequent regret that a material which is sure to fall to pieces in a few years, should have been selected for such records.

Drawing slate is a finer and more compact variety, of bluish and purplish shades of color. The best slates come from Spain, Italy and France. A good quality is quarried in Maine and Vermont.

Novaculite, hone-slate, or whet-stone, is a fine grained slate, containing considerable quartz, though the grains of this mineral are not perceptible. It occurs of light and dark shades of color, and compact texture. It is found in North Carolina, seven miles west of Chapel Hill, and elsewhere; in Lincoln and Oglethorpe counties, Georgia; on Bush creek, and near Unionville, Maryland; at the Cove of Wachitta, Arkansas.

Argillite is a general term given to argillaceous or clay slate rocks. Many shales or argillites crumble easily, and are unfit for any purpose in the arts, except to furnish a clayey soil.

Alum shale is any slaty rock which contains decomposing pyrites, and thus will afford alum or sulphate of alumina on lixiviation.

Bituminous shale is a dark colored slaty rock containing some bitumen, and giving off a bituminous odor.

Plumbaginous schist is a clay slate containing plumbago or graphite, and leaving traces like black lead.

The *Pipestone* of the North American indians was in part a red claystone or compacted clay from the Coteau de Prairies. It has been named Catlinite. A similar material now accumulating, occurs on the north shore of Lake Superior, at Nepigon bay. Another variety of pipestone is a dark grayish compact argillite; it is used by the Indians of the northwest coast of America.

Agalmatolite is a soft mineral, impressible by the nail, and waxy in luster when polished, presenting grayish and greenish colors and other shades. Gr=2·8—2·9. It has a greasy feel. It consists of silica 55·0, alumina 30 0, potash 7·0, water 3 to 5 per cent, with a trace of oxyd of iron. It is carved into images, and is hence called figure-stone.

QUARTZ ROCK.

Quartz rock is a compact rock consisting of quartz, and often appearing granular. Its colors are light gray, reddish or dull bluish; also sometimes brown.

When the granular quartz contains a little mica, it often breaks in slabs like gneiss or mica slate. The itacolumite of Brazil, with which gold and topaz are associated, is a micaceous granular quartz rock of this kind.

Flexible sandstone is an allied rock of finer texture. Granular quartz graduates into the proper sandstones. The two rocks are properly parts of one series.

Granular quartz is one of the most refractory of rocks. It is consequently used extensively for hearthstones, for the lining of furnaces, and for lime kilns. At Stafford, Conn., a loose grained micaceous quartz rock is highly valued for furnaces; it sells at the quarry for $16 a ton.

Granular quartz is also used for flagging, and a fine quarry is opened in Washington, near Pittsfield, Mass.; it also occurs of good quality at Tyringham and Lee, Mass. In the shape of cobble stones, it is a common paving material.

A highly important use of this rock is in the manufacture of glass and sandpaper, and for sawing marble. In many places it occurs crumbled to a fine sand, and is highly convenient for these purposes. In Cheshire, Berkshire county, Mass., and in Lanesboro', Mass., it occurs of superior quality, and in great abundance. It is also in demand for the manufacture of glass and pottery. In Unity, N. H., a granular quartz is ground for sandpaper and for polishing powder; the latter is a good material for many purposes.

A fine variety of granular quartz is a material much valued for whet-stones.

BURSTONE.

Buhrstone is a quartz rock containing cellules. It is as hard and firm as quartz crystal, and owes its peculiar value to this quality and the cellules, which give it a very rough surface. In the best stones for wheat or corn the cavities about equal in space the solid part. The finest quality comes from France, in the basin of Paris and some adjoining districts.

The stones are cut into wedge-shaped parallelopipeds called panes, which are bound together by iron hoops into large millstones. The Paris buhrstone is from the tertiary formation, and is therefore of much more recent origin than the quartz rock above described.

Buhrstone of good quality is abundant in Ohio, and others of the western states. It is associated there with proper sandstones.

The quartz rock of Washington, near Pittsfield, Mass., is in some parts cellular, and makes good millstones.

A burhstone occurs in Georgia, about 40 miles from the sea, near the Carolina line; also in Arkansas, near the Cove of Washitta.

Ornamental Tree and Shrub

SEEDS,

NO. 408 CALIFORNIA STREET

Old Number 110,

Between Sansome and Montgomery streets,

SAN FRANCISCO, CAL.

THE UNDERSIGNED HAS ESTABLISHED SUCH a correspondence and business in Europe as to enable him to secure from the very best source—the most successful growers—their choicest seeds grown, of which he will always be in receipt, and in endless variety, imported directly from France and England, from well known and responsible houses; some of the most prominent of which are named in our catalogues.

It has been the experience of our best gardeners and growers, and all others who plant seed, that seeds raised in California are not fully reliable and cannot be for a series of year, until more capital, experience and scientific knowledge shall be given to the business.

HAS FOR SALE

Alfalfa or Chile Clover; Hungarian Grass;
Kentucky Blue-grass; Orchard Grass,
Red-top Grass; Sainfoin Grass,
English Rye-grass, Timothy Grass;
Red Clover; White Dutch Clover;
Crimson Clover, Lucerne, &c. &c. &c.

With many entire new varieties of Grass Seeds and prepared Lawn Grasses never before offered.

EVERY VARIETY OF

BEET, CABBAGE, CARROT, RADISH, TURNIP, CUCUMBER, MELONS, LETTUCE, ONIONS, TOMATO, EARLY AND LATE PEAS, BEANS, &c., &c., &c.

Tobacco Seed.

HAVANA, VIRGINIA, CONNECTICUT SEED LEAF, AND MARYLAND TOBACCO SEED.

COTTON SEED.

Guano from Johnston's Island.

FLOWER SEEDS (300 Varieties)

BULBS:

LILIES, TULIPS, HYACINTHS,
Amaryllis, Anemones, Ranunculus,
Narcissus, Tuberoses, Peony-roots,
Gladiolus, Iris,

and in endless variety, imported direct from France and Germany.

From his long experience in the Seed Business (over thirteen years), and his very extensive stock of goods appertaining to an establishment of this kind, he is confident of his ability to satisfy his patrons.

California Notes,

ABOUT

GRASSHOPPERS AND LOCUSTS.—No. 6

BY ALEX. S. TAYLOR.

SECOND SERIES.

Continued from the California Farmer of March 11, 1864.

The California Grasshopper in 1861.

ITS ENEMIES AND FRIENDS.

Its greatest enemy is overflooding waters or rains attended with a freezing temperature, which with violent dry storms of wind soon clean them out of the country. The rainless gales takes the mature ones to sea, and the heavy rains destroy the eggs and the young. But after a great visitation, succeeded by heavy falls of rain, and then comes up (as is often the case in Syria and California) sudden, hot or warm, drying winds, their development from the egg to the full fledged, is then greatly accelerated. Cold foggy days benumb them, and they will then get in masses or long windrows under bushes, walls, fences, hedges, in holes and such like protections, and can scarcely move. As soon as the weather clears and the sun gets hot, they are warmed, and by noon are strong on the wing or at jumping, and soon fill the surface of the earth in all directions until the shades of the setting sun drive them into the crevices of the earth or exterior protections. In the first half of May, 1861, several days occurred in this country with hot, dry parching winds, which developed their functions of growth and existence to a marvelous extent, between the town of Santa Barbara and the pass of the Santa Ynez Cuesta; but they were not found but *very sparsely* on the eastern slopes of the Coast ridge or Cuesta of Santa Ynez of the county, through nearly the whole length of which this Cuesta runs at a distance of a league from the ocean line.

A small species of red lice is often found covering their bodies. Their other enemies are all sorts of birds and quadrupeds, including man in the shape of the Indian, who catches them by thousands in all parts of the State, particularly the wild Indians, and after roasting them, eats them whole or grinds them to powder to make mush—mostly when they are full of eggs. Different kinds of insects devour their eggs, and even hatch their young in its body. When they fall into water, salt or fresh, in any numbers, they speedily corrupt it and cause a strongly offensive odor. Birds are also its enemies, particularly the Blackbird, Starling, or rose or yellow-winged Thrush of California, called in Spanish *Chenate*, which are often found at times in all parts of the State in clouds and countless thousands. They completely, however, defy extermination either by man or any other form of animated nature.

THEIR COLONIES, CHRADNRAS, STATES AND CONFEDERACIES.

In all May is the great time of the laying of their eggs. This is *always* effected in companies of several hundreds or thousands over a given space from a center of from fifty to a hundred yards in diameter, gradually thinning off on the edges till the outposts or frontiers of another rancheria, camp, or clan is reached. The ground will be covered with all sizes of young and old, walking, creeping or crawling about, the females depositing their eggs from one to several feet from each other, in their nests or holes in the ground. As before noted, the female is then always seen with its abdomen buried in the ground, with two and three to six males (or what appear to be such) on top of the female in a pile, crowding and working its abdomen by twisting their tails around it from each side, and pressing and squeezing it by a curling, corkscrew fashion, or earnestly rubbing the sides of the abdomen until the eggs are expelled. Several bunches of eggs have been found within the circumference of an inch or two, and it is likely other females lay their eggs near by where a predecessor had just stepped out. The holes are made generally at the roots of grass or in cracks in the soil, and often in hard, baked earth. If the ground could be properly examined, it is probable that the eggs are thickly laid over every square inch of their territories. In a breeding colony, the females laying *at one time*, will seldom be more than one-tenth of the animals on the ground. The Locust provides for itself, from the grub and egg to death, without assistance. Take a superficial league of land affected by their Colonies, and the young from the first of February to the first of June keep rising up daily on to the surface as an exhalation, and as they grow older, by the middle of May, state will join state, and clan to clan overrun the whole surface like an army going to battle, and it is said each band, colony or crowd has its king, captains and leaders. When they attain the strength of their wings and bodies (1861 in this county), which is at its *culmination* from the 12th to the 31st of May, the bands join company and mingle with each other, and all fly together as soon as a man or animal disturbs them, filling the air at a distance of ten feet from the ground as thick as flakes of snow. In other parts of the State, these colonies will rise in the air from one hundred feet to a thousand, and joining company like a homogenous host, army or nation under leaders, fly from one green place to another, and eat up every succulent thing they can find. Their gathering in migratory clouds at hights in the atmosphere, under kings and captains, always of a clear warm day near noon, or 10 to 4, has not been observed this year in Santa Barbara, up to the 7th of June, but it has been several times noted in 1855 in the Sacramento valley and mountains during the great visitation of that year. On the 25th May they could be seen flying at from five feet to ten hundred feet from the ground, but denser in numbers at ten feet hight, and flying in all directions, and apparently circling around like vultures on sight-ing their prey; it evidently appearing then that one swarm had joined and mingled with another. Their breeding places are always made in warm dry soils and exposures, and *never* in damp or moist places.

THEIR DEVASTATIONS AND MANNER OF FEEDING.

They will, when unfledged, creep and jump along till they meet succulent vegetation, immediately near the surface and commit great havoc—particularly on young garden stuff and the pastures as they spring from the roots. But on maturity, they will alight on *all* green plants and eat all up to the roots, cutting, tearing, sawing and biting until they devour the plant or kill it. They will eat, bark and scratch fruit and other trees, and flowering shrubbery and plants till they are completely denuded. The immense fields of wild mustard, which keeps green in this county from March to June according to soil, has been completely stripped of leaf, seed, flower and cuticle, according to the strength or numbers of the swarms. After nightfall they will gather in masses on all grass which is green, bulrushes, bushes, plants and trees in green leaf, until they break them down or devour all its leaves, fruit, flowers and succulence. This occurs after sundown, and in the morning they are found covering the ground, plants, and indeed everywhere, till the sun warms them into flight after ten o'clock. At night they make no noise or movements, and probably sleep like other animals. Of a bright, moonlight night, before attaining their strength of wings, we have found them completely quiet and absent from the surface. At maturity they eat with great voracity and dispatch, and digest and pass their *green food* rapidly. At this time they creep over walls and enter houses, causing great annoyance. Each full grown Locust, I should judge would devour twenty grains of food daily, judging by their excrements and effects of feeding as shown on the plants in their vicinity. On the fresh laid droppings of horses and cattle they will immediately swarm in a mass (when they are at the largest sizes) and quickly devour it—or until it dries up.

THEIR APPEARANCE AS RISING FROM THE GROUND.

Early in February they are all saltones, and will be seen coming up from the ground in small colonies and resting on stones, roadsides, and hard places to dry themselves in the sun. This continues in vastly *augmenting* multitudes till about the 25th of May, when saltones and flyers are found covering the sites of their colonies in all stages of their growth. The saltones will emerge from the earth like a morning exhalation, while the flyers will fill the lower air from noon to 3 o'clock. Many of them are seen with flame-red thighs. They are all shades of red, yellowish brown or brownish yellow, from infancy to old age. A few of them (3 or 4) were seen of deeper brown and with *flame-red under-wings*, with a black fringe. These may be the captains, kings, queens, or leaders. It is possible that there may be as many grades and conditions of them as among men, bees, and ants—"workingers," neuters, slaves, soldiers, queens, etc, etc. It is certain they make no store of food for winter or scarcity. They all seem to jump, creep, crawl, march or fly in a general direction. The youngest can jump one and two feet, and the other sizes before fledging, from three to ten feet. Those recently winged can fly from three to twenty yards before lighting, but the oldest ones can jump much further, and fly, before resting, from a hundred yards to many miles (with the fresh wind), according to strength, age, and the temperature. At any disturbance they will rise from the ground (flying) in a dense flock, and the noise they make in this action sounds as the gathering of a distant armed force—the rustling of wind through a forest or ship's rigging—the dull fall of surf on the beach—the far-off rippling of running water—the flight of a flock of small birds—the distant fall of a cataract, or water rushing through a mill-race. When they alight, unfledged or winged, it sounds like a heavy fall of rain with wind, if they are in any numbers. These points I observed several times in April, May and June. At the mature stage, their bellicose propensities are fully developed, and with their hard, crustaceous-mailed heads and throats, they will fight each other like two bulls, tear off wings and legs and bite out big pieces from the abdomen. They seem sometimes to play, chaff, tumble and sport like young tigers and little bears. When caught in the hand they will always emit a blackish, gummy liquid from mouth and tail, which stains the skin.

A MONSTER CAKE.—The largest cake ever made in the world is now on view at the shop of Mr. Arnatt, confectioner, St. Giles's in London. It weighs 3,000 pounds, stands seven feet high, and is 18 feet in circumference. There have been used in its manufacture 550 pounds of flour, 3,000 eggs, five barrels of currants, two cwt. of oranges and lemon peel, 300 pounds of butter, 400 pounds of sugar, besides other ingredients.

PATENT RIGHTS FOR SALE.

THE FOLLOWING PATENT RIGHTS OF NEW AND valuable inventions (of which we have models to show their value) are now offered for the States of California and Oregon, and Utah and Washington Territories.

NO. 1. THE MECHANIC'S SPIRIT LEVEL.

Patented September 13, 1859.

This Implement will be of great value to Contractors and Builders, being one of the most valuable inventions yet out. Builders will do well to examine the model.

NO. 2. IMPROVED CLOTHES REEL AND BAR.

Patented January, 3, 1860.

This valuable domestic piece of furniture can be used in the Laundry, the Kitchen, the Nursery, or Chamber, and can be made plain or ornamental; standing in the same relation as a piece of important furniture as does Wheeler & Wilson's Sewing Machines, neat when used and ornamental when not in use.

NO. 3. A CORN CULTIVATOR.

With this implement the soil is first thoroughly plowed and deeply pulverized, and on the return it smoothly and perfectly hills up and harrows the ground between the rows. A very new and valuable implement.

NO. 4. A MUSKETO BAR.

This will be much wanted in California. It is simple in its contrivance, perfect in its working, and can be afford very cheap to all styles of bedsteads. Hotels, public houses and private families will find it a useful invention.

NO. 5. HYDE'S PATENT POST-DRIVER.

A most excellent labor and money-saving machine, for which we offer rights.

NO. 6. SEED-SOWER.

This is a new invention, and one of great importance to all who sow grain, or any garden seeds. The working model can be seen at the Farmer's Reading-room.

Holding the rights to all these new inventions, we invite the public to call and see the models. All persons who may be desirous to purchase either County, City, Town, or Individual Rights, can do so on application to

COL. WARREN, Editor Farmer.

Opinions of Professors of Music on Jacob Zech's Pianos.

SAN FRANCISCO, December 29, 1863.

JACOB ZECH, ESQ:

Dear Sir: We, the undersigned, musicians of the City of San Francisco, do hereby give our unbiased opinion as to the workmanship, purity, power, and brilliancy of tone, and perfectness and durability of action, of the Grand Piano manufactured and exhibited by you. We have no hesitation in pronouncing them far superior to any piano, ever placed before us for inspection. At the late exhibition of the State Agricultural Society, the Committee saw fit to denounce your instrument and award the first prize for an inferior *square piano*, which we pronounce a great injustice to you, and we do hereby give our names, and warrant your pianos to be superior to any in the State. With the greatest esteem, and the most fervent desire for your success, and a wish that the people of California may give you justice, and not be controlled by money or the opinion of any body of men who are not qualified to judge of the merits of a Piano.

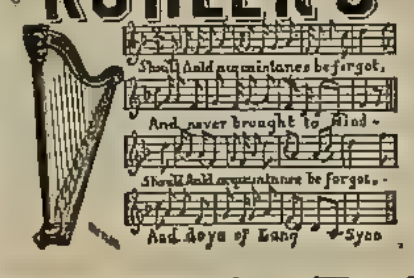
We are truly yours, etc,

R. HEROLD, Professor of Music,
GEO. T. EVANS, Pianist and Organist,
GEO. F. PETTINOS, Pianist and Organist,
LOUIS SCHMIDT, Pianist and Organist,
CHAS. STADERMAN, Pianist,
STEPHEN W. LEACH, Artist,
L. T. PLANEL, Professor of Music,
A. LAPEGER, Pianist,
ALBERT STOHR, Musician,
JOSEPH D. SCHMITZ, Musician,
EMILE TOUSSIN, Pianist,
CHAS. SCHULTZ, Pianist and Organist,
J. D. KNELL, Pianist, and Organist at Cathedral,
H. HOLZHAUER, Pianist,
WM. CROOKER, Pianist.

Letter to Jacob Zech.

[The following notice of my Pianos was received by me from the gentlemen named, professors of music at Sacramento, and approving, in very flattering terms, my instrument.—J. ZECH.]

Your Grand Piano was an excellent and beautiful instrument, full and rich and tone, in with all the excellencies that are desired in a Grand Piano.



Your Square Piano was one of extraordinary excellence, and beyond question the best on exhibition, having a full and powerful tone, yet, with that soft and delicate expression so desirable to an artistic ear. We feel gratified to know of your success in this art, and hope your efforts will be duly appreciated.

Wishing you all success, we are your friends,

CHARLES WINTER, Pianist,
CHAS. STADDERMAN, Pianist.
CHRISTIAN STATFIELD, Pianist,
GEORGE GREINER, Piano Maker.

Fine Farms for Sale.

YOU WHO WANT GOOD FARMS CAN SECURE them by applying to the Editor of the Farmer. The following can now be had:

FOUR VERY FINE FARMS in the splendid San Joaquin District, within a few miles of Stockton, all very productive.

ONE FARM about 20 miles from Stockton—valuable.

ONE FARM capable of great improvement and valuable, in Contra Costa County, near Pacheco.

A GOOD RANCH in Santa Cruz County—a good bargain.

A FINE FARM AND VINEYARD in the region of Mt. Diablo—can be made valuable.

Several STOCK RANCHES in various parts of the State, from $1,500 to $25,000; in all these, good and permanent settlers can find bargains. Address by letter, or in person, for particulars to Col. Warren, Editor of the Farmer. 23

A Fine, House, Orchard and Vineyard

NEAR SACRAMENTO—FOR SALE.

A FINE HOUSE AND OUTBUILDings, and 30 acres of Land in the highest state of cultivation, with good Orchard and Vineyard, in full bearing. The Gardens are fenced in the very best manner, and having now cisterns of water for garden, stock, and house. The Fruit from this place commands the very highest price.

The place will be sold on easy terms: a long time to pay the most of the money, and interest only 7 per cent per annum. A smart business manager can make the payments off the place every year. Inquire of Editor Farmer. 15

1864.

AGRICULTURAL STORE,

Corner of Davis and Washington streets.

J. D. ARTHUR & SON,

Springfield, Ohio, WARDER & CHILD

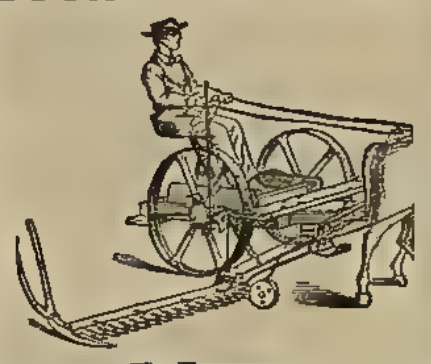
MAKE OF

Reapers,

Mowers, and

Combined Machines,

WITH ALL POSSIBLE IMPROVEMENTS.



EIGHT HUNDRED sold, and in use on this coast, with increased demand every year, thus PROVING their great SUPERIORITY over all the numerous kinds for sale in this market.

J. D. Arthur & Son,

Corner of Davis and Washington streets.

2-3m San Francisco.

BUCKEYE MOWER.

To Farmers:

WE, WITH GREAT CONFIDENCE OFFER THE BUCKEYE MACHINE, for this reason: knowing it to be Superior to any MOWER for sale, and that it will sustain the reputation it has made for the past THREE YEARS in surpassing any other Mower in the following respects:

Being better Made; much Stronger and more Durable; will Run Lighter, Cut much closer with greater ease to the team, and no side draught.

We can bring twenty Farmers to say the Buckeye is SUPERIOR to any Mower, to one who can be found prejudiced against it.

The BUCKEYE MOWERS are of two sizes, cutting 4 feet, and 4 feet 8 inches.

The "Buckeye" as a Reaper.

The important advantages which belong to the BUCKEYE as a Mower are retained in the REAPER, and can be used either as a Mower or Reaper by attaching the Platform and Reel.

Though importing largely of them, we have been unable, for two years, to supply the demand.

They are better adapted to the wants of California Farmers than any Combined Machine for sale. It will adapt itself to every surface of ground, will run lighter and deliver its grain easier and better than any other Reaper. The Reaper's seat is directly over the axle of the Machine, instead of being on the Platform where it adds greatly to the draught.

Of different makers, for $225; do., with carved legs, $240. Second-hand Pianos and Melodeons at $40, $50, $60, $75, $100, $115, $125, $150, and $160.

THE HORACE WATERS MELODEONS AND HARMONIUMS.

Toned the Equal Temperament with the Patent Divided Swell. Prices from $50 to $300. ALEXANDER ORGANS from $200 to $500.

☞ A liberal discount to Clergymen, Churches, Sabbath Schools, Lodges, Seminaries, and Teachers.

HORACE WATERS, Ag't,
No. 481 Broadway, N. Y

THE DAY SCHOOL BELL.

40,000 copies issued. A new Singing Book for Schools and Seminaries, called the Day-School Bell, is now ready. It contains about 200 choice songs, rounds, duets, trios, quartette, and choruses, many of them written expressly for this work, besides 32 pages of the Elements of Music, which are easy and progressive.

Among the large number of beautiful pieces may be found, "Uncle Sam's School," "Don't you hear the children coming," "Always look on the sunny side," "The little lass," and "Little Ted," "Oh, if I were a little bird," "Bird of beauty," "Pretty pair tree," "Anvil Chorus," "Meet me by the running brook," etc. It is compiled by Horace Waters, author of "Sabbath School Bell," Nos. 1 and 2, which have had the enormous sales of 825,000 copies. Prices—paper covers, 25 cents, $20 per 100; bound 30 cents, $25 per 100; cloth bound, embossed gilt, 40 cents, $35 per 100. 25 copies furnished at the 100 price. Mailed at the retail price.

SABBATH SCHOOL BELL, NO. 1,

contains 144 pages, and nearly 200 tunes and hymns, and is the most popular S. S. Book ever issued. Among the most popular pieces are "Kind Words," "Eden Above," "Christian Hero," "Beautiful Zion," "I ought to love my Mother," "The Angels told me so," "In the Light," "Rest for the Weary," etc. Prices—paper covers, 20 cents each, $15 per 100; bound 25 cents, $20 per 100; clothbound, embossed gilt, 30 cents, $25 per 100.

SABBATH SCHOOL BELL, NO. 2,

Is an entire new work of 192 pages, and nearly two hundred and twenty-five tunes and hymns. One million of these Bells have been issued and are now ringing through this and other countries. Among the many choice pieces may be found, "Shall we meet beyond the River?" "There is a Beautiful World," "Sorrow shall come again no more," "Don't you hear the Angels coming?" "Thou, God, seest me," "Sabbath Bells chime on," etc. Prices of Bell No. 2. are same as Bell No. 1. Both numbers can be obtained in one volume, price, bound copy, 40 cents, $35 per 100; cloth bound, embossed gilt, 50 cents, $45 per 100. 25 copies furnished at the 100 prices. Mailed at the retail price.

WATER'S CHORAL HARP.

A new Sunday School Book of 160 pages of beautiful hymns and tunes. It contains many gems, such as "Shall we know each other there?" "Suffer little children to come unto me," "The Beautiful Shore," "Oh, 'tis glorious," "Leave me with my mother," "He leadeth me beside still waters," etc. Price, papers covers, 20 cents; $15 per 100. Bound, 25 cents, $20 per 100. Cloth bound, embossed gilt 35 cents, $30 per 100. Mailed at the retail price. It is edited by HORACE WATERS, author of "Sunday School Bells," Nos 1 and 2, which have had the enormous sale of over 800,000 copies.

Just published by HORACE WATERS,
No. 481 Broadway, New York.

THE NEW PATRIOTIC SONG BOOK

contains 96 pages of songs, duets, and choruses, both sacred and secular, including 14 pages of prayers for sick and dying soldiers, and soldiers' Scripture Manual. It is well suited for social singing, as well as Sabbath worship. Among the many beautiful pieces may be found, "Where liberty dwells is my country," "The Christian Hero," "Three cheers for our Banner," "Come sing to me of Heaven," Columbia, the Gem of the Ocean," "Freeman's Gathering," "Columbia's King forever," "Marching Along," etc Prices—paper covers, cents, $10 per 100. Mailed at retail prices.

THE HARP OF FREEDOM

contains 32 pages of songs, duets, and choruses for Freedom. Among the choice pieces we would name, "Fair Freedom's morn," "O let my people go," "Over the mountain," "They worked me all the day," etc. Price 5 cents single, 50 cents per dozen, $3 per 100; postage 1 cent each.

RUTH: A SACRED CANTATA

contains 126 pages. Words by Rev. Sidney Dyer, music by Prof. Cull. This is an excellent book for concerts for the young. Prices—paper covers, 20 cents, $15 per 100; bound 25 cents, $20 per 100.

THE REVIVAL MUSIC BOOK

contains 72 pages of tunes and hymns, designed for revival, prayer, and conference meetings. Price in paper covers single copies 10 cents, $8 per 100. Mailed at the retail price

THE ATHENÆUM COLLECTION

contains 512 pages of tunes and hymns, new and old of the choicest kinds, for church, Sunday school, revival, missionary, temperance, prayer, and conference, and all kinds of sacred and social meetings. The music in this book has life and animation in it, like "Shining Shore," "Rest for the Weary," "Shall we know each other there?" "Shall we meet beyond the River?" "There is a Beautiful World," "Kind Words," "Sweet Hour of Prayer," "There is a Land of Love," "Suffer little children to come unto me," "God save the Nation," etc. Prices—single copies, bound, 65 cents, $55 per 100; cloth bound, embossed gilt, 75 cents, $65 per 100 Mailed at the retail price.

HORACE WATERS, Ag't
481 Broadway, New York,
Publisher of the above Books.

NEW INSTRUMENTAL MUSIC.

"Idlewild," "Polka Caprice," by M. Keller: "Morning Prayer," by W. F. Moller; "Summer House of Roses," gallop, by Mrs. Parkhurst: "Le Pirl Polka;" "West Point March;" 25c each. "Ometepe Waltz;" "L'Armetee Waltz," "Frederica Waltz," J. G. Bernard, 40c each. "We are coming Father Abraham," "Always look on the Sunny Side," "Brilliant Variations," by Charles Grobe, 50c each. "Shall we know Each Other There," for Guitar, by Bloomer, 25c. "Sunny Side," set of 20 easy arrangements for the piano, 10 by James Bellak, and 10 by Mrs. Parkhurst, 15c each. Mailed free. HORACE WATERS,
Publisher, No. 481 Broadway.

NEW VOCAL MUSIC.

"Land of the Brave and Free," Rev. C. S. Pinsley; "Your Fortune is too Small for Me," Comic Song, Maurice, "I will Wait at the Gate for Thee," E. Holden; "We parted with a Cheerful Smile," M. Keller, "One by one the Stars of Evening," "The Flowers Bloom in Linden Vale," S. Lawrence; "The Morning is Dawning," H. S. Leland; "There is a Beautiful world," "Shall we Meet Beyond the River?" "The Angels are Hovering Near," "The Year of Love," "How Softly on the Bruised Heart," Mrs. Parkhurst, "Kindly Words and Smiling Faces," J. R. Thomas, "For the Dear Old Flag I Die," "Oh, Why am I so Happy?" S. C[illegible]ster; "Sabbath Bells, Chime On," Lowry, 25 cents each, mailed free.

For Sale by

ALLEN & SPIER,

8 *SAN FRANCISCO.*

The California Farmer.

SAN FRANCISCO:

FRIDAY ..... MARCH 18, 1864.

☞ Those who receive a number of the Farmer with this paragraph marked, may understand that it is sent to them on trial or their examination, hoping it will meet their approval and induce them to subscribe, and ask their neighbors to do so.

Postmasters and others, who may receive the paper, will oblige us by soliciting subscriptions, or putting it in the hands of those that will. Subscriptions may commence at any time.

Send for Sample Papers and get up a club. Address,

PUBLISHER CALIFORNIA FARMER, San Francisco.

THE CALIFORNIA FARMER READING-ROOM AND MUSEUM OF NATURAL HISTORY.

320 Clay street—Marble Building—Up Stairs.

The Farmer's Headquarters.

The Editorial Rooms and Museum of the Farmer Office are always open, and an attendant ready to make a visit instructive to those who take an interest in the productions of our State. Samples of all productions: grains, grasses, fruits, models, inventions, minerals, and specimens in Natural History innumerable, are constantly being added.

Farmer's Reading-room.

Farmers and Mechanics, from the country, who visit San Francisco, should visit the Free Reading-room and Museum, at the Farmer Office. Members of the Press, and Strangers, are particularly invited to avail themselves of these rooms. Newspapers from every State to which we have access by mails, as well as Foreign Newspapers, Periodicals, and Magazines, are upon file and on the tables for use; a Good Library of hundreds of volumes, with works illustrative of Agriculture, Horticulture, and Floriculture, works for reference upon all Sciences, with a Cabinet of Minerals, Coins, and Curiosities of interest to the Naturalist, to which we invite all.

Immigration Office.

New comers to California can always obtain all needed information about Lands, Farms, etc, at the Farmer's Reading room, 320 Clay street. Most cheerfully we bid all welcome to our Sanctum.

Easiest Way to Pay Dues.

Those of our friends in the country who may visit our city, can always save us the trouble of sending bills out if they will favor us with a call, and at the same time they will find at our Museum and Reading-room much to interest them.

Send along your Greenbacks,

Don't be afraid to send along your Greenbacks. These we TAKE AT PAR in payment for all back dues to the Farmer for subscription. So send them along, now is the time. This is a better speculation than mining stocks, for it is so pleasant to read a newspaper when one knows he has paid for it the digestion is better and a man feels happy, and, if happy, then he feels rich. So pay prompt and you will "strike a lucky lead."

Transactions of the Horticultural Society of Boston.

We have received the Annual Transactions of this highly prosperous Society, for the year 1863. These Transactions contain the Annual Reports of the Committees on Fruits, Flowers and Vegetables, also the Annual Address of the President, and the Treasurers' Report. The Committee's Reports give full details of everything exhibited, showing the exhibitions of every member and are full of practical remarks, touching the interests they embrace. The Annual Address of the President, is an excellent one, showing his knowledge of the interests over which he presides and the zeal he manifests for the Society. The Treasurer's Report shows the flourishing condition of their Treasury. Here we have an exhibit of one of the most prosperous societies in the United States The Society hold real estate valued at $100,000. They give large Annual Premiums, have a splendid library valued at $2,500; furniture and plate, at $3,500 more, and usually add to their capital about $5,000 per annum. The Society's property over and above every liability, as shown, is estimated at $95,433 34. Here we have a Society well managed, every officer actually interested and engaged in the cause, and this secures prosperity. Let every Agricultural Society look to such a model institution for an example.

The Rain.

Rain, good and glorious rain, has come at last, and the croaker's occupation's gone. It has been trying hard for about a week to rain, with occasional light showers here in the city, while at several places in the country we hear it was more liberal. On Tuesday night last, we were treated to something of an old-fashioned thunder-shower, quite a rarity in California. There were a number of vivid flashes of lightning followed by "deep rattling thunder." But little rain fell at that time, however. But it has persevered, and now, Friday, rain is falling, with every prospect of a sufficiency. Farmers and miners will rejoice.

Parian Statuette.—Haynes & Lawton have received an invoice of most beautiful Parian Marble Statuette, representing some of the finest designs ever conceived. Those that love to look upon superb works of art should call early, as such rare works remain but a little while before appreciative purchasers are found. Among the pieces we notice "Shakspeare," a full figure and finely done; "Princess Alexandra," a bust of exquisite outlines; "The Nymph at the Fount;" "Steam's Maria," also a most exquisite piece; "Una and Lion," nobly done; "Ariadne," another fine piece of artistic skill; "Ophelia," a perfect piece; "Fanny Ellsler," also a perfect piece. The last two are statuette and most perfectly modeled, over which are thrown robes of lace. This lacework, although in marble, is as perfect as robes of actual lace. They are gems of beauty. The prices of these pieces are from $35 to $40 and $75 and are more beautiful than any ever yet offered here.

Prayer for Rain.—The beautiful "Prayer for Rain," in this number, is from a volume of Sacred Poems written by the Rev. Wm. B. Tappan of Boston, Mass, and published in 1847. This poem, like many, and most of his writings, is full of fervent piety and beauty of thought. The editions of his works had a large sale and were among the standard literature of the day.

Call on Us.—We shall always be glad to have those farmers who visit the city, call at our Reading Rooms and peruse the various Agricultural journals on file. We know we can interest farmers, and also, always give them various new seeds for experiments, some of great value.

Our Post Office.

Why is it that the San Francisco Post Office, the third Post Office for income and influence in the United States, and under some phases, the second, should be so *cramped* for those means of doing for the people its best service?

The labor and duties of our Post Office are very heavy, and according to the business done, must overwork Postmaster and every clerk. We know, for we see, every night when the down river and Overland mails come in, the immense labor performed, and we know that every clerk has to work beyond what is the duty of any clerk, especially when they are but *half paid*. We know, as all know, that clerks and all officers are paid in greenbacks, and while we approve of sustaining the Government currency, we regret that by our State's repudiation of them, the loss falls upon young men who toil, as do the clerks in our Post Office.

Why should not our Government give to San Francisco Post Office the means needed to have our mails quickly distributed, so that our merchants need not wait and suffer delay that is very injurious? Why can we not have a proportion of clerks equal to the amount of business the office does? Why not pay those clerks a sum equal to their laborious services, as many of them work extra hours? Why cramp the postal arrangements of the third Post Office in the United States, so as to drive the business from the Post Office into private hands? We believe it is now a notorious fact, that our *private Express companies* carry more letters than the mails! Is this right?

We believe that Postmaster Parker would gladly have carried out very important and valuable plans to facilitate our merchants and business men: such as sub-Post Offices over our city—a more speedy assorting and delivery of the mails—a Postal Agent to travel on all the good routes, etc, etc. But when he and the friends of reform urge these important matters, when they tell the *truth* and show that California does not receive that aid in her Post Office department that she needs and deserves, when the facts are made patent that our Postal matters are *twenty years behind the times*, off goes the head of the man who tries to benefit the people, and our merchants and business suffer.

Now, can we not have reform? Is there not influence and power enough among the business men to demand this from the Postmaster-General, or shall we see *all* the business of letter carrying pass from the U. S. Mails into Express Companies, and the people pay the old rate of *ten cents* for letters instead of *three*? This matter is in the hands of the people. We do know, everybody can know, that our Post Office is far behind what it should be for a city like San Francisco. The fault cannot be with the Postmaster, for he is ever at work till long after midnight, and so with the clerks, and for this they don't get half pay.

How long shall this go on? Shall it continue till the Post Office is abandoned and Expresses do all the business? if much longer continued, the price will be enhanced and soon 25 cents a letter will be charged instead of 10 cents, for the Post Office will then become powerless by reason of its slow movements.

Fares on the City Railroads.

Our city is now full of petitions preparing for our Legislature; some to *raise the fare*, others to oppose this increase. There can be no question which is the *right petition* to sign? Let every man go on the *side of the people*, as they will be sure to be right. The present rate of fares is most ample; of this no one can doubt. If the present owners of railroad stock feel they cannot make it profitable, then let them sell and transfer all their stock. There are plenty of men that stand ready to purchase these stocks at par; now if these croakers are so fearful of ruin—to the city railroads—then let them say so at once; let them say frankly they will sell out at *par value* and then stocks would change hands very quick, and the *new purchasers* would soon, by a wise management, reduce the price instead of enhancing it. If the present owners do not rest content—if they do not keep their charter engagements, they will soon find they have made a grand mistake, for the people will *demand* it; the price of fare *must* come down, ere long. The late reports of the cost of maintaining the street railroads revealed bad management if that report was based upon facts. *One great improvement* in our city railroad cars—one that is now imperatively demanded, is a plan like that of Brooklyn, New York; there the fee for riding in the cars can only be collected of those passengers who *have seats*, all that stand up ride free; this effectually checks the bad plan of crowding the cars to so great an extent, as to wrong the public, by taking the price of a seat and then ask the person to give it up to another; let the plan be adopted, no pay unless the passenger has a seat, and the conductor would then receive no more when the cars were over-crowded, than only full. By the present grasping system they receive the price of a seat several times over; let the watchword of our citizens be "low-priced fares" and no pay *without a seat;* the people can take this matter in hand and carry it out, and when this is done no one would dare to try to "log roll" any bill through the legislature that tends to increase the cost of travel or inconvenience the people.

Succession to the Rev. T. Starr King.—The congregation of the Unitarian Parish met at their church, on Geary street, in this city, on the evening of March 16th. After the reading of a report reviewing the ministerial career and labors of their late Reverend Pastor, in California, a dispatch was read from Rev. Dr. Henry W. Bellows, of New York, accepting the invitation of the Society to become its Pastor, and promises to leave for San Francisco by the steamer of the 3d of April next.

Ossian E. Dodge.—This distinguished gentleman, who comes so well heralded, announces, his first of a series of Fashionable Sociables, on Tuesday, 22d. We hope he will receive a warm welcome, as we feel assured he will gratify all.

Home.

What a word—Home! How full of meaning! What race or nation on earth, save our own and dear old England's, can give us the word Home!

"The parted bosom clings to wonted Home,
If aught that's *kindred* cheers the welcome hearth."

"Homes broken up!"—How much we grieve to see or read so sad an announcement in the advertising department of a paper! Not a house or grounds only, but all the cherished memories and tender associations of the place, that enrich it with a wealth beyond the computation of business men, the traders in homesteads and other classes of real estate.

It is a sorry day for a man and, more so for a family, when obliged to give up their home and go drifting again over the world. No experience shocks the sensitive heart like this! All gone—all deserted! the lights shining no more in the windows—the familiar faces no longer pressed against the panes—the fires dead and gone out—the smoke no more curling from the chimneys. The dear voices will not be heard there again, though they may pass and repass daily. Ah! there is needed no desolation of a sort like this! He must be of a hard and undeveloped nature that can contemplate such a scene without the deepest emotion. To lose one's home is to lose nearly all that earth can offer of happiness to man—

"Who, that in distant lands has chanced to roam,
Ne'er thrilled with pleasure at the name of Home."

Vast Increase of Trade in San Francisco.

The present week shows how vast is the trade of our city, and to what extent our merchants are supplying the various outlets, North and South, with goods of all kinds. The recent departures of the Oregon steamers created quite an exciting time. The loaded drays that occupied the streets appeared like the flush times of old in our up-river trade. The steamers for Portland lay at Broadway wharf, and immense loads of goods were in line from that steamer along Davis street to California, thence to Battery—some teams! Morton's big teams were placed at the gate and loaded from other teams, sometimes receiving as much as 12 tons in order to get freight on board. Freight for Oregon and the Northern mines is vastly increasing. It is the same with Mexico and the Southern country. The sailing vessels too, are all full, and besides the regular lines, extra vessels are demanded. Holliday & Co's line put on extra steamers and they are immediately filled up. This great rush for the North, South, and Mexico, shows the interest in our mining operations, and gives an immense amount of business to our merchants, steamers, and shipping interests, all tending to prosperity which we gladly herald. It is like the good old days of yore. These indications are an assurance of the "good times coming."

The Storm.

March the 18th, 1864, will be written as a memorable day; it witnessed the merry peltings of the snow-ballers, or rather *hail*-ballers in the streets of San Francisco. It was a merry sight, indeed, the side-walks white with the ice-pebbles, and at the same time the bright flashes of lightning and the heavy pealing of thunder; these, with torrents of rain, mingled to make an interesting scene. Although it was a severe storm it was gladly welcomed by our citizens—all save those whose hopes of *great gain*, by reason of the drought, was melting away quicker than melted the little white ice-pills that were pattering on the ground; as fast as fell these little pellets, so fast faded hope's fond illusion for fortunes in breadstuffs. This storm has extended widely over the State, and the present appearances of the Heavens indicates a week or more of continued rain. Lightning, thunder and hail have visited many places, more than ever known before. The countenances of men are changed to gladness, for this rain will give business to all the mining localities, and they in turn will give business and money to the merchants; these all are made glad, aye and they should be grateful to Him who sendeth the rains to bless and fertilize the earth.

Where is the Speculation?

Reaction, as expected, has come! The unwise and foolish attempt to create a panic in the grain and produce market has resulted just as we expected; it was a mad adventure in the face of the immense stocks on hand here and in Oregon. We only hope that those of our farmers, who had the opportunity to sell, have done so; if they have neglected it, their regrets must be great, for the last three or four weeks we have given them all the hints needed; what this journal preached is now here. Reaction has come—grain flour and produce are down again and at a stand still.

The Game Law.—The law for the protection of game from March 15 to Sept. 15, is not so comprehensive as it should be, or as it was doubtless intended to be, to protect all valuable game. It seems that canvas-back ducks are not protected, and can hence be killed at any time. We suppose this is a defect in the law, and should be corrected. But the law as it is, is a great hardship in some respects to Farmers. We are informed that across the bay, in the vicinity of San Pablo and other places, great damage is done to the grain crops by the Teal ducks, which come in immense numbers from the creeks and marshes in the vicinity, and eat the grain off smooth as fast as it grows. As the law prevents the killing of these ducks, farmers have no remedy; yet their great numbers would seem to obviate any necessity for protecting them by law.

The British Reviews and Blackwood.—These splendid literary works are more and more appreciated, among Californians, every day, and we learn that their circulation is largely increasing on the Pacific coast. The London Quarterly, Edinburgh Review, North British Review, Westminster Review and Blackwood, are the great standard works of the age, and keep pace with the march of mind. Leonard, Scott & Co., of New York, are the publishers.

Pere Antoine's Date Palm.—Walking through one of the streets of New Orleans, near the river immediately north of the Catholic Cathedral, we were much surprised to see a fine date palm, 30 feet high, growing in the open air. The tree is seventy or eighty years old, for Père Antoine, a Roman Catholic Priest, who died about twenty years ago, at the age of eighty, told Mr. Bringier that he planted it himself when he was young. In his will he provided that they who succeeded to this lot of ground should forfeit it if they cut down the palm. Wishing to know something of Père Antoine's history, we asked a Catholic creole who had a great veneration for him, when he died. He said it could never be ascertained, because, after he became very emaciated, he walked the streets like a mummy, and gradually passed away.

If the people here wish to adorn their metropolis with a striking ornament, such as the northern cities can never emulate, let them plant in one of their public squares an avenue of these date palms.—[A Traveller.

In California the date-palm has a healthy and rapid growth when planted in rich sandy alluvial soil. In Stockton the fan-tree, a species of palm, flourishes, especially in the gardens of the northern portion of the city, where trees eight inches in diameter and six to ten feet high, may be seen. Dates (*Phenix dactylifera*), and cocoa (*Cocos nucifera*), belonging to the family *Palmæ*. The palms, remarkable for their elegant forms and importance to man, should be cultivated in this State by all those who wish to combine the useful with the ornamental, giving an oriental appearance to the garden and elegant finish to the lawn. They contribute more than any other trees to impress upon the vegetation of tropical and equinoctial countries its peculiar physiognomy. The date-palm is a native of northern Africa, and is so abundant, says a traveler, between the Barbary states and the Sahara, that the district has been named "the land of the date." As the desert is approached, the only objects that break the monotony of the landscape are the date-palm and the tent of the Arab. It accompanies the margin of the mighty desert in all its sinuosities from the shores of the Atlantic to the confines of Persia, and is the only vegetable affording subsistence to man that can grow in such an arid situation. The annual produce of an individual is from 160 to 260lbs weight of fruit. The cocoa-palm furnishes annually about 100 cocoa-nuts, and occurs most abundantly in the islands of the Indian archipelago. The family of palms is supposed to contain over a thousand species, some of large size, forming large forests.

Merchants Express Line of Clipper Ships.—The largely increasing trade between New York and San Francisco, the large amount of our exports of produce of all kinds, in addition to the shipment of "ores," which is also largely increasing, is awakening the attention of Shipping Merchants of New York and inducing them to give more and better ships to the various lines of vessels that are now established. The Merchants Express Line, of which Messrs. DeWitt, Kittle & Co. are the agents, is now one of the best lines to and from New York. The owners of this Line are now adding new and splendid clipper ships, and giving particular attention to the business of forwarding merchandise with dispatch from New York to this port. Messrs. DeWitt, Kittle & Co., agents on this side, will give all needed information, so that all who wish merchandise imported or shipped can have it done with dispatch.

A Substitute for Rain.—The Marysville Express states that a plan for irrigating the lands lying along the Sacramento River will be put in operation in a few days. It is proposed to elevate the waters of that stream by means of a steam engine, upon the adjoining lands. Mr. A. J. Scoggins' of Colusa, has an engine now upon his farm, and, will have the pump operating in a few days. With this in full blast, he can completely inundate his farm, and keep it so as long as he chooses. This is the first time the experiment has been tried, and if it proves successful, as we can see no reason to doubt, it will open a new era to those located near the river. There are many localities along the Feather and Yuba Rivers, that, unless rain soon falls, will be entirely valueless, which by this process can be made a source of profit to the owners.

The Visalia Delta says, that despairing of rain, and unable to procure water from the creeks, as usual, farmers thereabouts have banded themselves together, for the purpose of cutting two or three big ditches from the running streams up among the foothills down to the plains. One of these ditches, in which over a hundred farmers are interested, is 18 feet wide at the bottom, 22 feet wide at top, and 12 miles long. It will be finished in three weeks, and with its aid, many fair crops of wheat will yet be raised.

What is Legal Tender.—There are practically at the present time four standards of value in the United States:

1. Gold coins of the United States.
2. Silver dollars.
3. Silver half dollars and the lower denominations.
4. Legal tender or United States Treasury notes.

1. Gold coins of the United States are a legal tender to any amount.
2. Silver dollars are a legal tender to any amount.
3. Silver half dollars and the lower denominations of silver are a legal tender to the amount of five dollars.
4. United States Treasury notes are a legal tender to any amount for all debts, except a few limitations.

The last of the Camel Speculation.—The lot of Government camels, 39 in number, which have been kept in Southern California, for some time, were sold at auction at Benicia last week at from $39 to $55 each, in greenbacks. The original cost of the animals, landed in America, was some $5,000 each, and the cost of bringing them from Los Angeles, for sale, was about three times as much as they realized under the hammer.

California Tobacco.—A large lot of tobacco, raised on the "Brannan Ranch," Feather river, reached this city last week. This tobacco is of good quality, and being packed in boxes, showed well for our State. Samuel Brannan, Esq., has pioneered many enterprises which have benefited our State.

Oregon Tobacco.—The Oregonian says: we were shown a box of tobacco, put up by Mr. J. F. [illegible] of Lewis river, which promises, with age, to occupy a prominent place in our tobacco market [illegible] become a source of revenue as an export. "C[illegible] nader Natural Leaf" is the name of the manufactured article before us, and the manner of its putting up evinces creditable skill on the part of [illegible] Vest. This leaf was raised on Dr. Prettyman's place, about three miles from the city. It can be laid down in market manufactured, for 30 cents per pound, and the crop properly cultivated, will bring a higher profit than wheat, potatoes or any other field produce. Two acres on Sauvie's Island, not highly cultivated, yielded 3,000 pounds last season. Mr. Vest acquired his knowledge of the business at Lynchburg, Va., and contemplates going into the regular trade of putting up tobacco.

Vallejo Railroad.—The Solano Press says: Late advices from General John B. Frisbie, who is now at Washington, state that the contract for building the railroad from Marysville to Suisun has been signed. Two years is the time specified for accomplishing the same. Gen. Frisbie entertains great hopes for the project. The contractors are men of ample means, and, indeed, we know of no reason why the road should not be built to Suisun in the time mentioned. The old grade is in an excellent condition, needing but slight repair, to be in perfect order. The route will prove one of the best paying ones in the State. The only opposition to be dreaded is from the Steam Navigation Company, who will spare no efforts to prevent the construction of the road.

Game Law.—The prohibition on game killing went into effect last Tuesday; the statute says that "It shall be unlawful for any person or persons hereafter to take, kill, or destroy any of the following game, within the time hereinafter specified, namely: Quails, partridges or grouse, mallard duck, wood duck, teal duck, and spoon-bill duck, and all other broad-billed ducks, shall not be taken, killed, or destroyed, between the 15th day of March and the 15th day of September of each year, under a penalty of twenty-five dollars for each duck, quail, or partridge killed and destroyed; and any person selling, or exposing for sale, or having in his possession any of aforesaid birds shall be subject to a like penalty."

The Camels.—Messrs. Charles Ramsey and Samuel Martin, of Green Valley, bought some of the Government camels, that were sold at Benicia lately. The folks around Rockville manifested a great deal of wonder at viewing these "ships of the desert." We don't know what Messrs. Ramsey and Martin are going to do with the dromedaries, but as they bought them at a very low figure, they stand but little chance of losing any great amount by the speculation.—[Solano Press.

A New Rat Poison.—The Scientific American says that a French paper recommends artificial carbonate of baryta to be mixed with various kinds of food for rats. This salt is almost tasteless, and it is said, does not become poisonous until the gastric juice renders the salts of baryta soluble. We would advise those of our readers troubled with rats to experiment a little with this carbonate.

A lady on one occasion traveling in a railway carriage, was much annoyed by a cockney companion continually embellishing his conversation with "This 'ere" and "That 'air." A few moments afterward she quietly requested him to close the window, remarking, "This car is effected by that air."

The Hog's Back.—The Steam Navigation Company keep two steamers constantly employed in digging out the "Hog's Back," in the Sacramento river. The bar known by that name is about five miles above Rio Vista.

Good for Sheep Raisers.—A movement is under way, having in view the transfer of all low-priced wool from the free list to the duty-paying schedule tariff.

We have received J. M. Thorburn & Co.'s new Flower and Seed Catalogues, from New York. Also catalogues of his bulbous roots, comprising a splendid collection.

General Neal Dow and Captains Flynn and Sawyer have been exchanged.

Cure for a Felon.—As soon as the part begins to swell, get the tincture of lobelia and wrap the part affected with cloth thoroughly saturated with the tincture, and the felon is dead. An old physician says he has known this to cure in scores of cases, and it never fails if applied in season.

Turpentine and Rosin.—We are glad to announce the complete success of the manufacture of California Turpentine and Rosin in our State. The manufactory of Messrs J. L. Gibson & Co, Marysville, now sends some of the best of manufacture to our city, and, while we speak of the manufactory, it is but just to say that for this successful establishment in our State, we owe it to the energy, skill, and knowledge of J. J. Hucks, Esq. of the Hucks & Lambert axle-grease manufactory of our city. Mr. Hucks is also interested with J. L. Gibson & Co.

Grain Harvesters.—Grain-growers, now look to your Harvesters; there will be a good crop; see that you have your Mowers, Reapers, and Harvesters. Look to our columns for Machinery for grain-growers. The best in the world can be had of our importers, Treadwell & Co., Hawley & Co., and Arthur & Low. Look to it in season. Long rains, good rains, will enhance the value of Reapers and Mowers. You can buy cheap now; strike quick, and buy cheap.

Home Made Paper.—Messrs S. P. Taylor & Co, our near neighbors, are the Pioneer Paper Manufacturers. We rejoice to know that they are now successful in the manufacture of all styles and kinds of printing paper, wrapping paper, etc. It is a good sign when we know such manufactures are sustained.

Those New Lamps.—Reader have you seen those new and beautiful lamps received by Stanford Brothers? To the student, the professional man, all who read, sew, or use a lamp, we say, by all means, go and provide a lamp, and the fluid that will not only be clear and brilliant but protect and preserve the eyes.

Garden Cutlery.—New and fine garden tools, just received from Europe, for sale at Moore's Seed Store, California street.

The following military arrangements have been made at Washington:

First—By order of the President, Lt. Gen. Grant assumes the command of the United States army. Second—Maj. Gen. Halleck is relieved from duty as General-in-Chief, and assigned to special duty in Washington as Chief of Staff of the army. Third—Maj Gen. Sherman is assigned to the command of the military division of Mississippi now commanded by Gen. Grant, comprising the Department of the Ohio, Cumberland, Tennessee, and Arkansas. Fourth—Maj Gen. McPherson is to command the Department of Tennessee, recently commanded by Gen. Sherman. Fifth—Gen. Grant will establish his headquarters in the field, with the respective armies operating under his personal supervision.

The following order has been sent to each of the Collectors of Internal Revenue from the Department:

SIR—You are informed that the Act to increase the internal revenue and other purpose has been approved by the President, and therefore has become law. The Act takes effect from its passage, and the duties upon distilled spirits are increased to 60 cents per gallon, and the duty on cotton to 2 cents per pound. You, therefore, will require all distilleries of spirits in making their returns, to specify the amount removed on and after the 5th instant, and on such amounts to pay taxes of 60 cents per gallon. JOHN J. LEWIS, Commissioner.

EUROPEAN.—The steamer Arabia, from Liverpool the 5th and Queenstown the 6th, has arrived. Danish affairs are reported unchanged. The Archduke Maximilian arrived at Paris on the 8th, and it is reported, will embark for Mexico on the 25th, all difficulties having been settled. A Hamburg dispatch announces that three brigades of Austrian troops had received orders from Gen. Wrangel to enter Jutland and invest Fredricia.

ANNT ROSY was dividing a mince pie among the boys, and when Jim, who had wickedly pulled the cat's tail, asked for his share, the dame replied: "No, Jim, you are a wicked boy, and the Bible says there is no peace for the wicked."

Life Insurance.—Be sure that you have a Policy of Insurance on your Life. $10,000 insurance on your life is just as good as $10,000 in Bank, i. e., for those who may be left behind you; those you love and wish to provide for.

Purchasing Agency.

Having had the experience of over thirty years in dealing in Trees, Plants, Seeds, and Agricultural Implements, we feel that we are fully competent by our experience in purchasing such articles to make a saving of from five to fifteen per cent for the great mass of purchasers. We will therefore offer to make purchases for all who wish our services, of any of those articles named, or for any articles of merchandize for our Farmers or Ranchmen, and ship the same as they shall direct.

In order that we may do their business in the most satisfactory way for them and ourselves, we ask wish that all who send orders should be as explicit as possible as to their wants—describing as minutely as they can; and, where they desire our judgment, we will do our best to suit them.

Our charge will be Five per cent, together with the cost of packing, freight, drayage, etc. Orders should inclose satisfactory references or the Cash; or bills could be sent by Express, to be collected on delivery.

We shall be happy to attend to the purchase and shipment of Trees, Seeds, Plants, etc., as this is our especial "hobby," and we know we can satisfy all that send us their business attend to

Miller Wante

A MILLER IS WANTED, QUALIFIED TO take charge of a large and valuable Mill, in a pleasant situation with all pleasant surroundings. A good man can secure a good and permanent situation, and a very liberal salary. None need apply unless of education, pleasant address, and the most correct habits and character. For particulars address Editor Farmer. 7

Situation Wanted as Superintendent of Farm.

A GENTLEMAN, every way qualified for the superintendence of a large Farm, who is now in the Eastern States, wishes a permanent situation. He is a man of family, and every way qualified for such a place. Any one wishing a No. 1 Superintendent, within a little time, can secure a valuable man for such a place by addressing the Editor of the Farmer. 7

$2,500 Wanted on Real Estate.

THE SUM OF $2,500 is wanted on Real Estate in San Francisco County, upon land of undoubted title, worth double the amount. Address A. B. C., Farmers Office. 7

Complimentary Vote of Thanks of the Passengers on board the Steamship America.

WE, THE UNDERSIGNED, PASSENGERS on the Steamship America, tender our thanks to Capt. Morton, and the other Officers of the steamer, for the Comforts we have enjoyed during our passage from San Francisco to Panama, and particularly for the neatness and good order on the Boat, and for the sumptuous fare, and kind attention we have received. While expressing our entire satisfaction with the Boat and its management, we heartily commend it to the attention and patronage of the public.

Dated at Panama, Feby 17th, 1864.

English Steward, or Gardener.

A PERSON JUST ARRIVED FROM CANADA IS DESIROUS of securing a place as Steward or Superintendent of a Farm. The very best references can be given of his character and capability for the situations. Apply at the office of Editor of Farmer, or by letter. 21-6

THE POTATO ROT.—At the last meeting of the Farmers' Club, Mr. Carpenter said: "I have read and observed a great deal on the subject of the potato rot, and the sum of the whole seems to be that potatoes planted in moist, tenacious soils, are much more subject to rot than if planted in dry ground." Prof. Mapes remarked: "I had a field, half of which was under-drained, and I planted the whole to potatoes. On the under-drained portion none of the potatoes rotted, while on the other half they all rotted."

Encourage HOME MANUFACTURE!

IT MUST BE GRATIFYING TO ALL CALIFORNIANS to observe the steady increase of Home Manufacture. Then let the motto of all be "ENCOURAGE BY YOUR PATRONAGE," and the time will soon come when we will be able to supply all our own wants, and the wants of the Pacific Coast.

A Thoroughbred "Jack" For Sale.

TO STOCKRAISERS AND BREEDERS: For Sale, at Mr. Allen's stable, corner of Kearny and Pine streets, a "JACK," lately imported from France; age three years, black, bred in the celebrated stud of Alphonse Lavalé, Esq., Reflet Poitou; by *Nero*, a thoroughbred Castilian Ass which received the Gold Medal at the Annual Agricultural Fair at Paris in 1860; out of *Augustine*. Pedigree guaranteed. For particulars apply at Mr. T. Bearwold's cigar store, 714 Kearny street, opposite the Plaza. 21-5

NEW AGRICULTURAL INVENTION.

Sower for all Kinds of Grains.

A NEW SEED-SOWER of large capability is now offered for sale—the Right of Manufacture and Sale of it for the State of California, or for Counties.

The Machine can be made with

Three, Five, or Seven Tubes,

and arranged to sow any kind of grains at any given distance, and to sow a greater or less quantity, to seed thick or sparce, as may be desired.

By the construction of this Machine it can be made to sow on level ground or on ridges, and every variety of seed, from the smallest kind to Beans, Peas, Grain, Corn, etc.

THE SIMPLICITY,

as well as the accuracy, with which this Machine works, is wonderful. Every farmer can regulate it to suit every purpose and plan.

The Evenness and Precision

with which it sows the seed without wasting it, will secure great benefit to the farmer, as it makes a great saving of seed—enough in a short time to pay for the Machine.

These Machines can be made expressly for the sowing of COTTON,
HIGHLAND RICE,
TOBACCO,
SUGAR-CANE,
and all the new crops, of which this State will, ere long, become famous.

For all particulars of the Machine, call at Farmer Reading Rooms, where the Machine can be seen, and where the price and terms of the Patent Right can be ascertained. 5-3m

A Fine Ranch in Contra Costa County.

A FINE RANCH IN THIS COUNTY IS NOW OFfered for sale at a Bargain, if applied for soon, as it will be sold at a price worthy special attention.

The Farm contains 208 acres; 70 acres of this are fenced—the balance is well and heavy timbered. This Farm will cut 2000 cords of wood, enough to pay for the Ranch.

It is an excellent Hay and Grain Ranch and the products sell well and at good prices on the spot, this being the head of navigation and near market: 8 miles from Martines and 4 1-2 miles from Pacheco.

The Title is good and possession given immediately. The Buildings are common, but the Land is No 1. For Price and Terms inquire of the Editor of this paper who will give all particulars.

SPECIAL NOTICE!

Farms for Sale!

THAT VALUABLE TRACT OF LAND IN SONOma County, lying between Sonoma and Petaluma Creeks, and bounded on the south by the San Pablo Bay, known as the property of G. P. Swift, Esq., containing fourteen thousand acres of land, is offered for sale in Lots or Farms to suit purchasers.

Most of this tract of land is suitable for cultivation, and has soil of the best quality. It is accessible to market, being adjacent both to the Sonoma and Lakeville landings—is well watered, has an unexceptionable climate, and is not surpassed in any respect by any tract of the same size in the State.

No better opportunity, it is believed, will ever be offered for the purchase of desirable farms at a low price and upon easy terms

There is a very large amount of fencing on the tract, the entire body of land being enclosed.

The Petaluma Boat touches daily, each way, at the Lakeville landing, which is about a mile from the nearest point.

In addition to the regular Steamer landing places, there are numerous suitable landing places along the entire water front of the tract.

The Sonoma Embarcadero is at one side, thus furnishing a convenient access to the San Francisco market at all seasons.

Persons desiring to purchase farms of any required size may apply to the undersigned, at the office of Haight & Pierson, 622 Clay street, San Francisco, or at the store of Mr. Paule, Sonoma. WILLIAM BIHLER.

FOR SALE, TO LEASE, ETC.

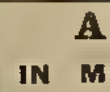
"MENLO PARK," San Mateo County.

Beautiful Sites for Homes in the Country.

THE UNDERSIGNED OFFER FOR SALE THE BALance, unsold, of this choice tract. There, are few, if any, places within one hundred miles of this large and growing metropolis, which combine so many natural advantages for a country residence; the soil is excellent; it is wooded with large, splendid live oaks, and other evergreen shade trees. The climate is unsurpassed; the extremes of heat and cold are never felt, and the harsh summer winds and fogs don't reach here. Good well water can be obtained here at thirty feet, independent of which, there is a Company already formed, in San Mateo County, for introducing an abundant supply of the best spring water, for this and adjacent tracts, and Redwood City; it will have a head of about sixty feet at this point. Two cars of the S. P. & S. J. R. R. and passengers at their depot, at this point, in about an hour and a quarter, thus enabling business men to live here and transact their business in town, without interruption. A first class school is about being established here, with educational ability second to none in the State. There will also be a first class family hotel opened in the Spring.

Those who are alive to the importance of a home in the country, with all the advantages for health, education, etc; are earnestly requested to go and look at this lovely spot. AS AN INVESTMENT, it is worthy the attention of every one who wishes to invest SAFELY AND PROFITABLY, as it is rapidly enhancing in value. The title is unquestionable, it being a portion of the PULGAS RANCHO, the first Spanish grant finally confirmed, and the patent issued.

About thirty heads of families have already purchased, with a view of building, in the Spring.



As to the merits of this choice tract, we refer to the following gentlemen, some of whom are now living in the neighborhood, and others have purchased with a view of doing so.

A. C. RANDALL & CO.,
642 Sacramento street,
17 San Francisco

A Fine Ranch IN MENDOCINO COUNTY.

A FINE GRAIN AND STOCK RANCH of 800 acres under fence, in Mendocino County, will be offered at a bargain if applied for soon. Together with this is a Stock Ranch of some thousand acres of mountain land which goes with this Ranch, being Uncle Sam's land.

The Ranch is about 80 miles from Petaluma and on the great mill road to the Navarro, Albion, and Mendico & Noye's mills.

The location is pleasant, having the Redwood Hills for a back ground, with a fine valley tract—one hundred and sixty acres valley land, mostly under cultivation—yielding fine Barley, Oats, Wheat, Hay, Corn, etc. The crop of Hay is fine

This Farm will sustain a herd of 300 Cattle, and is a grand Ranch for raising Stock, Horses, Mules, or Hogs, and a good place to raise Poultry. There is an orchard of two acres of bearing Trees. Vegetables grow well.

There is on the place a fine two-story frame Building, in which was put 30,000 feet of lumber, also Granary, Smokehouse, and Barn. The vicinity to the Redwoods gives an opportunity to improve, as Lumber is cheap and Timber handy

There are, at present, good Tools, Implements, Harvesters, Plows, etc, on the place; also some furniture. The House has been used as a Hotel and Store, and is also the Stage House. Hay, Grain, and Produce can always be sold at good prices.

There is also a herd of 100 head of Stock which will be sold at a bargain.

This is a rare chance, and worthy the attention of those who wish a good Home, a good Farm, and a profitable business. Prices reasonable. For particulars inquire of Editor Farmer. 21-1

Farmers and Immigrants.

LAND FOR SALE OR TO RENT.

THE ANTELOPE RANCH,

(FORMERLY JOB P. DYE'S) on the East side of the Sacramento River, embraces many very superior Farms of

100 to 500 Acres each; also Vineyards, Gardens and Orchards,

above all overflows, Fenced, having Dwellings, Barns, etc., and throughout the year, large running streams, and irrigating ditches.

The soil is from 3 to 10 feet deep, very rich, and adapted to Wheat, Barley, Oats, Tobacco, Chinese Sugar-Cane, Fruits, etc.

The best market in the State is at Red Bluff, two miles above; at Tehama, three miles below the Ranch, and on the Ranch itself, for consumption in the northern portion of the State, Oregon, and the Humboldt Mines. The new Wagon Road from Red Bluff to the Humboldt Mines is within three miles of this Ranch.

Good Farmers (with families preferred) can hire these farms at low rates, or conduct them on shares, with privilege of purchase. Cash loans will be made, if desired, to assist in cultivating or holding crops, and every facility will be given.

Mowers, Headers, Threshers, etc, are on the Ranch—"The Antelope Flour Mill," of large capacity, and high reputation, is on the Ranch, owned by the same proprietors

☞ The "Job Dye Farm," of 250 acres—with Orchard, Vineyard, and Garden, with irrigating water, large Adobe House, and numerous out-buildings—will be rented to a satisfactory tenant

Apply to GEO. CHAMPLIN, Red Bluff P. O, or on the Ranch, or to

Home Miscellany.

OUR BLACKSMITH.

BY ALICE CARY.

Good luck befall our blacksmith,
For he is a right brave man,
Willing to keep on a leather apron,
And earn his meat as he can;
Good luck befall him and his sledge,
And his arm of brawny tan.

Good luck befall his dingy shop,
With its sign, a pillar of smoke,
And all the cattle, both big and little,
That nod to the sledge's stroke;
The farm horse halt, the wild-woods-colt,
The jade with her neck in a yoke.

Good luck to the two stout door-posts,
Bestudded with bridle-pegs,
And the poor old mare that tethered there
For a speedy shoeing begs;
With her head awry, and her one white eye,
Trembling the flies from her legs.

Good luck to the little farmer
That on her bareback rides,
Telling how she will fit if you give her the bit,
As he carries the ribs in her sides;
And caressing her mane again and again,
As the blacksmith's time he bides.

Good luck to the rusty horse-shoes
On the earthen floor that lie;
To all the litter, to all the clatter,
Ringing clear and high,
And to every spark that struck from the dark,
Strives to get at the sky.

And ever and always fall good luck
To the queer old house he owns,
With its seams of clay running every way
Between the bright blue stones;
Good luck to the roof-tree where the wind
Through the long, wild Winter moans.

Good luck to all his girls and boys,
Where'er their footsteps rove—
Be they never afraid of the honest trade
By which their father throve;
For through such moil and by such toil
The world is made to move.

RAIN! RAIN!

Rain! Rain! from out thy clouds,
O God of Nature pour;
Refresh the panting earth
With thy abundant store;
For thy death-angel spreads his wings
Of withering, o'er our lakes and springs.

Rain! Rain! the cracking ground
Sends columns forth of heat;
'Tis yellow brass above,
'Tis dust beneath our feet.
The tasseled corn hangs down its head,
The bearded rye and wheat are dead.

Rain! Rain! or life will fail;
Fast fails its only staff;
Turn not our wells to rocks,
Turn not our bread to chaff.
Let not our poor, unnoticed, cry;
Let not our children, famished, die.

Pray on!—the pregnant cloud
Lies ready in God's fist,
And prayer can force it out,
And empty't as ye list.
Ye've prayed?—to prayer! to prayer! again;
So may He give the gracious Rain.

HOME FROM THE WAR.

"There'll be a bitin' black frost on the hills to-night, I tell ye! said Moses Atterly, as he threw an armful of oak logs, fringed with silver-gray moss, upon the stone hearth, and rubbed his hands cheerily before the red, roaring blaze that encircled the rude iron fire-dog in drifts of ruby sparks.

He was a tall, wiry-looking old man, with mild hazel eyes, and a skin well nigh as brown as the basket of butternuts that stood in the corner—a man whom you might easily fancy to have grown up among those rock-bound wind-swept wildernesses, as one of the giant pines on the steep cliffs above had grown—stalwart, sturdy, and true to the very heart's core. The room was very plain, with no curtains at the narrow-paned windows, and no carpet save the old zig-zag veins in the hickory boards that formed the floor; yet there was an air of comfort in the splint-bottomed chairs, with red moreen cushions, and the round table, neatly spread for the evening meal. Over the fire an apoplectic black tea-kettle kept up a dreamy song, and Moses Atterly's only child sat, with folded hands, in the chimney corner, watching the vaporous wreath curling from the spout—a pretty, soft-eyed girl, with a late rose in her braids of glossy chestnut-brown hair, and straight, clearly-cut features—now in shadow, and all irradiated by the capricious torches of flame that played at hide-and-seek in and out among the crevices of the great bubbling, singing logs.

"Have you been to the post-office to-night, father?" said she, suddenly looking up as Moses gave the smouldering back log a sort of remonstrating kick.

"No; but I met Jim Grayling down by the hemlock hollow, and he said he was goin' straight there; so I told him to ask if there was anything for our folks. He'll be here directly, I calculate, for it must be all of two hours ago."

"I am sorry," said Bessie, almost petulantly. "Father I detest the sight of that man!"

"My daughter," remonstrated Moses, "that ain't accordin' to either sense or gospel."

"Well I can't help it, father," coaxed Bessie, stealing her soft, dimpled hand into the rough palm that lay on Moses Atterly's knee. "He always seemed to me like—"

She stopped suddenly—so suddenly that the late rose fell out of her hair and lay on the stone hearth—for, as she turned her head, she saw James Grayling standing beside them, unfolding a coarse white-and-red worsted comforter from about his neck. He stooped, without a word, and picked up the rose for her.

"Why Jim!" said Farmer Atterly, "where on airth did you drop down from? I did'nt hear you come in!"

"Didn't you? I am sure I knocked loud enough," said Grayling, with a deep-red flush slowly fading from his cheek. "Pretty well to-night, Bessie?"

"I am quite well enough," pouted Bessie, without looking at him, and tossing her recovered rose in among the glowing cinders. Somehow or other it had lost its charms, after having lain in James Graylings's hand a second.

"Sit down, Jim," said the farmer, heartily. "Any mails for us to-night?"

"Nothing."

What a strange smile passed over his face as he saw the sudden downward droop of Bessie Atterly's eyelashes—the quiver around her mouth.

"Nothin'! that's queer. You see Bessie's feelin' kind o' worried 'cause she don't hear nothin' from Henry Ives."

James Grayling paused, a little maliciously to note the sparkle in Bessie's eyes as she leaned forward with reddening cheeks and intent look.

"What does he say" she gasped.

"Well, I'm afraid you'll feel badly about it; but he says Harry Ives was captured, with a half dozen others, by a skirmishing party, a week before he wrote."

"Captured!"

"Yes. And that isn't all. He says that they didn't half believe Harry Ives cared whether he was carried down south or not; for he had taken a great notion to some pretty girl down in Virginia—a planter's darter—and—"

"I don't believe it, James Grayling," said Bessie, springing to her feet, with flashing eye and passion-crimsoned forehead; "I don't believe a word of it. You are repeating some vile falsehood."

"I knew you'd feel bad," said Grayling, with provoking mildness, "but I thought that you ought to know how matters stood. I can show you Sam's letter, if that will be any more satisfactory. I never had much faith in Harry Ives—a careless, dashing fellow—who—"

"Hush! I will not listen to another sentence," ejaculated Bessie, angrily, and with a certain strange dignity in her girl-face and slender form."

"Mr. Atterly," said Grayling, with aggravating moderation and calmness, "how long is it since your daughter received a letter from Harry Ives?"

"Well, it's a consid'able spell," said the old farmer; "but letters *do* take time to reach us, you know."

"Yes, particularly when they're never sent," sneered Grayling.

"Father, don't listen to him," cried Bessie, passionately. "If the whole world were to tell me Harry Ives was untrue, I would'nt believe them."

And Bessie fainted quietly away, with her chestnut braids of hair drooping over her father's knee."

Poor child! Could she but have foreseen the weary months of waiting for the letter which never came from the far-off southern hills, the hope deferred which maketh the heart sick, that were in store for her, she might have been sorry that she had not died then and there, holding fast to that firm faith in Harry Ives's fidelity.

James Grayling, a crafty, patient man, bided his time. It came at last when the tender green of the hill-sides shriveled and grew brown under the starry, silent frost of the bitter December nights, and the keen wind rushed with thunderous swell through the lonely pine forests in these wild solitudes.

"Daughter, it's the dearest wish of my heart," said Farmerly Atterly, solemnly, as he sat with Bessie in the old, silent room. "I'm gettin' well on in years; and if I could but see you married to some good and true man before I am taken away, I should rest easier in my grave. James Grayling has been almost a son to me these months of trial and trouble. He is coming for his final answer to-night. Let it be yes!"

Bessie shuddered. That year of sick, wistful grief had changed her into a pale, fragile girl, with large frightened eyes, ever roving from side to side as if vainly seeking something which never came.

"Wait, father," she murmured eagerly, as if pleading for sweet life itself: "wait a little longer—only a little longer!"

"I have waited, Bessie. It is a year and over since Harry Ives has sent you either word or message. He may be dead—better dead than a scoundrel!—but James Grayling has been true as steel to me all this time. He deserves you, Bessie; and when you're once married you'll learn to love him. Shall we say this day month for your wedding, daughter?"

That night Bessie laid her cold hand in James Brayling's eager palm, and said "Yes," dreamily, to whatever he proposed. What had life left for her? As well be James Grayling's wife as anything else, since God willed that she should live and suffer on, and the dreary path of years lay spread out before her listless feet!

The old smoke-stained walls were wreathed with feathery garlands of cedar and pine, with the scarlet berries of the mountain ash glowing here and there; the great fire roared up the chimney with festive sound, and all the neighbors were gathered round Farmer Atterly's hearthstone; for pretty Bessie was to be married that night.

"She don't look as a bride ought to, somehow," whispered Mrs. Deacon Jennings to her companion, Mahala Bird. "She seems to me jest like one o' them white snow-wreaths down in the hollow yonder."

"Maybe it's that white dress," said Mahala; "but she does look like a corpse. Land o' Goshen! what be I sayin'? It ain't good luck to talk about corpses on a weddin' night."

For the pretty bridemaids had just led Bessie in, robed in pure sheeny silk, with snowy geraniums in her hair, and not a vestige of color in her cheek.

"There don't she look sweet?" said Susy Jennings. "Is it time to go into the parlor yet?"

"Massy, no child!" said Mrs. Jennings; "not for an hour. Why, Jim Grayling hasn't come yet!"

So Bessie sat down in the midst of the assembled maids and matrons, and played with the white flowers in her bouquet, thinking—who knows of what? Perhaps the fair face of the woman who had wiled her lover's heart away.

Somebody spoke to her, she looked up, and all of a sudden her frightened eyes traced a figure beyond the open door opposite to which she sat—a figure hurriedly pressing through the crowd.

"Where is she? I will see Bessie, wedding or no wedding! Who has a better right than I?"

The next moment, the pale, white-robed bride lay like a fair, still statute in Henry Ives' arms.

"Stand off, I say!" he cried, fiercely. "Let no one come between me and the woman I love. I have earned her to be my wife—earned her by long months of pain and suffering—earned her by wounds upon the battle-field of the country she loved! Do you say she is to be married to James Grayling? What has James Grayling done with the letters I sent to his care?—with all the messages I entrusted to him! She had better be in her grave than married to James Grayling. Mr. Atterly, you are a just and a good man; judge between me and the treacherous fox I fancied was my friend."

"Harry, Harry!" faltered the old man, "I never dreamed o' this Tell us about it, my boy, for my old head swims."

And Harry Ives, still holding Bessie to his heart, revealed the story of his own truth and James Grayling's duplicity. When he had finished the impassioned recital, Moses Atterly clasped the brown, strong hand between his own horny palms, and said solemnly:

"My boy, I ask your pardon for every doubt that ever crossed my mind, and I thank the merciful Providence that has spared Bessie from being Jim Grayling's wife. We were calculatin' to have a weddin' here to-night; and it isn't too late yet, if Harry hasn't no objection to bein' married in his soldier clothes."

"Father," interposed Bessie, rosy as a whole bouquet of carnations blended into one; but Harry took her hand into his, whispering:

"Love! I shall not feel secure until I can call you *wife*"—and the remonstrance died away upon her lips.

"Are you all ready, Elder Wilkins?" said Moses; "'cause I b'lieve the young couple is."

Ah! she looked like a bride *now*, with the hazel light burning in soft fires under her long curled lashes, and the carmine dyes coming and going upon her cheek, like a proud and blushing bride.

The ceremony was scarcely over before the silver chime of sleigh bells sounded at the door, and James Grayling's voice was heard, exclaiming:

"I'm afraid I am a little late; but the horse sprained one of his legs, and I had to get him changed at Squire Warrenton's. However—"

"Yes, Jim Grayling, you *are* a little late," said Moses Atterly, taking a prodigious pinch of snuff; "for my darter's married already."

"Married!" ejaculated James Grayling, as if half uncertain whether his intended father-in-law were not a fit candidate for a lunatic asylum.

"Yes—to Harry Ives!"

As Grayling's bewildered eye caught sight, in the brilliantly lighted rooms beyond, of the young soldier, bending his head to listen to some whispered word from Bessie, he turned a dull, dead yellow, and a chill dew broke out around his mouth.

"What does this mean?" he asked.

"It means, Jim Grayling, that you're a scoundrel!" said the old man, with sudden fire flashing in his eyes. "There's the open door—leave the house before Harry Ives sets eyes on you, for he's a spirited lad, and mischief might come of it! And hark ye—never let me see your villainous face again!"

Silently, and like a wounded snake, James Grayling crept out into the chill darkness of the tempestuous night, a detected, disappointed man. And so effectually did he take Moses Atterly's advice that the little village in the hollow knew his name and presence no more.

And Bessie Ives, the happiest little wife in the whole world, sings softly over her work, counting the days until, "when this cruel war is over," she shall welcome her soldier-husband back to the grand old pine forests of Maine once more.

Self-Made Men.

"If you are to be an exception," said Mr. Crabbe to his young friend, "you will be the first in all my observation and experience. You may take the whole population of Maryland, and select from it fifty men who are the most distinguished for talents, or any description of public usefulness, and I will answer for it, they are every one of them, men who began the world without a dollar. Look into the public councils of the nation, and who are they that take the lead there? They are men who made their own fortunes—self made men, who began with nothing. The rule is universal. It pervades our courts, State and Federal, from the highest to the lowest. It is true of all the professions. It is so now; it has been so at any time since I have known the public men of this State or the nation; and it will be so while our present institutions continue. You must throw a man upon his own resources to bring him out. The struggle which is to result in eminence is too arduous and must be continued too long, to be encountered and maintained voluntarily, or unless as a matter of life and death. He who has a fortune to fall back upon will soon slacken from his efforts, and finally retire from the competition. With me it is a question whether it is desirable that a parent should be able to leave his son any property at all. You will have a large fortune, and I am sorry for it, as it will be the spoiling of a good lawyer. These are my deliberate sentiments, and I shall be rejoiced to find, in your instance, I shall have been mistaken."

For Wine---Rhine Grapes.

Black Gleffner,	Kohlen Traube,
Johnisberger Riesling.	Gray Gleffner,
Riesling Franken,	Silvaner,
Traminer,	Goodethel,
Rulander.	

FOR THE TABLE:

Goodethel,	Muscat Rose,
Black Hamburg,	Muscat Alexandria,
Chasselas Musque,	Golden Chasselas,
Charlesworth Tocay.	

The above list embraces those that the Undersigned has proved. The WINE-GRAPES are the BEST OF THE RHINE, such as our Choice Rhine Wines are made from; and those for the Table are well known and approved. The Grapes will make Better Wine than our California Grapes, by a 100 per cent. Having cut down all my California Grapes, and instituted others, I know what I say to be true.

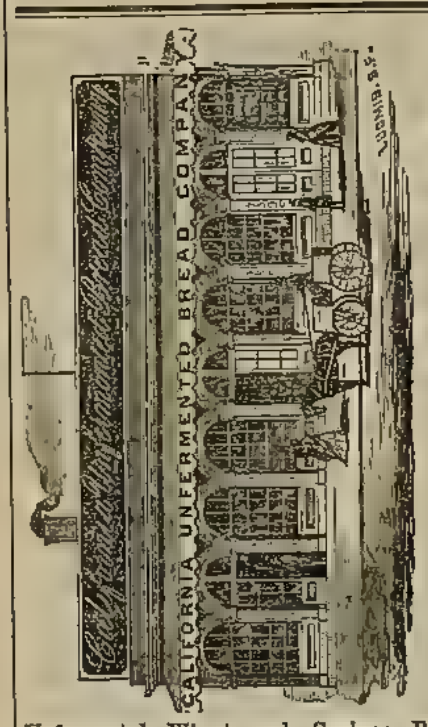
Orders for Rooted Vines or Cuttings at LOW PRICES, can be sent by Mail or left at the FARMER OFFICE, will be promptly attended to.

20-24-tf B. KAMP.

$5! Delaware Grape-Vines! $5!

PROPAGATED FROM VINES received in 1861, from Dr C. W. Grant, of Iona Island, near Peekskill, N. Y. One and two year-old Vines, from $1 00 to $2 00 each! The superiority of the Delaware as a Wine Grape, will doubtless induce unprincipled Dealers to flood the Market with a Spurious Article; and as mistakes sometimes UNINTENTIONALLY occur, which cause delay and trouble to the Purchaser—

☞ I WILL PAY IN GOLD COIN $5.



(or the same amount in Lincoln, Lenoir, Union Village, Anna, or Diana Vines, at 50c each, or the IONA at $2 00 each) for each Vine purchased from me, for the DELAWARE, which proves untrue to name.

I have a few IONA VINES, one year old, propagated from a Vine presented to me from Dr. Grant, the Originator of the same, which, except upon the above conditions, I do not intend to offer in Market without his permission

Catawba Vines and Cuttings by the Hundred or Thousand, CHEAP!

Fine House and Garden in Sacramento City

A LARGE, SPACIOUS, AND GENTEEL House and other buildings, with fine Garden, all finely located in the upper part of the city, containing a full half block—will be sold a bargain and on liberal terms of payment if applied for soon. Real estate is rapidly improving in Sacramento, and this is a rare chance. Inquire of editor Farmer. 16

Literary Shrubbery.

BORROWING CHICKENS.—One of our peculiar gaunt Yankees, lately emigrated and settled down in the West. As he put himself to work in good earnest to get his house to rights, the neighbors willingly lent him a hand. After he had got everything fixed to his notion, a thought struck him that he had no chickens. He was too honest to steal them and too mean to buy them; at last a thought struck him—he could borrow. He went to a neighbor and thus accosted him: "Wal, I reckon you hain't got no old hen nor nothin' you'd lend me a few weeks, have you neighbor?" "I will lend you one with pleasure," replied the old gentleman, picking out the very finest in the coop. The Yankee took the hen home, and then went to another neighbor and borrowed a dozen eggs. He then set the hen, and in due course of time she hatched out a dozen chickens. The Yankee was again puzzled; he could return the hen, but how was he to return the eggs? Another idea—and who ever saw a live Yankee without one? he would keep the hen until she had laid a dozen eggs. This he did, and then returned the hen and eggs to their respective owners, remarking as he did so: "Wal, I reckon I've got as fine a dozen of chickens as ever you laid your eyes on, and they didn't cost me a cent, nuther."

NIGGERPHOBIA IN WASHINGTON.—"Agate," of the Cincinnati Gazette, tells the following good one: "Washington has been full of strange illustrations of late, of the burial of prejudices, under the avalanche the war has wrought; but I know of no stronger one, in its humble way, than a curious little fact connected with the street railroad. When it was begun, two years ago, it was poison for a white man to breathe the same air with a negro in a street-car or omnibus. Let the storm be as pitiless and the car as empty as you choose, the negro woman, with a babe in her arms, must stand on the platform and bear it, lest her presence in a corner within should contaminate the scattered passengers. By and by it began to be suspected that the negroes might be entitled to ride within, if they had cars to themselves; and the suspicion became a very strong one when it was found it would pay. That was a few months ago. This morning I rode down to the Capitol in a car labeled 'Colored persons can ride in this car.' It was crowded with ladies and gentlemen, who, a year ago, would have been horrified at such a position; and by their sides sat the negroes, to whom the car rightfully belonged. The whites had actually taken possession of the negro car, and the most aristocratic ladies sat beside well-dressed negroes without a shudder. In its casual way, I know no happier illustration of the discovery that many have been making, that worth has as much as color to do with what is respectable and what is not."

A REMEDY.—It is suggested, as a means to effectually remedy the evil of swindling Government contractors, that a Board of Examination be appointed to take an inventory of the present property in possession of each of these robbers, deduct therefrom what he was worth when the war began, and make a further deduction of what would be a fair compensation for his time and the capital invested, and then confiscate the remainder for the benefit of the Treasury. It is believed that if this were done it would restore to the Treasury two or three hundred millions of dollars of which it has been robbed by knavish and thievish contractors. [Fishkill Journal, N. Y.

Greenbacks! Greenbacks!

We receive Greenbacks for subscriptions to the California Farmer, and allow the ruling premium on Gold!

IT is a well known fact to all conversant with newspaper publishers, that since the war commenced the cost of publishing a paper has very greatly increased, so much so as to stop hundreds of papers, over the United States. Yet it has been our pride not to add cost to our *subscribers*, but to relieve them although we have made sacrifices of thousands to carry out our principles, and do what we esteemed our duty to uphold the credit of our country both by precept and example. From the first we announced that we would receive Treasury Notes at par for *Subscriptions to the Farmer*. But the notes were rejected, here, as currency and many of our subscribers have, in conformity with the custom, continued to pay us in gold; yet we have never refused greenbacks at their face value when sent us by subscribers, though it has subjected us to serious loss from our being obliged (from the rejection of the currency as mentioned), to pay gold in our disbursements. At the present cost of all articles, we could not do a paying business by receiving greenbacks at par, at our present rates. But to make the thing work equally for all our subscribers, as well as conform to what we think our duty, we propose to adopt the greenback basis, and raise our subscription price to $5 a year, payable in greenbacks.

As it is evident to us now that the people of California are determined to sustain the National Government and make Treasury Notes the medium of trade, generally, we announce as follows:

The price of subscription to the CALIFORNIA FARMER, hereafter, will be $5 a year, payable in U. S. Legal Tender notes; this being a safe and easy medium of transmission, by mail; and we will allow the ruling premium when gold is tendered in payment.

We also announce, to all who are indebted to us for *Subscriptions* to the CALIFORNIA FARMER, send along your *Greenbacks*. They will come to us with the glorious impress of our country's sovereignty, and every pecuniary sacrifice we may make we cheerfully lay upon the altar of that country whose faith stands pledged in these notes and whose integrity *we dare not question*.

We make this change in the terms of our subscription *not to advance the present cost* of our journal, but rather to make it cheaper to all, for at the *present nominal* value of the notes it will cost the subscriber but $3 75.

We do hope also that all to whom we have sent bills, all who are indebted to us, will now see how easy we make it for them to pay their dues. It must be remembered also that all who owe for this paper, a bill of six month's standing should, by the terms already heretofore announced, remit us $5, and g. b.'s to that amount will be very acceptable.

We shall now have the consciousness of having taken a true step to sustain the National Currency, and we shall know who will "go and do likewise."

We do hope that the friends of a good, sound National Currency will give us their aid and cooperate by sending us their names for the FARMER.

The Markets.

Wholesale Produce Report.

This represents the prices paid by the dealer to the producer.

Corrected weekly, by A. H. Toon & Co., corner of Clay and Drumm Streets.] Mar. 18.

The wild speculative excitement that pervaded our Grain and Produce Market, last week, has in a great measure subsided. The recent decline in prices has been rapid and material. Sellers now have difficulty in finding buyers as well as being compelled to submit to buyers' views as regards prices. There are also sellers on the Market, of Wheat, Flour, etc (those who bought on speculation during the excitement), who now wish to realize, and would be content with a small profit or a moderate loss. We feel that we did our duty in attempting to allay the excitement, believing at the time that the alarm was unfounded, and fearing the results that would always follow after a panic or such excitement as has prevailed: dull times, depression, low prices, and dissatisfaction are the ruling features of the market. Considerable of the Flour that changed hands was bought by families and consumers, who, in their eagerness to provide against high prices and famine, bought from 6 months to one year's supply. The natural result will be that this, or much of it, must be used or consumed before these parties are again buyers or our market assumes a healthy condition. We look, consequently, for prices to drag and the market to fall off until as low, if not lower prices, are reached than was started from two weeks since.

If there be any truth in the general tenor of reports, Feed-Grains and Hay are likely to be sustained, or bear a relative high price compared with Wheat. In 1863, Oats were bought for shipment to Australia at 2½ and 3c, and it is believed by many that though our consumption has materially increased, the supply is less abundant than it was one year since. If there be any reliance on the above, it is reasonable to look for firmness in Feed-Grains and Hay. A good supply of rain throughout this month, and an occasional shower in April, we are led to believe, will insure us an ample if not an abundant crop, croakers and speculators opinion to the contrary notwithstanding.

Our Exports are as follows; Ex the Hamburg bark St. Thomas Packet, for Hong Kong, 2586 sks Wheat, 900 bbls 2000 qr-sks Flour, 200 sks Oats, etc. Ex bark Adelaide Cooper for Victoria, 2398 qr 400 hf and 50 bbls Flour, 944 sks Barley, 354 sks Beans, etc.

Our receipts of Produce from around the Bay for the past week have been as follows: Wheat 10139 sks, Barley 3410 sks, Oats 553 sks, Potatoes 1302 sks, Flour 2972 qr-sks, Bran 400 sks, Hay 119 tons, Cornmeal 128 sks.

Also, Coastwise: Wheat 3430 sks, Potatoes 4111 sks, Barley 2228 sks, Oats 2191 sks, Wool 3 bales, Beans 1831 sks, Onions 28 sks.

The Fruit Market is now better supplied (for this season of the year) than it has been for several years. We have a cargo of Malaga Fruit, Senator arrived last evening from Los Angeles with about 14,000 Oranges, and this morning the Esperance came in from Tahiti with a cargo of Oranges, Limes, Cocoanuts, etc, not to mention two cargoes of Apples from Oregon, near 11,000 boxes.

BY CONTINENTAL TELEGRAPH.

DATES TO MARCH. 16.

General Order No 100, dated Executive Mansion, March 14th, says: "In order to supply the force required to be drafted for the navy, and to provide an adequate reserve force for all contingencies, in addition to the half million called for on February 1st, a call is hereby made and a draft ordered for two hundred thousand men for military service in the army, navy and marine corps of the United States. Proportional quotas for the different wards, towns and election districts, or counties will be made known through the Provost Marshal General's bureau, and account taken of the credits and deficiencies of other quotas. The fifteenth day of April is designated as the time up to which the number required from each ward of cities, etc., may be raised by volunteering. A draft will be made in each ward of the city, town, and county in which, if there shall not be filled the quota assigned to it within the time designated, for the number required to fill the quota. A draft will be commenced as soon after the 15th of April as, practicable. Government bounties as now paid will continue to April first. After that date, two hundred dollars bounty only will be paid, as provided by act approved July 22, 1861.

March 14 a guard took possession of the naval store at Washington, by order of Secretary Welles, and arrested several of the Clerks and Navy Agents, to serve as witnesses against Savage, and parties in New York and Philadelphia, charged with swindling the Government in naval contracts.

General Hurlburt and Staff arrived at Memphis, January 11th, from Vicksburg. The larger part of his corps is connected with another expedition, which left Vicksburg some days since.

In the House, Merrill, from the Committee on Ways and Means, reported a bill to establish an an Assay Office in Nevada Territory; also, one at Portland, Oregon. Referred to Committee of the Whole.

There is considerable excitement in Kentucky against the acts of the Federal authorities in enrolling slaves in that State, preparatory to a draft. Governor Bramlette has issued an address, counseling reliance on the law.

Savannah news, of March 2d, contains an account of the capture of the rebel ship Eliza, with a cargo valued at $20,000.

The Richmond Examiner of March 8th, contains an account of three fires on Friday night, in the vicinity of Richmond, destroying over $100,000 worth of property.

A blockade runner, name unknown, escaped from Wilmington on the night of March 12th. She threw 120 bales of cotton overboard.

Brig. Gen. W. F. Smith has been nominated as Major General of Volunteers, *vice* Grant, promoted. This is supposed to be preliminary to his assignment to the command of the army of the Potomac.

Advices from Jacksonville, Ala., to March 7th, have been received. General Seymour was still in command. Our loss at Olustee reaches 1,800 men, of whom two-thirds were slightly wounded.

In the Senate, Mr. Cooness introduced a bill authorizing the erection of buildings for a Branch Mint at San Francisco, which was read twice and referred to the Committee on Finance. The Senate concurred in the House amendment to the Gold bill, which now only awaits the signature of the President to become a law.

A Washington special dispatch says the President has taken measures to enforce the enrollment law in Kentucky. A bill will be introduced in the Senate, to deprive all the deserters who may have escaped into the British Provinces, of all future privileges of citizenship, unless they immediately give themselves up for military duty.

The new call for troops accords with the plans for the military campaign which is laid out by Gen. Grant. It is understood that he asks for large armies, if the country expects him to close the war within the present year.

The order relieving Gen. Halleck from duty as General-in-Chief, says: The President desires to express his appreciation and thanks for the able and zealous manner which the arduous and responsible duties of that position have been performed.

A detachment of about two hundred and fifty rebel soldiers, who were prisoners of war, have taken the oath of allegiance and started for New York, on a special train.

The military committee of the House has decided to report in favor of increasing the pay of soldiers to eighteen dollars per month, and of Sergeants to thirty dollars.

The Post Office Department has concluded contracts for Mail service in Nebraska, Washington, Idaho and other far-off Territories. Among them is one providing that from July 1st the mails shall be carried thrice a month from the intersection of Salt Lake City, by way of Boise City and Auburn, to Walla Walla, in ten days, in lieu of sending them via Placerville. This saves 1200 miles of travel and ten days in the expedition of the mails. This service was let to Ben Holliday at 150,000 dollars a year. The mails for the newly discovered gold region of Idaho and Bannock City are to be sent from Salt Lake. The contract was awarded to E. S. Alvord.

March 16th, the House so amended the gold bill, that the obligation to create a sinking fund by the act of February 25th, 1862, shall not be impaired thereby. After some debate, the bill, with the Senate amendment, passed by 83 majority.

Charleston (rebel) advices to the 13th, say a slow fire on the city was kept up. There was an artillery duel of several hours on the 9th between battery Gregg and the battery on Sullivan's Island. No damage.

Peace has been ratified with the North Carolina Cherokees. Those recently captured in that State were induced to take up arms under the belief that they were fighting for the United States Government. Since their return to loyalty the rebels have committed numerous outrages on them. Several have been thrown into prison, and the rest are concealed in the mountains.

The Ariel has arrived at New York from Aspinwall, with $350,000 in treasure. Central America is quiet. Peru offered to mediate the impending question between Bolivia and Chile.

The Special Committee on the Bankrupt Bill have authorized Mr. Jenks to report a bill some time since proposed by him. It embraces both the creditors' and debtors' interests. Gen. W. F. Smith has been nominated a Major-General in the regular army, in the place made vacant by Grant's promotion.

A New Orleans letter states that Porter's entire fleet of Ironclads was at the mouth of Red river. Thirty transports loaded with troops were also there. General Banks and staff would take the field on the 10th, and the army commence immediate operations.

There is a rumor that the whole of Ewell's corps is moving into the valley of the Shenandoah, probably for subsistence.

A dispatch from Washington, on the 16th, says: 500 of our prisoners died at Richmond during February. The order relieving Gen. Meade, and appointing his successor, will be issued in a few days. Burnside will be assigned to the Department of the South, instead of Fremont.

The Court of Inquiry appointed to investigate the conduct of Generals McCook, Crittenden, and Negley, at the battle of Chickamauga, find that General McCook did his entire duty in the battle proper, but made a mistake, arising from an error of judgment, in going into Chattanooga. Gen. Crittenden is held entirely blameless. The Court speak in commendatory terms of his conduct. His forces had been sent piecemeal to Gen. Thomas, and he found himself without a command before leaving for Chattanooga. Negley is also exonerated.

The Department of the Pacific, including California, Oregon, etc, has been tendered to Major General Hunter, and refused, on the ground that he desires active service in the field directly against the enemy.

The late expedition resulted in the destruction of King and Queen county Court House, where the gallant Dahlgren was ambuscaded and murdered. The notorious guerrilla Bob Colton is among the killed. We have had none killed, but a half-dozen wounded.

Lieut. Col. Sanderson has been sent to Fort Warren.

At Chatanooga, March 15th, all quiet along the lines.

☞ **Holloway's Pills and Ointment.**—Burns, Scalds, Wounds, Bruises, etc.—No more flattering testimonials can be adduced of the immediate relief which Holloway's Medicines afford to sufferers from these terrible catastrophes than the readiness with which medical men use them in private practice for all such accidents. The grand feature in the Ointment is that it leaves neither scar nor blemish of the skin. No family should be without a supply of these invaluable remedies.

Sold by all Druggists, at 30c, 70c, and $1 10 per box or pot. 20-0
HOLLOWAY'S PILLS and OINTMENT may be always obtained of Messrs. CRANE & BRIGHAM, cor. Clay and Front streets, San Francisco, Cal.

THREE PREMIUMS for BEST Varieties FOREIGN GRAPES.

150,000 Grape-Roots

From imported Foreign, and American Vines of my own importation, FRUIT TREES, Etc., Etc.

Having imported myself from France, Germany, Italy, and Dr. Grant of N. Y., I offer for sale this season, as choice a lot of FOREIGN GRAPE-ROOTS and CUTTINGS as can be had in this State, and as cheap as any reliable nurseryman will sell. All the Vines and Trees have borne fruit with me, and I guarantee everything I sell to be TRUE TO NAME, or refund the money.

AMERICAN VARIETIES GRAPE-ROOTS, 1 and 2 years old, and Cuttings:
Delaware, Diana, Concord, Iona, Union Village, Lincoln, Anna (white), Catawba, Isabella, etc.

EUROPEAN VARIETIES GRAPE-ROOTS, 1 and 2 years old, and countless numbers of Cuttings:
True black, red, and white Burgundy (Pineaux), Traminer, Rulander, Madeira Winegrape, Riesling, white, red, and black Frontignan, Malaga, Parsley, Cannon-Hall and White Muscat of Alexandria, and over 100 varieties more

ALSO:—10,000 rooted vines 2 and 3 years old, LOS ANGELES, very cheap, and any amount of Cuttings of all varieties.

Also a limited lot of
DOWNING'S EVER-BEARING MULBERRY TREES 1 year from bud, extra large;
French, German, and Swiss Prunes (Fellenberg's Zwetsche).

....ALSO....

Pear, Apple, Plum, Peach, etc; Lawton Blackberries, English Gooseberries, and all kinds of Trees, and Shrubs. Cions unlimited, and cheap, of the above.

I intend to close out the Nursery Business, and sell at low as the lowest. For prices or orders, send per Wells, Fargo & Co, or mail, to

TRAVELING.

SAN FRANCISCO AND SAN [illegible] RAILROAD.

Two Trains Daily, Each Way

CHANGE OF TIME.

ON AND AFTER FEBRUARY 15, 1864, the San Francisco and San Jose Railroad Company will run trains each way, daily, leaving the Depot on Branan street, between Third and Fourth, for San Jose and intermediate stations, as follows:

Leave San Francisco at 8 a. m., and 4 p. m.
Leave San Mateo at 8:55 a. m. and 4:55 p. m.
Leave Redwood City at 9:20 a. m. and 5:20 p. m.
Leave Santa Clara at 10:10 a. m. and 6:10 p. m.
Arriving at San Jose at 10:20 a. m. and 6:20 p. m.

RETURNING.

Leave San Jose at 7:30 a. m. and 3:30 p. m.
Leave Santa Clara at 7:40 a. m. and 3:40 p. m.
Leave Redwood City at 8:30 a. m. and 4:30 p. m.
Leave San Mateo at 8:55 a. m. and 4:55 p. m.
Arrive at San Francisco at 9:50 a. m. and 5:50 p. m.

FREIGHT.

Our road being completed from the City of San Francisco to the City of San Jose, we are prepared to take Freight to either end of the line, or to and from any Station on the Road, at the lowest rates.

COMMUTATION TICKETS.

Parties wishing to commute between here and San Jose, or between Stations, can procure tickets at greatly reduced rates, by applying to any Station Agent, or at the office of the Company.

☞ Passengers can reach the Depot by either the Third or Fourth street lines of city cars.

From the Hills of Alameda County.

STONY BROOK, March 17, 1864.

EDITOR CALIFORNIA FARMER:

While the clouds are trying hard to give us some rain, I will try and write a few lines for the FARMER. In the first place, my wife wants to know if there is such a thing in San Francisco for sale as a patent wheel-head for spinning wool, and hand wool-cards. She has often wished she had a spinning-wheel and cards, so that she could spin her own stocking-yarn, and learn our two youngest girls to do it. For the sake of hearing the hum of the *big* wheel, I would get one up myself if I could get the head. I don't expect there are any made in California for sale, as it is an unpopular machine with the present generation, but I don't think the good old institution had ought to be entirely forgotten. It may be that a few good housewives from Missouri and Iowa, have brought their spinning-wheels with them across the Plains, but I doubt it some.

ROTATION, SUMMER-FALLOW, ETC.

My way of raising grain here is this: Wheat after corn, corn after barley, and barley after wheat. My wheat looks as well as I could wish now. I think it will make a crop if we don't get any more rain. At one end of my last year's wheat field I planted a patch of potatoes, this year sowed all to barley; that on the potato ground is now first best, that on the stubble looks doubtful. I am satisfied that either summer-fallow, or sowing after corn, beans, or other vegetables, is the surest for a grain crop in such a dry season as this promises to be. It is a question with me, whether sowing a summer-fallow is as good as sowing after corn and vegetables, in this country. In cultivating corn, beans, etc, the ground gets stirred and kept clean through the summer, while a fallow is apt to lay still and bake. I view it like this: if I don't get a great crop of corn, beans, etc, I prepare my ground for a good crop of wheat, and the corn-stalks and nubbins will pay expenses.

The little rain we have had, up to the present, wet the ground in two inches and revives the grain and grass. If the Clerk of the weather can manage to keep the wind blowing from the South a few days longer we may get rain enough yet; if not, I pity the stock in the hills.

BORER REMEDY.

We now and then have inquiries made, How to prevent the borer working in the fruit trees? I have tried different washes without effect. Last winter, I planted about sixty young apple trees in place of those the borer had killed, and wrapped them with paper 8 to 10 inches up. It saved them all but two, the paper got off by some accident and the borers killed them, and one or two they got in above the paper. I find they don't trouble a thrifty growing tree; it is only the first year after planting they do any damage—at least that is the way with my trees.

March 18.—We had a noble rain last night. I think the crisis is passed. It rained nearly all night, so gradually that not a drop was lost running away in brooks. I imagine I see the farmers and stockmen putting off their long faces and looking cheerful and thankful. It reminds me of the 10th verse of the third chapter of Malachi* which we all would do well to read frequently.

A. CLARK.

*"Bring ye all the tithes into the store-house, that there may be meat in my house, and prove me now herewith, saith the Lord of hosts; if I will not open you the windows of heaven, and pour out a blessing, that there shall not be room enough to receive it

Success of Agriculture at Great Salt Lake City.

From a letter received from the President of the Deseret Agricultural and Manufacturing Society, we gather the following very interesting particulars. The President in speaking of the doings of their Society says: "They have established gardens at a point so remote from other cultivation that they are able to raise pure seeds. Last season they succeeded in raising the Imphee seed, in purity; experiments on the stalks of which showed that from five gallons of juice one gallon of good thick sirup was made on a Cook's evaporator. At the same evaporator other cane that was worked took seven and sometimes as high as ten gallons to make one of sirup.

Pure-bred Fowls.

SACRAMENTO, March 20th, 1864.

EDITOR CALIFORNIA FARMER:

I wish to make an inquiry through your valuable paper in regard to fowls. I have lately bought a few Spanish fowls that have been running promiscuously with the common barn-yard fowls. Now what I wish to know is, how long after being shut up by themselves, can I depend upon having the pure Spanish egg from them? If you or any of the readers of the FARMER can give me the desired information, it will much oblige

A SUBSCRIBER.

We cannot pretend to give a positive answer to the above inquiries, but on "general principles," should say the eggs would be pure immediately after the separation of the fowls. It might be that hens laying at the time of separation would produce mixed eggs until that "litter" was laid out; this we presume would be the case with turkeys, but we cannot say if it would be the same with hens. Strictly speaking, it is doubtful if individuals of any distinct breed of animals can, after cross-breeding, again produce pure bred animals of their own breed, and much evidence has been given to substantiate this view by those who have given the subject attention; still the breed will doubtless be pure enough for all practical purposes, especially in the case of fowls. Will some of our readers give an answer to the above inquiries?

Since writing the above, we are informed by a "fowl fancier," that the eggs will be pure in three days after separation from the other breeds.

Uses of Water in Food for Stock.

EVERY farmer and stock-grower of experience knows that animals require a certain quantity of water or moisture daily to keep them in a thrifty and growing condition, and will be careful during the winter season to see that they are furnished with an abundant supply, both as a matter of economy as well as a means of promoting their health. But we refer more particularly to the feeding of articles, which contain different degrees of water, as hay, grain, or roots, and which require a greater or less amount of saliva or moisture, to prepare them for being digested in the stomach of the animal.

It is estimated that seventy-five per cent of the animal system is water, and it is the medium by which the nutritive materials are introduced into the system, also it is the medium by which the foul substances are removed from the body in the form of perspiration, feces and urine.

During the summer season while stock are at pasture and the food is green and succulent, so much moisture is not needed to prepare it for deglutition, but when the animals are housed and the food given is of a dry character, especially if it is wholly hay and other dry forage, the necessary moisture to salivate or prepare it for the stomach must be supplied. Boussingault says, "the absolute necessity of a sufficient degree of moisture in the food, in order to secure its due and easy digestion, greatly countenances the practice, which is beginning to be introduced in some places, of steeping hay for some time in water before giving it to cattle. This necessity further explains the great advantages in associating with dry fodder other very watery articles, such as roots, tubers, turnips, &c."

The amount of saliva necessary to moisten suitably dry feed for deglutition, is much more than we would naturally suppose. Experiments have shown that the horse in eating one hundred parts of hay would require a secretion of four hundred parts of saliva, while the same amount of green grass would require but forty-nine parts to prepare it for the stomach. In the ruminant or cud chewing animals, the per cent is still greater. A cow fed with thirty pounds of hay, per day, would require about one hundred and fifty pounds of saliva to moisten it, but if sixty pounds of turnips are fed as a substitute for a portion of the hay, reducing the latter to thirteen pounds, but one hundred pounds of saliva would be required. Hence the necessity and economy of supplying animals with food of different character, and containing a due quantity of moisture, and also of furnishing them with plenty of drink at all times and seasons, but particularly when their food is wholly of a dry character.—[Maine Farmer.

PLANT! PLANT! PLANT!—Improve every moment now. Put in new crops; the earth will be in good condition now. Plow deep, cultivate finely, and there will be no fear of a good harvest. The Seed stores have had rather a *dry time* of late, but now they are busy enough. S. W. Moore, on California street, the well-known Seedman for many years, is full of business. That is the place to buy; he has a large stock of reliable seeds. J. H. Wright, Marysville, has a large stock of Seeds, also, W. R. Story, Sacramento, and these are reliable stores.

SAN JOSE RAILROAD.—The benefit of this excellent road is now being seen and felt. Already our Farmers' produce is being brought over the road in quantities, thus benefitting the Farmers and the Road too.

Liverpool Wool Market.

JOHN L. BOWES & BRO.'s Wool Circular, dated 10th February, 1864, says: The financial and political events of the past month have not unfavorably affected desirable kinds of Wool, for stocks of such are in a moderate compass and consumption satisfactory, but faulty and ill-conditioned kinds are neglected and easier. In Belgium and France sound-stapled lots of old Mestizo are a trifle dearer, and weak mushy kinds rather lower, partly because so large a proportion of the new clip of B. Ayres is reported to be of the latter class. As the Australian clip is late this season, the London auction sales will not commence till first week in March.

Public Sales of Wool commenced here 26th ult. and closed 6th inst. They opened with some irregularity, but subsequently gained in strength, and most classes of well-conditioned Wool sold readily at full prices, but all faulty parcels, and some good clothing kinds, were neglected at ½d to 1d per lb reduction on October Sales. For the U. States nothing was done, Continental Exporters bought less than usual, and almost the entire business has been for home consumption.

The quantity offered was 37,619 bales, of which 17,098 bales had to be withdrawn.

Among the sales—1,185 bags of Lima and Obilo offered, 720 sold. The former 1d lower, medium to best white Lima unwashed 11½d to 14½d, mixed and black 9d to 12d, common to half-breed white 7½d to 10½d. Common unwashed Valparaiso 7d to 8d. 4,913 bales of Peru offered, 1,531 sold. Washed fleece, 13½d to 16d ordinary to fair, extra up to 17½d, washed skin 11d to 11½d; unwashed fleece 9½d to 10d.

Forbidden Fruit—Introduction of Potatoes in France.

M. Noel, a French agriculturist, speaking of the introduction of the potato into France, says: "This vegetable was viewed by the people with extreme disfavor when first introduced, and many expedients were adopted to induce them to use it, but without success. In vain did Louis XVI wear its flower in his button hole, and in vain were samples of the tubers distributed among the farmers; they gave them to their pigs, but would not use them themselves. At length, Parmentier, the chemist, who well knew the nutritive qualities of the potato, and was most anxious to see it in general use, hit upon the following ingenious plan: He planted a good breadth of potatoes, at Sablons, close to Paris, and paid great attention to their cultivation. When the roots were nearly ripe, he put notices up around the field that all persons who stole away any of the potatoes would be prosecuted with the utmost rigor of the law. No sooner were the new roots thus forbidden, as it were, by authority, than all persons seemed eager to eat them, and in a fortnight the whole crop was stolen, and without a doubt eaten. The new vegetable having been found to be excellent food, was soon after cultivated in every part of the kingdom.—[Ex.

Cost of Fences.

MR. CORNELL, late President of the New York State Agricultural Society, in a late address, makes the following remarks in regard to the relative cost of fencing land in large and small fields:

"To fence a farm into square fields of two and a half acres each, crediting half the fence to the adjoining field, requires forty rods of fence, or sixteen rods per acre, which, at $15 per thousand for rails, and $10 per thousand for stakes, will cost at least thirty cents per rod or $4 80 per acre, and entail an annual expense in the interest of money, natural decay of material, and labor for repairs, of nearly or quite $1 per acre. Fields of five acres each require eleven and a half rods per acre, costing $3 45 per acre. Ten-acre fields require eight rods of fence per acre, costing $2 40 per acre. Twenty-acre fields reduce the fence to five and a half rods per acre, at a cost of $1 65 per acre. Forty acres in a field require but four rods to an acre; and one hundred acres may be inclosed in one field with two and a half rods per acre, costing 75 cents per acre."

IMPORTANT DISCOVERY.—The Washington correspondent of the New York Journal of Commerce writes that a curious and interesting discovery has just been made in the Department of State, bearing upon the boundary line between the State of Minnesota and the British Provinces. From time immemorial, all the maps that have come before the public have represented the dividing line as barely touching the utmost southern extremity of the Lake of the Woods, and then passing directly to the westward. A recent investigation of the maps and treaty touching the matter have brought to light the fact that the boundary line, after reaching the lake, passes through one-half of its center, thence westward up an extensive bay or arm, then directly south again until it reaches the main meridian, and then continues to the west. The upshot of the story is, that Minnesota has a big lump of valuable land which she did not know belonged to her, and she has full command of the Lake of the Woods.

HOW TO DRIVE CUT NAILS.—It is often difficult to drive common cut nails into hard timber boards, &c. They will never "fly out," however, if first rubbed with soap—common bar or any hard soap will answer. Screws treated in the same manner may also be driven with much greater ease. Soap is much better than oil, and at the same time more convenient.

Some of the Grand Results of the Wheeler & Wilson Sewing Machine.

From what has been already said it will be seen that the *Wheeler & Wilson Sewing Machine*, is not an experiment to be tried, but a success achieved, with benefits far exceeding the most sanguine expectation. The steam engine and the magnetic telegraph have not proved more beneficent in the commercial world than has this in the domestic. From feeble beginnings, in 1852, and embarrassed by prejudices from the imperfections of machines then before the public, it has entirely revolutionized needle-work, and won for the Sewing Machine a recognition as being second to no mechanical agent.

With the invention of this machine a new era dawned upon woman, which will not fail to be marked upon the health, virtue, and happiness of future generations. Poets, orators, divines, philosophers, and economists, have descanted upon its bearings on social interests and the destiny of woman. Major General N. P. Banks, in his address at the Crystal Palace, declared that: "The Sewing Machine will work as great a change in families as railways have in communities and States." The ladies themselves have been most earnest in its praise. Not only in private but in public, through the press, ladies of the highest social standing, and authoresses of the first distinction, have exerted their influence in its behalf. Mrs. B. Oakes Smith has for more than four years earnestly employed her pen in advocating its general introduction into families. She says:

"Of the *Wheeler & Wilson Sewing Machine* we can speak with entire clearness and confidence after the use of one four years or more in our family. We look upon it as one of the benefactions of the age, and one which will constitute an era in the history of woman. Its song should be:

"Click! click! click!
While the cock crows loud and free,
And click! click! click!
Is a merry sound to me;
With bodice trim and neat
I seam, and gusset, and band,
With my dainty slippered feet,
And a small white-fingered hand.

"Stitch to the click of the steel,
And never an aching head,
While I turn the gliding wheel,
With the gleaming silver thread.
Oh, woman! no more a slave
To seam, and gusset, and band,
Shall beautiful grow and brave,
In the light of our happy land."

So fully has the *Wheeler & Wilson Sewing Machine* commended itself to public favor, that it is now looked upon as indispensable in every branch of industry requiring sewing. Not only are the wants of housekeepers fully met, but the machine is found a *necessity* for the seamstress, dress maker, tailor, manufacturers of shirts, collars, cloaks, mantillas, clothing, hats, caps, corsets, ladies' boots, silk and linen goods, umbrellas, parasols, etc. Some of these branches of business have attained gigantic proportions, and it is not unusual to find from 100 to 400 sewing machines used in a single manufactory. This is not surprising when the efficiency of the machine is considered.

THE WHEELER & WILSON MACHINE IN THE FAMILY.

By none has the Sewing Machine been more gratefully welcomed than by *the Housekeeper*, who is no longer equal to the burdens imposed upon her by necessity, fashion, and taste. A comfortably provided wardrobe for a family, consisting of husband, wife, and five children, would be about as follows:

For the husband—One dozen shirts with bosoms and collars; four night shirts; two pairs of under shirts and drawers; one dozen pocket and neck handkerchiefs; one dozen pair of stockings, one morning gown; one overcoat and two dress-coats; three pairs of thick pantaloons, three vests and one overcoat for spring and fall; and for summer, three coats, six pair of pantaloons and five vests. The wife would require one dozen dresses, of different materials; and equal number of skirts, and as many changes of under garments; one winter-cloak and various other outer garments, according to fashion; one dozen pairs of hose and gloves, besides numerous cuffs, collars and under-sleeves, aprons, handkerchiefs, etc. Each of the five children would require more changes than either of the parents, because they soil them more readily, wear them more rapidly, and also outgrow

Bed-linen for five beds might consist of ten pairs of sheets and blankets, ten pairs of pillow-cases and bolster-covers, besides coverlets, comfortables, quilts, ticks, etc. Table and toilet linens might be set down at half a dozen table-cloths, four dozen napkins, and four dozen towels. In addition to the above, there are bonnets, hoods, caps, curtains, carpets, covers, etc., that require the use of the needle in preparing them. Crochet, embroidery, and other fancy work demand attention. Some of the articles above specified do not require renewing annually, but they all need more or less repair. The scantiness of the purse must be eked out by careful stitching and darning, which renders the amount of work about equal to making the garments anew.

Many articles of clothing are indeed purchased ready-made, but in many cases they are so poorly made, and in all cases so bad a fit, that the purchase is a choice of evils, and not of taste.

It is evident, however, from the above inventory of the family wardrobe, that no one pair of hands is, unaided, competent to the task it imposes. The faithful wife and mother struggles hard daily under this accumulation of labor, in connection with her other household duties—children, cooking, cleaning, washing, etc.; but, when the voices of the family are hushed in slumber, she plies her busy needle until the clock has chimed the midnight hour. "With fingers weary and worn, with eyelids heavy and red," she toils at her cadless task, until her brain grows dizzy and her eyes swim.

The Sewing Machine furnishes relief from these evils, and restores to woman time for the charities and amenities of life, the proper care of her children, and her own culture. Length of days, health, and happiness, are cheaply purchased for her at the price of a Sewing Machine.

The testimony before the Patent Commissioner is pertinent to this point: Rev. Dr. Tyng said, in substance, that in view of the beneficial effect of Sewing Machines, he has taken much interest in endeavoring to have poor women supplied with them; and, as a result of this observation, that their condition was much improved by them," and that "intelligent sewing women are now generally satisfied of the importance and value of these machines."

THE PECUNIARY ADVANTAGES OF THESE MACHINES.

Nor are the pecuniary advantages less. Instead of the half-dollar paid for a day, lengthened far into the night, she receives from three to five times that amount for a day's employment of reasonable hours. Indeed, in thousands of cases has the presentation of a sewing machine rendered an object of charity self-supporting, and converted her into a thrifty and willing almoner. Mothers support families, and young women become capitalists. It is not unusual to find the owner of a sewing machine earning from $40 to $50 per month.

EMINENT OPINIONS OF THE WHEELER & WILSON SEWING MACHINES.

We conclude our sketch with the following quotations from the hundreds of commendatory letters, etc., that the Wheeler & Wilson Company are constantly receiving from all parts of the world:

I have great pleasure in bearing testimony to the value of your Sewing Machine. It is the realization of all our imaginings of household fairies and good hard-working brownies that ask for no payment. MARY HOWITT.

What the steam-engine proves, compared to horse-power, this beautiful machine is when set in opposition to the slow, patient progress of the ordinary needle. ANNA S. STEPHENS.

I find your machine invaluable. I have used it a year, and it has never been out of order. The stitch is very durable, and can be adapted to fine or coarse materials. It works with the rapidity of a dozen hands; saves much time, fatigue, and expense. One of your machines is used in my father's family, another in the household of a sister, and others by various friends. The opinions of all accord with that I have just expressed.

ANNA CORA RITCHIE.

Of it we can speak with entire clearness and confidence, after the use of one for four years or more in our family. We look upon it as one of the benefactions of the age, and one which will constitute an era in the history of woman.

MRS. E. OAKES SMITH.

Mrs. Vinton desires me to express to you her entire satisfaction with your Sewing Machine. I may add that, judging from the frequency of the rapid tick of this machine, it promotes both industry and pleasure. My purse bears witness that the Sewing Machine among its other excellencies, is a household economy.

REV. DR. FRANCIS VINTON.

Your admirable *Needle woman* is the only seamstress that defies extortionate men. They cannot cheat it, nor starve it, nor deprive it of sleep, nor tire it out, nor make its hands weary. It is the worker that is a match for the most unwearied and avaricious manufacturer. At last I am thankful that there is a Machine Woman that cannot be oppressed nor kept suffering.

REV. HENRY WARD BEECHER.

I take pleasure in saying that the Sewing Machine purchased of you by me, has been wholly serviceable. REV. SAMUEL GREGOO, D. D.

There is but one Sewing Machine, and that is Wheeler & Wilson's.

JUROR MECHS, of the American Institute.

The most practical invention adapted to common use.—[Com. Mechanic's Institute, Baltimore.

It will work as great a change in the family as railways have in States. HON. N. P. BANKS.

The sewing machine compares with hand labor as the steam-engine does with horse power.

The Wheeler & Wilson Company has prepared tables, showing, by actual experiments of four different workers, the time required to stitch each part of the garment by hand and with this sewing machine. Subjoined is a summary of several of the tables:

	By Machine. Hours.	Minutes.	By Hand. Hours.	Minutes.
Gentlemen's Shirts	1	16	14	28
Frock Coats	2	38	16	35
Satin Vests	1	14	7	19
Linen Vests	0	48	5	14
Cloth Pants	0	51	5	10
Summer Pants	0	33	2	50
Silk Dress	1	13	8	27
Merino Dress	1	4	3	27
Calico Dress	0	57	6	37
Chemise	1	1	10	31
Moreen Skirt	0	35	7	28
Muslin Skirt	0	30	7	1
Drawers	0	23	4	6
Night Dress	1	7	10	2
Silk Apron	0	15	4	16
Plain Apron	0	9	1	26

ARE YOU INSURED?—Look to your warehouses, your homesteads and your lives! Have all *insured*. Then if fire comes, you can rest safely—if sickness or death comes, you can meet them without fear, knowing you are in these matters prepared. Go, get insured.

Notes from San Joaquin.

The Stockton Independent published last week an interesting letter from Comstock's Ranch, in which the writer makes some sensible comments on the weather and the crops. The writer pays a gratifying compliment to the Farmer, which we know we have endeavored to merit, and for which he has our thanks. The letter is dated March 13 (before the late rains) and the writer first gives the following weather prognostications, which may be of value. He says:

All signs of the weather fail—even the new one, discovered last year by a local philosopher. A gentleman "all the way from Pike," with more than an ordinary share of Almanac in his cabeza, and a close observer of passing incidents withal, made the discovery at an early day, last season, that honey would be scarce in the valley—at least he so prognosticated from the fact that the working bees not only pinched the wings and garrotted the drones, but they actually perpetrated infanticide on a very large scale by tearing the half-developed young bees from the cells and removing them from the hives, thereby preventing an increase of their colony. All this having come under the observation of the aforementioned philosopher, ponderous calculations followed as a natural consequence, and the conclusion became irresistible that the usual annual array of flowers would not be forthcoming, and the honey-dew fail in the forests. The idea being elaborated and the conclusion fixed that it would be a season adverse to the bee health and honey making, it was not till the fall, when results became known, that our philosopher's prognostications were actually looked upon in the light of prophecy. It may be cheering, then, for the people in general, and to those in particular who have broad fields of growing grain, wiry, yellow and stunted among the arid clods, to know that much of it will yet be saved by rain, and that golden sheaves will dot the plains in harvest, sufficient in numbers to gladden the hearts of all, if this year's prophecy of our philosopher proves correct. He asserts, declares and maintains that we will have a heavy rain in March, founding his belief on the fact that the bees have not yet butchered their young. He is firmly of the opinion that the instincts of the bee, for judging of coming weather, are as strong as its habits are industrious; therefore it may be, in fact, must be, "that flowers will bloom and verdure spring," yielding plenty of nectar for their support, else they would be preparing to husband the honey on hand and economise the stock in store, by dispatching every solitary drone, etc. Let us hope, earnestly hope, that our friend's prophecy is as correct this year as it proved to be in the past; for if rain do not shortly come, the summer aspect of our usually fertile valley will be one of barrenness and gloom. [Well, the rain did come, doing much good, and we look for more of the same sort.]

Appearance of the Crops.

That valuable agricultural paper, the California Farmer, eminently practical in its views, has for years persistently advocated the plan of summer-fallowing land for grain raising, and the superiority of that system of cultivation is most strikingly apparent throughout San Joaquin Valley this season. Volunteer crops—the meanest and laziest way of raising grain that possibly can be conceived—are suffering far more severely than on either freshly-plowed or summer-fallow ground. Fallow land evidently withstands the killing influence of a severe and prolonged drought much better than any other, as may be seen generally throughout the Valley. Yet there are many extensive fields of grain sown late on soil plowed during the winter, that will yield quite two-thirds of a full crop, should it yet rain inside of say two weeks. Should even half the usual yield per acre be harvested this season, the total amount produced will not fall so very far short of last year's production as many may suppose. There is vastly more land sown with grain this year than there was last; and, one or two localities of but small extent excepted, where the soil is light and the crops mainly volunteer, those in which the young grain has already suffered beyond redemption, the appearance of the crops, although not far advanced, is not by any means one of utter hopelessness. On the sandy plains beyond French Camp, where the northwest wind carries clouds of fine sand over the fields every afternoon, the crops have suffered infinitely more than along Mormon Slough and on the land between the Salt Spring Valley road, across the Mokelumne Hill road, eight or ten miles from Stockton, and through by the Calaveras river northward. Between the Eight Mile House on the Mokelumne Hill road, and through by the Waterloo House, there are many extensive fields where little, if any, of the young grain has died. Neither do I believe its destruction would be accomplished even if there should be no rain for a week or two to come.

The General Feeling.

Farmers, particularly those who have herds of cattle, are beginning to believe that great loss will be sustained unless their stock is soon removed to other places. Several in this locality contemplate removing their stock to Oregon; and those having sheep are preparing to drive them to the mountains and gradually progress eastward as the snow on the Nevadas disappears, so that their flocks may be in good condition for the markets in Nevada Territory in summer. The idea is a capital one, as there is little or no doubt but what plenty of good pastures will soon be found in the high latitudes now covered with snow. Those possessing little or no stock, and who are wholly dependent upon cereal products as their means of livelihood, are, in too many instances, altogether too much pre-occupied in mind with gloomy forebodings. The anticipation of bad fortune may be made as intense and difficult to bear as the actual suffering resulting from the experience of it; therefore no good whatever can come from brooding melancholy, but rather let us strive to do the best we can in a spirited manner, and as cheerfully as possible abide the consequences.

Struck by Lightning.—During the storm of Wednesday night, the house of Mr. Girard, near French Camp, San Joaquin county, says the Independent, of March 16th, was struck by lightning, stunning Mr. G., rendering him senseless for some half an hour. The lightning tore the clapboards off one side of the house and shattered the window to pieces. The electricity descended a tree close by the house, twisted a branding-iron hanging on it, then killed a dog fastened to the tree by a chain, breaking the chain in three places, and then followed one of the roots of the tree, plowing up the earth in a singular manner. The family of Mr. Girard were so frightened that they sat up all night, fearing to go to sleep. The lightning also struck a fence on Cherokee Lane, descending a post, and knocking matters into a cocked hat.

States Pledged to Establish Agricultural Colleges.

The Secretary of the Interior reports as follows concerning lands donated for college purposes:

"The States which have accepted the college land grants prior to the 30th of September, 1863, 'in place,' are as follows:

In place.	Acres.	In Scrip.	Acres.
Iowa	240,000	Rhode Island	120,000
Kansas	90,000	Illinois	480,000
Michigan	240,000	Kentucky	330,000
Minnesota	120,000	Vermont	150,000
Wisconsin	240,000	New York	990,000
		Pennsylvania	780,000
		New Jersey	210,000
		Massachusetts	360,000
		New Hampshire	150,000
		Connecticut	180,000
Total acres	930,000	Total acres	3,750,000

Requiring twenty-three thousand four hundred and thirty-five pieces of scrip, or some ninety volumes of records. Special certificates, with printed forms of selections, have been duly furnished to the States authorized to make selections within their limits; and the work of issuing scrip to the other States has progressed with great rapidity, the whole complement due Rhode Island, Kentucky, Vermont, and New York, have been prepared, whilst all due the other States above mentioned, it is expected, will be dispatched to the proper destinations before the end of December next."

It will be seen from this list that the States of Maine, Ohio, and Indiana, have lost their lands by default; as have also all the States south of Mason and Dixon's line, together with California and Oregon.—[Prairie Farmer.

Not all, neighbor; those States have not yet accepted the offered lands, but as they have until July 2d, of the present year, in which to do so, there is scarcely a possibility that any of the loyal States will be left out in the cold. The neglect to more promptly accept the grant has, in most cases, resulted from a disagreement in the legislatures of the respective States on questions which should have been treated as subsequent issues.—[Wis. Farmer.

Iron and Steel.

Steel is iron passed through a process called cementation, the object of which is to impregnate it with carbon. Carbon exists more abundantly in charcoal than any other fusible substance, and the smoke that goes up from a charcoal forge is carbon in a fluid state. Now, if you can manage to confine that smoke, and put a piece of iron into it for several days, and heat the iron at the same time, it will become steel. Heating the iron opens its pores, so that the smoke or carbon can enter into it.

The furnace for this purpose is a conical building of brick, in the middle of which are two troughs of brick or stone, which hold about four tons of iron. At the bottom is a large grate for the fire. A layer of charcoal is put at the bottom of the troughs, then a layer of bar iron, and so on, alternately, until the troughs are full. They are then covered over with clay, to keep out the air, which, if admitted, would prevent the cementation. Fire is then communicated to the wood and coal with which the furnace is filled, and continued until the conversion of iron into steel is completed, which generally happens in about eight or ten days. This is known by the blisters on the bars, which the workmen occasionally draw out in order to determine. When the conversion is completed the fire is then let go out, and the bars remain in the furnace about eight days more to cool.

The bars of steel are then taken out, and either sold as blistered steel or drawn to a convenient size, when it is called tilted steel. German steel is made out of this blistered steel, by breaking the bars into short pieces and welding them together, drawing them down to a proper size for use.

A New Horse Tamer.

A rival to the celebrated Rarey has appeared. Mr. D. Magner is astonishing the people of Portland and vicinity by his wonderful performances in subduing and controlling vicious and unmanageable horses. The following account of a recent exhibition of his skill given in Montreal, is copied from the Herald of that city under date of Jan. 23d:

"Mr. D. Magner astonished not a few of our citizens yesterday morning by driving a very spirited and noble-looking horse up and down Genessee street before a buggy, without reins, managing him perfectly by means of a whip which he held in his hand. The horse, whose name is "Turco," backed, turned, trotted, galloped, stopped, at the owner's will, by means of simple flourishes of the whip, and without a word being spoken. A slight touch on the right shoulder, and Turco turned to the right; on the left, and Turco turned to the left; an upward flourish, and Turco stopped instanter; and various other taps and motions made him obedient to other wishes. Connoisseurs in horsemanship pronounced the performance admirable. In the afternoon Mr. Magner gave a few persons an opportunity to witness his process of training horses, at the barn of Mr. Roberts, near the Cemetery. Mr. R.'s stallion, Ethan Allen, which is known as one of the most fiery, spirited horses in this part of the State, was taken in hand and in five minutes would follow Mr. Magner with entire docility by a mere word. In a short time, perhaps 20 minutes, Mr. M. had him completely under control, so that he could handle him precisely where and as he pleased, and managed him without bridle or halter. Among other apparently very hazardous things, he passed beneath the horse between both fore and hind legs. An unbroken colt was also operated with, and was brought under complete subjection in considerably less time than the stallion. A committee of competent judges present, expressed great satisfaction with the result."

The Crops in San Joaquin.—The Stockton Independent says the appearance of the wheat and barley fields east and south of Stockton has materially improved in the few days since the rain. On the loose rich sandy soil the crops look green and vigorous. On the thin light gravelly lands, the drought had about destroyed all their vitality, and in such places the showing is poor enough. In many of the small fields on the foothills, adjacent to the new road to Copperopolis, the crops look well enough to to give a hope of a tolerable harvest.

An elk can run a mile and a half in two minutes; an antelope in a minute; the wild mule of Tartary has even greater speed than that.

MINERALOGY.

[Continued from California Farmer of March 18th, 1864.

Rocks.

SANDSTONE.—GRIT ROCKS.—CONGLOMERATES.

Sandstones consist of small grains, aggregated into a compact rock. They have a harsh feel, and every dull shade of color from white through yellow, red and brown to black. Many sandstones are very compact and hard, while others break or rub to pieces in the fingers. They usually consist of siliceous sand; but grains of feldspar are often present. In many compact sandstones there is much clay, and the rock is then an argillaceous sandstone.

Sandstones are of all geological ages, from the lower Silurian to the most recent period. The older rocks are in general the most firm and compact. The "old red" sandstone is a sandstone below the coal in age; while the so-called "new red" is more recent than the coal. But these terms beyond this particular point, are of somewhat indefinite application. The sandstone of the Connecticut valley is called the new red sandstone.

Grit rock. When the sandstone is very hard and harsh, and contains occasional siliceous pebbles, it is called a grit rock, or millstone grit.

Conglomerates. Conglomerates consist mostly of pebbles compacted together. They are called *pudding stone* when the pebbles are rounded, and *breccia* when they are angular. They may consist of pebbles of any kinds, as of granite, quartz, limestone, etc., and they are named accordingly *granitic, quartzose, calcareous, conglomerates.*

The use of sandstone as a building material is well-known. For this purpose it should be free, like granite, from pyrites or iron sand, as these rust and disfigure the structure. It should be firm in texture, and not liable to peel off on exposure. Some sandstones, especially certain argillaceous varieties, which appear well in the quarry, when exposed for a season where they will be left to dry, gradually fall to pieces. The same rock answers well for structures beneath water, that is worth nothing for buildings. Other sandstones which are so soft as to be easily cut from their bed without blasting, harden on exposure (owing to the hardening of silica in the contained moisture), and are quite durable. These are qualities which must be tested before a stone is used. Moreover it should be considered that in frosty climates, a weak absorbent stone is liable to be destroyed in a comparatively short time, while in a climate like that of Peru, even sunburnt bricks will last for centuries.

Mr. Ure observes, that "such was the care of the ancients to provide strong and durable materials for their public edifices, that but for the desolating hands of modern barbarians, in peace and in war, most of the temples and other public monuments of Greece and Rome would have remained perfect at the present day, uninjured by the elements during 2,000 years. The contrast in this respect of the works of modern architects, especially in Great Britain [much more true of the United States], is very humiliating to those who boast so loudly of social advancement; for there is scarcely a public building of recent date which will be in existence a thousand years hence." Many splendid structures are monuments (not endless) of folly in this respect. He observes also that the stone intended for a durable edifice ought to be tested as to its durability by immersion in a saturated solution of sulphate of soda, and exposure to the air for some days: the crystallization within the stone will cause the same disintegration that would result in time from frost.

The dark red sandstone (*freestone*) of New Jersey and Connecticut, when of fine gritty texture and compact, is generally an excellent building material. Trinity Church in New York is built of the stone from Belville, New Jersey. At Chatham, on the Connecticut, is a large quarry, which supplies great quantities of stone to the cities of the coast; and there are numerous others in the Connecticut valley, both in Connecticut and Massachusetts. A variety in North Haven at the east end of Mount Carmel, has been spoken of as excellent for ornamental architecture. That of Long Meadow and Wilbraham, in Massachusetts, is a very fine and beautiful variety and is much used. A *freestone* occurs also at the mouth of Seneca creek, Maryland, convenient for transportation by the Chesapeake and Ohio canal; white and colored sandstones occur also at at Sugarloaf mountain, Maryland.

The sandstone of the Capitol at Washington, is from the Potomac; it is a poor material.

Sandstones when splitting into thin layers, form excellent *flagging stones*, and are in common use.

Hard, gritty sandstones and the grit rocks are used for the *hearths of furnaces*, on account of their resistance to heat. They are also much used for *millstones*, and when of firm texture, make a good substitute for the buhrstone.

The true *Buhrstone* has been described as a cellular siliceous rock, without an apparent granular texture. The buhrstone of Ohio approaches this character; it is in part a true sandstone containing fossils in some places, and overlying the coal. Much of it contains lime; and it is possible that the removal of the lime by solution, since its deposition, may have occasioned its cellular character. It has an open cellular structure where quarried for millstones. It occurs in Ohio, in the county of Muskingum, and the counties south and west of south, on the Raccoon river and elsewhere. The manufacture commenced in this region in 1807, and in Richland, Elk, and Clinton, and in Hopewell, the manufacture is now carried on extensively. Stones 4 feet in diameter bring $150.

The "green sand" of the cretaceous formation contains grains of silicate of iron and potash, to which it owes its greenish tint. It occurs abundantly in New Jersey as a soft rock, and is much used for improving lands: a value it owes mostly to the alkali it contains.

Pudding stones and breccias are fitted, in general, only for the coarser uses of stone, as for foundations, buttments of bridges. Occasionally when of limestone, they make handsome marbles, as the "Potomac breccia marble" on the Monocacy, of which the columns in the Hall of Representatives at Washington.

Porphyry conglomerates, basaltic conglomerates, pumiceous conglomerates, consist respectively of pebbles or fragments of porphyry, basalt, pumice.

Tufa is a sandrock consisting of volcanic material, either cinders or the comminuted lavas. Pozzuolana is a kind of tufa found in the vicinity of Rome, Italy. It consists of silica 34·5, alumina 15, lime 8.8, magnesia 4·7, potash 1·4, soda 4·1, oxyds of iron and titanium 12, water 9·2. *Peperino* is a coarse sandrock, made up of volcanic cinders or fine fragments of scoria, partially agglutinated.

LIMESTONES.

Limestones consist essentially of carbonate of lime, and belong to the species of calcite, or of the carbonates of lime and magnesia. They are distinguished by being easily scratched with a knife, and by effervescing with an acid. They are either *compact* or *granular* in texture: the compact break with a smooth surface, often conchoidal; the granular have a crystalline granular surface, and the fine varieties resemble loaf sugar.

Granular limestone. The finest and purest white crystalline limestones are used for statuary and the best carving, and are called *statuary marble.* A variety less fine in texture is employed as a building material. Its colors are white, and clouded of various shades. It often contains scales of mica disseminated, and occasionally other impurities, from which the cloudings arise.

The finest statuary marble comes from the Italian quarry at Carrara; from the Island of Paros, whence the name Parian; from Athens, Greece; from Ornofrio, Corsica, of a quality equal to that of Carrara. The Medicean Venus and most of the fine Grecian statues are made of the Parian marble. These quarries, and also those of the Islands of Scio, Samos and Lesbos, afforded marble for the ancient temples of Greece and Rome. The Parthenon at Athens was constructed of marble from Pentelicus.

Statuary marble has been obtained in the United States, but not of a quality equal to the foreign. Fine building material is abundant along the Western part of Vermont, and south through Massachusetts to Western Connecticut and Eastern New York. In Berkshire county, Mass., marble is quarried annually to the value of $200,000; the principal quarries are at Sheffield, West Stockbridge, New Ashford, New Marlborough, Great Barrington, and Lanesborough. The colums of the Girard College are from Sheffield, where blocks 50 feet long are sometimes blasted out; the material of the City Hall, New York, came from West Stockbridge; that of the Capitol at Albany, from Lanesboro'. At Stoneham is a fine statuary marble; but it is difficult to obtain large blocks. The variety from Great Barrington is a handsome clouded marble. Some of the West Stockbridge marble is flexible in thin pieces when first taken out. There are Vermont localities at Dorset, Rutland, Brandon, and Pittsford. In New York extensive quarries are opened not far from New York, at Sing Sing; also at Patterson, Putnam county; at Dover in Duchess county, N. Y.; in Connecticut there are marble quarries at New Preston; in Maine at Thomaston; in Rhode Island at Smithfield, a fine statuary; in Maryland, a few miles east of Hagerstown; in Pennsylvania, a fine clouded variety, 20 miles from Philadelphia. A fine *dun colored* marble is obtained at New Ashford and Sheffield, Mass., and at Pittsford, Vt.

The granular limestone when coarse usually crumbles easily, and is not a good material for building. But the finer varieties are not exceeded in durability by any other architectural rock, not even by granite. The impurities are sometimes so abundant as to render it useless. For statuary, it is essential that it should be uniform in tint and without seams or fissures; the liability of finding cloudings within the large blocks would altogether discourage their use for statuary.

The common minerals in this rock are tremolite, asbestus, scapolite, chondrodite, pyroxine, apatite, besides sphene, spinel, graphite, idocrase, mica.

Verd antique marble—verde antico—is a clouded green marble, consisting of a mixture of serpentine and limestone. It occurs at Milford, near New Haven, Connecticut, of fine quality; and also in Essex county, N. Y., at Moria and near Port Henry on Lake Champlain. A marble of this kind occurs at Genoa and in Tuscany, and is much valued for its beauty. A variety is called *polzivera di Genoa* and *vert d'Egypte.*

The *Cipolin* marbles of Italy are white, or nearly so, with shadings or zones of green talc. The *bardiglio* is a gray variety from Corsica.

[TO BE CONTINUED.]

Agricultural Statistics.—The Assembly has amended and passed the bill for the collection of agricultural and industrial statistics. Existing laws require Assessors to collect and report such statistics to the Surveyor General, but the duty is regarded as an imposition, there is no extra pay allowed for it and no penalty for neglecting it, so of course it is very poorly performed, and the statistics lately collected are almost worthless. The House bill proposes to pay the Assessors a reasonable extra compensation, offers premiums for the first and second best reports, and requires the necessary blanks to be furnished by the State Board of Agriculture.

It is said there have been a greater number of large, brilliant and distinguished evening parties in Washington during the present season, than in any former one during the last three years.

CALIFORNIA MARBLE WORKS,

John Grant. P. J. Devine.

Grant & Devine,

Sutter street, bet. Montgomery and Sansome,

OFFER FOR SALE

MANTLES, GRAVE-STONES,

MONUMENTS, TOMBS,

TABLE-TOPS, GRATES, TILES,

And every description of Marble Work.

Sculpture, Carving, Lettering,

And all kinds of ORNAMENTAL WORK will receive special attention.

Grant & Devine are constantly in receipt, from their quarries in Tuolumne County, of the finest and purest Marble, which they manufacture into the above. They respectfully solicit the patronage of persons requiring any articles in their line.

MARBLE sold by WHOLESALE and RETAIL, in the slab and block.

GRANT & DEVINE,

20-13 Sutter street, between Montgomery and Sansome.

SEED WAREHOUSE

(ESTABLISHED IN 1850.)

SEEDS,

NO. 408 CALIFORNIA STREET

Old Number 110,

Between Sansome and Montgomery streets,

SAN FRANCISCO, CAL.

THE UNDERSIGNED HAS ESTABLISHED by a correspondence and business in Europe as to enable him to secure from the very best source—the most successful growers—their choicest seeds grown, of which he will always be in receipt, and in endless variety, for sale directly from France and England, from well known and responsible houses; some of the most prominent of which named in our catalogues.

It has been the experience of our best gardeners, market growers, and all others who plant seed, that seeds grown in California are not fully reliable and cannot be depended upon for series of years, until more capital, experience and scientific knowledge shall be given to the business.

HAS FOR SALE

Alfalfa or Chile Clover; Hungarian Grass;
Kentucky Blue-grass; Orchard Grass;
Red-top Grass; Sainfoin Grass;
English Rye-grass, Timothy Grass;
Red Clover; White Dutch Clover;
Crimson Clover, Lucerne, &c. &c. &c.

With many entire new varieties of Garden Seeds and prepared Lawn Grasses never before offered.

EVERY VARIETY OF

BEET, CABBAGE, CARROT, RADISH, TURNIP, CUCUMBER, MELONS, LETTUCE, ONION, TOMATO, EARLY AND LATE PEAS, BEANS, &c., &c., &c.

Tobacco Seed.

HAVANA, VIRGINIA, CONNECTICUT SEED LEAF, AND MARYLAND TOBACCO SEED.

COTTON SEED.

Guano from Johnston's Island.

FLOWER SEEDS (300 Varieties)

BULBS:

LILIES, Amaryllis, Narcissus, TULIPS, Anemones, Tuberoses, Gladiolus, HYACINTHS, Ranunculus, Peony-rooted Iris,

and in endless variety, imported direct from France and GERMANY.

From his long experience in the Seed Business (thirteen years), and his very extensive stock of goods appertaining to an establishment of this kind, he is confident of his ability to satisfy his patrons.

Native California Evergreen

TREE AND SHRUB SEEDS

For Exportation

THE UNDERSIGNED, FROM HIS EXTENSIVE facilities and

Large Stock of Every Variety of Seeds

Can offer unusual inducements to

MERCHANTS IN THE TRADE, FARMERS AND LARGE RANCH OWNERS,

Who wish to be supplied in his line.

And would recommend that ORDERS FOR SEEDS be sent DIRECT to the undersigned, through the Express or by Mail, otherwise parties run GREAT RISK of being imposed upon, in case their Orders should be filled by some IRRESPONSIBLE ESTABLISHMENT.

☞ The Agents of Wells, Fargo & Co.'s Express are hereby authorized to act as Agents for the undersigned in taking Orders for Seeds and receipting for the same.

The undersigned is also permitted to refer to R. Warren, editor of California Farmer, who has had experience of twenty years in the Seed and Nursery business, and is conversant with the high value of imported seeds, and their superiority to all others.

☞ Send for a Catalogue.

California Notes,

ABOUT

GRASSHOPPERS AND LOCUSTS.—No. 7

BY ALEX. S. TAYLOR.

SECOND SERIES.

Continued from the California Farmer of March 18, 1864.

The California Grasshopper in 1861.

MISCELLANEOUS NOTATIONS IN THEIR ECONOMY.

After 23 May the flyers commenced to ascend all young trees and green plants and cover them in masses and bunches, stripping them of all green or succulent parts. In very dry seasons, they hatch out early in February and continue to do so, but in vastly augmenting numbers, till the first of June. Their rapid increase is due to droughts, and hot suns and winds, but they do not begin to appear till the surface of the ground becomes thoroughly dry and hard. In the act of union they will often jump, joined together, from one to three feet before separating, if they are disturbed. In all stages of their growth they contain considerable oily matter, which might be easily pressed out and used for making soap. It is not known if the eggs of the unwinged mothers and fathers are fully impregnated, or if the same female lays more than once its 18 eggs in the season, or if they ever contain more than 18 eggs, or if they are absolutely assisted in depositing their eggs by males, neuters, or small females, or if many females are infertile.

On 20 May many dead were found, but on the 1st of June the number of defunct ones was vastly increased, i. e. from natural deaths, and not from drowning, etc. From 15 May to 10 June the flyers and breeding colonies were greatly increased.

They have a drum or sounding apparatus on each side of the chest, with which they make a slight chirping noise, in conjunction with the chafing of their wings and legs. Saltones are often found in masses of from two to five pounds in damp holes, and in this state they all feel moist and gummy. In 1861 their great appearance and numbers were between the Montecito and Refugio localities, or about 40 miles in length along the ocean coast of Santa Barbara county. They were, however, very numerous from the line of Los Angeles county to that of San Luis Obispo county. They were also very numerous and destructive all along the coast of San Luis Obispo county, as at the same times they were observed in our county. At the Saticoy, or Santa Clara river and vicinity, up to the Carpenteria, all in this county, they were not so annoying, as further north, along the coast. The flyers are often seen in masses (in S. B. county) of two or three bushels, as I am told, and will sometimes hang on to branches of trees like a swarm of bees. Mr. I. McElroy of the Santa Cruz Sentinel informed me, that he once saw the complete skeleton of a grasshopper made by ants eating away its fleshy parts. The Santa Barbara ones have not been noticed as green in color. Their numbers and visits are asserted to be greatly augmented since the succession of dry seasons after 1842. Very few were comparatively known here before. The Texas, Sonora, Sinaloa, Utah, and Sierra Nevada species are said to be twice as large as the ones we are writing of. I am told, however, that the red-winged ones in this county, in the Santa Ynez Valley, are often found twice as large as those of the coast lines. In Sinaloa and Sonora they are, as I am informed by Mexicans, as numerous as they are in the Californias.

The nest, or hole to lay their eggs, is said to be done by the female, with its tail and hind legs; the tail used as a fulcrum or pivot, but no case of making their holes has been observed by myself, though to see them laying is very common. The forearms and hind legs appear to be used to throw the earth out of its hole until its nest is completely formed. An analytical dissection, or microscopical examination of the locusts is still a great desideratum in the scientific world—as was accomplished by Huber in the bee and ant with such eminently valuable results. We can only hope some French or German savan will devote his time to this interesting and important branch of their physical history. On a square mile of land, overrun by them, it may be estimated or assumed that as many as ten millions could be found, as one will stand on every half-square inch of surface. They are said to make a splendid fertilizer of the soil for all sorts of crops. The difference between the migratory or gregarious locust and the common grasshopper is that the latter does not fly high in the air nor go in companies.

TURIE BIBLIOGRAPHY.

Every writer, poet, or prophet, of eminence, in the countries of the Mediterranean, makes mention of the locust or its metamorphosis, since the times of Moses. The literature of all the Oriental nations is full of magnificent symbolical figures, and descriptions of their powers, invasions, instincts, and appearances. It is the most celebrated of *all animated nature*, if we except man. What has been written about them would fill an immense library, yet, will it be believed that no regular detailed historical, scientific, and analytical account of them has *ever yet been given* to the world of letters. The author of this 1861 memorandum attempted to make a compendium of their history and visitations throughout the world, which was published in the California Farmer from February to May 1859, and would only form an octavo pamphlet of thirty-five pages. These papers included a full account of their scourges in California and Utah, and neighboring countries in the year 1855, and also in 1856, '57, '58 and '59; but these notes embraced mostly a collation of notices of their appearance from the periodical press, or from books, ancient and modern. No detailed consecutive observations on their natural history, characteristic in all its stages and metamorphosis, were made by any California writer in 1855, nor could we meet with any such of their past appearances in *any* country of the world, in *any* book we consulted, nor was any mention made of any. The present notes will answer for all countries as to their carefully observed habits and instincts within the full period of their life; as far as we know, are the only ones ever made, viz. as to the actually punctuated notation of their extraordinary development from the grub to the maturest age. Certainly no such thing has ever been written of any State in the Western Hemisphere, though from the immense importance of the subject, it ought to have been done long anterior to the Epoch of Gold.

The notes published in the Farmer of 1858 were abridged to one-half and republished for general information in the Smithsonian report for 1858, issued in 1859. The same volume of the Report also published the extensive and valuable historical observations of Mr. V. Motschulsky, made in the Russian Empire, ante 1855, treating of the best and most practical "means and methods of destroying the grasshopper," and translated from the Russian for the Smithsonian by the celebrated American philologist Prof. Turner. Since this, the Smithsonian has printed a pamphlet (in 1860) containing a system of propositions to form a collection of all observed facts, in their nature, and from the inspection of specimens of all countries forwarded to them for analysis and investigation, on a scientific basis, designed for the practical application of farmers and cultivators.

MEANS TO DESTROY THEM.

The methods mentioned by Motschulsky, as practiced in the Russian Empire, and other Asiatic and European States, are only partially effectual and suited to the thickly populated districts, and not at all possible to apply in California or thinly settled countries. He who will discover a simple and easily applied method, or system, for their effectual extermination will be crowned a greater benefactor of the human race than Washington, Franklin, Watt, Howard, or Jenner, and his fame be higher than King Solomon, Confucius, or William Shakspeare. Kings and Emperors will give him a Duchy, or a principality, and his fellow men forever rise up and call his name blessed.

ARE THEY ENTIRELY INDIGENOUS IN CALIFORNIA AND THE WESTERN HEMISPHERE, OR PARTIALLY EXOTIC?

That some of the North American species of the locusts are indigenous, is doubtless true, particularly that of the Alta California ante 1846. But as they prevail over all the dry countries of the Western Hemisphere, assimilating to the valleys of Mexico, California, and Chile, in climate and soil, it is also likely to have been the case that they have been imported, in the egg, into Alta California, by the various military and missionary expeditions from Sonora and Lower California, 1769 to 1846, and since then by the numerous bands of gold miners and emigrants to 1860. They may also have been imported into our State by the numerous vessels from the Mediterranean countries arriving in San Francisco, and also from Chile, Buenos Ayres, China, and Mexico, even since 1849, in the cargoes of fruit, wines, etc, arriving or mixed with seeds of wheat, rice, barley, etc, from 1846 to 1853. Doubtless many of their eggs have been so brought into Mexico, Chile, Argentina, and elsewhere in Spanish America between 1530 and 1800 in the numerous cargoes of vessels from the ports of old Spain, a country which is, at times, dreadfully infested with locusts in the districts adjacent to her Mediterranean ports. And very likely they have been imported into various places in the United States in the same way, which may partially account for their recent multitudinous increase on the great plains of the country west of the Mississippi, from the sowing of Mediterranean wheats, grains, etc.

Their *great* increase of numbers, as I am informed, has not been noticed in Santa Barbara county before about 1848, though they were always seen all over California since the first settlement of the country in 1769. Lower California was settled by the Jesuits in 1697, yet the grasshoppers did not trouble them till 1722, then again in 1746; 1747, and 1748, and in 1763 and 1764, and also again in 1765, 1766 and 1767, i. e. in a district of country from Cape San Lucas to 30° North. Buffon relates that the eggs of locusts were imported by vessels' cargoes from Madagascar into the island of Bourborn, and for many years done great injury to the crops. The Jesuit missionaries of California were all natives of the locust-infected districts of Europe, and paid great attention to their habits.

Another important point ought to be noticed. I am informed by several persons in this county that from ten to fifteen years back, they were not numerous as now, but the large grasshopper of two and three inches size was often seen singly. This locust assimilates to the Syrian species and has its under or gossamer wings of flame or red color. Probably these were an exotic species mixing with the indigenous ones.

PATENT RIGHTS FOR SALE.

THE FOLLOWING PATENT RIGHTS OF NEW AND valuable inventions (of which we have models to show their value) are now offered for the States of California and Oregon, and Utah and Washington Territories.

NO. 1. THE MECHANIC'S SPIRIT LEVEL.

Patented September 13, 1859.

This Implement will be of great value to Contractors and Builders, being one of the most valuable inventions yet out. Builders will do well to examine the model.

NO. 2. IMPROVED CLOTHES REEL AND BAR.

Patented January, 3, 1860.

This valuable domestic piece of furniture can be used in the Laundry, the Kitchen, the Nursery, or Chamber, and can be made plain or ornamental; standing in the same relation as a piece of important furniture as does Wheeler & Wilson's Sewing Machines, neat when used and ornamental when not in use.

NO. 3. A CORN CULTIVATOR.

With this implement the soil is first thoroughly plowed and deeply pulverized, and on the return it smoothly and perfectly hills up and harrows the ground between the rows. A very new and valuable implement.

NO. 4. A MUSKETO BAR.

This will be much wanted in California. It is simple in its contrivance, perfect in its working, and can be afforded very cheap to all styles of bedsteads. Hotels, public houses and private families will find it a useful invention.

NO. 5. HYDE'S PATENT POST-DRIVER.

A most excellent labor and money-saving machine, for which we offer rights.

NO. 6. SEED-SOWER.

This is a new invention, and one of great importance to all who sow grain, or any garden seeds. The working model can be seen at the Farmer's Reading-room.

Holding the rights to all these new inventions, we invite the public to call and see the models. All persons who may be desirous to purchase either County, City, Town, or Individual Rights, can do so on application to

COL. WARREN, Editor Farmer.

Opinions of Professors of Music on Jacob Zech's Pianos.

SAN FRANCISCO, December 29, 1863.

JACOB ZECH, ESQ:

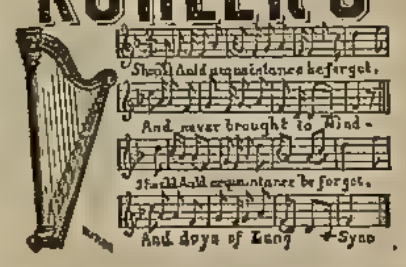
Dear Sir: We, the undersigned, musicians of the City of San Francisco, do hereby give our unbiased opinion as to the workmanship, purity, power, and brilliancy of tone, and perfectness and durability of action, of the Grand Piano manufactured and exhibited by you. We have no hesitation in pronouncing them far superior to any piano, ever placed before us for inspection. At the late exhibition of the State Agricultural Society, the Committee saw fit to denounce your instrument and award the first prize for an inferior *square piano*, which we pronounce a great injustice to you, and we do hereby give our names, and warrant your pianos to be superior to any in the State. With the greatest esteem, and the most fervent desire for your success, and a wish that the people of California may give you justice, and not be controlled by money or the opinion of any body of men who are not qualified to judge of the merits of a Piano.

We are truly yours, etc,

R. HEROLD, Professor of Music,
GEO. T. EVANS, Pianist and Organist,
GEO. F. PETTINOS, Pianist and Organist,
LOUIS SCHMIDT, Pianist and Organist,
CHAS. STADERMAN, Pianist,
STEPHEN W. LEACH, Artist,
L. T. PLANEL, Professor of Music,
A. LAPFGER, Pianist,
ALBERT STOHR, Musician,
JOSEPH B. SCHMITZ, Musician,
EMILE TOUSSIN, Pianist,
CHAS. SCHULTZ, Pianist and Organist,
J. B. KNELL, Pianist, and Organist at Cathedral,
H. HOLZHAUER, Pianist,
WM. CROOKER, Pianist.

Letter to Jacob Zech.

[The following notice of my Pianos was received by me from the gentlemen named, professors of music at Sacramento, and approving, in very flattering terms, my instrument.—J. ZECH.]



Your Grand Piano was an excellent and beautiful instrument, full and rich and tone, in with all the excellencies that are desired in a Grand Piano.

Your Square Piano was one of extraordinary excellence, and beyond question the best on exhibition, having a full and powerful tone, yet, with that soft and delicate expression so desirable to an artistic ear. We feel gratified to know of your success in this art, and hope your efforts will be duly appreciated.

Wishing you all success, we are your friends,
CHARLES WINTER, Pianist,
CHAS. STADDERMAN, Pianist.
CHRISTIAN STATFIELD, Pianist,
GEORGE GREINER, Piano Maker.

Fine Farms for Sale.

YOU WHO WANT GOOD FARMS CAN SECURE them by applying to the Editor of the Farmer. The following can now be had:

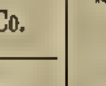
FOUR VERY FINE FARMS in the splendid San Joaquin District, within a few miles of Stockton, all very productive.

ONE FARM about 90 miles from Stockton—valuable.

ONE FARM capable of great improvement and valuable, in Contra Costa County, near Pacheco.

A GOOD RANCH in Santa Cruz County—a good bargain.

A FINE FARM AND VINEYARD in the region of Mt. Diablo—can be made valuable.



Several STOCK RANCHES in various parts of the State, from $1,500 to $25,000; in all these, good and permanent settlers can find bargains. Address by letter, or in person, for particulars to Col. Warren, Editor of the Farmer. 23

A Fine, House, Orchard and Vineyard

NEAR SACRAMENTO—FOR SALE.

A FINE HOUSE AND OUTBUILDings, and 30 acres of Land in the highest state of cultivation, with good Orchard and Vineyard, in full bearing. The Gardens are fenced in the very best manner, and having new cisterns of water for garden, stock, and house. The Fruit from this place commands the very highest price.

The place will be sold on easy terms; a long time to pay the most of the money, and interest only 7 per cent per annum. A smart business manager can make the payments off the place every year. Inquire of Editor Farmer. 15

EIGHT HUNDRED sold, and in use on this coast, with increased demand every year, thus PROVING their great SUPERIORITY over all the numerous kinds for sale in this market.

J. D. Arthur & Son,

Corner of Davis and Washington streets.

2-3m San Francisco.

BUCKEYE MOWER.

To Farmers:

WE, WITH GREAT CONFIDENCE OFFER THE BUCKEYE MACHINE, for this reason: knowing it to be Superior to any MOWER for sale, and that it will sustain the reputation it has made for the past THREE YEARS in surpassing any other Mower in the following respects:

Being better Made; much Stronger and more Durable; will Run lighter, Cut much closer with greater ease to the team, and no side draught.

We can bring twenty Farmers to say the Buckeye is SUPERIOR to any Mower, to one who can be found prejudiced against it.

The BUCKEYE MOWERS are of two sizes, cutting 4 feet, and 4 feet 8 inches.

The "Buckeye" as a Reaper.

The important advantages which belong to the BUCKEYE as a Mower are retained in the REAPER, and can be used either as a Mower or Reaper by attaching the Platform and Reel.

Though importing largely of them, we have been unable, for two years, to supply the demand.

They are better adapted to the wants of California Farmers than any Combined Machine for sale. It will adapt itself to every surface of ground, will run lighter and deliver its grain easier and better than any other Reaper. The Reaper's seat is directly over the axle of the Machine, instead of being on the Platform where it adds greatly to the draught.

HORACE WATERS, Ag't,
No. 481 Broadway, N. Y.

THE DAY SCHOOL BELL.

40,000 copies issued. A new Singing Book for Schools and Seminaries, called the Day-School Bell, is now ready. It contains about 200 choice songs, rounds, duets, trios, quartettes, and choruses, many of them written expressly for this work, besides 32 pages of the Elements of Music, which are easy and progressive.

Among the large number of beautiful pieces may be found, "Uncle Sam's School," "Don't you hear the children coming," "Always look on the sunny side," "The little lass," and "Little Lad," "Oh, if I were a little bird," "Bird of beauty," "Pretty pair tree," "Anvil Chorus," "Meet me by the running brook," etc. It is compiled by Horace Waters, author of "Sabbath School Bell," Nos. 1 and 2, which have had the enormous sales of $25,000 copies. Prices—paper covers, 25 cents, $20 per 100; bound 30 cents, $25 per 100; cloth bound, embossed gilt, 40 cents, $35 per 100. 25 copies furnished at the 100 price. Mailed at the retail price.

SABBATH SCHOOL BELL, NO. 1,

contains 144 pages, and nearly 200 tunes and hymns, and is the most popular S. S. Book ever issued. Among the most popular pieces are "Kind Words," "Eden Above," "Christian Hero," "Beautiful Zion," "I ought to love my Mother," "The Angels told me so," "In the Light," "Rest for the Weary," etc. Prices—paper covers, 20 cents each, $15 per 100; bound 25 cents, $20 per 100; clothbound, embossed gilt, 30 cents, $25 per 100.

SABBATH SCHOOL BELL, NO. 2,

is an entire new work of 192 pages, and nearly two hundred and twenty-five tunes and hymns. One million of these Bells have been issued and are now ringing through this and other countries. Among the many choice pieces may be found, "Shall we meet beyond the River?" "There is a Beautiful World," "Sorrow shall come again no more," "Don't you hear the Angels coming!" "Thou, God, seest me," "Sabbath Bells chime on," etc. Prices of Bell No. 2, are same as Bell No. 1. Both numbers can be obtained in one volume, price, bound copy, 40 cents, $35 per 100; cloth bound, embossed gilt, 50 cents, $45 per 100. 25 copies furnished at the 100 prices. Mailed at the retail price.

WATER'S CHORAL HARP.

A new Sunday School Book of 160 pages of beautiful hymns and tunes. It contains many gems, such as "Shall we know each other there?" "Suffer little children to come unto me," "The Beautiful Shore," "Oh, 'tis glorious," "Leave me with my mother," "He leadeth me beside still waters," etc. Price, papers covers, 20 cents; $15 per 100. Bound, 25 cents, $20 per 100. Cloth bound, embossed gilt 35 cents, $30 per 100. Mailed at the retail price. It is edited by HORACE WATERS, author of "Sunday School Bells." Nos 1 and 2, which have had the enormous sale of over 800,000 copies.

Just published by HORACE WATERS,
No. 481 Broadway, New York.

THE NEW PATRIOTIC SONG BOOK

contains 96 pages of songs, duets, and choruses, both sacred and secular, including 14 pages of prayers for sick and dying soldiers, and soldiers' Scripture Manual. It is well suited for social singing, as well as Sabbath worship. Among the many beautiful pieces may be found, "Where liberty dwells is my country," "The Christian Hero," "Three cheers for our Banner," "Come sing to me of Heaven," Columbia, the Gem of the Ocean," "Freeman's Gathering," "Columbia's King forever," "Marching Along," etc Prices—paper covers, cents, $10 per 100. Mailed at retail prices.

THE HARP OF FREEDOM

contains 32 pages of songs, duets, and choruses for Freedom. Among the choice pieces we would name, "Fair Freedom's morn," "O let my people go," "Over the mountain," "They worked me all the day," etc. Price 5 cents single, 50 cents per dozen, $3 per 100; postage 1 cent each.

RUTH: A SACRED CANTATA

contains 128 pages. Words by Rev. Sidney Dyer, music by Prof. Call. This is an excellent book for concerts for the young. Prices—paper covers, 20 cents, $15 per 100; bound 25 cents, $20 per 100.

THE REVIVAL MUSIC BOOK

contains 73 pages of tunes and hymns, designed for revival, prayer, and conference meetings. Price in paper covers single copies 10 cents, $8 per 100. Mailed at the retail price

THE ATHENÆUM COLLECTION

contains 512 pages of tunes and hymns, new and old of the choicest kinds, for church, Sunday school, revival, missionary, temperance, prayer, and conference, and all kinds of sacred and social meetings. The music in this book has life and animation in it, like "Shining Shore," "Rest for the Weary," "Shall we know each other there?" "Shall we meet beyond the River?" "There is a Beautiful World," "Kind Words," "Sweet Hour of Prayer," "There is a Land of Love," "Suffer little children to come unto me," "God save the Nation," etc. Prices—single copies, bound, 65 cents, $55 per 100; cloth bound, embossed gilt, 75 cents, $65 per 100 Mailed at the retail price.

HORACE WATERS, Ag't
481 Broadway, New York.

Publisher of the above Books.

NEW INSTRUMENTAL MUSIC.

"Idlewild," "Polka Caprice," by M. Keller: "Morning Prayer," by W. F. Muller; "Summer House of Roses," gallop, by Mrs. Parkhurst; "Le Piri Polka;" "West Point March;" 25c each. "Cinotope Waltz;" "L'Armetee Waltz," "Frederica Waltz," J. C. Bernard, 40c each. "We are coming Father Abraham," "Always look on the Sunny Side," "Brilliant Variations," by Charles Grobe, 50c each. "Shall we know Each Other There," for Guitar, by Bloomer, 25c. "Sunny Side," set of 20 easy arrangements for the piano, 10 by James Bellak, and 10 by Mrs. Parkhurst, 15c each. Mailed free.

HORACE WATERS,
Publisher, No. 481 Broadway,

NEW VOCAL MUSIC.

"Land of the Brave and Free," Rev. C. S. Plumley; "Your Fortune is too Small for Me," Comic Song, Maurice; "I will Wait at the Gate for Thee," E. Holden; "We parted with a Cheerful Smile," M. Keller; "One by one the Stars of Evening," "The Flowers Bloom in Linden Vale," S. Lawrence; "The Morning is Dawning," H. S. Leland; "There is a Beautiful world," "Shall we Meet Beyond the River?" "The Angel's are Hovering Near," "The Year of Love," "How Softly on the Bruised Heart," Mrs. Parkhurst; "Kindly Words and Smiling Faces," J. R. Thomas; "For the Dear Old Flag I Die," "Oh, Why am I so Happy?" S. C. Foster; "Sabbath Bells, Chime On," Lowry, 25 cents each, mailed free.

For Sale by

ALLEN & SPIER,

8 SAN FRANCISCO.

The California Farmer.

SAN FRANCISCO:

FRIDAY ..... MARCH 25, 1864.

☞ Those who receive a number of the FARMER with this paragraph marked, may understand that it is sent to them for their examination, hoping it will meet their approval and induce them to subscribe, and ask their neighbors to do so.

Postmasters and others, who may receive the paper, will oblige us by soliciting subscriptions, or putting it in the hands of those that will. Subscriptions may commence at any time.

Send for Sample Papers and get up a club. Address, PUBLISHER CALIFORNIA FARMER, San Francisco.

THE CALIFORNIA FARMER READING-ROOM AND MUSEUM OF NATURAL HISTORY.

320 Clay street—Marble Building—Up Stairs.

The Farmer's Headquarters.

The Editorial Rooms and Museum of the FARMER OFFICE are always open, and an attendant ready to make a visit instructive to those who take an interest in the productions of our State. Samples of all productions: grains, grasses, fruits, models, inventions, minerals, and specimens in Natural History innumerable, are constantly being added.

Farmer's Reading-room.

Farmers and Mechanics, from the country, who visit San Francisco, should visit the Free Reading-room and Museum, at the FARMER OFFICE. Members of the Press, and Strangers, are particularly invited to avail themselves of these rooms. Newspapers from every State to which we have access by mails, as well as Foreign Newspapers, Periodicals, and Magazines, are upon file and on the tables for use; a Good Library of hundreds of volumes, with works illustrative of Agriculture, Horticulture, and Floriculture, works for reference upon all Sciences, with a Cabinet of Minerals, Coins, and Curiosities of interest to the Naturalist, to which we invite all.

Immigration Office.

New comers to California can always obtain all needed information about Lands, Farms, etc, at the Farmer's Reading room, 320 Clay street. Most cheerfully we bid all welcome to our Sanctum.

Easiest Way to Pay Dues.

Those of our friends in the country who may visit our city, can always save us the trouble of sending bills out if they will favor us with a call, and at the same time they will find at our Museum and Reading room much to interest them.

Send along your Greenbacks,

Don't be afraid to send along your Greenbacks. These we TAKE AT PAR in payment for all back dues to the FARMER for subscription. So send them along, now is the time. This is a better speculation than mining stocks, for it is so pleasant to read a newspaper when one knows he has paid for it, the digestion is better and a man feels happy, and, if happy, then he feels rich. So pay prompt and you will "strike a lucky lead."

ws of the Crops.

From almost every section of our State (with but few exceptions), we have good news of the crops, since the late copious rains; in fact in several places it is reported that the crops are *from four to six weeks* earlier than for long, long years. These facts preclude the possibility of any advance in breadstuffs, and lucky are those farmers that sold when the price of wheat was at 2½ cents ₩ lb. This prospect of a good harvest gives life and animation to trade, both in the country and the city.

Cashmere Goats, and the Alpacca and various Goats of Asia.

We have received letters from parties familiar with this subject, who have traveled largely in that part of the world, and who have a complete history of those valuable animals and the source from whence they can be obtained, who are desirous to form a company for the purpose of importing them in numbers to this country.

The gentlemen wish parties who have capital to join in the enterprise for the purchase and shipment of these animals. This enterprise can be made very certain and largely profitable. The party who writes is one of high standing, has much experience as a traveler, and is of undoubted responsibility, with a thorough knowledge of such an undertaking.

OSSIAN E. DODGE'S CONCERTS.—This widely renowned genius, this comic, witty and funny man, came upon our community like a comet, created a similar excitement, and like a comet he will fly from one sphere of action to another—*i. e.* he will be constantly "Dodging" about. We were present at both Concerts, and while it was evident that they were not as varied nor of that character anticipated from the announcement made, no one could deny but what there was much to amuse and gratify, and that among the varied comic effusions and feeling songs, there were several songs full of beauty and most admirably sung by Mr. Hayward. Those most worthy of note were "Mother, Dear, Oh Pray for Me," "What is Home," "The Dying Boy," "I'm Coming Home to Die," and "Come this Way, My Father;" these and the patriotic songs, "Can I go, Dearest Mother?" and "Freedom's Thunder" were excellent, and all elicited earnest applause. Platt's Hall was crammed the first evening, but by reason of severe, unmerciful and unmerited criticisms, the second Concert was not near so well attended. It is but just to remark, that while these Concerts were far superior in every sense to many of our theatricals which are nightly given, yet there was not enough of the entertainment to satisfy the audience of the metropolis, and at the full price of an Oratorio or an Opera, Mr. Dodge committed an error in the price. Whatever has been the result in our city, there is no doubt Mr. Dodge will draw largely in the country and in the mining towns, and he and Mr. Hayward will meet with success. Mr. Hayward has a sweet voice, not of much compass, yet well modulated, and his singing is excellent. Mr. Dodge, a genius of the comic and merry order, and we know their entertainments must make an audience laugh, that will do them good. All should hear these amusing actors, for it will amuse them and cure the dyspepsia.

CHICKEN HATCHER.—There was exhibited at Marysville some two or three years since, a machine to hatch chickens by heat. If the owner or inventor of that machine will call or send his address to this office, he will hear of something to his advantage.

WHEELER & WILSON SEWING MACHINES.—We call the attention of ladies to the sketch of these machines in this week's issue. It contains many facts and recommendations worthy of special notice.

Gen. Sutter's Visit to his "Old Fort."

Every man of true and generous feeling must have some reflective thoughts as he reads the fact in the newspapers, announcing the day of the visit of Gen. John A. Sutter—the good old pioneer of California—to Sutter's Fort, after a lapse of many, many years. To the minds of many persons, such a visit may seem a trivial circumstance, and it might, aye, will pass as a matter of no account; but to this veteran, and to all who can realize how such an event would affect him, it is a circumstance worthy of more than a passing notice.

In the great rush of '49–'50, there was no great landmark in the history of our State more memorable than Sutter's Fort, to thousands of our early miners; it was the "Jerusalem" of their hopes, to visit, to see Sutter's Fort. To pass beneath its portals was an event worthy a "life record," and we venture the assertion, that today there are hundreds of "old letters" containing romantic histories of that *world-renowned spot*. But what is the history of that spot or its associations to the visitor, the stranger, in comparison to the thronging memories that cluster around it and are linked to the heart of the "venerable Sutter?" When that Fort was in its glory, when in its early days it stood out upon the broad plains of that wide and beautiful valley, the only "home" of man for miles around, it was, indeed, grand and interesting, as well as a noble object—it was a "home" upon otherwise a wild, but not a dreary waste.

Sutter's Fort was then and ever had been an object of great interest in the history of California. In those early years it stood out the beacon, the guiding lighthouse upon the broad extended plain, the sure home and resting-place of all who ever entered its cheerful walls—for in early days it was cheerful, it was prosperous—and its owner was honored, was rich, was happy. His heart was warm, his hand open, his purse ready to aid all who needed his generosity or assistance. But years have passed, and with them his lands, his wealth, his strength, his hopes, his happiness—and we see him, the man who once stood before the "gates of Sutter's Fort" in its glory, with a wide sweep of domain almost boundless, rich, fertile, and with fields of waving grain, "lord of all he surveyed," now gazing upon a waste and barren spot, the once proud and stately Fort in ruins, not a stone to mark where the walls once stood—

> No gate, or turret, or guard on postern wall,
> One dreary waste and ruin, ruin all.

See the venerable pioneer now, "like Cæsar amid the ruins of Carthage," he mourns its desolateness, "an old, old man, with beard as white as snow." Who can read his thoughts, who tell his sorrows as he reviews the past, remembers *what he was* in his days of pride, strength and power, and feels *what he is now*, when left almost alone, powerless, aged, and neglected by the very ones who have fattened on his bounties—well can he exclaim—

> "If there be a crime
> Of deeper die than all the guilty train
> Of human vices, 'tis Ingratitude."

But see the venerable man as he gazes around and marks the change that time has made, as he looks to the spot "once so dear to him," must he not in bitterness and sorrow say—

> "All, all that in this world is great or gay,
> Doth as a vapor vanish and decay."
>
> "Thus doth the ever changing course of things
> Run a perpetual circle, ever turning;
> And that same day, that highest glory brings,
> Brings us unto the point of back-returning."

And thus our early pioneer now stands where once he stood. Behold him there, the man who has done so much to make our State what it is! Shall *he* be left in *ruins* like that ancient Fort? Is there no public heart, no gratitude for such a man? Have we no public gratitude?

We talk of *monuments!* aye, monuments of granite and marble, to mark the spot where good men, great men, sleep. Build monuments for good men, while good men *live!* Give them what is their due; make their *lives easy, comfortable, and happy.* Build monuments of Gratitude in grateful hearts: these are monuments that the hand of Time cannot crumble or decay, for such acts will live in the soul! We know that if Gen. Sutter should die, California would rear a monument over his sleeping dust. We say give him a monument while he *lives!* and let that monument be a testimonial of the *gratitude* of our State, that shall make his declining years comfortable and happy. Then we would prove that California had a heart with pulsations of feeling for those who had laid the foundation of our State, and that our State had a *heart* to feel and act too. Time is precious now with our pioneer. If our Legislature would do a noble deed, build a noble monument, one that shall outlive Time, let them remember their duty to this pioneer quickly, and it shall be a monument that will stand long after the lofty Nevadas shall crumble, for it will be built in Heaven, and on its surface shall be inscribed, in the pure gold of our mountains:

"To Gen. John A. Sutter, a Testimony of Gratitude from the State of California to the noble Pioneer, to make his declining years happy."

GRASSHOPPERS.—Farmers in the foothills say that these destructive insects will be more numerous this year than they have been for several years past. Recently Mr. Cunningham, while digging on his ranch, came across large beds of full grown ones a short distance below the surface, with innumerable young ones.—[Mariposa Gaz.

There is a satisfaction in knowing, if this prognostication is correct, the varmints will all die for something to eat.—[Marysville Appeal.

Not so; the grasshopper is omniverous, and it is their habit—like fish and stock-brokers—big ones eat the little ones. In 1854 the grasshoppers were so plenty, on the Stanislaus and Tuolumne, as to eat up all green vegetation in that section. Near the running streams we noticed ash trees of large size peeled by them, from topmost limb to root. They were so plenty, under the shady trees, as to more than cover the ground, and the hogs fared most sumptuously every day.

Plant Rice.

Our tule lands will yield good rice if put in proper order, and yield it abundantly; and rice on our tule lands will pay better than grain. "Highland Rice," too, can be grown with profit—grown as cheap and as easily as wheat or barley—and *now* is the time to sow it. Lands that have been recently plowed since the late rains, will be in good order for it. Highland Rice for planting can be had at our office for experiment, *free of charge*, and it is to be hoped that many experiments may be made with it this season.

There is now a well-established Rice Cleaning Mill in our city, so that rice raised here can be cleaned and prepared for sale at once. The India Rice Mills of W. W. Battles & Co., on Fremont street, are in the full tide of success in cleaning the rice (paddy) brought from various parts of the world. At these mills eight hands are constantly employed, and 15 to 20,000 pounds a day are cleaned. Rice of every grade is brought in the rough and here made marketable.

The amount of rice imported annually is about *twenty-five millions of pounds.* Of this vast amount more than seven-eighths of it small rice, purchased and consumed by the Chinese exclusively.

The Japanese Highland Rice will grow well here, and why should we not raise it in large quantities, and thus stop the importation of it; it would pay our farmers better than grain, and shall it not be tried?

Turpentine and Rosin.

Very few persons in our State can have any idea of the value of the products unless they shall take pains to make minute inquiries. At first thought they would be esteemed of but little value; it was only about three years since, when the subject of finding turpentine trees in our State was first talked about; it was considered chimerical and beyond a possibility, but thanks and gratitude to those persevering spirits that never allow obstacles to prevent a good work—thanks to the genius, perseverance and well-directed chemical knowledge of one of our citizens who was desirous of developing the resources of our State, discoveries have been made from time to time until now, when the business has assumed an importance and value sufficient to give it rank among the staple products of our great and growing State, and to such a degree as to yield a large supply for our home use and also to begin the exportation of both articles. We esteem it a matter of moment to announce the fact that California turpentine and rosin are being exported, and to a considerable extent. There are two manufactories of rosin and turpentine, one at Marysville and one at Forbestown; this latter—Messrs. J. L. Gibson & Co.'s—originated by and through the persevering influence of J. J. Hucks, Esq., of this city, to whom we have often alluded, as the gentleman who deserves great credit for the benefits he has actually conferred upon our State by awakening attention to these subjects. It is to the scientific knowledge of this gentleman that these products are now so rapidly being brought before the public; such citizens, by their knowledge and labor, are the benefactors and the corner-stones of our State. We need only to refer to the card of Messrs. H. & L., to show their ability, usefulness, and business.

Sanitary Fairs.

It will be remembered that from the first beginning of Sanitary Fairs the amounts received at each have been increased. Chicago Sanitary Fair realized $60,000; Boston, $100,000, and now we hear from the great State of Ohio, that the Cincinati Fair gives the splendid sum of $268,611 44. The Empire State is now about opening her benevolent breast, and the New York Sanitary Fair commences the 28th. We had supposed that if New York should raise a quarter of a million dollars, this would be the climax of Fairs, but as Cincinnati has exceeded that amount, we will amend our first proposition and put down New York at $500,000—an even half a million. As California, in her previous efforts for the Sanitary Fund, has given more than any other State in the Union, we shall look with much anxiety for the result of the Sanitary Fair in California, the initiary steps for which have already been taken by the noble-hearted Ladies of our city; if she speaks with the usual throbbings of her big heart, we may put down California at the round sum of a million of dollars, for the Golden State never does her work by halves.

Safety by Insurance.

It is very important for all business men to be fully insured, and not only insured but be sure that they obtain their policies where there is ability to pay a loss, and pay it promptly. By the new law of our State, all Insurance Companies are obliged to make large deposits of Bonds in Trust. The Insurance Agency of Messrs. Bigelow Brothers have now on deposit, in this city, bonds to the amount of $300,000, thus giving an assurance of an undoubted ability to meet all losses promptly. This firm have been eminently successful at the business of Insurance and have won a high name for active, prompt and a most satisfactory way of doing their business, thereby winning many friends and great popularity. We would refer the reader to their large card which explains the different offices for whom they are Agents and the immense amount of capital to support all engagements made by them as Insurance Agents.

A WELL TESTED PIANO.—We have had the pleasure of hearing the fine Piano, made by Jacob Zech, exhibited at the First Mechanic's Fair, and also the First State Fair at Stockton, taking the Premium at both places. This was the first highly-finished Instrument made in California, and now after several years of continual use, that Piano looks bright and the tone full and rich, and far superior to many of the high-priced Pianos offered *new*. This is a proof of the durability and excellence of Jacob Zech's Pianos, and the fact of this, the first Piano, proving so excellent is most highly creditable to the manufacturers.

THE CENTRAL PACIFIC RAILROAD.—The Sacramento correspondent of the Call, March 21st, says: Having adjourned at an early hour on Saturday for that purpose, as I informed you, the Legislature that afternoon made an excursion to the Granite Quarries belonging to the Central Pacific Railroad Company. Some 400 people, inclusive of grave Senators and fair ladies, availed themselves of the Company's invitation to ride over the road. The party was accompanied by a band of music, which discoursed beautiful airs, while airs atmospherical were as splendid as they are generally made. The cars now run out 23 miles, within nine mile of Newcastle, in Placer county, to which point the road will be completed within three weeks, and then will commence carrying freight up and down country. The granite quarry alone will supply an immense amount of freight, the stone being of the best quality for building purposes—not too hard to work easy, and yet hard enough to answer all purposes for building. The supply is ample to last for a century, and build 20 cities of the size of San Francisco. Besides this stone, which can be delivered on the Sacramento levee for $1 a ton, there is an immense amount of firewood on the lands of the Company, in the borders of Sacramento and Placer counties—enough to furnish a large supply for years. The wood and stone will supply a large amount of down freight—as much, perhaps, as the Company can convey for some time to come—while nearly all the merchandise for Yuba, Placer and other upper counties, must pass over the road upwards. In this connection, I will say that work on the road is being pushed on with remarkable rapidity. Track is being laid at the rate of half a mile a day; cars are being set up as fast as possible, and altogether the progress making is sufficient to extend further aid to this great work.

The Ship success, from New York, which arrived on the 19th inst., brought a large quantity of iron and rolling stock for the Central Pacific Railroad. Among the rolling stock is a first class locomotive engine named the C. P. Huntington. Some idea of the quantity of material, etc., brought by this vessel may be inferred from the amount of freight money due on the bills of lading, which is $12,781 44. By the ship Mary Robinson, arrived last week, this company received two other first-class locomotive engines, one of which is named T. D. Judah. With these additions the Central Pacific Railroad Company have now on hand five engines to run the road.

ITEMS FROM TAHITI.—The *Echo du Pacifique* has news from Tahiti to the 6th February. We translate the following items: A Peruvian ship named the *Capricorne*, started to take back to the Society Islands 367 Polynesians who had been kidnapped, and carried to Callao as slaves; and of those 367 all but 32 died on the passage to the Islands. The French Government has commenced the enforcement of new rules regarding the erection of houses and the division of land; and they declare that it shall no more be said, as has been said hitherto that, there is neither proper name, nor private dwelling, nor exclusive landed property in Tahiti. Teachers have been sent to establish two French school on the Marquesas Islands. The commerce of the Society Islands is growing. They now export fish, mother of pearl, pearls, sea-snails, coconaut oil, fibers, and fecula of pia, vanilla, sugar, coffee, alcohol made of kawa, and rat-ear mushrooms. The rat-ear mushrooms are sold for $200 a ton. These and the sea-snail are shipped to China.

GOOD NEWS FROM THE COUNTRY.—All the news we hear from every section is clearly in favor of a fair crop of grain. From Napa, Sonoma, Petaluma, Santa Rosa, and all along the great Russian River country, the farmers feel very contented and hopeful since the late rains, and they look for more. There will be quite a quantity of land plowed since the rain, and quite a variety of crops planted. It is very gratifying to know that quite a large quantity of *root crops* will be put in for dairy-stock and for horse-feed, in view of the increased price for hay, as that crop will in all probability be short of the usual amount.

COTTON AND COFFEE.—A Company called themselves the Agua Caliente Cotton and Coffee Company, filed articles of incorporation with the County Clerk Wednesday. The object of the Company is to carry on and conduct the business of growing cotton, coffee and sugar, etc., and the manufacture of the same, in the State of Sinaloa, Republic of Mexico. The principal business office of the Company will be located in San Francisco. A capital stock of one hundred and fifty thousand dollars, divided into one hundred dollar shares, is named as a base of operations. The Trustees are: Frederick Collier, Thomas Wallace, R. O. Sturdivant, William Reynolds, and John Reynolds

IMPORTANCE OF LIFE INSURANCE.—The great number and frequency of sudden deaths in our State, should remind our citizens of the importance of Life Insurance. During the past few months, Death has called away many of our most active, noblest and best of men. How many were wise and had their lives guarded by a policy of Life Insurance we know not, nor how many thought of either Life Insurance or of Death, but this we do know: Rev. T. Starr King had a policy on his life here for $5,000, and also a policy of $5,000 in the Massachusetts Life Insurance Company of Boston, Massachusetts, thus making the sum of $10,000 on his life.

THE GAME LAW.—This law, so far as it applies to many ducks which visit our State should be modified. "Broad-bill," "Blue-bill" and "Canvas-back" ducks do not breed here. In fact, for about three or four weeks after the law comes in force these ducks are more plenty; for then they are on their way North where they mate and breed. [Solano Press.

As we stated last week, the present law does not include canvas-backs, and they continue to be brought into market. Should not Teal ducks be also exempted from the operations of the law?

A CUTTING REPORT.—After the younger Mr. Pitt had made his speech in the House of Commons, Sir Robert Walpole, in a sarcastic tone remarked: "I apprehend the *young* gentleman has not sown all his wild oats." To which Mr. Pitt replied in a rejoinder: "*Age* has its privileges, and youth may have its faults; but the gentleman affords ample illustration that I still retain food enough for *geese* to pick at."

The Starr King Fund Concert.

The gathering at Union Hall, on Thursday afternoon, for the Musical Matinée in behalf of the "Starr King" fund, was not so largely attended as was expected, although the musical offerings were of the very highest order, and rarely has there been an equal in our city. We learn that the proceeds will be about $1,000; this sum would be but a small beginning for a monument worthy the late Rev. T. Starr King, still it is a nucleus to which tens of thousands might be added. But most respectfully would we ask, can any monument that art, taste, or genius could rear, be a more noble, beautiful or fitting tribute to our lamented Patriot and Divine than the perfect, model Temple that he reared and completed just as he was called from us, seemingly typical that his earthly work was done, and his church destined—or as he himself expressed it—would be his monument. With this view would it not be well to let the "Starr King Fund" be devoted to some great and noble purpose, such as his own heart would have planned had he remained longer with us to act with and for us for the public good and welfare.

THE TROUT LAW.—Several inquiries have been made regarding the Trout Law. It can be found on page 92 of the Statutes of 1862. It says: "shall not be lawful for any person or persons to cast, draw, or make use of any seine or net, hook and line, or other appliances, for the purpose of catching trout in any of the streams, rivers, or lakes, in this State, except in the counties of El Dorado, Placer, Nevada, Sierra and Plumas during the time intervening between the 20th of October of each year, and the first day of April of the following year." The next section refers exclusively to the counties before mentioned. The third section declares that on conviction of the violation of the act, the offender shall be fined not less than fifty nor more than two hundred dollars, with costs in addition; one half the fine in each case to be paid to the informer, and the other half into the Common School Fund of the county in which suit shall be brought, and in case the one-half of such fine shall not be demanded the whole amount of the fine recovered shall be paid into said fund; and in case default be made in the payment of such fine, the person so convicted shall be imprisoned not less than twenty-five nor more than ninety days. Indians are excepted from the provisions of the act.

EARLY STRAWBERRIES.—Oakland spreads her banner and sends over the early strawberries—the first in quantity grown in the open air. This is more than a month earlier than usual. What would our friends in New York or New England say could they leave their *frozen homes* and come to us on the *telegraphic wires*, experience our beautiful clime, roam over our flower-crowned hills and valleys and gather delicious strawberries in the open air in the month of March.

COAL IN NEVADA.—An extensive outcrop of coal has been discovered on the Truckee river near O'Neal's station, Nevada Territory, by C. C. Brett, Esq. The vein is seven feet wide on the surface. Preparations are being made for the further development, by sinking a shaft upon it. All parties connected with it are satisfied of the great value of the discovery. This discovery is of immense value to the Territory.

CAREFULLY PRUNE YOUR GARDEN ROSES.—The past copious rains will promote a vigorous growth of the wood of all roses and garden shrubs, and now is the time to carefully prune and keep down short, and the bloom will be greater for it. Gardens can be made, laid out and finished now and all this month and next, which work will do well and prosper.

Home-made Soap.—The Soap Factory of J. F. Dyer, on Mason near Pacific streets, is a monument of the industry of a truly energetic man. Mr. Dyer, from small beginnings, more than [illegible] years ago, has built up a large and prospering business, highly creditable. Mr. Dyer is a colored man of great and good influence among his people, and ready to aid in every enterprise that truly deserves the success he has attained.

CASTOR OIL AND MERCURY.—We translate as follows from a Los Angeles letter published in the Echo du Pacifique of Monday:

"Two of our compatriots, Messrs. Racouillat and Bouet, intend to establish on the San Pedro road, nine miles from this town, an immense plantation of the castor-oil bean, and to press out the oil. The work has already been commenced.

Gov. Low has vetoed the bill passed by the Legislature, *requiring* the Board of Supervisors of Sacramento to levy a tax for the payment of the debt of the State Agricultural Society.

Private dispatches received to-day (March 24th) and last night mention that gold was quoted yesterday in New York at 166½@170.

THE student of nature can find no one thing in it to despise.

GRAIN HARVESTERS.—Grain-growers, now look to your Harvesters; there will be a good crop; see that you have your Mowers, Reapers, and Harvesters. Look to our columns for Machinery for grain-growers. The best in the world can be had of our Importers, Treadwell & Co., Hawley & Co., and Arthur & Low. Look to it in season. Long rains, good rains, will enhance the value of Reapers and Mowers. You can buy cheap now; strike quick, and buy cheap

RICH TEA-SETS, VASES, ETC.—Some of the most superb Tea and Coffee sets we have ever seen, are now being opened at Haynes & Lawton's Crockery Warehouse. The beautiful blending of the colors of blue and gold, crimson and gold, green and gold, in their chaste designs, gives harmony and beauty, that is most gratifying to the eye, and adds materially to the flavor of the beverage.

THOSE NEW LAMPS.—Reader have you seen those new and beautiful lamps received by Stanford Brothers? To the student, the professional man, all who read, or use a lamp, we say, by all means, go and provide a lamp, and the fluid that will not only be clear and brilliant but protect and preserve the eyes.

GARDEN CUTLERY.—New and fine garden tools, just received from Europe, for sale at Moore's Seed Store, California [illegible] cet.

	1860	1861	1862	1863
In Boston	15,298,294	16,372,316	17,539,933	17,371,813
In N. York	17,073,325	12,461,332	38,304,042	47,571,920

Stock of Foreign Wool on hand at Boston, January 1, for the last four years:

	1861	1862	1863	1864
Pounds	3,500,000	3,518,000	6,667,000	5,056,000
Bales	8,529	7,940	14,324	10,004

Stock of Domestic Wool: In Boston 6,000,000 pounds, Philadelphia 4,500,000 pounds, New York 2,500,000 pounds. California Wool: In Boston 300,000, New York 2,300,000 pounds.

We beg to call your attention to our Prices Current and accompanying tables. The table of Imports shows the influence of the war upon the commerce of this city, for, while our annual imports have been about the same as in former years, New York has, owing, in part, to the large consignments from Europe to agents in that city, but mainly to the necessity of employing neutral vessels, which can be more readily chartered for New York, on account of the greater facility of obtaining return freights there—received nearly three times as much as she did during the two years before the war. A considerable portion of this last class was owned and found its way here. The Stock table shows a much smaller stock of Foreign fine Wools, Cape and Mestiza, than last year, and a largely increased stock of Domestic. This is owing to the fact that very little Domestic Fleece reached the market until near the close of the year, and manufacturers were obliged to use Foreign. The stock of fine Foreign in first hands was also light in New York, while there, as here, there was an accumulation of Mediterranean Wools, adapted mainly to army uses, for which, during 1863, the demand has been much less than was anticipated. The stock of these has been, during the past month, much reduced, and at present prices cannot be replenished without loss.

The amount of new machinery started in the United States since July, 1862, exceeds one thousand sets, and could not be kept in operation by a quantity of Wool equivalent to the entire imports of the last year, large as they were. When we consider that without extra pressure of the machinery in operation before that time we were obliged to import at least one-third of the Wool manufactured we cannot doubt that there will be a demand fully adequate to any probable supply.

GEO. WM. BOND & Co, Boston.

Purchasing Agency.

Having had the experience of over thirty years in dealing in Trees, Plants, Seeds, and Agricultural Implements, we feel that we are fully competent by our experience in purchasing such articles to make a saving of from five to fifteen per cent for the great mass of purchasers. We will therefore offer to make purchases for all who wish our services, of any of those articles named, or for any articles of merchandise for our Farmers or Ranchmen, and ship the same as they shall direct.

In order that we may do their business in the most satisfactory way for them and ourselves, we do wish that all who send orders should be as explicit as possible as to their wants—describing as minutely as they can; and, where they desire our judgment, we will do our best to suit them.

Our charge will be Five per cent, together with the cost of packing, freight, drayage, etc. Orders should include satisfactory references or the Cash; or bills could be sent by Express, to be collected on delivery.

We shall be happy to attend to the purchase and shipment of Trees, Seeds, Plants, etc., as this is our especial "hobby," and we know we can satisfy all that send us their business attend to.

The New Seed Sowers.—These fine implements—the sample machines—have arrived, and are now at our rooms. We invite all interested to call and examine them—as per advertisement. "Patent Rights" are for sale and a handsome sum can be made by purchasing.

Old Newspapers.

FIFTY THOUSAND Large-sized old Newspapers for sale at this office in lots to suit purchasers.

For Sale!
A Fine Orchard and Garden.

A BEAUTIFUL ORCHARD AND GARDEN, FULL of Fruit Trees of rare kinds, a new Gothic Cottage House, with pleasant surroundings.

The place contains 150 acres of rich land, all in a high state of cultivation.

The estate is near Oakland, Contra Costa County, and is increasing in value every day. For particulars, inquire of the Editor of this journal. 8

Situation Wanted as Superintendent of Farm.

A GENTLEMAN, every way qualified for the superintendence of a large Farm, who is now in the Eastern States, wishes a permanent situation. He is a man of family, and every way qualified for such a place. Any one wishing a No. 1 Superintendent, within a little time, can secure a valuable man for such a place by addressing the Editor of the Farmer. 7

Enigma. (Answer requested.)

THREE-QUARTERS of a cross, a circle complete,
A straight perpendicular, and part of two semicircles to meet—
A rectangle-triangle to stand on two feet,
Part of two semicircles, and a circle complete.

BORN.

In this city, March 20, to the wife of H. C. Thompson, a daughter.

A CARD.

YEARS HAVE ELAPSED SINCE THE Subscribers first invited public attention to the peculiar properties of their Patent Axle-grease. At first their invention made but slow progress, but thanks to the liberal and appreciative spirit of a large portion of the teamsters and coach proprietors of California, the demand for their manufacture has gradually increased, and notwithstanding the many spurious [illegible] ich from time to time have been introduced from [illegible] in States [illegible] pete with their article, the H & L AXLE-GREASE has now acquired an unrivaled [illegible] tation, extending throughout the length and breadth of California, Oregon, and the neighboring Territories.

The subscribers return their grateful acknowledgments to a discerning public, who have so largely patronized them in all their enterprises, are now happy to say, are beginning to be justly appreciated as [illegible] to our California industry.

The supply of material from the East having, in consequence of the war, been cut off, the subscribers turned their attention to the substitution of COAL OIL as a basis of their manufacture, but after applying every means suggested by the modern application of the science of chemistry, they were reluctantly compelled to the conclusion, that however fit COAL-OIL might be for illuminating purposes, and for which it stands unequaled, it was not at all adapted to make a permanently satisfactory Axle-grease. In this dilemma the subscribers turned their views to the native produce of California, believing that large quantities of natural rosin might be collected from the noble pine trees of her boundless forests.

Having invited attention to this subject, they have, with steady progressive steps, advanced this interest, until, at the present time, they have established a manufactory of Rosin and Turpentine at Forbestown, from which considerable quantities of both articles are daily manufactured, of such a quality as to find a ready market at fair prices.

It is hoped that increased efforts may continue to be put forth, and new discoveries made, so that California may soon be independent of all foreign supply, for we believe our lofty mountains and our mighty pine forests, will yet give us that supply. The subscribers are now receiving native rosin in sufficient quantities to be able to sell their celebrated AXLE-GREASE at a LOWER PRICE than any of the spurious COAL-OIL varieties, which may hereafter be imported.

Wants a Situation.

A PERSON FROM CANADA WISHES EMPLOYment of some kind, either upon a farm, care of stock, or would take a position in store for the sake of immediate employment in a permanent place. Reasonable wages only, would be asked till full capacity is known. 8.

Agricultural Books.

MANY VALUABLE WORKS on Agricultural Subjects, Stock, etc, not usually found at bookstores, for sale at the Office and Reading-room of the Farmer.

Encourage
HOME MANUFACTURE!

IT MUST BE GRATIFYING TO ALL CALIFORNIANS to observe the steady increase of Home Manufacture. Then let the motto of all be "ENCOURAGE BY YOUR PATRONAGE," and the time will soon come when we will be able to supply all our own wants, and the wants of the Pacific Coast.

S. P. Taylor & Co.,

PROPRIETORS OF THE
PIONEER PAPER MILL,

TAYLORVILLE, MARIN COUNTY.

Paper Store,

No. 322 Clay street, between Front and Battery.

All Kinds of Paper on Hand, and Made to Order, Wholesale and Retail.

☞ Junk and Rag Depot 111 and 113 Davis street. Second hand Bags for Sale. 21 6

A Thoroughbred "Jack" For Sale.

TO STOCKRAISERS AND BREEDERS: For Sale, at Mr. Allen's stable, corner of Kearny and Pine streets, a "JACK," lately imported from France; age three years, black, bred in the celebrated stud of Alphonse Lavalé, Esq., Ruffec Polton, by *Nero*, a thoroughbred Castilian Ass which received the Gold Medal at the Annual Agricultural Fair at Paris in 1860; out of *Angouleme*. Pedigree guaranteed. For particulars apply at Mr. T. Beerwold's cigar store, 714 Kearny street, opposite the Plaza. 21-5

$2,500 Wanted on Real Estate.

THE SUM OF $2,500 is wanted on Real Estate in San Francisco County, upon land of undoubted title, worth double the amount. Address A. B. C., Farmers Office. 7

Miller Wanted.

A MILLER IS WANTED, QUALIFIED TO take charge of a large and valuable Mill, in a pleasant situation with all pleasant surroundings. A good man can secure a good and permanent situation, and a very liberal salary. None need apply unless of education, pleasant address, and the most correct habits and character. For particulars address Editor Farmer. 7

English Steward, or Gardener.

A PERSON JUST ARRIVED FROM CANADA IS DEsirous of securing a place as Steward or Superintendent of a Farm. The very best references can be given of his character and capability for the situations. Apply at the office of Editor of Farmer, or by letter. 21-6

CALIFORNIA THE FARMER.

A FIVE Dollar Treasury Note will pay for the FARMER *one year*. Now is your time to make a saving; it makes the cost of the FARMER, to new *subscribers*, only $3,25 per year. See our card.

Purchasers of Farms.

We shall now keep a complete record of *Farms, Ranches, Orchards and Vineyards*, for sale, and make it a speciality from this date. A "Bulletin Board," in our Reading Room, will contain numerous Farms, etc., on sale, and to which we invite special attention of both *Buyers and Sellers*.

☞ MANUFACTURERS OF MACHINERY, AGRICULTURAL *Warehouses, Seedsmen and Florists*—All such who desire to make their business known over the entire State of California, should send their business & dvertisements to us, and we can spread the news for them.

TERMS OF ADVERTISING.

THE charge for Advertising in the CALIFORNIA FARMER [illegible] in advance), is **One Dollar** for five lines, or less of space, in nonpareil type, for one insertion and ten cents a line for any larger space. Each subsequent insertion half those rates. This it is believed affords the cheapest and best medium of reaching the Agricultural community on this coast. As heretofore, the right is reserved to reject any advertisements deemed objectionable.

NEW
AGRICULTURAL INVENTION.

Sower for all Kinds of Grains.

A NEW SEED-SOWER of large capability is now offered for sale—the Right of Manufacture and Sale of it for the State of California, or for Counties.

The Machine can be made with

Three, Five, or Seven Tubes,

and arranged to sow any kind of grains at any given distance, and to sow a greater or less quantity, to seed thick or sparse, as may be desired.

By the construction of this Machine it can be made to sow on level ground or on ridges, and every variety of seed, from the smallest kind to Beans, Peas, Grain, Corn, etc.

THE SIMPLICITY,

as well as the accuracy, with which this Machine works, is wonderful. Every farmer can regulate it to suit every purpose and plan.

The Evenness and Precision

with which it sows the seed without wasting it, will secure great benefit to the farmer, as it makes a great saving of seed—enough in a short time to pay for the Machine.

These Machines can be made expressly for the sowing of COTTON,
HIGHLAND RICE,
TOBACCO,
SUGAR-CANE,

and all the new crops, of which this State will, ere long, become famous.

For all particulars of the Machine, call at Farmer Reading Rooms, where the Machine can be seen, and where the price and terms of the Patent Right can be ascertained. 5-3m

Complimentary Vote of Thanks of the Passengers on board the Steamship America.

WE, THE UNDERSIGNED, PASSENGERS on the Steamship America, tender our thanks to Capt. Morton, and the other Officers of the Steamer, for the Comforts we have enjoyed during our passage from San Francisco to Panama, and particularly for the neatness and good order on the Boat, and for the sumptuous fare, and kind attention we have received. While expressing our entire satisfaction with the Boat and its management, we heartily commend it to the attention and patronage of the public.

Farmers and Immigrants.

LAND FOR SALE OR TO RENT.

THE ANTELOPE RANCH,

(FORMERLY JOB P. DYE'S) on the East side of the Sacramento River, embracing many very superior Farms of

100 to 500 Acres each; also Vineyards; Gardens and Orchards,

above all overflows, Fenced, having Dwellings, Barns, etc.; and throughout the year, large running streams, and irrigating ditches.

The soil is from 3 to 10 feet deep, very rich, and adapted to Wheat, Barley, Oats, Tobacco, Chinese Sugar-Cane Fruits, etc.

The best market in the State is at Red Bluff, two miles above; at Tehama, three miles below the Ranch, and on the Ranch itself, for consumption in the northern portion of the State, Oregon, and the Humboldt Mines. The new Wagon Road from Red Bluff to the Humboldt Mines is within three miles of this Ranch.

Good Farmers (with families preferred) can hire these farms at low rates, or conduct them on shares, with privilege of purchase. Cash loans will be made, if desired, to assist in cultivating or holding crops, and every facility will be given.

Mowers, Headers, Threshers, etc, are on the Ranch—"The Antelope Flour Mill," of large capacity, and high reputation, is on the Ranch, owned by the same proprietors.

☞ The "Job Dye Farm," of 250 acres—with Orchard, Vineyard, and Garden, with irrigating water, large Adobe House, and numerous out-buildings—will be rented to a satisfactory tenant.

Apply to GEO. CHAMPLIN, Red Bluff P O, or on the Ranch, or to

WAR'S CHANGES.

The wedded, unwed—the loves that are dead,
The soulless mother—the widowed,
The tears that are shed—the hearts that have bled,
Are more than the battle's myriad.

There's Isabell Clare—I remember well
The blushing bride of a year ago;
When a young man stood on the chancel stairs—
Husband and wife just a year ago.
But he lies asleep on the tombless field,
And Isabell Clare is married again.
O, Isabell Clare, is the old love dead!—
And does the new love bring no pain?

There's the Widow Gray I remember now,
When she leaned on a young lad's arm,
A smile on her face when she walked with him,
O, so sweet and tender and warm;
But now all is changed, and the house is closed,
So dark and silent over the way,
And nobody sees her except at church,
When a dark figure kneels to pray.

There was Eleanor Vane—a sweet pale girl,
With a heart as true as God's word,
The Sergeant who went with Company B,
Bore her love away with his sword;
But the Sergeant was killed in Tennessee,
And Eleanor Vane lies alone,
Beneath the snow and the wind and the rain,
Without a memorial stone.

And Mary, the merriest maddest girl,
The daughter of old John Blake,
In love and out, over a thousand times,
Trying somebody's heart to break;
But somebody went away to the war,
And Mary grew sober and staid,
And somebody says if he never comes back,
That Mary will die an old maid.

O, the wedded, unwed—the loves that are dead,
The soulless mother—the widowed,
The tears that are shed—the hearts that have bled,
Are more than the battle's myriad.

C. FRENCH RICHARDS.

SAN FRANCISCO, March 18, 1864.

"DEAL GENTLY WITH THE ERRING."

"DEAL gently with the erring one,
Ye may not know the power
With which the dark temptation came
In some unguarded hour;
Ye may not know how earnestly
He struggled or how well;
Until the hour of darkness came
And sadly thus he fell.

"Speak gently of the erring one,
Oh! do not thou forget,
However darkly stained in sin
He is thy brother yet;
Heir of the self-same heritage;
Child of the self-same God;
He hath but stumbled in the path
Thou hast in weakness trod.

"Speak gently to the erring one,
For is it not enough
That innocence and peace are gone
Without thy censure rough?
Oh! sure it is a weary lot
That sin-crushed heart to bear,
And they who have a happier lot
May well their chidings spare.

"Speak gently to the erring one,
And then may'st lead him back
With holy words and looks of love,
From misery's thorny track;
Forget not, too, that thou hast sinned,
And sinful yet may be;
Deal gently with the erring one
As God hath dealt with thee!"

Habits of the Lobster.

MANY of our readers have a fondness for lobster flesh, who may know little about the habits of this prince of shell-fish. As a kind of dessert after a hearty meal on this luxury of the table, we commend to their attention the following sketch by Mr. G. P. Disceway:

Who does not like the flesh of the lobster? Even the child knows the nursery riddle, "black in the kitchen, red on the table." Without any warmth in their bodies, or even without red blood circulating through their veins, they are wonderfully voracious. They even devour each other, and may be said to eat themselves; for changing their shell and stomach every year, these remains are generally the first morsel to glut their new system. They are always in the harness, heavily armed to the teeth; seven jointed is the cunningly forged mail of their back. Beneath this protecting roof move four, yes, eight sprawling feet, four on each side, pushing forward the unwieldly war engine, like the Roman legion under the shelter of the battering ram.

Two great claws are the lobster's instruments of provision and defence, and by opening like a pair of scissors, they have great strength and take a firm hold. Between the two claws is the animal's head; very small, with eyes like two black, horny specks on each side, and these it can advance out of the socket or draw in at pleasure. The mouth, like that of insects, opens lengthwise of the body, not crosswise, as with men and higher races of animals. It has two teeth for its food, but three more in the stomach. Before the pointed nose, the long wire-feelers or horns are stretched out, that seem to aid the dimness of its sight. The tail, or jointed instrument, is its great locomotive by which it is raised and propelled through the water. Beneath this we see lodged the spawn in great abundance.

When the young lobsters leave the parent, they seek refuge in small clefts of the rocks, or crevices at the bottom of the sea. In a few weeks they grow much larger and change their shell for lobsterhood. In general this is done once a year, and is a painful operation. For some days before this change, the animal discontinues its usual vigor, strength and lying torpid and motionless; but just before casting its shell, striking its claws against each other, every limb seems to tremble. Then the body swells in an unusual manner, and the shell begins to divide—it seems turned inside out, the stomach coming away from its shell. In like manner the claws are disengaged, the lobster casting them off as much like you or I would kick off a boot too big for us. For several hours it now continues enfeebled and motionless, but in two days the new skin becomes hardened, and within forty-eight hours the shell is perfectly formed and hard, like the one just cast off.

The lobster has now increased more than a third in its size, and like a boy has outgrown his pants; it seems wonderful how the old shell could contain so great an animal as fills the new. Below, in his native element, he reaches the age of twice ten years, and loses a foot and a claw without feeling his loss, for he very well knows that they will grow again. At certain seasons lobsters never meet with each other without a fight, and when a leg or even a claw is lost, the victor carries it off, while the vanquished retires for a thorough repair of his injured anatomy. This is quickly accomplished, for in three weeks the new limb is nearly as large and powerful as the old one.

When hunting, the lobster resorts to stratagem, if his strength be sufficient. In vain the oyster closes the door against his grasping, vice-like claw, for as soon as the unsuspecting muscle opens its house, in he pops a stone, and the breach made, the oyster must surrender.

The lobster has his rocky hole at a depth of from six to twelve fathoms, and the propagation of his race is continued on in marvelous number. More than 12,000 eggs have been counted in a single female. When he reaches the light he is inactive; but in his own realm he dashes with rapid speed over chasms and rocky tablelands of the ocean. A motion of the tail is sufficient to hurl him down more than fifty feet deep, and thus escape the swiftest pursuit. So sure is this leap, that he never misses the entrance of his cavern, even in the most precipitous of his flights, although, too, it merely offers space enough to admit the body.

[The "crawfish" of this coast resembles the eastern lobster in every respect we believe except having no "great claws," and may properly be called the Pacific lobster.]

Obstinacy.

AN obstinate man does not hold opinions, but they hold him; for when he is once possessed with an error it is like a devil, only cast out with great difficulty. Whatsoever he lays hold on, like a drowning man, he never loses, though it do but help to sink him the sooner. His ignorance is abrupt and inaccessible, impregnable both by art and nature, and will hold out to the last, though it has nothing but rubbish to defend. It is as dark as pitch, and sticks as fast to anything it lays hold on. His skull is so thick that it is proof against any reason, and never cracks but on a wrong side, just opposite to that against which the impression is made, which surgeons say does happen very frequently. The slighter and more inconsistent his opinions are the faster he holds them, otherwise they would fall asunder of themselves; for opinions that are false ought to be held with more strictness and assurance than those that are true, otherwise they will be apt to betray their owners before they are aware. He delights most of all to differ in things indifferent; no matter how frivolous they are, they are weighty enough in proportion to his weak judgment; and he will rather suffer self-martyrdom than part with the least scruple of his freehold; for it is impossible to dye his dark ignorance into any lighter color. He is resolved to understand no man's reason because he finds no man can understand his but himself. His wits are like a sack, which the French proverb says is tied faster before it is full than when it is; and his opinions are like plants that grow upon rocks, that stick fast though they have no rooting. His understanding is burdened like Pharaoh's heart, and is proof against all sorts of judgments whatsoever.

THE LOVE OF HOME.—The following noble sentiments were uttered by Daniel Webster. They are indeed, pearls of the rarest value:

"It is only shallow-minded pretenders who make either distinguished origin a matter of personal merit, or obscure origin a matter of personal reproach. A man who is not ashamed of himself, need not be ashamed of his early condition. It did happen to me to be born in a log cabin, raised among the snow-drifts of New Hampshire, at a period so early that when the smoke first rose from its rude chimney and curled over the frozen hills, there was no similar evidence of a whiteman's habitation between it and the settlements on the rivers of Canada. Its remains still exist. I make it an annual visit. I carry my children to it, to teach them the hardships endured by the generation before them. I love to dwell on the tender recollections, the kindred ties, the early affections, and the narration and incidents which mingle with all I know of this primitive family abode; I weep to think that none of those who inhabited it are now among the living; and if ever I fail in affectionate veneration for him who raised it, and defended it against savage violence and destruction, cherished all domestic comforts beneath its roof, and, through the fire and blood of seven years' revolutionary war, shrunk from no toil, no sacrifice to serve his country, and to raise his children to a condition better than his own, may my name and the name of my posterity be blotted from the memory of mankind."

LAUGH AND BE HAPPY.—That is our creed. Don't go through life with a frown upon your face and a sigh ever heaving your breast, but learn to look on the sunny side of life. Rebuffs and disappointments will sometimes come over us; but don't court their company by going half way to meet them, nor, when they have fairly come, welcome them by an embrace. Don't cut your throat, nor hang yourself, because dame Fortune has given you the slip, and the sky is cloudy.

"Beware of desperate steps!—the darkest day,
Live till to-morrow, will have passed away."

Sit down to your dinner with a thankful heart—we mean the table of your life and fortune as well as that at which you dine. "Cheerful looks make every dish a feast," says Massinger. The truth is, we can afford to lose almost anything better than good humor; and if only we take care that it shall ever be the spring-time of the year in our hearts, we shall find cheerfulness, peace and quiet enjoyment blossoming there with the freshness of the season of flowers. Everything in Nature teaches us this beautiful lesson—the birds in the green wood, and the green herbage. We shorten life, all philosophers say, by unnecessary anxiety.

"Care to our coffin adds a nail, no doubt,
And every grin so merry, draws one out."

Cultivate cheerfulness, and people will love you for the sunshine that your presence will always bring with it. You will be better satisfied with yourself and everybody else, and time's wings will be gilded with happy remembrances of the merry faces and pleasant reflections that have crowded your pathway through life.

KINDNESS TO MILCH COWS.—It is a great error to whip, beat or kick a cow during milking, because she happens to be restless and unquiet. It does no good, and in the end the cow becomes worse, instead of better. Treat the cows gently and kindly, like all other animals.

SEED, PLANTS, ETC.

CHOICE GRAPES!

B. Kamp,

of SAN JOSE, offers the following Choice kinds of Grapes:

Grape-Vines, Cuttings, and Plants,

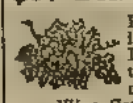
INCLUDING NINETY VARIETIES OF

NEW AND RARE KINDS!

For Wine---Rhine Grapes.

Black Gleffner, Johnisberger Riesling-Riesling Franken, Traminer, Rulander. Kohlen Traube, Gray Gleffner, Silvaner, Goodethel,

FOR THE TABLE:



Goodethel, Black Hamburg, Chasselas Musque, Charlesworth Tocay. Muscat Rose, Muscat Alexandria, Golden Chasselas,

The above list embraces those that the Undersigned has proved. The WINE-GRAPES are the BEST OF THE RHINE, such as our Choice Rhine Wines are made from; and those for the Table are well known and approved The Grapes will make Better Wine than our California Grapes, by a 100 per cent. Having cut down all my California Grapes, and instituted others, I know what I say to be true.

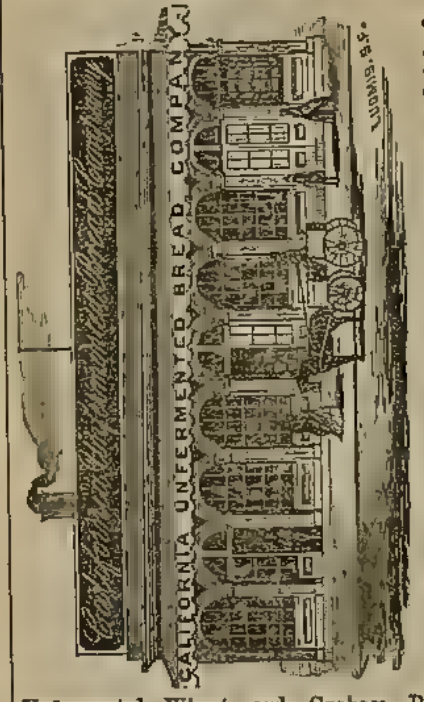
Orders for Rooted Vines or Cuttings at LOW PRICES, can be sent by Mail or left at the FARMER OFFICE, will be promptly attended to.

20-24-tf B. KAMP.

$5! Delaware Grape-Vines! $5!

PROPAGATED FROM VINES received in 1861, from Dr C W. Grant, of Iona Island, near Peekskill, N. Y. One and two year-old Vines, from $1 00 to $2 00 each! The superiority of the Delaware as a Wine Grape, will doubtless induce unprincipled Dealers to flood the Market with a Spurious Article; and as mistakes sometimes UNINTENTIONALLY occur, which cause delay and trouble to the Purchaser—

☞ I WILL PAY IN GOLD COIN $5.



(or the same amount in Lincoln, Lenoir, Union Village, Anna, or Diana Vines, at 50c each, or the IONA at $2 00 each) for each Vine purchased from me, for the DELAWARE, which proves untrue to name.

I have now IONA VINES, one year old, propagated from a Vine presented to me from Dr. Grant, the Originator of the same, which, except upon the above conditions, I do not intend to offer in Market without his permission

Catawba Vines and Cuttings by the Hundred or Thousand, CHEAP!

Fine House and Garden in Sacramento City

A LARGE, SPACIOUS, AND GENTEEL House and other buildings, with fine Garden, all finely located in the upper part of the city, containing a full half block—will be sold a bargain and on liberal terms of payment if applied for soon. Real estate is rapidly improving in Sacramento, and this is a rare chance. Inquire of editor Farmer. 16

Literary Shrubbery.

That's what's the matter?

"Tender-handed touch a nettle,
And it stings you for your pains;
Grasp it like a man of mettle,
And it soft as silk remains.
Thus it is with vulgar natures,
Treat them kindly, they rebel;
Use them rough as nutmeg-graters,
And they often love you well."

A HORSE FOND OF MISCHIEF.—A gentleman some years ago, speaking of the habits of animals, gave the following curious account:

"There is," he said, "a very fine horse in the possession of Sir Henry Meux & Co., the eminent brewers, which is used as a dray-horse, but is so tractable that he is left sometimes without any restraint to walk about the yard, and return to the stable, according to his fancy. In the yard there are also a few pigs of a peculiar breed, fed on grains and corn, and to these pigs the horse has evidently an insuperable objection, which is illustrated by the following fact. There is a deep trough in the yard, holding water for the horses, where this horse goes alone with his mouth full of corn, which he saves from his supply. When he reaches the trough, he lets the corn fall near it on the ground, and when the young swine approach to it (for the old ones keep aloof), he suddenly seizes one of them by the tail, pops him into the trough, and then capers about the yard, seemingly delighted with the frolic. The noise of the pig soon brings the men to his assistance, who know from experience what is the matter, while the horse indulges in all sorts of antics, by way of showing his glee, and then returns quietly to the stable."—[English Paper.

MAMMOTH GRASSHOPPER.—A Frenchman, while translating an American book, came to a sentence which related that a soldier tied his horse to a locust (tree) standing in front of the house. Looking at the dictionary, he found the word locust to be in French "lauternelle," meaning grasshopper. He therefore used the word "lauternelle" in his translation, thus conveying the idea to his readers that in this country grasshoppers were large enough to admit of a horse being fastened to them, and that one was at the time conveniently standing by the door.

Greenbacks! Greenbacks!

We receive Greenbacks for subscriptions to the California Farmer, and allow the ruling premium on Gold!

IT is a well known fact to all conversant with newspaper publishers, that since the war commenced the cost of publishing a paper has very greatly increased, so much so as to stop hundreds of papers, over the United States. Yet it has been our pride not to add cost to our *subscribers*, but to relieve them although we have made sacrifices of thousands to carry out our principles, and do what we esteemed our duty to uphold the credit of our country both by precept and example. From the first we announced that we would receive Treasury Notes at par for *Subscriptions to the Farmer*. But the notes were rejected, here, as currency and many of our subscribers have, in conformity with the custom, continued to pay us in gold; yet we have never refused greenbacks at their face value when sent us by subscribers, though it has subjected us to serious loss from our being obliged (from the rejection of the currency as mentioned), to pay gold in our disbursements. At the present cost of all articles, we could not do a paying business by receiving greenbacks at par, at our present rates. But to make the thing work equally for all our subscribers, as well as conform to what we think our duty, we propose to adopt the greenback basis, and raise our subscription price to $5 a year, payable in greenbacks.

As it is evident to us now that the people of California are determined to sustain the National Government and make Treasury Notes the medium of trade, generally, we announce as follows:

The price of subscription to the CALIFORNIA FARMER, hereafter, will be $5 a year, payable in U. S. Legal Tender notes; this being a safe and easy medium of transmission, by mail; and we will allow the ruling premium when gold is tendered in payment.

We also announce, to all who are indebted to us for *Subscriptions* to the CALIFORNIA FARMER, send along your *Greenbacks*. They will come to us with the glorious impress of our country's sovereignty, and every pecuniary sacrifice we may make we cheerfully lay upon the altar of that country whose faith stands pledged in these notes and whose integrity *we dare not question*.

We make this change in the terms of our subscription *not to advance the present cost* of our journal, but rather to make it cheaper to all, for at the *present nominal* value of the notes it will cost the subscriber but $3 25.

We do hope also that all to whom we have sent bills, all who are indebted to us, will now see how easy we make it for them to pay their dues. It must be remembered also that all who owe for this paper, a bill of six month's standing should, by the terms already heretofore announced, remit us $5, and g. b.'s to that amount will be very acceptable.

We shall now have the consciousness of having taken a true step to sustain the National Currency, and we shall know who will "go and do likewise."

We do hope that the friends of a good, sound National Currency will give us their aid and cooperate by sending us their names for the FARMER.

The Great Want supplied.

FAMILY

Cider & Wine

MILL,

WITH

Press Combined.

Costs but $18.

Grinds 6 to 8 bushels of Apples; 10 to 12 bushels of Grapes, Currants, or Berries, per hour.

The Markets.

Wholesale Produce Report.

This represents the prices paid by the dealer to the producer.

Corrected weekly, by A. H. Todd & Co., corner of Clay and Drumm Streets.] Mar. 25.

Our grain market affords us but little to say. At the decline in price noted last week many sold. There are others, both producers and holders, who are not offering to sell, believing (they say) that there has not been a sufficient amount of rain to insure a crop. The result is that the offerings on the market have been comparatively light, and prices have not declined as rapidly as it was supposed they would. The heaviest decline in any one article of produce has been in Hay, sales having been made at $20 to $25 ₱ ton, for that which, two weeks since, readily brought $45 to 50 ₱ ton. The Hay market, however, like the Grain market, is unsettled, and frequently a great disparity occurs between buyers' and sellers' views, although we notice when actual buyers enter the market, that terms are agreed upon, whether it be Flour, Wheat, Barley, Oats, or Hay, that is wanted.

Our exports are as follows: Ex the Russian ship Czarovitch for New Archangel, 515 bbls 3937 hf and 500 qr-sks Flour, 886 sks Wheat, 100 bales hay, etc. Ex bark Francis Palmer for Victoria, 1200 sks Barley, 1120 hf and 100 qr-sks Flour, etc.

Our receipts of Produce from around the Bay for the past week have been as follows: Wheat 22679 sks, Barley 3543 sks, Flour 6543 qr-sks, Potatoes 5289 sks, Oats 1286 sks, Corn 371 sks, Beans 3346 sks, Hay 3532 bales, Straw 1041 bales, Middlings 85 sks, Bran 1167 sks, Cornmeal 292 sks, Wool 110 bales, Salt 500 sks.

Also, Coastwise: Potatoes 2725 sks, Oats 1256 sks, Wool 103 bales.

Prices at Pacific Fruit Market—Mar. 25.

Messrs. Addison Martin & Co. report to us the following prices as the ruling rates for fruit:

Apples 2@4c, A No. 1 6@8c ₱ lb. Dried Plums 15@20c ₱ lb. Dried Peaches 10@15c ₱ lb. Dried Nectarines 20@30c ₱ lb. California Dried Figs 20@30c ₱ lb. Strawberries $1 00@1 50 ₱ lb. Lemons $6@8@10 ₱ box, retail 50@75c ₱ doz. Oranges $3 50@6 ₱ 100, retail 75@1 25 ₱ doz. Chestnuts 30@40c ₱ lb. Black Walnuts 15@20c ₱ lb, Imported Figs 35@50c ₱ lb.

This week, Strawberries have come in from several localities, though as a general thing have been picked too green. The prospect now is that we will get a small crop from Oakland this year, but will in some measure be made up by Mission and San Jose Strawberries.

BY CONTINENTAL TELEGRAPH.

DATES TO MARCH. 26.

In the House, Elliott, from the Committee on Commerce, reported a bill which passed, authorizing the Secretary of the Treasury to stipulate for the release from attachment, or other process, property claimed by the United States—in other words, to enable the Government to arrange for the use of property it wants without waiting for legal process.

The House passed the Senate bill authorizing the President to negotiate with certain Indians in Southern Oregon for the acquisition of land, and appropriating twenty thousand dollars therefor.

The steamer Spread Eagle sunk at Miller's Landing, Missouri River, sixty miles above the mouth, on Sunday. She was valued at $40,000. She will probably be raised.

The steamer Fanny sunk below Vicksburg, on the night of the 15th. The cargo was valued at two hundred thousand dollars. She is a total loss. The boat is valued at twenty thousand, also a total loss.

Adjutant-General Thomas is stationing troops, mostly colored, at the principal points along the lower river, to protect the plantations and trade depots.

Two companies of the Seventy-first Indiana, scouting in Virginia, came upon the enemy's pickets, killing one and wounding another, and returned to camp with four horses, wagons, arms, and seventy prisoners, including the notorious rebel guides and bushwhackers Green and Estler, who long have been the terror of Union citizens.

Morgan's command is still opposite Decatur, and cannot be mounted from the scarcity of horses. Deserters from Longstreet's army say he is doubtless moving to Gen. Lee.

A special dispatch says that McDougal endeavored to force before the Senate Committee on Foreign Relations, of which he is a member, some sort of a report, either for or against the French invasion of Mexico. Failing in this he fell back upon the resolutions which he subsequently introduced, and upon which he will endeavor to speak in a few days, insisting that it is the duty of the Government to interpose in behalf of Mexico, even at the risk of war.

The Postmaster-General invites proposals for putting the Overland California Mail Service in operation by the first of October; or, if preferred by the accepted bidder, July first. The schedule increases the speed so that each trip must be made in sixteen days during eight months of the year, and twenty days for the remainder of the year. The contract to be for four years. Newspapers and documents by mails are to be transported by sea.

A New Orleans' letter says Gen. Banks took the field on the 9th. Franklin is to direct operations. The force is composed of thirteen thousand Cavalry, twenty-four light pieces, and four brigades. It will sweep across the country thence into Texas.

A resolution instructing the Committee on Ways and Means to inquire into the expediency of imposing an adequate duty on all wool imported from foreign countries after July, passed the House March 23d.

General Smith, who commanded the recent cavalry raid in Mississippi, says he obtained positive and reliable information that Vice President Stephens, of the rebel Confederacy, was hostile to the present policy of the Confederates, and has written to Richmond he will not resume the presidency of the Senate until the recently adopted conscription law be repealed, regarding its passage as a violation of the plighted faith of the Confederacy.

Major General W. F. Smith will have command in the East, next to Grant. His position will really be Chief-of-Staff to the Lieutenant-General, and as such will direct the movements of whoever may be nominally in command of the Army of the Potomac. It is understood that General Grant, after reorganizing the army to his satisfaction, will give the rebels a taste of his fighting qualities before he returns to the West.

The great monitor, Monodoc, was successfully launched at Boston, March 24th.

Advices from the Red River country are to the effect that the iron-clad and monitor fleet reached Atchafalaya on the 14th March, where General Smiths's force disembarked to operate against Fort De Russy, where Dick Taylor was encamped with 11,000 men. As soon as Taylor heard of Smith's landing he marched to the rear to attack him. Discovering Taylor's design, during a skirmish that ensued, General Smith's army, instead of attempting to keep open the communication with the river, proceeded by forced marches towards the fort, reaching it three hours before Taylor came up. A charge on the works was immediately made. Considerable fighting took place, in which the Federals lost about 40 killed and wounded. The fort was taken with 200 prisoners and 11 guns. The fleet in the meantime steamed up Red River. At the latest dates it was at Alexandria. The action was gallantly contested. The First and Second Illinois; 58th, 119th and 89th Indiana, and 24th Missouri, charged over deep ditches and amid a galling fire; and within twenty minutes after the order to charge was made, the Federal flag was floating on the enemy's works. 325 prisoners, including 24 commissioned officers, were captured, with eight guns, a lot of small arms, an immense quantity of assorted ammunition and a large quantity of commissary stores. De Russy is a formidable work, quadrangular in shape, bastions and bomb-proofs covered with railroad iron. A powerful water-battery is connected with the fort, the casemates being capable of resisting shot and shell of the heaviest caliber. About 800 negroes were for a year constructing the earthworks. The destroying of them was to commence next day, and would take 3,000 men two or three days to complete it.

Admiral Porter has been busily engaged the last three days in removing obstructions from the Red River, consisting of rafts and piles driven into the channel. Transports are now proceeding up the river without interruption.

The enabling bills for Colorado, Nevada and Nebraska Territories, have been signed by the President.

Military operations in Virginia will commence much sooner than many suppose. General Grant will waste no time in idle reviews, but as soon as he obtains a knowledge of the material with which he is to operate, will make his offensive movements, and those promptly.

The House instructed the Judiciary Committee to inquire into the expediency of proposing amendments to the Constitution, by striking out the article which forbids the laying of a tax on articles exported from any State.

The report of the capture of Fort Powell, near Mobile, by Admiral Farragut, is confirmed by the rebels. Date not given.

The World's Baltimore correspondent gives the strength of the rebel army as follows: Under the Department of Virginia, 70,000 infantry, and 250 pieces of artillery with 5,000 men, and 15 regiments of cavalry of 15,000 men; at Richmond and elsewhere 40,000; total under Lee's orders, 130,000 men. In the Department of the southwest, 75,000 men; in East Tennessee under Longstreet, 20,000 men; in Department of the Gulf, 30,000; west of the Mississippi, 15,000; at Mobile, 5,000; total number of troops, 275,000 [?]

☞ **Holloway's Pills.—Female Complaints.**—No other medicines of the day possess the property of restraining those inordinate flows incidental to the gentler sex, and which are the sad results of nervous debility or unfeebled constitution. Thousands of females in America owe their existence and the actual enjoyment of health to the use of these celebrated remedies. Their nature is so simple that they may be taken by the most delicate female with perfect freedom and safety.

Sold by all Druggists, at 30c, 75c, and $1 10 per box.

HOLLOWAY'S PILLS and OINTMENT may be always obtained of Messrs.
CRANE & BRIGHAM,
cor. Clay and Front streets, San Francisco, Cal.

☞ **Ayer's Cherry Pectoral**—the world's great remedy for Colds, Coughs, and Consumption.

FOR SALE, TO LEASE, ETC.

A Fine Ranch

IN MENDOCINO COUNTY.

A FINE GRAIN AND STOCK RANCH of 900 acres under fence, in Mendocino County, will be offered at a bargain if applied for soon. Together with this is a Stock Ranch of some thousand acres of mountain land which goes with this Ranch, being Uncle Sam's land.

The Ranch is about 80 miles from Petaluma and on the great mill road to the Navarro, Albion, and Mendico & Noye's mills.

The location is pleasant, having the Redwood Hills for a back ground, with a fine valley tract—one hundred and sixty acres valley land, mostly under cultivation—yielding fine Barley, Oats, Wheat, Hay, Corn, etc. The crop of Hay is fine.

This Farm will sustain a herd of 300 Cattle, and is a grand Ranch for raising Stock, Horses, Mules, or Hogs, and a good place to raise Poultry. There is an orchard of two acres of bearing Trees. Vegetables grow well.

There is on the place a fine two-story frame Building, in which was put 30,000 feet of lumber, also Granary, Smokehouse, and Barn. The vicinity to the Redwoods gives an opportunity to improve, as Lumber is cheap and Timber handy.

There are, at present, good Tools, Implements, Harvesters, Plows, etc, on the place; also some furniture. The House has been used as a Hotel and Store, and is also the Stage House. Hay, Grain, and Produce can always be sold at good prices.

There is also a herd of 100 head of Stock which will be sold at a bargain.

This is a rare chance, and worthy the attention of those who wish a good Home, a good Farm, and a profitable business. Prices reasonable. For particulars inquire of Editor Farmer. 21-1

A Fine Ranch in Contra Costa County.

A FINE RANCH IN THIS COUNTY IS NOW OFfered for sale at a Bargain, if applied for soon, as it will be sold at a price worthy special attention.

The Farm contains 208 acres; 70 acres of this are fenced—the balance is well and heavy timbered. This Farm will cut 2000 cords of wood, enough to pay for the Ranch.

It is an excellent Hay and Grain Ranch and the products sell well and at good prices on the spot, this being the head of navigation and near market: 8 miles from Martinez and 4 1-2 miles from Pacheco.

The Title is good and possession given immediately. The Buildings are common, but the Land is No 1. For Price and Terms inquire of the Editor of this paper who will give all particulars.

Farms for Sale!

THAT VALUABLE TRACT OF LAND IN SONOma County, lying between Sonoma and Petaluma Creeks, and bounded on the south by the San Pablo Bay, known as the property of G. P. Swift, Esq., containing fourteen thousand acres of land, is offered for sale in Lots or Farms to suit purchasers.

Most of this tract of land is suitable for cultivation, and has soil of the best quality. It is accessible to market, being adjacent both to the Sonoma and Lakeville landings—is well watered, has an unexceptionable climate, and is not surpassed in any respect by any tract of the same size in the State.

No better opportunity, it is believed, will ever be offered for the purchase of desirable farms at a low price and upon easy terms.

There is a very large amount of fencing on the tract, the entire body of land being enclosed.

The Petaluma Boat touches daily, each way, at the Lakeville landing, which is about a mile from the nearest point.

In addition to the regular Steamer landing places, there are numerous suitable landing places along the entire water front of the tract.

The Sonoma Embarcadero is at one side, thus furnishing a convenient access to the San Francisco market at all seasons.

Persons desiring to purchase farms of any required size may apply to the undersigned, at the office of Haight & Pierson, 622 Clay street, San Francisco, or at the store of Mr. Paulo, Sonoma.

WILLIAM BIHLER

Ayer's Pills.

ARE YOU SICK, FEEBLE, AND COMPLAINING? Are you out of order with your system deranged and your feelings uncomfortable? These symptoms are often the prelude to serious illness. Some fit of sickness is creeping upon you, and should be averted by the timely use of the right remedy. Take Ayer's Pills, and cleanse out the disordered humors—purify the blood, and let the fluids move on unobstructed in health again. They stimulate the functions of the body into vigorous activity, purify the system from the obstructions which make disease. A cold settles somewhere in the body, and obstructs its natural functions. These, if not relieved, react upon themselves and the surrounding organs, producing general aggravation, suffering and disease. While in this condition, oppressed by the derangements, take Ayer's Pills, and see how directly they restore the natural action of the system, and with it the buoyant feeling of health again. What is true and so apparent in this trivial and common complaint is also true in many of the deep-seated and dangerous distempers. The same purgative effect expels them. Caused by similar obstructions and derangements of the natural functions of the body, they are rapidly and many of them surely cured by the same means. None who know the virtue of these Pills will neglect to employ them when suffering from the disorders they cure, such as Headache, Foul Stomach, Dysentery, Bilious Complaints, Indigestion, Derangement of the Liver, Costiveness or Constipation. As a Dinner Pill they are both agreeable and effectual.

Price 25 cents per box; or 5 boxes for $1.

Prepared by Dr. J. C. AYER & CO., Lowell, Mass.

Price 25 cents per box. Five boxes for $1. Sold by Crane & Brigham, San Francisco, R. H. McDonald & Co., Sacramento, and all dealers in medicine. 6eo3m

THREE PREMIUMS for BEST Varieties FOREIGN GRAPES.

150,000 Grape-Roots

From imported Foreign, and American Vines, of my own importation, FRUIT TREES, Etc., Etc.

Having imported myself from France, Germany, Italy, and Dr. Grant of N. Y., I offer for sale this season, as choice a lot of FOREIGN GRAPE-ROOTS and CUTTINGS as can be had in this State, and as cheap as any reliable nurseryman will sell. All the Vines and Trees have borne fruit with me, and I guarantee everything I sell to be TRUE TO NAME, or refund the money.

AMERICAN VARIETIES GRAPE-ROOTS, 1 and 2 years old, and Cuttings:
Delaware, Diana, Concord, Iona, Union Village, Lincoln, Anna (white), Catawba, Isabella, etc.

EUROPEAN VARIETIES GRAPE-ROOTS, 1 and 2 years old, and countless numbers of Cuttings:
Tokay, Black, red, and white Burgundy (Pineaux), Traminer, Rulander, Madeira Winegrape, Riesling, white, red, and black Frontignan, Malaga, Paraley, Cannon-Hall and White Muscat of Alexandria, and over 100 varieties more.

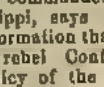
ALSO:—10,000 rooted vines 2 and 3 years old, LOS ANGELES, very cheap, and any amount of Cuttings of all varieties.

Also a limited lot of
DOWNING'S EVER-BEARING MULBERRY TREES
1 year from bud, extra large;
French, German, and Swiss Prunes (Fellenberg's Zwetsche).

....ALSO....

Pear, Apple, Plum, Peach, etc; Lawton Blackberries, English Gooseberries, and all kinds of Trees, and Shrubs. Cions unlimited, and cheap, of the above.

I intend to close out the Nursery Business, and sell as low as the lowest. For prices or orders, send per Wells, Fargo & Co. or mail, to



Louis E. Miller's
Mountain Vineyard,
"SOLLAH,"
Rattlesnake Bar Postoffice, Placer Co.
January 1, 1864. 20-20

New Native Apples.

WE INVITE THE ATTENTION OF PLANTERS of California to our collection of

NEW

Native Apples,

Of which we have a remarkably fine and thrifty stock, embracing a large variety obtained from all parts of the South and West. It undoubtedly contains many varieties which will prove eminently suited to the soil and climate of California. Catalogues can be obtained at the office of the California Farmer.

☞ PACKING done in the best manner and shipments from New York, Philadelphia, or Baltimore.

EDWD. J. EVANS & CO,
6 YORK, Pennsylvania.

GOD MADE MAN, AND MAN MADE MONEY
God made Bees, and Bees made Honey;
Men and Money, and Honey and Bees,
There are spurious kinds of all these.
But if you want pure California Honey,
Come to Washington Market with your Money,
In all shapes you'll get it if you call,
At Howard & Kneller's Honey Stall.
'Tis said, some folks their Honey mix,
But it is always pure at 76,
Now when your friends to market you bring,
Be sure and come to the Eastern Wing.

SAN FRANCISCO AND SAN JOSE RAILROAD.

Two Trains Daily, Each Way

CHANGE OF TIME

ON AND AFTER FEBRUARY 15, 1864, the San Francisco and San Jose Railroad Company will run trains each way, daily, leaving the Depot on Brannan street, between Third and Fourth, for San Jose and intermediate stations, as follows:

Leave San Francisco at 8 a. m., and 4 p. m.
Leave San Mateo at 8:55 a. m. and 4:55 p. m.
Leave Redwood City at 9:20 a. m. and 5:20 p. m.
Leave Santa Clara at 10:10 a. m. and 6 10 p. m.
Arriving at San Jose at 10:20 a. m. and 6:20 p. m.

RETURNING.

Leave San Jose at 7:30 a. m. and 3:30 p. m.
Leave Santa Clara at 7:40 a. m. and 3:40 p. m.
Leave Redwood City at 8:30 a. m. and 4:30 p. m.
Leave San Mateo at 8:55 a. m. and 4:55 p. m.
Arrive at San Francisco at 9:50 a. m. and 5:50 p. m.

FREIGHT.

Our road being completed from the City of San Francisco to the City of San Jose, we are prepared to take Freight to either end of the line, or to and from any Station on the Road, at the lowest rates.

COMMUTATION TICKETS.

Parties wishing to commute between here and San Jose, or between Stations, can procure tickets at greatly reduced rates, by applying to any Station Agent, or at the office of the Company.

☞ Passengers can reach the Depot by either the Third or Fourth street lines of city cars.

A. H. HOUSTON,
21-3m General Superintendent

THE PEOPLE'S OPPOSITION STEAMSHIP LINE FOR NEW YORK VIA PANAMA.

GREAT REDUCTION IN RATES

THE NEW, FAST, AND SPLENDID STEAMSHIP

(2300 TONS.)

THOMAS H. MORTON.....Commander

Will be dispatched for

PANAMA,

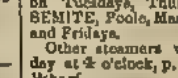
From Mission street Wharf at 9 o'clock A. M.

Connecting at Aspinwall, by the PANAMA RAILROAD, With the splendid Steamship

ILLINOIS

2,500 Tons.

FOR NEW YORK.



Passengers are landed at Panama, immediately on arrival by the Panama Railroad Company's Steamboats. The Company have also wharf facilities at Aspinwall. A Surgeon Master will be sent on each steamer.

For further information, apply to
I. K. ROBERTS, Agent,
5-td No. 101 Battery street, cor. of Pine, up stairs

California Steam Navigation Company

Departure daily from Broadway wharf, at 4 o'clock, P. M.

CARRYING UNITED STATES MAIL.

THE FAST AND SPLENDID STEAMERS
CHRYSOPOLIS and YOSEMITE

Will leave on alternate days for SACRAMENTO, at 4 o'clock p. m., from Broadway wharf.

Steamer CHRYSOPOLIS, Chadwick, Master, will leave on Tuesdays, Thursdays and Saturdays. Steamer YOSEMITE, Poole, Master, will leave on Mondays, Wednesdays and Fridays.

Other steamers will also leave for STOCKTON every day at 4 o'clock, p. m. (Sundays excepted), from Broadway Wharf.

For Marysville and Intermediate Landings, Every Day.

Steamer YOUNG AMERICA, Littleton, Master, and Steamer SWALLOW, Summers, Master, will leave Sacramento, alternate days, at 6 o'clock a. m.

ONE TRIP A WEEK FOR COLUSA, RED BLUFF, AND INTERMEDIATE LANDINGS.

The steamers LARK and GEM will leave for the above named places on SATURDAYS, at 7 o'clock, a. m. from the Storeship, foot of K street, Sacramento.

For freight or passage by any of the above boats, apply on board, or at the Office of the Company, corner of Jackson and Front streets.

v17-13 J. WHITNEY, JR., President

CALIFORNIA FARMER.

List of Agents.

(Our Subscribers can send money by MAIL to the Register at the Post-office, and the money will come duly and sure.)

Wells, Fargo & Co., at all their Offices in the State
Postmasters, throughout the State are requested to act
J. W. Sullivan, Washington street, San Francisco.
J. W. Sanborn, Benicia.
Postmaster, Napa City and County.
A. B. Webster, Brooklyn.
Postmaster, Iona Valley.
Timoty Malon, San Rafael, Marin county.
E. Levy, Bolinas and Olema, do
Knyes & Barker, and Dutton & Barton, Tomales.
Col. R. J. Preston, Preston's Point.
R. Fowler, Postmaster, Copperopolis.
Mr. Hunt, Postmaster, Murphy's.
W. J. Swasey, Eureka, Humboldt county.
Knapp, Burrell & Co., Portland, Oregon.
J. Bigg, Esq., Belmont Nursery, Victoria, V. I.
C. M. Saxton & Barker, booksellers, New York City, N. Y.

. Subscribers can always form Clubs and transmit either of the Expresses, or with perfect safety by Mail.

CALIFORNIA FARMER AND JOURNAL OF USEFUL SCIENCES.

VOLUME XXI. SAN FRANCISCO, CALIFORNIA: FRIDAY MORNING, APRIL 1, 1864. NUMBER 9.

The California Farmer.

AND JOURNAL OF USEFUL SCIENCES.

PUBLISHED EVERY FRIDAY MORNING,

BY WARREN & CO.

Office—No. 220 Clay street (up stairs), below Battery, SAN FRANCISCO.

TERMS OF SUBSCRIPTION--IN GREENBACKS.

By mail, for one year, $5; for six months, $3 50. For a club of five new subscribers, a sixth copy will be sent gratis. To City subscribers, delivered by carrier, 12½ cents a number, or $6 a year in advance.

☞ Advertisements and Subscriptions must be paid for in advance.

JOB-WORK—Of every description, done with promptness, at fair rates orders will be faithfully attended to.

☞ All letters on business connected with the office should be addressed to PUBLISHER CALIFORNIA FARMER, San Francisco, Cal.

The Orange.

We clip the following from the Bulletin of the 29th inst..

"The Orange Blossom, and the Green and Ripe Fruit of the same Bough.—We were shown today a small bough plucked from an orange-tree growing at Los Angeles, which, considering the season and climate of California, is something of a curiosity. The bough was about two feet long, the small twigs at its extremities spreading out about that width. On it were six large full grown oranges, two one-third grown green ones, and a dozen buds just beginning to blossom. Two things were plainly shown by this specimen, viz: that we can grow our own semi-tropical fruits; and there being no frosts in the vicinity of Los Angeles, that section of country for the growing of sugar cane and cotton, might be successfully tried."

It would appear by the above article that an *orange tree* with ripe fruit, green fruit, and blossoms, at the same time was a phenomenon of rare occurrence; but while we can hail such a sight with intense pleasure and satisfaction as proof positive that Los Angeles can grow the orange successfully, it should be borne in mind that *good healthy orange trees* always present the same appearance in their fruiting season: ripe fruit, green fruit and blossoms. We are also glad to know that we have other places besides Los Angeles where oranges can be successfully grown. Gen. Vallejo, at Sonoma, has grown oranges in quantity for several years, having large fine trees of 8, 10, and 12 feet high, loaded with fruit in the autumn.

Doctor J. Strenzel of the Alhambra Gardens, two miles from Martinez, has large fine orange trees on which he has grown as beautiful oranges as were ever grown, some of which we have now on exhibition at our office. We make these notices in the spirit of congratulation, for the success of which we have proof in the cultivation of this delicious fruit.

As to having no frosts in Los Angeles, the Bulletin is as much mistaken there, as it is in a notice of a frost occurring across the Bay on Wednesday morning, making the statement that "frost is unusual at this time of year," whereas frosts most always occur at this time or later in the season It is not requisite to be exempt from frosts for rasing oranges.

How to Stop a Leaky Roof.—This receipt is rather late for this season, but it is easy to remember, so I will give it while I think of it. Cover the roof with canvass of some kind, boil coal tar till it lays still in the kettle; make a swab of a piece of sheepskin with wool on, and swab the tar on hot; give it two coats and the job is done. I had a roof that leaked, four years ago last fall; I simply covered it with drilling, and the next fall I swabbed two-thirds of it with pine or common tar, and the other third, as an experiment, I covered with coal tar as above; the result was that the part covered with pine tar, all rotted and came off in one year, while that portion covered with coal tar, is apparently as good as ever. A. Clark.

Sandwich Island News—Agricultural Meeting.—By the arrival of the bark Smyrniote from Honolulu, we have news of the meeting held at that place by those interested in the cultivation of sugar-cane, coffee, cotton, rice, tobacco, etc. The growers of these articles intend to form a Planter's Society, which will tend greatly to promote their interests The meeting was on the 7th of March, at which prominent citizens made speeches, adopted resolutions, and arranged all the necessary details for an organization for the furtherance of these interests Success attend them.

Rich Strike at Carson Hill.—We learn by a private letter from an old citizen of the county to the Calaveras Chronicle, that several rich strikes have been made during the past two weeks in the Melones mine, situated on Carson Hill. It is said that $30,000 worth of gold was thrown out by one blast. Carson Hill is traditionally one of the richest mining sections in California; as early as '51 over $1,000,000 worth of dust was taken out of the Morgan claim. It now bids fair to equal its early fame and create the same excitement that it did in the palmy days of gold mining. It is refreshing to hear of gold-bearing quartz as rich as the famous argentiferous ledges of Washoe.

(For the California Farmer.)

The Culture of Tobacco.

Editor California Farmer:

As some of your readers wish for information relative to the culture of Tobacco, and having a just appreciation of your noble endeavors to develop the almost inexhaustible agricultural resources of California, I will endeavor (should no abler pen volunteer) to describe the whole process of raising and curing, as well as my humble abilities will admit. It is simple enough to raise, but more difficult to cure properly from written directions, however definitely given.

Tobacco, which was first introduced to the world about 300 years ago, has undergone more persecution than any other plant that grows; the despots of Europe have obtained fabulous sums from its taxation; the medical faculty have hurled their anathemas unsparingly upon it; and last, though not least, crinoline beauty has frowned upon it incessantly; yet in the face of this triple array of physical, moral, and uninterrupted opposition, its consumption has been steadily on the increase.

Some, however, may object to its culture from a moral stand-point. Well, kind reader, in this, as in every other transaction of life, just

> Where you find your conscience gripe,
> Let that aye be your border.

But if you are determined to raise the weed, then let it be A No. 1; you will find a material difference when you bring it to market—between eight and sixty cents a pound. In selecting your seed, purchase from a responsible Seedman. I prefer imported, and if five or ten years old, and properly kept, all the better. Sow Virginia for pressing; Connecticut Seed Leaf and Havana for cigars; the seed may be sown any time from the first of Feb. to the middle of April. To test the seed, throw some on a hot stove or fire; if it burns with a cracking noise, it is good; otherwise it is not. The soil should be rich, loose, and deep, and if near the coast should be protected from the winds; one man will attend to about five acres until harvesting; 1500 pounds may be considered a fair yield in California.

The actual cost of raising it when you have land, team, shed, etc, will be about five cents a pound; have never kept account of expenses, but this is pretty near the figure. Our tule lands will doubtless give a large crop, but whether the quality will be equal to that raised on the foot-hills, may be considered a question open for debate; it derives its quality in a measure, without doubt, from the soil upon which it grows.

You should now take into consideration the sheds required for curing. A stick five feet long will hold fifteen plants, which must be six inches apart and about four feet between tiers; thus a barn 30 feet long, 10 feet wide, and about 15 feet high, will hold 5,400 plants, or some over an acre, besides, if the roof be pretty straight it will hold about one-half tier; by this you can easily figure up the amount of shed-room required.

We now come to the seed-beds, which should, if possible, be a virgin soil and southern slope, a plot of brush is best, which should be burned on the beds; then dig over and rake several times, or until the soil is very finely pulverized, and mark into beds four feet wide, so you can weed without treading on the plants. To a bed four feet wide and fifty feet long, sow a large tablespoonful of seed, and if this should do well, will give plants enough for an acre; but it is not safe to trust to less than twice that amount. Mix the seed in fine ashes first, beat the beds down with the back of a hoe or shovel, then take half your ashes and sow lengthways and the other half crossways the bed; rake lightly and beat down the bed again; all this is necessary so that the seeds may not be covered too deep. Now if your beds have been properly made they will be moist on the surface, at least in the mornings; if not, they must be kept so with water, say about blood-warm: this is the grand secret of having plants come good; a weak solution of gunpa and water is good for the growing plants. There is now nothing to do but keep the beds free from weeds and bugs (as shown in a former article) and prepare the land for the reception of the plants, which should be plowed, harrowed, and rolled, until it is pulverized very fine and deep, for upon this, in a great measure, will depend both the quantity and quality of the crop, but to follow it through all the various but simple processes which it must undergo, would require too much space, probably, in your journal at present. I will, therefore, from time to time, as the season progresses (should you desire it), give such information as may be deemed necessary. J.D.

Hunting the Beaver.—The Independent relates that a Stockton hunter, who has passed the season on the sloughs and among the tules, some forty miles west of this city, has killed from three to four hundred beavers and otters since the 1st of January. The skins of these animals are worth from two to three dollars, according to size and quality. So he has done a very good business independent of the coon, duck and other game killed during the time.

New York Wool Market.

Walter Brown's Monthly Wool Circular, issued March 1, 1864, says:

We have to report another month of inactivity in the Domestic Wool Trade, and, as a consequence, a slight decline in prices.

Strictly coarse qualities, being in light stock and in some demand for Army goods, have receded but little in price; and medium grades being most in request, have very nearly maintained their value. Fine fleeces, which had been firmly held for several weeks, finally gave way to the pressure upon the market, and during the last few days sales have been made at a reduction in price of from 3 to 5 cents per pound.

The aggregate stock of fine domestic Wool is large, and as the arrivals of the best grades of foreign Wools during the past two months have also been large beyond precedent, and these Wools are being constantly forced on the market, by auction and otherwise, the effect has been unfavorable to the maintenance of prices. This somewhat unexpected condition of the market has no doubt been induced by the high prices which Wools have attained in the past year, and the largely increased consumption of them in this country. In accordance with the operation of the law of supply and demand, Wools have been attracted from the other markets of the world to this, as being the point of highest appreciation or value. And in the present instance it has happened, as it often must, that the influx from abroad has exceeded the demand for the article here, thus producing an overstock, which is necessarily followed by a decline of prices. To what extent the price of fine domestic fleeces may be affected by this result, it is now difficult to determine—while American gold sustains its present value we look for no material decline.

Pulled Wools have been in fair demand, and prices of the best pullings well supported. Inferior parcels are offered at low figures and sell more slowly. The entire stock is not large, and as the production will soon be reduced, owing to the advance of the season, we do not look for much decline in rates.

California Wools have received a fair share of the current demand, yet there has not been sufficient activity in sales to satisfy owners; as the result of this, we see announced a large sale of these Wools, to take place in this city on the 3d inst. Meanwhile, private operations are mostly suspended.

In Foreign Wools there has been a general activity—in finer fleeces by forcing them on the market, while the medium and low grades have been freely taken for Army kerseys and blankets. The market is well supplied with these Wools.

By late Foreign advices we learn that the prices of the better descriptions of Wool have not materially changed; while inferior, and the more irregular parcels, have been selling at a reduction of one-half to a penny per pound.

At the recent Liverpool sales but little Wool was taken for the American markets.

We have reported the following sales during the past month: Fleeces, 850,000 lbs., 65@82½c; Pulled, 375,000 lbs, 60@84c; 150,000 lbs California, 36@50c; 14,000 lbs Mexican, 34c; 15,000 lbs Santa Fe, 48c; 70,000 lbs Chilian, 30@33c; 17 bales Rio Grande; 1,050 bales Cape, 40½@42½c; 260 bales Mestizo; 430 bales East India, 54@60c; 350 bales Donskoi; 800 bales Mediterranean; 300 bales Cordova; 500 bales Constantine; 3,036 bales African, 32@50c; 200 bales Australian; 602 bales Penigeni; 85 bales Rabbat; 1,030 bales Provence, 40c.

At Auction.—858 bales Cape, 38@45c; 302 bales Damaged Cape, 31½@36½c; 7 bales Damaged Mestizo, 13½c; 1 bale Caracao.

In Boston, Fleeces and Pulled, 1,650,000 lbs, 70@87½c; 30,000 lbs Canada, 70@76c; 29 bales California, 33½c; 814 bales Mediterranean; 10 bales Scoured Australian, 135c; 257 bales Mestizo, 34@35c.

At Auction.—Fleeces and Pulled, 268,300 lbs, 54@78½c; 44,939 lbs California, 26@45c; 7,300 lbs Canada, 65@72c; 5 bales Washed Cape, 65c; 767 bales Unwashed Cape, 30½@39½c; 20 bales Algerian, 28½c; 20 bales Karnisar, 46½c; 60 bales Mogadore, 19@22½c; 53 bales Zigay, 31@33½c; 45 bales Boulavat, 50c; 24 bales Mestizo, 28½c; 20 bales Donskoi, 39c; 31 bales Persian, 30½c; 75 bales Smyrna, 24@31c; 277 bales Spanish, 24½@32½c; 112 bales French, 33½c.

In Philadelphia, Fleeces, 625,400 lbs 73@87c; Pulled, 17,500 lbs 72@73c; 130,000 lbs South American; 1,112 bales Donskoi; 100,000 lbs Rabbat; 143,000 lbs Foreign.

In Providence, Fleeces, 33,000 lbs, 77½@85c; Pulled, 31,000 lbs, 75@84½c.

The imports for the past month, as published, are: From Liverpool, 82 bales; London, 3,244; Marseilles, 4,034; Algoa Bay, 1,178; Havre, 272; Hamburg, 51; Bremen, 103; Antwerp, 574; Leghorn, 70; Odessa, 1,173; Montevideo, 27; Buenos Ayres, 210; Matamoras, 11; Aspinwall, 675; Bermuda, 1 bale. Total, 11,705 bales.

Total imports from January 1st to February 20th, about 27,500 bales against 19,000 bales to same time last year.

Prices current of California wool.

California, Unwashed Fleeces, in grades, 35@50c.
California Washed Pulled, 45@60.
California Common Washed Pulled, 35@40.
California Washed Fall Clip, in grades, 35@48.

Valuable Facts in regard to Education.

The Annual Report of the Superintendent of Education, John Swett, Esq., contains many important facts which we are glad to see published in this report. These facts are worthy the consideration and action of every friend of education. The extracts upon the subject of "change of teachers," the necessity of educating the children of the State "during the war." The vast number of children in California "that do not attend school," and the contrast between the "educated and uneducated soldiers," show that the cause of education is most intimately contented with and most materially influence our nation in her present struggle for existence as a free and happy Republic.

B. G. Northrop, the energetic School Travelling Agent of Massachusetts, says:

"In chemistry, in the arts and agriculture, experiments, however expensive, are often necessary and useful. Persevering trials and repeated failures usually precede and sometimes suggest valuable inventions. But of all experimenting, the most needless, costly, and fruitless, and yet the most common, is the practice of 'placing a new hand at the wheel, annually, or even twice a year, in our school-houses. When passing through Hurl Gate in a storm, some months since, I observed how much the apprehensions of timid passengers were quieted by the simple statement: 'Our good captain has run safely on this Sound for forty years.' The assurance that an experienced hand guided the helm at once inspired hope and confidence. But if false economy, prejudice, caprice, or favoritism placed new Captains or Pilots twice a year on our noble 'Sound steamers,' how soon would they be condemned and forsaken by an indignant public. And yet not a few prudential Agents in our districts, from mere whim or pique, or more often from open nepotism, waste, practice a system of change of Teachers, which introduces the place weakness, discouragement, and often retrogression, in the place of system, economy, efficiency, and progress. This is the prolific source of most serious defects now hindering the usefulness of our Schools. True, there has been an encouraging advance for some years in respect to the permanency of Teachers. But my own observation convinces me that there is a pressing need of far greater progress in this direction.

"The Teacher for the time being stands in the place of the parent. And what results would be realized in the family were a new step-father or step-mother to be semi-annually invested with parental authority? The picture of anarchy, and alienation, which this question suggests, need not here be drawn. The evil is hardly less serious in the School than it would be in the household. What would be the effect of a semi-annual change of Clerks and Book-keepers in our mercantile establishments, or of Agents and Overseers in our manufactories, or of Financiers in our banks, or of Masters of our merchantmen, or Commanders of our iron-clads, or of Doctors in our families, or of Pastors in our parishes? Shrewd men never make such blunders in business matters, although such frequent changes would be less disastrous to worldly enterprises than they are to the best interests of Schools. While the country is mourning over the sad loss of life and treasure by the frequent changes in the Commanders of our armies, let us not also practically deny the value of experience in the most vital interest committed to our charge at home—the training of our children."

Governor Bramlette, in his late message, pays the following eloquent tribute to the Public Schools:

"In the midst of dire calamities forced upon us by the rebellion, we should not permit the present troubles to make us forget our obligations and duties to the future. The education of our youth must be provided for. Our Common Schools should be cherished with earnest solicitude. We must feed the mind of our coming youth. And whilst we transmit to them an undiminished and an unbroken heritage of freedom, we should see that they be fitted to receive it and pass it down, not impoverished, but enriched, to their successors. Our Jacksons, our Clays, our Websters, have passed away, leaving us the light of their example, the wisdom of their counsel, the treasures of their fame, as part of our heritage. And last, though not least, be of the sage counsel, and eloquent tongue, and of the mold of manly chivalry, the type and embodiment of pure and lofty patriotism—that perfect model of a Kentuckian, John J. Crittenden, has been gathered to his fathers, and Kentucky has been left lonely and in tears. To our Common Schools we must look, as the nurseries of men, to fill their places and prolong their fame."

"The Secretary of the Board, Joseph White, closes his report with the following:

"Is it wise for legislators to fold their arms in apathetic indifference, when 20,000 children of school age, or twenty-five and one-half per cent are reported as "not attending any School?" Is this recognizing the principle "that it is the bounden duty of Government to provide for the instruction of all youth?" When the average length of time School is continued is only six months in the year, is it probable that the children will be more than half educated? When the percentage of daily attendance on the Public Schools is only twenty-five per cent of the whole number of children in the State of school age, and the percentage of attendance on the whole number enrolled is only fifty-five per cent, can the State be said to educate her children?

When California has only two hundred and nineteen free schools out of seven hundred and fifty-four Public Schools, can she boast of her liberality in the presence of the other loyal States whose Schools are *all Free Schools?*

If one State in the Union needs a system of Free Schools more than any other, that State is California. Her population is drawn from all nations. The next generation will be a composite one, made up of the heterogeneous atoms of all nationalities. Nothing can Americanize these chaotic elements and breathe into them the spirit of our institutions but the Public Shools."

The Massachusetts report says:

"The Common Schools of the Free States are now fighting the battles of the Union, and will triumph over the rebellion. Our Union armies are strong in an intelligence derived from the Schools. Educated minds makes better soldiers, as it makes men better for every other work. Educated men fight better than other men, because they put thought into war. Thus it is true that 'bayonets think.' The volunteer soldiers who sprang to arms from a thousand valleys of the North, from the hills of New Hampshire and Vermont, from the prairies of Illinois, from the shores of Maine and Massachusetts, from the machine-shops and manufactories, from the broad, sunny farms of New York, and Pennsylvania, and Ohio—came because they saw and felt the work of our Common Schools. Only a Nation thoroughly educated, like ours, its habits to meet the exergencies of the occasion. Europe looks with astonishment at us, unable to comprehend how a nation so unmilitary as ours, can rise up in a day armed for one of the greatest struggles the world has seen. She cannot understand how a people, unaccustomed to any restraint except its own will, can at once submit to the most arbitrary acts of Government, and to the surrender of all the guarrantees of freedom. She is amazed to see a people unaccustomed to taxation, clamoring to be taxed. While she is dogmatically declaring our Union at an end, she sees it rising up stronger than ever."

Natural Slate Pencils.—A writer in the Monterey Gazette says: I noticed not long since, in one of the interior papers, an article with the above title, or something like it. The writer went on to say, that there is a sort of seaweed found on the Coast of California, that answered all the purposes of a slate-pencil, etc. Those persons who live near the sea shore, will probably know at once what is referred to as "natural slate-pencils," but to those who live in the interior, and are not in the habit of seeing salt water, it may be interesting to learn that the slate-pencils, so called, are the spines of the sea urchin (or sea-egg as it is sometimes called). It is an animal of the genus Echinus, and of the family Radiata, or star-fishes. It is round and flattened like a large flat apple, with a thin shell over it, covered with movable spines two or three inches long, and not more than an eighth of an inch thick. These spines being movable where they are jointed to the shell, the animal, by this means, is capable of locomotion. Sea-eggs are very common everywhere on this coast, and are eaten by many people. The spines may be used, and frequently are used, for pencils, by school-children, to mark with on their slates.

The California and Columbia River Railroad.—Charles Barry, general agent of the California and Columbia River Railroad Company, has just returned from Portland, and will organize a party, as soon as possible, to complete the survey and location of the road. Mr. Barry informs us that he has made a thorough examination of the country between Jacksonville and Portland, and thinks the distance can be materially lessened in many places, and a road built on better ground than the route surveyed and reported by Mr. Elliot, particularly through Polk, Yamhill, Washington, and Multnomah counties; and that Jesse Applegate has recently discovered and surveyed a low pass through the Calapooya Mountains, a short distance to the west of the present traveled road, which is considerably shorter and several hundred feet lower at the highest point than the Poss creek elevation.—[Jacksonville (Oregon) Intelligencer.

A very useful apparatus is now on exhibition at the Patent Office, Washington, invented by Mr. F. N. Gisborne, the originator of the Atlantic cable, for communicating the signals required in working the engines of steamships, or in steering vessels of all sorts, by means of telegraphic wires. The communication is instantaneous, and the apparatus is so arranged as to make it trustworthy and certain. The officer on deck has only to move an index upon a dial under his hand to cause a corresponding movement to appear directly before the eyes of the pilot or engineer, whose attention is ensured by the ringing of the bell, as a part of the telegraphic movement. Meanwhile the action of the pilot or engineer, in response to the order, is telegraphed back to the officer by an automatic motion, so that all possibility of mistake is avoided. Mr. Gisborne's apparatus has been examined and approved by some of the highest nautical authorities in foreign countries and in our own, and has been actually used in several vessels. He has patents in the principal maritime countries.

It is questionable whether there is an instance in the history of the composition of our army to match the following, which we find in the Portland Advertiser: A widow in Union, Maine, who has twelve children, eleven of them boys, has just sent the eleventh son into the army. On the occasion of his enlisting, some officers and friends made up a purse of $200, and presented it to this patriotic matron, who said she was sorry that her other child was not a boy so that she might make still another offering to her country.

The Viceroy of Egypt is importing steam plows on so large a scale as to tax the manufacturing capacity of England. He will soon have a capital of nearly £200,000 in steam plows on his own estates alone.

Cultivation of the Grape on Dry Land.

The following practical essay, written by J. D. Mason, was published in the Ione Chronicle of October last:

When the emigration of early days saw the dusty plains and parched hill-sides of California, the contrast with the evergreen and fertile prairies which they had left, was so great, it is not strange that they felt discouraged and formed a very poor opinion of the agricultural resources of this State. It was believed that only the bottom lands along the streams would pay for cultivation, but as years rolled on, we found a few persons planting vines and trees around their cabins on the hill-sides, and raising fruit of a marvelous size and quality. In most of these instances, the trees grew in the vicinity of springs, or ditches, where they could be irrigated, but as water for any great portion of the land was out of the question, it was believed that it must remain unproductive. It did not escape their attention, however, that trees and shrubs covered the hills, notwithstanding the intense heat and want of rain for many months in the year. It was found that the seeds of trees and shrubs vegetated where the ground was covered with leaves; that under this natural mulching the ground was moist all summer, as it was under the straw in the thrashing yard, or under the refuse of a coal-pit. Mulching with straw was recommended for fruit trees, but this, besides being expensive, was slovenly and unsightly, and was adopted only to a limited extent. Cultivation of the soil has gradually superseded irrigation and mulching, and proves a very good substitute for the occasional rains which most of us thought would make such a delightful country of California, but theory without fact is of little use to anybody; practical results alone are valuable. Hoping to add something to the general stock of information on this subject, I propose to relate some of my experience in the cultivation of dry land and the means I have employed to retain the moisture in the soil.

The ground upon which I have experimented is the common red clay and gravel, varying from one to four feet deep, with a sandstone (lava?) subsoil; hard, tenacious, and seemingly impervious to water. In the spring of 1860, I plowed the ground with a common Peoria plow, about six inches deep, following in each furrow with a ball tongue, or narrow shovel-plow, subsoiling about four inches deeper, making ten inches in all. I planted about 1000 cuttings, of the Los Angeles variety, in rows about eight feet apart, intending to thin them out if they grew. The cuttings were an inferior lot, as I made the largest possible number of the stock I had. I cultivated the ground thoroughly with a horse hoe, as long as there was any rain to melt the soil together, and when dry weather came let it alone. The earth was moist, within three or four inches of the surface, all summer, while a portion of the same field sown to barley was dry to the depth of a foot by the first of August, notwithstanding a heavy rain on the 11th and 12th of July. About 750 of the cuttings lived through the season and made fair growth; some of them making an aggregate of fifty feet of root, but as rain sufficient to wet the ground seldom falls in July, I was not satisfied with the experiment of that season. I repeated the experiment in 1861, also this season (1863), with about the same success, except that the cuttings planted in '60 made larger growth than they have since, owing, as I believe, to the heavy rains in July—a hint for irrigating about that time. The ground so tilled is moist at the time of writing this (Sept. 20th), within a few inches of the surface, the cuttings still growing slowly. From these experiments it is fair to infer that grape cuttings will grow on dry red land without irrigation when properly treated. As a further evidence of the effect of cultivation in retaining the moisture, I will relate a little circumstance connected with the planting of the cuttings this season. To facilitate cultivating them I marked the hills of cuttings by sticking small water-willows two or three inches into the ground, a foot or more remaining above ground; many of these are growing, having made sprouts two or three feet in length. To return to the first experiment; I dug up and transplanted the excess of vines, leaving them about eight feet distant in the rows. I took care to save most of the roots, not leaving them out of the ground more than half an hour the vitality of the roots being preserved. At this time (1863) there is little or no difference between the size of the vines transplanted, and those where the cuttings were originally set.

I sometimes think that the thorough cultivation the ground can receive at the time of transplanting will more than compensate for a slight loss of roots. At any rate there is no material loss in transplanting, provided it is properly done. The vines first planted have been pruned rather closely, and the earth cultivated every season until the rains ceased. They made a good growth each season until about the first of August, when they apparently remained stationary, though the leaves did not fall until winter.

I have now, the fourth year from planting, a very fair crop of grapes, the bunches being of moderate size and rather more compact than is usual with this variety, the grapes being very sweet and high flavored, with more gummy coloring matter on the skin than on those grown on the bottom land. I think they have a more astringent flavor than ordinary grapes, owing to the excess of black pigment.

What kind of wine they will make I have no means of knowing, but should presume that it would rank among the heavy wines.

A few observations on the effect of growing vegetation on this ground, will close this article. A crop of hay weighing two tons to the acre when dry, will not weigh less than seven or eight when newly cut. Under favorable circumstances this moisture will dry out in one day. It is reasonable to suppose that the amount of water evaporated from the plant while standing is much greater, at least twice as much in a day, as the greater part of the moisture leaves the grass the first hour after cutting. Calling the evaporation from the standing grass ten tons, and ten tons more from the ground which is under grass or weeds, generally baked hard, and of course is parting with a great amount of moisture, and we have a total loss of twenty-five tons, or 5000 gallons of water from the soil each day, on each acre. All of the loss by the vegetation, and a greater part of that from the earth, can be remedied by cultivation. Grain fields dry out from two to four feet during the summer. The black sandy loam of our bottom lands is far less retentive of moisture than the red clayey land of the hills, though more easily kept mellow. The finer the soil, the greater its capacity to withstand drought.

It is a mistaken notion that plowing through the summer is beneficial. Any further cultivation than what is necessary to make a fine tilth of two or three inches is an absolute injury. To sum up, grapes can be raised on the dry land without irrigation, though a wetting of the roots, about July 1, is desirable, as they will make a better growth, and produce a larger crop. We may reasonably expect to see the chaparral on our hills give way to the vine with its purple clusters. Millions of acres of good wine land are vacant waiting the hand of intelligent industry. The richest placers will yet be found in our vineyards, which will afford homes for a greater and happier population than the richest mines.

Level Stalls for Horses and Cows.

L. L. Pierce, in a communication to the Boston Cultivator, states it as his opinion that horses and cattle are often seriously injured by the long continued practice of standing on inclined floors. He gives the following dimensions and directions to obviate this evil. The width of the stalls should be 4½ or 5 feet. We should like such of our readers as have given attention to the subject to furnish us the result of their observation:

The proper width of a horse stall is 4 feet. Length from partition in front, 9 feet; deduct 1½ foot for crib, and we have 7½ feet from crib to rear of stall. For the first 4 feet of the rear end of the stall, cut 2 inch hard wood plank into 3½-inch strips, and lay them ½ of an inch apart; spike them down at end. The remainder of the floor in the stall should be laid tight, of whole plank. The floor under the animals' fore feet being tight and the entire flooring secured, prevents the flow of any liquid manure forward. The interstices in the rear floor, conduct it back to where it flows into an iron gutter, through which are drilled inch holes to carry it below. Back of the gutter, (which is 3½ inches wide) is an iron plate 4 inches wide and ½ an inch thick, to take the wear of the horses' hind feet; both pieces of iron to be headed into the plank so as to be level with the bottom of the upper floor of the stall. The whole floor should not pitch over one inch. The better way is to have the forward floor level, and the rear or strip floor should not pitch half an inch.

Cow Stalls.—The floor in the rear of cows' stalls, should be dropped (or the one upon which they stand raised), 6 inches, in order to keep the animal clean. The floor upon which they stand should be just long enough for them to stand upon, without stepping down upon the floor behind. From the cribs, 6½ feet is long enough for small cows, and 6½ to 7 for large ones, is about right. These floors to be level.

Feeding Qualities of Oil-Cake.

Dr. Macadam, in a lecture on the feeding qualities of the oil-cake, makes the following remarks: "The ordinary food of stock, consisting of grass, hay, and turnips, is very bulky in its nature, and contains a small percentage of flesh-forming ingredients, accompanied by a large proportion of heat-producing constituents and refuse matter. The digestive system of the sheep and the ox are especially designed for making the best use of such food, but the fattening process proceeds slowly, unless an admixture of richer food is given. The oil-cakes which are now so extensively consumed by stock, supply in small bulk, and with comparatively little trouble to the animal, a large amount of flesh-forming ingredients. The feeding qualities of oil-cake are mainly dependent on the albuminous compounds to the extent of 20 to 40 per cent, accompanied by an average of 12 per cent of oil, but besides these there is a large amount of starch and woody fiber along with a little sugar and gum, and saline matter containing phosphates (the principal elements in bones). In short, we have present in an oil-cake the important feeding properties of the ordinary food of animals in a concentrated form, and readily capable, when partaken of by the animal, of becoming flesh and fat. One of the great advantages of a feeding-stuff with the composition of an oil-cake, is the presence of so much ready-formed oil.

Haymaking

We have alluded, repeatedly in our columns, to the successful method of haymaking pursued by our townsman, Gen. James D. Thompson. On Saturday last he filled our office with delicious fragrance, by bringing in a sample of hay, cured by still another process. The grass, cut about 11 o'clock in the forenoon of a day in July last, was, immediately, packed closely in a cask, the head of which was at once put in, its hoops driven, and the cask rolled into a shed. There it remained untouched until Saturday, when it was opened; and its contents were as sweet as the day when they were first packed. There was all the freshness, greenness and aroma of new-mown hay—not a suspicion of mustiness, nor a sign of decay—it was bright, flexile and juicy. At the present price of casks, this mode of curing hay would be expensive; but our neighbor suggests that grass, cut as this was, might be screwed into bundles in the field, and thus be equally well preserved.—[New Bedford Standard, Jan. 22d.

Los Angeles Tobacco.—The News makes this mention: We have seen tried samples of tobacco manufactured by M. Keller, of Los Angeles, which equal anything in the line of "old and far-fetched" stocks now in the market, for flavor, fine color and solidity. Mr. Keller raised quite a quantity of this, at present, "expensive weed," last season as an experiment, and now has his press with everything complete for manufacturing. He will put up about ten thousand pounds of tobacco, which will be—if we judge from the quality of the leaf and the samples we have seen—inferior to none, if it is not a superior article. We are satisfied that the trial, which is under the management of an experienced tobacconist, cannot fail of success.

MINERALOGY.

[Continued from California Farmer of March 25th, 1864.

Rocks.

Compact limestone usually breaks out easily into thick slabs, and are a convenient and durable stone for building and all kinds of stone work. It is not possessed of much beauty in the rough state. When polished it constitutes a variety of marbles according to the color; the shades are very numerous, from white, cream and yellow shades, through gray, dove-colored, slate-blue or brown, to black.

The *Nero-antico* marble of the Italians is an ancient deep black marble; the *paragone* is a modern one, of a fine black color, from Bergamo; and *panno di morte* is another black marble with a few white fossil shells.

The *rosso-antico* is deep blood-red, sprinkled with minute white dots. The *giallo antico*, or yellow antique marble, is deep yellow with black or yellow rings. A beautiful marble from Sienna, *brocatello di Siena*, has a yellow color, with large irregular spots and veins of bluish-red or purplish. The *Mandelato* of the Italians is a light red marble, with yellowish-white spots; it is found at Luggezana. At Verona, there is a *red marble*, inclining to yellow, and another with large white spots in a reddish and greenish paste.

The *black marble* used in the United States comes mostly from Shoreham, Vt., and other places in that State near Lake Champlain. The *Bristol marble* of England is a black marble containing a few white shell, and the *Kilkenny* is another similar. There are several quarries at Isle La Motte. It is quarried also near Plattsburgh and Glenn's Falls, N. Y.

The *porter* is a Genoese marble very highly esteemed. It is deep black, with elegant veinings of yellow. The most beautiful comes from Porto-Venese, and under Louis XIV a great deal of it was worked up for the decoration of Versailles.

Gray and dove-colored compact marbles are common through New York and the states West.

The *bird's eye* marble of Western New York is a compact limestone, with crystalline points scattered through it.

Ruin marble is a yellowish marble, with brownish shadings or lines arranged so as to represent castles, towers, or cities in ruins. These markings proceed from infiltrated iron. It is an indurated calcareous marl.

Oolitic marble has usually a grayish tint, and is speckled with rounded dots, looking much like the roe of a fish.

Shell marble contains scattered fossils, and may be of different colors. It is abundant through the United States. *Crinoidal* or *encrinital marble* differs only in the fossils being mostly remains of encrinites, resembling thin disks. Large quarries are opened in Onondaga and Madison counties, N. Y., and the polished slabs are much used. *Madreporic marble* consists largely of corals, and the surface consists of delicate stars; it is the *pietra stellaria* of the Italians. It is common in some of the states on the Ohio. *Fire marble*, or *lumachelle*, is a dark brown shell marble, having brilliant *fire* or *chatoyant reflections* from within.

Breccia marbles and *pudding stone marbles* are the polished calcareous breccia or pudding stone, alluded to.

Stalagmites and stalactites are frequently polished, and the variety of banded shades is often highly beautiful. The *Gibralter stone*, so well known, is of this kind. It comes from a cavern in the Gibralter rock, where it was deposited from dripping water. It is made into inkstands, letter-holders, and various small articles.

Wood is often petrified by carbonate of lime, and occasionally whole trunks are changed to stone. The specimens show well the grain of the wood, and some are quite handsome when nicely polished.

Marble is sawn by means of a thin iron plate and sand, either by hand or machinery. In polishing, the slabs are first worn down by the sharpest sand, either by rubbing two slabs together or by means of a plate of iron. Finer sand is afterwards used, and then a still finer. Next emery is applied of increasing fineness by means of a plate of lead; and finally the last polish is given with tin-putty, rubbed on with coarse linen cloths or baggings, wedged tight into an iron planing tool. More or less water is used throughout the process.

Quicklime. Limestone when burnt produces quicklime, owing to the expulsion of the carbonic acid by the heat. The purest limestone affords the purest lime (what is called *fat* lime). But some impurities are no detriment to it for making morter, unless they are in excess. *Hydraulic lime*, which is so called because it will set under water, is made from limestone containing some clay, silica, and often magnesia. The French varieties contain 2 or 3 per cent of magnesia, and 10 to 20 of silica and alumina or clay. The varieties in the United States contain 20 to 40 per cent of magnesia, and 12 to 30 per cent of silica and alumina. A variety worked extensively at Rondout, N. Y., afforded Prof. Beck, carbonic acid 34·20, lime 25·50, magnesia 12·35, silica 16·37, alumina 9·13, peroxyd of iron 2·25. Oxyd of iron is rather prejudicial than otherwise.

In making mortar, the lime is mixed with water and siliceous sand. The final strength of the mortar depends principally on the formation of a compound between water, the silica (or sand) and the lime; of course therefore the finer the sand, the more thorough the combination. In hydraulic lime, there is silica and alumina present in a thoroughly disseminated and finely divided state, which is favorable for the combination alluded to; and to this fact appears to be mainly owing its hydraulic character. Much less sand is added in making mortar from this lime than from that of ordinary limestone.

Pozzuolana forms a hydraulic cement when mixed with a little lime and water. Similar cements may be made with tufa, pumice stone, and slate clap, by varying the proportions of lime; these materials consist essentially of silica and alumina or magnesia with alkalies, and often some lime, and therefore produce the same result as with hydraulic limestone.

In the *burning of lime*, the most common mode is to erect a square or circular furnace of stone, with a door for managing the fire below. An arched cavity for the fire is first made of large pieces of limestone, and then the furnace is filled with the stone placed loosely so as to admit of the passage of the flame throughout: the carbonic acid is expelled by the heat, and when the fires are out, the lime now in the state of quicklime, or in other words, pure lime, is taken out. Great economy of fuel is secured by means of what is called a *perpetual kiln*. The cavity within is best made nearly the shape of an egg with the narrow end uppermost. The inner walls are of quartz rock, mica slate, or some refractory stone or fire brick, and between the inner and outer there is a layer of cinders or ashes, as in the iron furnace. Below are three or more openings for furnaces which lead into the main cavity, a few feet from the bottom; and alternate with these are other openings at a lower level for withdrawing the lime. The lime is taken out below and the stone thrown in above, and this may be kept up without intermission as long as the kiln lasts. Beneath the furnaces there are also ash pits. Such a kiln is most convenient for being filled and emptied when situated on a side hill.

The localities of limestone in the United States are too common to need enumeration. Hydraulic limestone is also abundant.

Quicklime is much used for improving lands; also for clarifying the juice of the sugar cane and beet root; for purifying coal gas; for clearing hides of their hair in tanneries, and for various other purposes.

How to be Rich.

This seems to be the great desire which takes pre-eminence of all others. It affects all people alike, whether they are Christians or Infidels. They agree in this matter, even if they differ in everything else. It becomes a question, then, of some importance, as all desire to grow rich, whether there is any way of obtaining riches? There is! and it is within the reach of almost everybody who is disposed to follow it. He may not become a millionaire, but he can get to be a thousandaire (if we may use the expression) and a thousand dollars would be a large sum to many a poor man. The reason, probably, why more do not become rich is, they do not pursue the right course which is as follows, and which is just as true as it is old-fashioned, and not likely to be adopted by young men generally. However, we will give the rule, for perhaps some would like to read it, if nothing more:

The secret is not in earning, but in saving. Almost any man can earn money, but few can keep it. A small sum is disregarded; yet a large one is only several smaller ones united. Unless little sums are laid together, how can there be a great one? Suppose a person saves a cent every day; at the end of a year he has $3 65—at the end of thirty years, about $100, including interest. How easy it is for any man to save a cent a day! How many can save ten cents a day, $36 60 a year, or about $1000 in twenty years, including interest!

He who spends six cents upon some idle fancy—for instance, in drink, cigars, fruit, etc, should at the same time reflect that he thus throws away the interest of a dollar for a year. Are there not often occasions in the course of a day when a person spends six cents, or one cent, which he might avoid without feeling the worse for it? There go his ten cents a day—his $1000 in twenty years—the very interest of which would perpetually afford him and his heirs a clear income of $60 per annum.

Many grow rich by saving, with very little facility for earning. Some old men have always lived well, and are very rich by mere saving, but who do not earn so much daily as their neighbors. They did not foolishly buy things which they could just as well do without; and therefore have money to lend, while others are obliged to borrow. This is economy; but join industry, and wealth accumulates fast.

Report Your Success.—How much that is known by our successful farmers, is never communicated! We see fields of the richest grain, excellent cattle, good fences, etc; farms that the mind singles out among inferior land, and is delighted at such prosperity, wondering how the improvement was brought about. Who has not such farms in his mind's eye? And yet these farms are unknown; only the neighbors are benfited by the example. Here is valuable matter. Why not report the success, how it was brought about, so that others may get the benefit? It matters not if it is said in a homely way, if it is only said.—[Valley Farmer.

A New Powerful Explosive.—Experiments were made at a Government quarry near Washington lately with a new kind of powder. This new explosive is composed of two ingredients, neither of which can be set on fire when separated. Its cost will be less than ordinary gunpowder. The experiments showed that with about two-thirds in weight as with ordinary powder, it produced quiet as much execution. The powder was also tried in a rifle with equal satisfaction. As this discovery has only been made during the past few weeks, it is yet an experiment requiring further tests before it can be entitled to full confidence.

CALIFORNIA MARBLE WORKS.

John Grant. P. J. Devine.

Grant & Devine,

Sutter street, bet. Montgomery and Sansome,

OFFER FOR SALE

MANTLES, GRAVE-STONES,

MONUMENTS, TOMBS,

TABLE-TOPS, GRATES, TILES,

And every description of Marble Work.

Sculpture, Carving, Lettering,

And all kinds of ORNAMENTAL WORK will receive special attention.

Grant & Devine are constantly in receipt, from their quarries in Tuolumne County, of the finest and purest Marble, which they manufacture into the above. They respectfully solicit the patronage of persons requiring any articles in their line.

MARBLE sold by WHOLESALE and RETAIL, in the slab and block.

GRANT & DEVINE,

20-13 Sutter street, between Montgomery and Sansome.

SEED WAREHOUSE

(ESTABLISHED IN 1850.)

S. W. MOORE,

IMPORTER

... AND....

WHOLESALE AND RETAIL DEALER

ALL KINDS OF

GARDEN, FLOWER, FRUIT,

Agricultural

....AND....

Ornamental Tree and Shrub

SEEDS,

NO. 408 CALIFORNIA STREET,

Old Number 110,

Between Sansome and Montgomery streets,

SAN FRANCISCO, CAL.

THE UNDERSIGNED HAS ESTABLISHED SUCH a correspondence and business in Europe as to enable him to secure from the very best source—the most careful growers—their choicest seeds grown, of which he will always be in receipt, and in endless variety, imported directly from France and England, from well known and responsible houses: some of the most prominent of which named in our catalogues.

It has been the experience of our best gardeners and growers, and all others who plant seed, that seeds raised in California are not fully reliable and cannot be for a series of years, until more capital, experience and scientific knowledge shall be given to the business.

HAS FOR SALE

Alfalfa or Chile Clover;	Hungarian Grass;
Kentucky Blue-grass;	Orchard Grass;
Red-top Grass;	Sainfoin Grass;
English Rye-grass,	Timothy Grass;
Red Clover;	White Dutch Clover,
Crimson Clover,	Lucerne, &c. &c. &c.

With many entire new varieties of Dry Seeds and prepared Lawn Grasses never before offered.

EVERY VARIETY OF

BEET, CABBAGE, CARROT, RADISH, TURNIP, CUCUMBER, MELONS, LETTUCE, ONIONS, TOMATO, EARLY AND LATE PEAS, BEANS, &c., &c., &c.

Tobacco Seed.

HAVANA, VIRGINIA, CONNECTICUT SEED LEAF, AND MARYLAND TOBACCO SEED.

COTTON SEED.

Guano from Johnston's Island.

FLOWER SEEDS (300 Varieties)

BULBS:

LILIES,	TULIPS,	HYACINTHS,
Amaryllis,	Anemones,	Ranunculus,
Narcissus,	Tuberoses,	Peony-roots,
	Gladiolus,	Iris,

and in endless variety, imported direct from France and Germany.

From his long experience in the Seed Business (over thirteen years), and his very extensive stock of goods appertaining to an establishment of this kind, he is confident of his ability to satisfy his patrons.

Native California Evergreen

TREE AND SHRUB SEEDS

For Exportation.

THE UNDERSIGNED, FROM HIS EXTENSIVE facilities and

Large Stock of Every Variety of Seeds

Can offer unusual inducements to

MERCHANTS IN THE TRADE, FARMERS AND LARGE RANCH OWNERS,

Who wish to be supplied in his line.

And would recommend that Orders for Seeds be sent DIRECT to the undersigned, through the Express or by Mail, otherwise parties run GREAT RISK of being imposed upon, in case their Orders should be filled by some Irresponsible Establishment.

☞ The Agents of Wells, Fargo & Co.'s Express are hereby authorized to act as Agents for the undersigned in taking Orders for Seeds and receipting for the same.

The undersigned is also permitted to refer to J. Warren, editor of California Farmer, who has had experience of twenty years in the Seed and Nursery business, and is conversant with the high value of imported seeds, and their superiority to all other sorts.

☞ Send for a Catalogue.

S. W. MOORE,

SEED WAREHOUSE,

408 (old No. 110) California street,

11 SAN FRANCISCO.

THE "GOLDEN HARP"

....AND....

THE "LEADER,"

TWO SPLENDID NEW AND IMPROVED STOVES just received, to which attention of purchasers is solicited.

....ALSO....

The BAY STATE and other Stoves,

With a large assortment of

Plain and Fancy TIN-WARE, Enameled & Tinned IRON-WARE, COFFEE-MILLS, BAKE-OVENS, SAD-IRONS, &c. &c. &c.

For sale by—

B. C. AUSTIN,

Pacific Tin-Works, 324 Clay street, below Sansome,

13 SAN FRANCISCO.

California Notes,

ABOUT

GRASSHOPPERS AND LOCUSTS.—No. 8

BY ALEX. S. TAYLOR.

SECOND SERIES.

Translated from the California Farmer of March 25, 1864.

The Countries affected by Locusts.

GENERALLY the superficial surface of the earth (above water) may be termed *australis Californica*, and the other half *contra Californica*—that is, one half is affected by the Locusts and the other half know very little of them. The following countries are the fields of their greatest scourges: South America, California, the old Oregon of ante 1851, Utah, New Mexico, Lower California, Sonora, Sinaloa and all the dry upland districts of Mexico and the elevated districts of Central America Also, Texas, Kansas and the great plains and elevated districts to the westward until the frontiers of California and further north are reached.

IN SOUTH AMERICA.

Paraguay, Uraguay, and the dry countries of the Argentine Confederation, the dry districts of Brazil and Chile, from Antacania to Atacama.

IN AFRICA.

The entire part of the dry districts of Africa, which is five-sixths of its surface, that is, leaving out the densely wooded districts of its Atlantic and northeastern coasts. The entire district of the great Mediterranean countries is the center of their developments, as here they have been known to its inhabitants for six thousand years of recorded history, or the earliest emergements of human affiliations. They rise from the cemeteries of the extinct races and tribes of men forgotten or unforgotten in the cradles of all their pro-California similitudes over the wide earth; as if the spirits inheriting their remains would come again to visit the scenes of their ancient inhabitance. for the earth contains millions on its surface, but in its chambers of death it holds millions of myriads of dead men's bones and dust. What a *revista* of poor mortality—sixty years of life, and thousands of years of unbroken sleep!

IN EUROPE.

The Locusts are found in the one-half or the South of the Russian empire, and in nearly all the districts of Austria, Poland, Italy, Greece, Turkey, and portions of France and Spain adjacent to the Mediterranean sea.

IN ASIA.

On this continent, they are known from the dawn of history as affecting the ancient countries of the Bible, Persia, all the countries of the Caspian and the Black seas, and in fine all the dry districts of India, and those of Russian Asia and of China. They also infest the Phillipine islands and many other sections of the Eastern Archipeligo subject to droughts in their uplands. We have met with no notice of their appearance in Japan, Australia or the Pacific islands.

IN CALIFORNIA.

July 1st. By the 15th of June, the grasshoppers begin to sensibly diminish throughout the county of S. B. A large flight of full grown ones, as we were informed, were blown down to San Buenaventura Mission Valley, where they caused great injury to the growing crops, and filled in *parts* the waters of the San Buenaventura creek and also the Saticoy river beyond. On 22d June many were seen of large jumpers, a full inch long, with the thighs inside of vermillion, and the shank of the legs blue. These saltones were very active, and seemed mature, and were found to be uniting with the males, also jumpers only, the same as those full fledged. These last saltones were found in company with many full fledged flyers of the ordinary kind, which has puzzled us not a little. We are inclined to think they must be either a species known or unknown, or perhaps they fill the offices of dignity or servility in the economy of the Locusts. At the date we speak of, they were found in great numbers in some places of the lower foothills, three miles from the sea. By the 25th June these numbers were so diminished in this county, that the cultivators renewed their sowings of vegetables and garden crops which had been destroyed by the chapulis, with larger quantities of growing grain. By the first of July these animals made their appearance throughout the valleys of the bay of San Francisco shores, and in the length and breadth of the Sacramento and San Joaquin valleys, as also in many valleys of the Sierra Nevada. They also made their appearance in the Washoe silver mining country. The following notice will suffice for the results of their appearance elsewhere in the State than Santa Barbara county, up to the first of July. Their appearance in the valleys of the Bay country is much later than in this latitude, and they continue their ravages thereaway as late as the first of October.

The Visalia Delta of the 6th of June, 1861, speaking of grasshoppers, says: "Their name is Legion," and they are on their way down to Visalia, as fast as legs, wings and an occasional fair wind can carry them. Last week they had got along on the plains nearly to the timber. They are coming in perfect swarms and eating up every green thing. In the vicinity of King's river and Millerton they have done serious damage to the crops. Jerry Brown who resides at Cottonwood, about eight miles above Millerton, "being duly sworn, deposes," that they have eaten up all his vegetables above ground and *commenced digging his potatoes*, etc.

The Farmers in the western portion of Placer county, on Coon creek, and in Sutter beyond Bear river, are experiencing serious inconvenience and loss from the grasshopper plague. The Placer Herald says these insects come from the West, and now cover a strip of country several miles in width. They have completely stripped several Orchards and injured the trees greatly. Some of the Farmers fear they will attack Grain which is yet soft. They cannot hurt Barley, as the heads are now too hard. The operations of the grasshoppers are always confined to the open country of the plains, and never extend towards the foothills further than the edge of the timber.—[Cal. Farmer, May 2, '61.

In California, Washoe and Utah.

THE WINGLESS GRASSHOPPER OF SHASTA.

Grasshoppers have infested many parts of California from the earliest days of which there is any record, and they have appeared so regularly and abundantly as to be regarded in some places as an ineradicable plague. The Digger Indians seem to have been long habituated to use them as an article of food, and relish them as much as any kind of subsistence they have. The winged as well as the wingless variety are collected by them for winter use. Both kinds are captured by sinking large pits and firing the grass in a large circle around them. To escape the fire and smoke, the grasshoppers take to the pit, when they are killed by combustibles being thrown upon them. Formerly, the winged grasshoppers were common in Shasta valley; but in the summer of 1856 they gave way to the large wingless kind, which have increased in numbers every year since, till the summer of 1860, when they were more destructive than ever before. During the last three years they have appeared in Fall River valley, but were only in destructive number last summer. They always have their origin in sheltered parts of valleys, where the temperature is higher in winter than the neighboring districts over which they roam in summer. In Shasta valley they breed from or near alkaline flats, where the ground never freezes; and in Fall River valley, they invariably start from the most sheltered part of it. In Shasta valley, after they commence migrating, they always go to the south or southwestward; while in Fall River valley, their course is northward. In both places they leave mountains behind them and traverse a level district; and this seems to be the only cause of the difference of direction pursued by them in the two valleys. In migrating, they are turned aside by mountains. Though they have been in Shasta valley since the summer of 1856, they have been confined to it, and have not crossed any of the mountains which separate it from other valleys. The windings of a river may turn them from their course a little; but if a stream lay across their route, or if embraced in a bend of it, they plunge into the water, in which vast numbers are destroyed. They can be driven by any rattling noise, and are very timid, alarm spreading rapidly through a considerable host of them, but the fright once over, they *invariably* return to their original course. A house is no impediment to them, as they crawl right over it, and they destroy all vegetation even to tobacco and stramonium, and do not seem in the least sensitive to poisonous substances, such as strychnine, arsenic, or corrosive sublimate, when these articles were mixed with other food which they devoured—neither did croton oil affect them. Nor do they seem sensible to pain, as if cut in two parts, the head often continues eating, and if legs are left they will crawl off and remain alive several hours, and the sundered hinder parts has been seen *to insert the oviporitor in the ground as if to deposit eggs!*

See note of Dr. E. P. Vollum, U. S. A., from Fort Crook, Cal., November 1860, of three and a half pages, with an engraving of the Wingless Grasshopper and two or three illustrations of methods taken by the settlers to stop their ravages; vide Smithsonian Report for 1860.

INDIAN TERMS FOR THE GRASSHOPPER.—FOOD SPECIES IN CALIFORNIA.

These may be found in the Vocabularies of our Indianology of California, lately concluded in the FARMER. They are as follows for the different localities named, that is, from San Diego county to the Upper Sacramento:

1. Calaveras county, on Stanislau river, the Grasshopper is called Limanuk. 2. Sacramento river, near Tehama, it is called Weelik. 3. Those near Petaluma, call it Chako. 4. Those near Santa Cruz Mission, Uros. 5. The Ekselenas of Monterey, Polokus. 6. Those near Santa Ynez Mission, Tukha. 7. The Santa Cruz Islanders termed it, Panawashoo. 8. Those of Santa Barbara Mission, Tue or Tueha. 9. The San Gabriel tribe, Waxet. 10. Those of San Luis Rey called od it Tamow. 11. In San Diego the grasshopper is called Tomow.

During our observations and notations on the California grasshopper, from 1855 to 1864, we have never been able to meet with any scientific and detailed description of the insect, nor have we yet met with its proper name and classification in the works on Entomology within our reach, and it appears to us that, though so common and abundant, it has not been described in a scientific manner, and we know its habits have not been, as an amateur naturalist, until these observations and investigations of our humble selves. There are at least four species we know of, in California. 1. The migratory of the coast and inner valleys, described in these notes, about one to two inches long. 2. A species twice as large, with wings, and differing in habits by not flying or living in masses, found on the hills of the coast from one to two thousand feet elevation, say in Santa Ynez and Purisima Missions. 3. The wingless grasshopper, or as it is called—cricket, of the north Sacramento mountains, Honey Lake, Washoe plains, Klamath plateau and parts of Utah, thrice as big as those of the migratory. 4. A wingless species, size of the migratory, very plentiful on the hills of Santa Barbara coast, and ranging near the migratories, some 700 feet above the sea, but it is different from the Honey Lake species, or No. 3.

The species inhabiting Lower California and so well described in Clavijeros history transferred to the 1858 notes, may be *the same* species as the migratory kind of Santa Barbara and Sacramento, but we believe it has never been scientifically described. It has, however, the same habits, and ought to be more accurately known to naturalists, as if it is *not* the same, there are five known species in the Californias, and probably several other unknown species. Strange to say, not a single grasshopper has been seen in Santa Barbara county during the drought from 1st May 1863 to 1st March 1864, in which time only three or four showers fell. Note of March 1864.

THE SEVENTEEN-YEAR LOCUSTS—PEACE AND WAR.

These locusts have made their appearance near Cleveland, Ohio, and have commenced their depredations. The outside shell of the insect is armed with a barbed, gouge-like sting, nearly an inch in length, with which the insect readily punctures the bark of the twigs of fruit and other trees as it moves along, inflicting a series of wounds which it fills with white eggs—cicatrices—that generally prove fatal to the stung limb. The eyes of the locusts are big and blood-red, yet it is not easily scared. On the wing of this year's locusts the letter "W" is plainly to be seen, which veteran observers translate to mean "War." They report that in peaceful times the letter "P," for peace was equally distinct. However this may be regarded by the credulous and superstitious, a fair "W" is now plainly printed on the filmy wings of the locust hosts.—[1863.

Opinions of Professors of Music on Jacob Zech's Pianos.

SAN FRANCISCO, December 29, 1863.

JACOB ZECH, ESQ:

Dear Sir: We, the undersigned, musicians of the City of San Francisco, do hereby give our unbiased opinion as to the workmanship, purity, power, and brilliancy of tone, and perfectness and durability of action, of the Grand Piano manufactured and exhibited by you. We have no hesitation in pronouncing them far superior to any piano, ever placed before us for inspection. At the late exhibition of the State Agricultural Society, the Committee saw fit to denounce your instrument and award the first prize for an inferior *square piano*, which we pronounce a great injustice to you, and we do hereby give our names, and warrant your pianos to be superior to any in the State. With the greatest esteem, and the most fervent desire for your success, and a wish that the people of California may give you justice, and not be controlled by money or the opinion of any body of men who are not qualified to judge of the merits of a Piano.

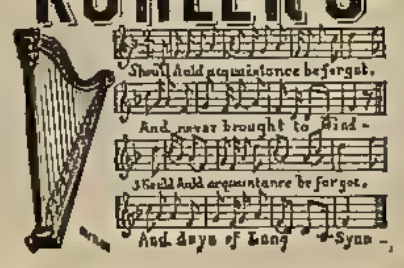
We are truly yours, etc,

R. HEROLD, Professor of Music,
GEO. T. EVANS, Pianist and Organist,
GEO. F. PETTINOS, Pianist and Organist,
LOUIS SCHMIDT, Pianist and Organist,
CHAS. STADERMAN, Pianist,
STEPHEN W. LEACH, Artist,
L. T. PLANEL, Professor of Music,
A. LAPFGER, Pianist,
ALBERT STOHR, Musician,
JOSEPH B. SCHMITZ, Musician,
EMILE TOUSSIN, Pianist,
CHAS. SCHULTZ, Pianist and Organist,
J. D. ENELL, Pianist, and Organist at Cathedral,
H. HOLZHAUER, Pianist,
WM. CROOKER, Pianist.

Letter to Jacob Zech.

[The following notice of my Pianos was received by me from the gentlemen named, professors of music at Sacramento, and approving, in very flattering terms, my instrument.—J. ZECH.]

Your Grand Piano was an excellent and beautiful instrument, full and rich and tone, in with all the excellencies that are desired in a Grand Piano.



Your Square Piano was one of extraordinary excellence, and beyond question the best on exhibition, having a full and powerful tone, yet, with that soft and delicate expression so desirable to an artistic ear. We feel gratified to know of your success in this art, and hope your efforts will be duly appreciated.

Wishing you all success, we are your friends,

CHARLES WINTER, Pianist,
CHAS. STADDERMAN, Pianist.
CHRISTIAN STATFIELD, Pianist,
GEORGE GREINER, Piano Maker.

SACRAMENTO, October 6th, 1863. 21-3m

KOHLER'S

"VOICE OF PRAISE,"

10,000

SOLD IN TWO MONTHS.

Teachers, and Leaders of Choirs, send orders immediately to

A. KOHLER,
Music Dealer, San Francisco.

NEW AGRICULTURAL INVENTION.

Sower for all Kinds of Grains.

A NEW SEED-SOWER of large capability is now offered for sale—the Right of Manufacture and Sale of it for the State of California, or for Counties

The Machine can be made with

Three, Five, or Seven Tubes,

and arranged to sow any kind of grains at any given distance, and to sow a greater or less quantity, to seed thick or sparce, as may be desired.

Of the construction of this Machine it can be made to sow on level ground or on ridges, and every variety of seed, from the smallest kind to Beans, Peas, Grain, Corn, etc.

THE SIMPLICITY,

as well as the accuracy, with which this Machine works, is wonderful. Every farmer can regulate it to suit every purpose and plan.

The Evenness and Precision

with which it sows the seed without wasting it, will secure great benefit to the farmer, as it makes a great saving of seed—enough in a short time to pay for the Machine.

These Machines can be made expressly for the sowing of COTTON,
HIGHLAND RICE,
TOBACCO,
SUGAR-CANE,

and all the new crops, of which this State will, ere long, become famous.

For all particulars of the Machine, call at Farmer Reading Rooms, where the Machine can be seen, and where the price and terms of the Patent Right can be ascertained. 5-3m

San Francisco, Mar. 4, 1864.

Agricultural Books.

BUCKEYE MOWER.

To Farmers:

WE, WITH GREAT CONFIDENCE OFFER THE BUCKEYE MACHINE, for this reason: knowing it to be Superior to any MOWER for sale, and that it will sustain the reputation it has made for the past THREE YEARS in surpassing any other Mower in the following respects:

Being better Made; much Stronger and more Durable; will Run lighter, Cut much closer with greater ease to the team, and no side draught.

We can bring twenty Farmers to say the Buckeye is SUPERIOR to any Mower, to one who can be found prejudiced against it.

The BUCKEYE MOWERS are of two sizes, cutting 4 feet, and 4 feet 8 inches.

The "Buckeye" as a Reaper.

The important advantages which belong to the BUCKEYE as a Mower are retained in the REAPER, and can be used either as a Mower or Reaper by attaching the Platform and Reel.

Though importing largely of them, we have been unable, for two years, to supply the demand.

They are better adapted to the wants of California Farmers than any Combined Machine for sale. It will adapt itself to every surface of ground, will run lighter and deliver its grain easier and better than any other Reaper. The Reaper's seat is directly over the axis of the Machine, instead of being on the Platform where it adds greatly to the draught.

We are

HORACE WATERS, Ag't,
No. 481 Broadway, N. Y.

THE DAY SCHOOL BELL.

40,000 copies issued. A new Singing Book for Schools and Seminaries, called the Day-School Bell, is now ready. It contains about 200 choice songs, rounds, duets, trios, quartets, and choruses, many of them written expressly for this work, besides 32 pages of the Elements of Music, which are easy and progressive.

Among the large number of beautiful pieces may be found, "Uncle Sam's School," "Don't you hear the children coming," "Always look on the sunny side," "The little lass," and "Little Lad," "Oh, if I were a little bird," "Bird of beauty," "Pretty pair tree," "Anvil Chorus," "Meet me by the running brook," etc. It is compiled by Horace Waters, author of "Sabbath School Bell," Nos. 1 and 2, which have had the enormous sales of 225,000 copies. Prices—paper covers, 25 cents, $20 per 100; bound 30 cents, $25 per 100; cloth bound, embossed gilt, 40 cents, $35 per 100. 25 copies furnished at the 100 price. Mailed at the retail price.

SABBATH SCHOOL BELL, NO. 1,

contains 144 pages, and nearly 200 tunes and hymns, and is the most popular S. S. Book ever issued. Among the most popular pieces are "Kind Words," "Eden Above," "Christian Hero," "Beautiful Zion," "I ought to love my Mother," "The Angels told me so," "In the Light," "Rest for the Weary," etc. Prices—paper covers, 20 cents each, $15 per 100; bound 25 cents, $20 per 100; clothbound, embossed gilt, 30 cents, $25 per 100.

SABBATH SCHOOL BELL, NO. 2,

Is an entire new work of 192 pages, and nearly two hundred and twenty-five tunes and hymns. One million of these Bells have been issued and are now ringing through this and other countries. Among the many choice pieces may be found, "Shall we meet beyond the River?" "There is a Beautiful World," "Sorrow shall come again no more," "Don't you hear the Angels coming?" "Thou, God, seest me," "Sabbath Bells chime on," etc. Prices of Bell No. 2, are same as Bell No. 1. Both numbers can be obtained in one volume, price, bound copy, 40 cents, $35 per 100; cloth bound, embossed gilt, 50 cents, $45 per 100. 25 copies furnished at the 100 prices. Mailed at the retail price.

WATER'S CHORAL HARP.

A new Sunday School Book of 160 pages of beautiful hymns and tunes. It contains many gems, such as "Shall we know each other there?" "Suffer little children to come unto me," "The Beautiful Shore," "Oh, 'tis glorious," "Leave me with my mother," "He leadeth me beside still waters," etc. Price, paper covers, 20 cents, $15 per 100. Bound, 25 cents, $20 per 100. Cloth bound, embossed gilt 35 cents, $30 per 100. Mailed at the retail price. It is edited by HORACE WATERS, author of "Sunday School Bells," Nos 1 and 2, which have had the enormous sale of over 200,000 copies.

Just published by HORACE WATERS,
No. 481 Broadway, New York.

THE NEW PATRIOTIC SONG BOOK

contains 96 pages of songs, duets, and choruses, both sacred and secular, including 14 pages of prayers for sick and dying soldiers, and soldiers' Scripture Manual. It is well suited for social singing, as well as Sabbath worship. Among the many beautiful pieces may be found, "Where liberty dwells is my country," "The Christian Hero," "Three cheers for our Banner," "Come sing to me of Heaven," Columbia, the Gem of the Ocean," "Freeman's Gathering," "Columbia's King forever," "Marching Along," etc Prices—paper covers, cents, $10 per 100. Mailed at retail prices.

THE HARP OF FREEDOM

contains 32 pages of songs, duets, and choruses for Freedom. Among the choice pieces we would name, "Fair Freedom's morn," "O let my people go," "Over the mountain," "They worked me all the day," etc. Price 5 cents single, 50 cents per dozen, $3 per 100; postage 1 cent each.

RUTH: A SACRED CANTATA

contains 126 pages. Words by Rev. Sidney Dyer, music by Prof. Call. This is an excellent book for concerts for the young. Prices—paper covers, 20 cents, $15 per 100; bound 25 cents, $20 per 100.

THE REVIVAL MUSIC BOOK

contains 73 pages of tunes and hymns, designed for revival, prayer, and conference meetings. Price in paper covers single copies 10 cents, $8 per 100. Mailed at the retail price

THE ATHENÆUM COLLECTION

contains 312 pages of tunes and hymns, new and old of the choicest kinds, for church, Sunday school, revival, missionary, temperance, prayer, and conference, and all kinds of sacred and social meetings. The music in this book has life and animation in it, like "Shining Shore," "Rest for the Weary," "Shall we know each other there?" "Shall we meet beyond the River?" "There is a Beautiful World," "Kind Words," "Sweet Hour of Prayer," "There is a Land of Love," "Suffer little children to come unto me," "God save the Nation," etc. Prices—single copies, bound, 65 cents, $55 per 100; cloth bound, embossed gilt, 75 cents, $65 per 100 Mailed at the retail price.

HORACE WATERS, Ag't
481 Broadway, New York,
Publisher of the above Books.

NEW INSTRUMENTAL MUSIC,

"Idlewild," "Polka Caprice," by M. Keller: "Morning Prayer," by W. F. Mudler; "Summer House of Roses," gallop, by Mrs. Parkhurst: "Le Piri Polka," "West Point March," 25c each. "Ometepe Wal z," "L'Armetee Waltz," "Frederica Waltz," J. G. Bernard, 40c each. "We are coming Father Abraham," "Always look on the Sunny Side," "Brilliant Variations," by Charles Grobe, 50c each. "Shall we know Each Other There," for Guitar, by Bloomer, 25c. "Sunny Side," set of 20 easy arrangements for the piano, 10 by James Bellak, and 10 by Mrs. Parkhurst, 15c each. Mailed free.

HORACE WATERS,
Publisher, No. 481 Broadway.

NEW VOCAL MUSIC.

"Land of the Brave and Free," Rev. G. S. Plumley; "Your Fortune is too Small for Me," Comic Song, Maurice; "I will Wait at the Gate for Thee," S. Holden; "We parted with a Cheerful Smile," M. Keller, "One by one the Stars of Evening," "The Flowers Bloom in Linden Vale," S. Lawrence; "The Morning is Dawning," H. S. Leland; "There is a Beautiful world," "Shall we Meet Beyond the River?" "The Angel's arm Hovering Near," "The Year of Love," "How Softly on the Bruised Heart," Mrs. Parkhurst; "Kindly Words and Smiling Faces," J. R. Thomas; "For the Dear Old Flag I Die," "Oh, Why am I so Happy?" S. C[illegible]ster; "Sabbath Bells, Chime On," Lowry, 25 cents each, mailed free.

The California Farmer.

SAN FRANCISCO:

FRIDAY .....APRIL 1, 1864.

☞ Those who receive a number of the Farmer with this paragraph marked, may understand that it is sent to them for their examination, hoping it will meet their approval and induce them to subscribe, and ask their neighbors to do so.

Postmasters and others, who may receive the paper, will oblige us by soliciting subscriptions, or putting it in the hands of those that will. Subscriptions may commence at any time.

Send for Sample Papers and get up a club. Address, Publisher California Farmer, San Francisco.

THE CALIFORNIA FARMER READING-ROOM AND MUSEUM OF NATURAL HISTORY.

320 Clay street—Marble Building—Up Stairs.

The Farmer's Headquarters.

The Editorial Rooms and Museum of the Farmer Office are always open, and an attendant ready to make a visit instructive to those who take an interest in the productions of our State. Samples of all productions: grains, grasses, fruits, models, inventions, minerals, and specimens in Natural History innumerable, are constantly being added.

Farmer's Reading-room.

Farmers and Mechanics, from the country, who visit San Francisco, should visit the Free Reading-room and Museum, at the Farmer Office. Members of the Press, and Strangers, are particularly invited to avail themselves of these rooms. Newspapers from every State to which we have access by mails, as well as Foreign Newspapers, Periodicals, and Magazines, are upon file and on the tables for use; a Good Library of hundreds of volumes, with works illustrative of Agriculture, Horticulture, and Floriculture, works for reference upon all Sciences, with a Cabinet of Minerals, Coins, and Curiosities of interest to the Naturalist, to which we invite all.

Immigration Office.

New comers to California can always obtain all needed information about Lands, Farms, etc, at the Farmer's Reading room, 320 Clay street. Most cheerfully we bid all welcome to our Sanctum.

Easiest Way to Pay Dues.

Those of our friends in the country who may visit our city, can always save us the trouble of sending bills out if they will favor us with a call, and at the same time they will find at our Museum and Reading room much to interest them.

Send along your Greenbacks,

Don't be afraid to send along your Greenbacks. These we TAKE AT PAR in payment for all back dues to the Farmer for subscription. So send them along, now is the time. This is a better speculation than mining stocks, for it is so pleasant to read a newspaper when one knows he has paid for it, the digestion is better and a man feels happy, and, if happy, then he feels rich. So pay prompt and you will "strike a lucky lead."

Transactions of Agricultural Societies.

We would ask of those Societies in the Atlantic States and Europe, to whom we send our Journal, to send us the transactions of their several Socities, so that we may give the benefit of their perusal to visitors, from the several States, who are callers at our Reading-rooms. By this means we can lay before them the progress of Agriculture in their former homes, and thus advance the interest of both Atlantic and Pacific States.

TO READERS AND CORRESPONDENTS.

We have several articles from M. J. U. and H. H C.; also from several other correspondents, on file. All in good time.

We call the especial attention of all tobacco growers to the excellent letter of J. D., in this number. It is a plain practical good sense letter, and will be valuable to all raisers of the weed, as the writer is familiar with the subject on which he writes.

We are glad our correspondent, St. Aubyn, has taken up the subject of Schools and Education. This contributor has been so long a teacher herself, that she can write earnestly and truthfully. Our readers will appreciate what is thus written.

Our new correspondent, "Editha," who sends us the "Touching Incident," will please excuse the omission of her signature to the communication; it was accidental.

ARTICLES RECEIVED AT THE CALIFORNIA FARMER EXHIBITION ROOMS, No. 320 Clay Street.

A copy of the new Bee Book, published by W. A. Flanders, Esq, A. M., at Cleveland, Ohio, was received by last mail. This is a neat little work bearing the pleasant title of *Sweet Home*, or *Nature's Bee Book*, containing the usual articles found in such a book: full directions in all the departments of labor of the apiarian. The book is small size of 60 pages, illustrated with neat cuts. The book is sold in the Atlantic States at 25c, and is a useful and cheap book, telling us of this simple and beautiful artist of nature.

"So work the bees,
Creatures that, by a rule in nature, teach
The art of order to a peopled kingdom."

We have received the Annual Report of Adjutant General Kibbe, a volume of 250 pages giving all the details of our military force. The volume is full of valuable statistical information, sound logical suggestions and facts showing that we have a gentleman and an officer at the State Department of our military, whose heart is in the work. To Gen. Kibbe our State owes a heavy obligation for the present efficient condition of our safety guard. Had it not been for the well disciplined military force of California, our condition would not have been as well as it is now, and we owe it in a great degree to General Kibbe.

The First Raspberries of the Year.—Messrs. Addison Martin & Co., of the Pacific Fruit Market, exhibited the *first* raspberries of the season; they were grown across the Bay, in Alameda county. The growers had gathered ripe fruit for some little time before; but this is the first in market. This early appearance of the raspberry in the market is proof of the forwardness of the season, being some *four* weeks in advance of former years. Messrs. Martin & Co., are ever prompt in having the earliest and best fruits of the season. Purchasers can always look for choice fruits at this stand.

The Magruder Money.—The money deposited by the Magruder murderers at the Branch Mint, in this city—$7,388—has been paid over by the Sub Treasurer, to the attorney of the widow. All honor to D. W. Cheeseman, for his firm and noble stand against the would-be robbers of robbers.

Speculators Gone in.—An Early Season.

Where are the famine-makers, the croakers, and —and—the speculators? We would always commend the active, energetic, and far-seeing merchant who, in view of a rising market, uses his intelligence by wise purchases, and, by that means, amasses a fortune. But the greedy speculator who forestalls a market, and with fictitious stories and paid for paragraphs raises a panic, and thereby attempts to make money upon the fears of the people, why, when the tables are suddenly turned on him, and he feels the falling market and *goes down with it* we have no pity or compassion—his every influence is bad on all within his reach.

That an attempt was made to create a panic in breadstuffs, take the files of newspapers and look at the various paragraphs, all tending that way. Who wrote those paragraphs? Who paid for them? So far as the effort carried money into the pockets of our hardy farmers and grain-growers, we rejoice. Our only regret is, that more of them did not sell. We wish that every bag of grain in the State had been in speculators' hands at 2½ cts a pound, paid for, and the money scattered over the State; that would have been a *glorious speculation* for the farmers.

It always seems strange to us that our farmers are not shrewd enough to take advantage of such times, and sell. Sell, should be the word with them. But, alas! they hold on for a bigger rise. They hold on *too* long, and when they let go, the market is down, and they wish they had sold. There is grain and breadstuff enough, and to spare—from every quarter of the State there is news of an excess of breadstuffs. We could find in three hours ride, just across the bay, in Alameda, Contra Costa, and Santa Clara counties, grain enough to supply our State three months, just in these counties, and that is one hundred and twenty thousand barrels flour, or its equal in wheat.

The late rains have started vegetation everywhere; crops, in many places, never looked so well, never were so forward; all kinds of vegetation are in advance; fruits and vegetables, as well as grain, are most promising; the heart of the husbandman is cheered by the prospect before him, for which let all be thankful, thankful indeed.

We venture the assertion, that on the 1st of May the ruling price of superfine flour will be only $5, if not less. For this belief, let it be remembered that millers everywhere had entered into contracts largely in advance, and it will take them sometime to complete these contracts. These were for flour at an advancing rate, consequently they are buyers of wheat, to fill these contracts, at a high price. When these contracts are over, they will buy wheat on their own account to keep their mills agoing, but it will be at a much lower price for flour; the consequence will be, down comes the price of flour, and down comes the price of wheat. If all evince this supposition time will tell. We think our logic sound. Mark the 1st of May.

Loss of Cattle in the Lower Counties.

There is no loss without some gain. From a gentleman who visited our rooms from San Bernardino, we gathered many important items of the true condition of the lower counties. That there has been a large loss of cattle in that section of the State there can be no doubt, for we learn that Abel Stearns, Esq., the great stock-man of Los Angeles, has lost some 12,000 head. Another large stock-man has lost 5000 head, and others less numbers, according to the extent of their herds. But that this is a calamity, or even a loss to our State, we do not believe. There was a great surplus of these wild and almost worthless cattle, all their value being their hides; these were gathered without the trouble of knocking down the cattle, for they were already down, and the owners sold the hides readily. It is a singular fact, that with this great loss of stock, no *American cattle were lost*. We should esteem it the best thing for the country to get rid of these wild and worthless stock and breed and keep only the better kind. A good American beef brings $20 to $40 when fat—a wild ox $2 to $5—and they eat up the entire country. It does not pay, and ranchers are beginning to see this.

There is another great evil growing out of these immense herds of wild cattle, and these ranches of ten and twenty thousand acres; big ranchos occupy all the best land, and being open, not fenced or cultivated, are called wild land and taxed at a valuation of only 10c an acre, and $2 valuation a head for cattle, while small farms, cultivated and fenced, and an ornament and benefit to a whole community, are taxed at a valuation of $5 an acre, and $20 a head valuation for American cattle. Thus the *same quality of land* is taxed because it is improved, with all the improvements, at a largely increased ratio, while land lying idle, with wild cattle, goes almost clear. Which benefits the country most? We think if all the wild cattle were to die off, and the large tracts of land cut up into small farms, our State would be greatly the gainer.

The late drought will, we think, compel many large owners to sell their land. This will be a benefit to our State, and we shall see that good will come out of evil, or rather what was esteemed a calamity, proves but "a blessing in disguise."

Several of the large Spanish ranches are now being cut up and sold at $5 an acre.

The crops in and around San Bernardino are very fair, and the prospect is there will be as much grain as last year. Our informant has already cut one crop of alfalfa, and the clover is again six inches high. This shows the advanced state of the season and the bright prospect before us, even down in the lower counties, where so dark a picture has been held up before us.

The Tucker & Garrison Case.—The unfortunate difficulties growing out of mining speculations seem to increase in our city, as new ones are developing every day. The card of J. W. Tucker, Esq, in our columns this week, fully proves, as we said some weeks ago, that he would wash his hands of the trouble ere the matter was ended. His card is strong and to the point.

Success of the Pacific Railroad.

The action of our Senate, on Monday last, in the passage of the bills for the furtherance of this great National Work, is most highly honorable to our State. It shows that, in despite of any petty local, or selfish feeling, that may exist in this county, against Sacramento, the State is right, and heartily in favor of this great National Work.

One of the Acts passed is to ratify the action of last year's Legislature, in a measure, and gives the interest of seven per cent upon one million and a half Bond and this aid comes to the immediate help of the road. A second Act gives to the Central Road (to Sacramento) one and a half million Bonds, and to the Western Road half a million, subject to the approval of the people.

Thus has the Senate spoken out in favor of the great iron pathway from the Atlantic to the Pacific. What reflective mind but must see this is most wise legislation? None but short-sighted mortals could possibly hesitate to aid such a work, destined as the surest way to open up the resources of the State, and give to the people increased facilities of sending their produce and manufactures to market, and send much merchandi se quickly into market.

The retarding influence of those presses in San Francisco, that have tried to bias our county and induce their holding back, will now, in a measure, be out-generaled and overcome, but the wrong intended by such action can never be forgotten. San Francisco, more than any one section of our State, is to be the gainer by the Pacific Railroad. San Francisco is the great heart of the State, yet what could she do without arms and legs to her body, and of what avail is arms and legs to a body if the blood does not circulate through them? How can the arms and legs help the body if paralyzed and hanging lifless by its side? And so with the interests of a State. Send out good healthy blood from the heart, and it gives life and energy to the arms and legs, and these work for the body, to clothe and feed it. Make these arms and legs strong, and the body is the greatest receiver, for the life blood goes to the metropolis of our State, to San Francisco. If she acts to benefit the interior, if she aids public works and all internal improvements, she, herself, will be the greatest gainer. One single fact will prove this the silver and gold of the Nevada mountains, is it not the life blood of our merchants and business men? And will not this Railroad reveal and bring it out in millions upon millions? Aye, will it not bring it to our very city? As certain as blood goes back from the extremities to the heart for new strength by purification, so will the gold, silver, and wealth of the interior flow to this city, to answer all the certain laws of trade; and the action of those presses, and those men, who have hindered the appropriation of half a million of City Bonds in aid of this work, after our citizens themselves voted it, is in violation of all the natural laws that govern trade, or political economy, or the rights of our citizens, and the best interest of the city.

Our National Legislature has done nobly; our own State has done nobly; many of our counties have done nobly; the President and Directors of the Road have given to the work the most devoted energy, the most untiring assiduity ever given to any public enterprise, overcoming almost insuperable obstacles, but they have at last triumphed gloriously, for the work will go on to its completion and every one that has given it a helping hand will rejoice. All honor, say we, to the friends of this great work, for their hour of triumph is near.

California Gold and its Influences.

What if not for the *certain reliance* upon California for about fifty millions of dollars in gold, annually, what would be the condition of exchanges between the United States and Europe? Were it not for *our* gold, where could the amount annually sent abroad be procured? Should this stream of gold cease to flow to the Atlantic States, what would be the result to them? Should this fifty millions annual contribution fail, and the vacuum occasioned by foreign demand be suddenly withdrawn, would it not have a disastrous effect upon the whole country? Would not the withdrawal of our gold suddenly check the facilities of our Government and its war operations by the derangement, generally, of all financial matters? If these surmises are true, then it is of the greatest moment that we prepare to prevent any and all movements that look to this point. California occupies at this moment a most serious and important position; for California holds the "*balance* of power," i. e., she contributes the regular amount that goes to fill the foreign export of gold, therefore the very keystone of the glorious arch that sustains and maintains our union and the furtherances and finishing work of the war.

News from Tahiti.

From Capt. S. P. Brothers, of the bark Esperance, which left Tahiti, Society Islands, on the 10th of February, we learn that great interest is being manifested at that place in the cultivation of Sugar-cane, Coffee, Tobacco, etc. The Sarah, which sailed from this port some months since with machinery, agricultural implements, etc, for a Sugar and Coffee Plantation, had gone round the Island and unloaded her cargo some two weeks before the Esperance sailed. Mr. Stewart, who has charge of the Sugar and Coffee Plantation, has obtained sufficient land for the present, and the work of erecting Mills, putting up machinery, etc, is being vigorously prosecuted. Every spare mechanic on the Island has been engaged, and it would seem that Mr. Stewart has so far met with every success. The Coffee crop is looking well on the Island and will be larger this season than ever before, while many new plantations are being started. The Government is taking a deep interest in the agriculture of the Island, and offers very liberal premiums for the cultivation of Sugar-cane, Coffee, and various other productions.

Here we find wise legislation coming to the aid of the working man; so it should be everywhere; this is what builds up a State.

The Great Historical Work of the Age.

Greeley's American Conflict.—A History of the Great Rebellion in the United States of America, from 1860 to 1864.

This is the title of the new work soon to appear, the first volume being nearly ready for the press, and will be issued in the month of May. Who but Horace Greeley, the great American journalist, the prominent leader of the great Anti-slavery party of the United States, the man whose mind is the storehouse of the political history of our country, who but he so competent to prepare a history of this great American conflict originating as it did most assuredly from the conflict between Freedom and Slavery. This work, in all its details, must necessarily form one of the most important and most interesting, exciting and valuable histories ever given to the world, for it will comprize the *causes, incidents* and *results*," of this great struggle, and it is intended to exhibit especially the *moral* and *political* phases of this conflict, and to show the rise and progress of American opinion respecting *Human Slavery*, from 1776 to 1864. We have been favored with specimen pages of this work, from wich we can speak of its intrinsic value to every one who has an interest in our country. The "Great American Conflict," which is now near its close, is termed the *Rebellion*. When coming ages shall have rolled away, and this history, by Horace Greeley, shall have been read and re-read, then will the full influence of this great struggle be realized; Slavery will have long ceased from the earth and history will have made the record of the year 1864, from whence we shall date the *world's freedom from slavery*. It will readily be admitted that no man could have been selected, in our country, so completely and pre-eminently fitted for such a work, as Horace Greeley, and the world will look for a history worthy the occasion and worthy the man—

"And Rome shall owe,
For her memorial, to *his* learned pen,
More than to all those fading monuments,
Built with the riches of the spoiled world."

This work will be issued in two Royal Octavo volumes (double column), 600 pages each, abundantly illustrated with maps, diagrams of battle-fields, sieges, naval actions, etc.; also, views of places of historic interest, obtained from the most authentic accounts, being official sources, together with fine steel plates of prominent Generals, and persons connected with the war, both north and south. The first volume, we learn, will appear the first of May; this volume will contain *seventy portraits*, on steel, classified and arranged in appropriate groups, with other illustrations of great interest as connected with this important history. Among the portraits in Volume I, will be those of the Executive officers of the United States Government; the Confederate chieftians; eminent opponents of the slave power; Union Generals; Confederate Generals, and Union Navy Officers. This History will be of one of the most valuable ever issued from the American press. The cost of the work will be from $3 50 to $6 per volume. O. D. Case & Co., Hartford, Connecticut, and George Sherwood & Co., Chicago, Illinois, are the publishers. We have spoken of this work at length, because we feel that such a work, being a history of the salvation, not only of this country but of the whole world, from slavery and despotism should be heralded world wide, so that it may be read as the Text Book of Freedom for all coming ages.

Delegates to the Baltimore Convention.—The Union State Convention, held at Sacramento, March 29th, elected the following Delegates to the National Union Convention: First District—James Otis, of San Francisco; W. S. McMurtry, of Santa Clara. Second District—O. H. Bradbury, of Tuolumne; Wm. Ritter, of Sacramento. Third District—Nathan Coombs, of Napa; Robert Gardiner, of Yolo. *Alternates*—A. J. Snyder, of Yuba; A. W. Thompson, of Sonoma; C. P. Huntington, of Sacramento; C. C. Ryneraon, of San Joaquin; W. H. Culver, of San Francisco; and A. J. Jourdan, of Santa Cruz. *From the State at Large*—Samuel Brannan, David Mahoney, John F. Neville, and —— Randall.

Delegates from Oregon.—Messrs. Pearne, Fairing, Charman, Souther, Hirich, and Hiram Smith.

Movements of Revenue Cutters, etc.—Orders have been sent from Washington to have the revenue cutter Joe Lane brought from Puget Sound to this port, where she will be stationed, instead of the steam-cutter Shubrick, which is ordered to replace the Joe Lane at Puget Sound. It is reported that a large new steam-cutter, of over 500 tons register, is now on the way from the East to this port, where she is to be stationed. The officers of the Shubrick received their commissions from Washington, and have been sworn in by Deputy Collector Burke. Lieut. Scammon was promoted to rank as 1st Lieutenant in the service

Sickness in Napa.—Never in the annals of Napa, says the Napa Reporter has their been known as much sickness for the same length of time, as this portion of Napa Valley has suffered under for the three opening months of 1864. Measels, scarlatina, diptheria, various types of fever, coughs, and colds have some of them, visited every family. The only reason assigned for so much sickness is a lack of electricity in the atmosphere, consequent upon such a long continued dry term.

A Quick Run.—The Bulletin, reports the quick run of the clipper bark Smyrniote which arrived on the morning of the 29th from Honolulu, S. I., having made the passage from port to port in 14 days. The Symrniote, however is reported to have been becalmed for 3 days in sight of Oahu, and to have made the Farallones on Sunday, the 27th instant, having made the run from land to land inside of 10 days. This, her first trip, is one of the quickest runs on record between the two places, and presages that the bark's future passages may yet cause the Comet, Yankee and other vessels regularly engaged in the trade to look to their laurels.

The Senate has passed a Bill authorizing San Francisco, San Mateo and Santa Clara counties to sell stock in the San Jose Railroad.

"Financial."

The following are extracts from a "financial" article published in the Bulletin of March 3d, which escaped our notice till we saw them copied and briefly commented on in the Stockton Independent. The latter paper classes the article as "ably written, but significant, on the above subject." With this we agree, and copy the extracts more as a record and "vindication of the truth of history," as well as showing the "operations" of trade in San Francisco, than for the effect it may have on those who would even sacrifice the country and its government for the difference between gold and greenbacks:

"*Large Profits and their Relation to Interest on Money.*—We have already in a previous [illegible] alluded to the profits of mining, which is at present, and will probably long continue to be, the leading interest of the State. The profits of trade also are comparatively large. The merchant in California [San Francisco], turns over his capital and realizes his profit in half the time usually required for those operations in the Eastern States. His per centage of profit upon sales of merchandise may not be greater; it is in some cases less, but it is made sooner and oftener, and the rate of profit to capital is consequently increased. The usual credit in mercantile transactions is 30 to 60 days; *it rarely extends to ninety days*, and more rarely exceeds it. Purchasers for very remote localities are now and then favored with longer time, but they compensate for it by paying higher prices; and as a general rule, the debtor who does not pay up the whole or the greater part of his indebtedness within a period of three months is regarded as slow and doubtful, and buys at a disadvantage. The seller *exacts* pay for long time, and greater risk incurred."

From the above, remarks the Independent, it will be seen that merchants of San Francisco have reduced business to a "dead wood" basis:

"*Of the importing trade we do not speak.* In former years it was not remunerative, and has since, until very recently, been conducted by factors or agents of parties residing elsewhere, and whose profits or losses do not concern us. While *the past two years, however, importations on home account have largely increased*, and we have a class of jobbers who import heavily for their own trade. *Owing to the peculiar condition of fiscal matters*, and the constantly increasing requirements of the country, these transactions have for the most part eventuated favorably. But we confine our remarks mainly to the jobbing and retail trade; and it may be safely assumed, taking all branches together, that the careful, experienced merchant realizes, in prosperous years, an average of *ten per cent net* upon the amount of his actual capital every *sixty* to *ninety* days. With a capital of $25,000 he can easily handle merchandize to the value of $50,000; so that even half of the above named percentage of profits on sales, will give him the full rate on his own capital—or the equivalent of 50 per cent per annum; which covers the current rate of interest on money, and yields him beside a reasonable remuneration for such additional risk and personal labor as are incident to his calling and incurred by the money lender."

The above paragraph is pretty fair evidence that the speculators in gold have a good thing, and they will continue to grow rich while the people of the interior will grow poorer, and suffer in the depreciation of property as long as the national paper currency is excluded. It substantially admits, also, all that the advocates of the national currency have charged, and what we have argued in the Farmer from the beginning, in the controversy about "greenbacks," that the present system of California was benefiting the few at the expense of the many, or in other words, that the State was being impoverished, that a few brokers and traders in San Francisco may get rich; for this monied piece and organ of these classes says in so many words that within the past *two years* importations on home account have "*largely* increased," and "*owing to the peculiar condition of fiscal matters*" (that is, that importers pay for their goods in greenbacks and sell them for gold, thereby pocketing the most of the premium on gold in addition to their regular trade per centage—for it certainly means this or it means nothing), "these transactions have for the most part eventuated favorably." There is the whole thing acknowledged, that the benefits of the gold premium are monopolized by the few, and that the "jobbers" of San Francisco are getting rich at the expense of the State at large; while their excessive importations induced by these large profits are prejudical to our domestic industry, and a fatal drawback on the general prosperity, and yet, they endeavor to hoodwink the masses and make them believe it is all right. The result is shown in the shipments of treasure, viz:

Total since January 1, 1864	$12,281,[illegible]
Corresponding period	9 [illegible]
Excess this year	$2,[illegible]

As will be seen from the following, all classes of people in San Francisco are prospering, while business and enterprise in the interior counties are almost suspended:

"There is now standing at the credit of the working classes in this city, in the various Savings Institutions, no less than $3,600,000, yielding them an annual interest of about $500,000; and we may add, that during the past year more than $2,000,000 have been returned to depositors from those institutions, the greater portion of which has been invested in real estate and in mining stocks. We may remark here that labor is double concerned in the proper compensation of capital having capital of its own—three-and-a-half millions, at interest. Considering the brevity of the period in which these results have been accomplished, the evidence of prosperity among the industrial classes [in San Francisco] is remarkable.

Boardman, Gray & Co's Pianos.—This New York Agency for Boardman, Gray & Co's Pianofortes is now in the hands of Siberia Ott, Esq., at 721 Broadway, New York. The styles of Pianos made by this firm embrace all the various patterns from the 7¼ octave Grand Piano of $1,000, to the grand square Parlor Piano of 7¼ octaves, Pianos for schools, Musical Departments for colleges, etc., varying in value to meet every case. Mr. Ott, formerly a partner of B. G. & Co., has now the agency of their Pianos, where purchasers can at all times be suited and to whom catalogues will be sent gratis. Mr. Ott's long experience enables him to suit all who favor him with a call.

Prolific Salt Mines.—The Sand Spring salt mines, on the Reese River Road, N. T., cover eighteen hundred acres, and the salt is from fourteen to twenty feet deep. The mine produces thirty tons of salt per day, sacked for shipm[illegible]

RICE, AGAIN.—Those who doubt the ability of our soil or climate to grow Rice successfully, should call at our office and see a sample which was grown on the tules at Stockton, last year; also, fine samples from Honolulu, which have been kindly sent us from the Rice Mills of Messrs. Battles & Co. We should by all means grow Rice in California, it can be done, and as we have Mills to clean it, nothing but apathy can hinder. Messrs. Battles & Co. keep 12 men, instead of 8 as we said, employed in cleaning Rice. Their Mills are doing a good business, and California should give them millions of pounds more to clean. The rice from Honolulu, was a large lot consigned to Oakley & Jackson, of our city.

BEAVERS AND OTTERS.—The Stockton Independent says that a hunter of that city, who has passed the season on the sloughs and among the tules, some 40 miles west of Stockton, has killed over 350 beavers and otters since the first of January. The skins of these animals are worth from two to three dollars, according to the size and quality.

ELECTION OF DIRECTORS FOR INSANE ASYLUM.—A Joint Convention of both houses met in the Assembly Chamber, in Sacramento, March 31st, and elected for Directors of the Insane Asylum the following gentlemen: Dr. E. S. Holden, Austin Sperry, J. G. Gassman; and for Visiting Physician, Dr. L. Hubbard, present Assemblyman from Yuba

PITCH GATHERERS.—A meeting of pitch gatherers was held at Dogtown, Butte county, on the 11th inst., at which resolutions were passed condemning the late Act of the Legislature, and calling for its amendment. In case an amendment was not made, it was resolved to test the legality of the law in the courts.

BIG CABBAGE.—The largest head of cabbage we ever saw, was brought into Napa on the 26th from some 14 miles up the Valley, where it was raised. With all the refuse outside leaves taken off, it measured 105 inches in circumference. We understand a Dutchman bought it, with the intention of making a barrel of sauerkraut from the monster.

SINGULAR "FIND."—The dead body of a man named Newton was recently found in the fork of a tree, near the ranch of Sam. Frakes, between the Fresno and Chowchilla. His gun was lying at the foot of the tree, with one barrel discharged, the contents of which entered under the chin, and came out at the top of his head.

A NEW POSTOFFICE.—A postoffice has been established at Collinsville, Solano county, and C. J. Collins, Esq., appointed Postmaster. Hereafter a letter-bag will be made up regularly at that place.

MORE ORANGES.—The brig Surete is in port, from Tahiti, with four hundred thousand oranges. This is, we believe, the third cargo of Tahiti oranges landed in San Francisco since January 1, 1864.

IDAHO—NOT SO.—An Iowa correspondent of the Chicago Tribune says: "I have seen a reliable gentleman just from Idaho, and he says the story about that fifteen millions of dollars in gold awaiting transportation is all bosh; and adds there is not enough gold dug out in the whole Territory to pay the expenses of getting the emigrants home, and that all these big stories telegraphed from St. Paul and New York, just before Spring opens are the fabrications of speculators, to get up a rush of deluded emigrants."

A CARD.

☞IN ORDER TO PREVENT ANY MISAPPREhension arising from the fact that the prosecutions instituted against me, in the Police Court, were dismissed on the ground that the time within which indictments could lawfully be found had elapsed, I desire to state that in the month of February, William R. Garrison and others endeavored to obtain indictments against me on the charge subsequently made in the Police Court; that after a full examination of all the evidence produced on the part of the prosecution and without hearing my witnesses, the Grand Jury refused to find any bill against me—the time in which the indictment could be lawfully brought had not then expired. Garrison, foiled in his efforts in that quarter, then instituted the Police Court prosecutions. On the second of March I was called to answer before that tribunal, and the case was, by agreement of Court, continued to another day. On the adjourned day it was further continued, at the request of Garrison's counsel, to the 25th of March. In the meantime, I was advised by my counsel that it was useless to go to the expense of summoning witnesses from a distance to establish my innocence, when, in their opinion, the Court would of its own motion dismiss the case for want of jurisdiction as soon as the first witness for the prosecution should have been examined. To save expense to both parties, it was then agreed by the counsel for Garrison and myself that the matter should be argued on the 25th, and that if the Court did not then dismiss the complaints, another day should be fixed for hearing the testimony. Upon my counsel stating his first point, and before argument, the counsel for the prosecution admitted that the prosecution could not be maintained, and they were accordingly dismissed. Whenever the merits of my Wide West transactions with Garrison shall be investigated, and the civil suit pending between us shall be heard, I shall be prepared to show that the charges so industriously circulated against me are false, and that nothing whatever in my transactions with him or with others have been otherwise than perfectly fair and honorable on my part.

9 1m J. W. TUCKER.

Hubbard Squash.

WE HAVE RECEIVED ANOTHER SMALL INVOICE of the true "Hubbard Squash Seed," from the Atlantic States.

This is the BEST Squash in the world. It is a hard shell, and the only way to cook it is to saw the shell in halves and bake in the oven, then serve on the table in the shell. The flavor of the Squash is better than the best Sweet Potato, and for pies has never had an equal.

Seed for sale at this Office.

For Sale!
A Fine Orchard and Garden.

A BEAUTIFUL ORCHARD AND GARDEN, FULL of Fruit Trees of rare kinds, a new Gothic Cottage House, with pleasant surroundings.

The place contains 150 acres of rich land, all in a high state of cultivation.

The estate is near Oakland, Contra Costa County, and is increasing in value every day. For particulars, inquire of the Editor of this journal. n8

Situation Wanted as Superintendent of Farm.

A GENTLEMAN, every way qualified for the superintendence of a large Farm, who is now in the Eastern States, wishes a permanent situation. He is a man of family, and every way qualified for such a place. Any one wishing a No. 1 Superintendent, within a little time, can secure a valuable man for such a place by addressing the Editor of the Farmer.

WHAT "CRUDE BULLION" IS.—The Gold Hill, N T., News says: What is spoken of by the papers of this Territory as "crude bullion," crude "amalgam," etc., is the cakes of silver, and what other metals there are mixed with it, as they come from the retorts of the various mills. It is sometimes in large square cakes of the same size as the pans in which the amalgam was placed for retorting, and again in lumps of no particular form, just as it crumbles up on being taken from the retorts. When a very strong heat is applied in retorting, the silver partially melts, and a solid cake is the result; where the heat was not so strong, the cake more easily breaks to pieces. This retorted amalgam, whether in cakes or crumbled into lumps, is the crude bullion as it is received by the assayers to be moulded into solid bars and assayed.

THE County Jail of Napa county is once again, vacant. Not that there are no crimes committed in that community, but the villainies are so small secretly and cunningly committed, that the perpetrators escape detection.

The Napa Reporter says: "The largest head of cabbage we ever saw, was brought into town on Friday, from some fourteen miles up the valley, where it was raised. With all the refuse outside leaves taken off, it measured one hundred and five inches in circumference.

☞Holloway's Pills and Ointment.—Sprains, Dislocations, etc. Neither opodeldoc liniment, nor any other embrocation can equal the efficacy which characterizes these essential vegetable extracts in the cures of sprains, strains, wounds, contusions, or dislocations, etc. They are unequaled for alleviating pain, reducing local inflammation, and promoting a rapid cure.

Sold by all Druggists, at 30c, 75c, and $1 10 per box or pot. 202

HOLLOWAY'S PILLS and OINTMENT may be always obtained of Messrs. CRANE & BRIGHAM, cor. Clay and Front streets, San Francisco, Cal.

☞There is no excuse for those who drag their weary and disordered bodies into our company, when a few doses of AYER'S SARSAPARILLA would cleanse their murky blood and restore their health and vigor. Ye muddy victims of bilious disease, have some regard for your neighbors, if no for yourselves.

Purchasing Agency.

Having had the experience of over thirty years in dealing in Trees, Plants, Seeds, and Agricultural Implements, we feel that we are fully competent by our experience in purchasing such articles to make a saving of from five to fifteen per cent for the great mass of purchasers. We will therefore offer to make purchases for all who wish our services, of any of those articles named, or for any articles of merchandise for our Farmers or Ranchmen, and ship the same as they shall direct.

In order that we may do their business in the most satisfactory way for them and ourselves, we ask that all who send orders should be as explicit as possible as to their wants—describing as minutely as they can; and, where they desire our judgment, we will do our best to suit them.

Our charge will be Five per cent, together with the cost of packing, freight, drayage, etc. Orders should inclose satisfactory references or the Cash; or bills could be sent by Express, to be collected on delivery.

We shall be happy to attend to the purchase and shipment of Trees, Seeds, Plants, etc., as this is our especial "hobby," and we know we can satisfy all that send us their business attend to.

The New Seed Sowers.—These fine implements—the sample machines—have arrived, and are now at our rooms. We invite all interested to call and examine them—as per advertisement. "Patent Rights" are for sale and a handsome sum can be made by purchasing.

A CARD.

YEARS HAVE ELAPSED SINCE THE Subscribers first invited public attention to the peculiar properties of their Patent Axle-grease. At first their invention made but slow progress, but thanks to the liberal and appreciative spirit of a large portion of the teamsters and coach proprietors of California, the demand for their manufacture has gradually increased, and notwithstanding the many spurious imitations which from time to time have been introduced from the Eastern States to compete with their article, the H & L AXLE-GREASE has now acquired an unrivaled reputation, extending throughout the length and breadth of California, Oregon, and the neighboring Territories.

The subscribers return their grateful acknowledgments to a discerning public, who have so largely patronized them in all their enterprises which they are now happy to say, are beginning to be justly appreciated as belonging to our California industry.

The supply of material from the East having, in consequence of the war, been cut off, the subscribers turned their attention to the substitution of COAL-OIL as a basis of their manufacture, but after applying every means suggested by the modern application of the science of chemistry, they were reluctantly compelled to the conclusion, that however fit COAL-OIL might be for illuminating purposes, and for which it stands unequaled, it was not at all adapted to make a permanently satisfactory Axle-grease. In this dilemma the subscribers turned their views to the native produce of California, believing that large quantities of natural rosin might be collected from the noble pine trees of her boundless forests.

Having invited attention to this subject, they have, with steady progressive steps, advanced this interest, until, at the present time, they have established a manufactory of Rosin and Turpentine at Forbestown, from which considerable quantities of both articles are daily manufactured, of such a quality as to find a ready market at fair prices.

It is hoped that increased efforts may continue to be put forth, and new discoveries made, so that California may soon be independent of all foreign supply, for we believe our lofty mountains and our mighty pine forests, will yet give us that supply. The subscribers are now receiving native rosin in sufficient quantities to be able to sell their celebrated AXLE-GREASE at a LOWER PRICE than any of the spurious COAL-OIL varieties, which may hereafter be imported.

HUCKS & LAMBERT,
Manufacturing Chemists,
21-3 Natoma and Minna streets, San Francisco.

$2,500 Wanted on Real Estate.

THE SUM OF $2,500 is wanted on Real Estate in San Francisco County, upon land of undoubted title, worth double the amount. Address A. B. C., Farmers Office. 7

Miller Wanted.

A MILLER IS WANTED, QUALIFIED TO take charge of a large and valuable Mill, in a pleasant situation with all pleasant surroundings. A good man can secure a good and permanent situation, and a very liberal salary. None need apply unless of education, pleasant address, and the most correct habits and character. For particulars address Editor Farmer. 7

English Steward, or Gardener.

A PERSON JUST ARRIVED FROM CANADA IS DEsirous of securing a place as Steward or Superintendent of a Farm. The very best references can be given of his character and capability for the situations. Apply at the office of Editor of Farmer, or by letter. 7-6

MORE RAIN.—The earth has been repeatedly refreshed by rains within the past week. On Tuesday night heavy showers fell in this city, and reports speak of rain in many places in the country.

THE CALIFORNIA FARMER.

A FIVE Dollar Treasury Note will pay for the FARMER one year. Now is your time to make a saving; it makes the cost of the FARMER, to *new subscribers*, only $3,25 per year. See our card.

Purchasers of Farms.

We shall now keep a complete record of *Farms, Ranches, Orchards and Vineyards*, for sale, and make it a specialty from this date. A "Bulletin Board," in our Reading Room, will contain numerous Farms, etc., on sale, and to which we invite special attention of both *Buyers and Sellers*.

Life Insurance.—Be sure that you have a Policy of Insurance on your Life. $10,000 insurance on your life is just as good as $10,000 in Bank, i. e., for those who may be left behind you; those you love and wish to provide for.

☞MANUFACTURERS OF MACHINERY, AGRICULTURAL *Warehouses, Seedsmen and Florists*—All such who desire to make their business known over the entire State of California, should send their business advertisements to us, and we can spread the news for them.

TERMS OF ADVERTISING.

THE charge for Advertising in the CALIFORNIA FARMER (payable in advance), is **One Dollar** for five lines, or less of space, in nonpareil type, for one insertion, and ten cents a line for any larger space. Each subsequent insertion half these rates. This it is believed affords the cheapest and best medium of reaching the Agricultural community on this coast. As heretofore, the right is reserved to reject any advertisements deemed objectionable.

Complimentary Vote of Thanks of the Passengers on board the Steamship America.

WE, THE UNDERSIGNED, PASSENGERS on the Steam Ship America, tender our thanks to Capt. Morton, and the other Officers of the Steamer, for the Comforts we have enjoyed during our passage from San Francisco to Panama, and particularly for the neatness and good order on the Boat, and for the sumptuous fare, and kind attention we have received. While expressing our entire satisfaction with the Boat and its management, we heartily commend it to the attention and patronage of the public.

Dated at Panama, Feby 17th, 1864.

Farmers and Immigrants.

LAND FOR SALE OR TO RENT.

THE ANTELOPE RANCH,

(FORMERLY JOB F DYE'S) on the East side of the Sacramento River, embraces many very superior Farms of

100 to 500 Acres each; also Vineyards, Gardens and Orchards,

above all overflows, Fenced, having Dwellings, Barns, etc., and throughout the year, large running streams, and irrigating ditches.

The soil is from 3 to 10 feet deep, very rich, and adapted to Wheat, Barley, Oats, Tobacco, Chinese Sugar-Cane Fruits, etc.

The best market in the State is at Red Bluff, two miles above; at Tehama, three miles below the Ranch, and on the Ranch itself, for consumption in the northern portion of the State, Oregon, and the Humboldt Mines. The new Wagon Road from Red Bluff to the Humboldt Mines is within three miles of this Ranch.

Good Farmers (with families preferred) can hire these farms at low rates, or conduct them on shares, with privilege of purchase. Cash loans will be made, if desired, to assist in cultivating or holding crops, and every facility will be given.

Mowers, Headers, Threshers, etc, are on the Ranch—"The Antelope Flour Mill," of large capacity, and high reputation, is on the Ranch, owned by the same proprietors.

☞ The "Jos Dye Farm," of 200 acres—with Orchard, Vineyard, and Garden, with irrigating water, large Adobe House, and numerous out-buildings—will be rented to a satisfactory tenant.

Apply to GEO. CHAMPLIN, Red Bluff P. O, or on the Ranch, or to
E. F. NORTHAM and R. B. WOODWARD,
Dec. 17—12-2m San Francisco.

Home Miscellany.

"LET ME HOLD UP THE FLAG TILL I DIE."

["Let me hold up the Flag till I die" was the exclamation of the color sergeant of the Sixteenth Vermont Regiment, while lying mortally wounded at the battle of Gettysburg, on a portion of his comrades attempting to take the National Flag from his grasp. We copy the following lines from the New York Dispatch.]

"Let me hold up the flag till I die:"
Gasped a soldier faint, on the heath;
And he grappled the staff, as a sigh
Gushed out with his perishing breath,
And the flag o'er his form flaunted high,
Till his heart was pulseless with death.

"Let me hold up the flag till I die,"
Were his words, how faithful and few!
And there gleamed a fond light in his eye,
As upward he gazed on each hue:
For from boyhood he loved to descry
The star gems that mingled its blue!

Let us hold up the flag till we die—
Is the prayer of patriot men—
Ignominious it never shall lie,
To be scorned by History's pen.
Nay! it dazzled the world; the sky
Shall welcome its glories again.

FATE DEFIED.

BY BAYARD TAYLOR.

If seed was meant to grow, or buds to swell
In vernal airs, or birds to mate and build,
Then this quick love, wherewith my heart is filled,
Was meant to bourgeon and to bloom as well.

If sap was made, to mount in every tree,
And blood to fill the million veins of man,
Then I was made, the hour my life began,
To share the universal destiny.

If, as ordained, each creature finds his mate
And gives to younger lamps his fading flame
Of life, then I a like fulfillment claim,
Nor ask release from my appointed fate.

This heart is flesh, I cannot make it stone:
This blood is hot, I cannot stop its flow:
These arms are vacant—whereso'er I go,
Love lies in others' arms, and shuns my own.

I who have waited, served, performed my task
For seven long years, and find my Rachel fled,
What recompense shall now be mine instead?
Fate turns away, nor grants the least I ask!

Come, 'tis enough!—Fate, Law, whatever rules
This wretched Earth, my hand is on thy throat:
Pour on these wounds the sole sweet antidote,
And keep thy tricks for cowards and for fools!

Too long I've lain, and with submissive will
Suffered: my rights I now demand of thee:
Give me the wife, the home, thou stol'st from me,
The children of the Future thou didst kill!

Mine thou hast chosen from a thousand lives
To bear thy malice: cruel power take heed!
Pierced unto death, the conquered heart may bleed,
The vengeance of an injured man survives.

Give back, thou thief, thy plunder! Let me lie
In some low nook of earth, obscure, forgot,
But sharing still my brethren's blessed lot,
Or I will wrestle with thee till I die!

"WHEN MY MOTHER TUCKED ME IN."

Cold blows the wind and dreary,
And the daylight's warmth has fled,
As tired, and chill, and weary,
I approach my lonley bed,
To think of home and treasures
Of the blazing hearth within;
Of the by-gone childish pleasures,
When my Mother tucked me in.

How beaming were her features,
And how sweet her soft "Good night!"
That best of human creatures
With her smile of holy light!
How tender was the pressure
Of her kiss upon my brow,
As in words of sweetest measure,
She breathed forth—"God bless you now!"

How sweet the recollection
Of those happy boyish days!
How ample the protection
Of that Mothers loving gaze!
Oh! weary is my yearning,
When beset with care and sin,
For the happy day's returning
When my Mother tucked me in.

Humbug No. 2.—Schools and Teachers.

EDITOR CALIFORNIA FARMER:

Permit one who has been behind the scenes to give, if but a passing glance, at the above topic.

First, parents humbug themselves, in fancying that their children are acquiring information by being within the walls of school-room, or that education consists in repeating so many words a day. Do they ever consider what is the aggregate of the pupils attainments? After being years at this treadmill round, verily but little. Let us briefly review: he has learned to write tolerably well; perhaps he commenced at six years of age and is now fifteen, during which period he has had some dozens of different teachers, each teaching him a different style, therefore, when he learned to write fairly with one teacher he had to unlearn with another; probably after leaving school he will write carelessly, and eventually form his hand to his own practice. Now three months is long enough to acquire a knowledge of how to write, fluently and legibly, twenty-four letters, if acquired under a good system and one teacher, practice and attention will do the rest.

We will next inspect the arithmetic. If, after weary hours, lengthened into years, he leaves school able to keep accounts neatly and calculate readily, it is well; but I have known a pupil able to almost square the circle by the mechanical rules of ciphering, yet as unable to give a quick and correct answer as an uneducated man, they would rather solve an abstruse problem than use their mathematical faculties in the common routine of life.

Again, how few pleasant readers we find, after leaving school, unless here and there one who has a peculiar faculty for it! School-reading is mostly tiresome; it is rather declamation, or monotonous drawl—measured punctuation makes lifeless readers. Turn we then to grammar. Your child has learned the contents of most modern grammars, can glibly parse and annalyze, giving rule for each phrase, he is, therefore, a grammarian; he opens his mouth, and out drop phrases in perfect violation of every rule, and, too often, the teacher, when imparting the lessons, by solecisms of speech ignores the lesson on syntax. Neither can but few pupils, after leaving school, write a letter that is not faulty both in grammar and orthography.

Then, again, you have spent large sums in purchasing books on philosophy, and all the ologies in which you suppose your child conversant; the result is, to afford a jumble of obscure ideas, a crude notion of self-sufficient knowledge, which, in maturer years, men acquire again. In fact, school knowledge is, too often, nothing but learning and forgetting, and our real attainments are what we acquire ourselves. If education were what it ought to be, three years, commencing at ten years of age advancing from primary to grammar, under one course of teachers, are all that a pupil commonly needs for every-day life, but then we should require very different views of things to what we now have. A child's reputation for smartness at an exhibition when he mouths forth the words that have been driven into him is thought to be some evidence of improvement, when it is too often the result of vanity and self-assurance—the dullest scholar often makes the best display. The pupils are, therefore, often humbugged into thinking they are acquiring education, when they make a vain display, repeat words without one idea attached to them.

Again, how many teachers are humbugs, being physically and mentally incompetent, and often morally so; having adopted the profession as a means of living unaccompanied by one ennobling view of benefiting their pupils, they go through their lifeless routine of duties. Do many of them ponder on the vast responsibility of their charge, and if they find the duties too onerous, resign for a more suitable vocation? No, often their only aim is to please parents and pupils, persuade each party that grand progress is being made, when conscience warns them not one real attainment is made.

"Taught—at schools such mythologic stuff,
But sound morality sparingly enough,"

says Burns, with truth, for morality, except in dry didactic reading lessons, is seldom glanced at, and the child tumbles up at the mercy of adventitious influence his moral or immoral bias without restraint or culture. Were the years that are devoted to filtering words through the child's memory devoted, in the first part, to physical and moral training, and, as years advance, to acquiring general information and correct mental ratiocination, that would send the pupil from school knowing how to use his faculties in the great battle of life. A school ought to be a mental gymnasium. Each pupil should be studied by the educator, so that his faculties and tendencies be understood; but for those who pass from one mere hireling instructor, this would be impossible. Though my subject is fraught with so much interest I must cease for the present. ST AUBYN.

[For the California Farmer.]

A Touching Incident.

MR. EDITOR: I hand you the following for insertion, if you think it worthy of publication; it is a picture, though brief, of a living reality which the writer witnessed, within a little time since, in a luxurious city:

A beautiful lady sat beneath a veranda overshadowed by clustering vines; in her lap was a young infant, apparently asleep; the mother sat, as she supposed, unobserved, and lost in deep meditation. Richly-robed and surrounded with all the outward appearances of wealth and station; wife and mother and mistress of a splendid mansion and garden around it, it would have seemed as if the heart that could claim to be queen, here, should be a happy one. Alas! appearances are not always the true guide, for—

That mother sat there like a statue, awhile,
When over her face beamed a sad, sad smile,
Then she started and shudder'd as if terrible fears,
Were crushing her spirit—then came the hot tears.

And the wife and mother, with all that was seemingly joyous around her, gave herself up to the full sweep of agonizing sorrow. I gazed upon this picture for a little while, only, for my own tears fell freely and without any control; the lady was so truthful and innocent, to all outward appearances, that my own deepest sympathies went out instantly to her and her sorrows.

This is no fancy sketch, but a sad, sad reality. It occurred in the very heart of our city, and witnessing it with deep sorrow, I asked myself, how can these things be? But I remember that this small incident may only be a foreshadowing of some great sorrow deeply hidden in that mother's aching heart. The Bard of Avon says:

"When sorrows come, they come not single spies,
But in battalions."

I had turned away for a moment to look at some object, that attracted my attention, when looking again, this child of sorrow was drying her eyes carefully and preparing to leave and go within,—

"And *there* will canker sorrow eat her bud,
And chase the native beauty from her cheek."

CHANGE IN THE MEANING OF WORDS.—How many words men have dragged downward with themselves, and made partakers, more or less, of their own fall! Having originally an honorable significance, they have yet, with the deterioration of those that used them, or about whom they were used, deteriorated or degenerated too. What a multitude of words, originally harmless, having assumed a harmful meaning as their secondary lease; how many worthy have acquired an unworthy! Thus "knave" meant once only no more than lad (nor does it now, in German mean more), a "villain" was no more than peasant; a "boor" was only a farmer; a "varlet" was but a serving man; a "menial" one of the many or household; a "churl" but a strong fellow; a "minion" a favorite. Sylvester says: "Man is God's dearest minion." "Time-server" was used two hundred years ago as often for one in an honorable, as in a dishonorable sense, "serving the time!" Conceits" once had nothing conceited in them; "officious" had reference to offices of kindness and not of busy meddling; "mood" was that which pertained to a man's mood, without any gloom of sullenness implied. "Demure" (des mours—or good manner) conveyed no hint, as now, of an over-doing of the outward demonstrations of modesty. In "crafty" and "cunning" there was nothing of crooked wisdom implied, but only knowledge and skill; "craft" indeed, still retains very often its more honorable use—a man's craft being his skill, and even the trade in which he is skilled.

NAPA Valley was visited by severe frosts last week.

ARTIFICIAL BONE FILLING

For Decayed Teeth,

Put in while soft, without pressure or pain. Aching Teeth, or mere Shells can be filled with it, and restored to health and usefulness, by the discoverer, DR. PEARSON (late Pearson & Crane), at his rooms No. 653 (old No. 197) Clay Street, San Francisco.

Dr. Pearson having spent the last six years in New York, Philadelphia, Baltimore, London, and Paris, is prepared to supply at short notice, and at reasonable prices, Artificial Teeth on the most approved methods, including Vulcanite Rubber Work, rendering the Extraction of roots wholly unnecessary.

DR. PEARSON'S NERVINE

Cures the severest Tooth-ache, and serves as a temporary filling—any one can apply it by observing the directions. Price $1, sent by express.

ALL DENTAL OPERATIONS will receive the personal attention of Dr. Pearson, as he has no partner, and INTENDS having none in future. His office has been established thirteen years—being one of the oldest, if not the oldest Dental Office in the State of California.

0 JAMES PEARSON, M. D.

CHOICE GRAPES!

B. Kamp,

of SAN JOSE, offers the following Choice kinds of Grapes:

Grape-Vines, Cuttings, and Plants,

INCLUDING NINETY VARIETIES OF

NEW AND RARE KINDS!

For Wine---Rhine Grapes.

Black Gloffner, Johnisberger Riesling, Riesling Franken, Traminer, Rulander, Kohlus Traube, Gray Gloffner, Silvaner, Goodethel,

FOR THE TABLE:

Goodethel, Black Hamburg, Chasselas Musque, Charlesworth Tuscy, Muscat Rose, Muscat Alexandria, Golden Chasselas,

The above list embraces those that the Undersigned has proved. The WINE-GRAPES are the BEST OF THE RHINE, such as our Choice Rhine Wines are made from; and those for the Table are well known and approved. The Grapes will make Better Wine than our California Grapes, by a 100 per cent. Having cut down all my California Grapes, and instituted others, I know what I say to be true

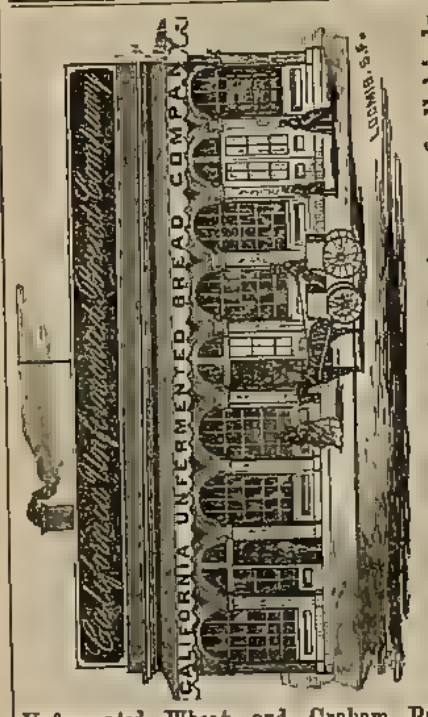
Orders for Rooted Vines or Cuttings at LOW PRICES, can be sent by Mail or left at the FARMER OFFICE, will be promptly attended to.

20-24-0j B. KAMP.

$5! Delaware Grape-Vines! $5!

PROPAGATED FROM VINES received in 1861, from Dr C. W. Grant, of Iona Island, near Peekskill, N. Y. One and two year-old Vines, from $1 00 to $2 00 each! The superiority of the Delaware as a Wine Grape, will doubtless induce unprincipled Dealers to flood the Market with a Spurious Article; and as mistakes sometimes UNINTENTIONALLY occur, which cause delay and trouble to the Purchaser—

☞ **I WILL PAY IN GOLD COIN $5.**



(or the same amount in Lincoln, Lenoir, Union Village, Anna, or Diana Vines, at 50c each, or the IONA at $2 00 each) for each Vine purchased from me, for the DELAWARE, which proves untrue to name.

I have a few IONA VINES, one year old, propagated from a Vine presented to me from Dr. Grant, the Originator of the same, which, except upon the above conditions, I do not intend to offer in Market without his permission

Catawba Vines and Cuttings by the Hundred or Thousand, CHEAP!

C. A. CRAIG,

Fine House and Garden in Sacramento City

A LARGE, SPACIOUS, AND GENTEEL House and other buildings, with fine Garden, all finely located in the upper part of the city, containing a full half block—will be sold a bargain and on liberal terms of payment if applied for soon. Real estate is rapidly improving in Sacramento, and this is a rare chance. Inquire of editor Farmer. 15

Literary Shrubbery.

Ladies Beware.

Let ladies beware
How they powder their hair
To entice the beaux,
'Tis they're doing better
When writing a letter—
Or mending their hose.

ROSA ****

THINGS I DON'T LIKE TO SEE.—I don't like to see a workman a quarter of an hour or twenty minutes after his time in the morning, and then enter in a jaunty, defiant, independent style. I don't like to see him punctual in going to, but the reverse in coming back, from his meals. I don't like to see the same individual uneasy in his mind five minutes before leaving-off time. I don't like to see a man as the clock strikes drop his work as though it burnt his fingers. I don't like to see him, after habitually coming late to his work, unwilling to devote one precious minute of his own time to his employer's service. I don't like to see an apprentice hastily resume work the instant he hears his master's footsteps, nor do I like his nonchalance in coolly turning to his work when accidentally discovered gossiping in the time he has to be paid for. I don't like to see an employer always dissatisfied on principle. I don't like to see an employer doing the work and his man looking on and laughing in his sleeve. I don't like to see a workman enter into an engagement to do his best and never think of carrying it out, except in receiving his remuneration. I don't like to see an employer make familiar companions of his workmen one day and act the tyrant the next. I don't like to see an employer tell the whole of the office his business concerns. I don't like to see a compositor one day "sticking up for his trade," and the next secreting sorts from his companions, or surreptitiously getting a look at the copy so that he may manœuver that the fattest portion shall fall to his own share. I don't like to see a man spend a shilling's worth of time rather than cut up a farthing lead, nor do I like to see him mutilate material rather than give himself a little trouble. I don't like to see a man stay away from his work or get intoxicated when there is a rush or pressure of work, and yet always at his post in slack times, when he would serve his employer by losing time. I don't like to hear a man say he works for a mutual advantage but all the time with a mental reservation. I don't like the man who can see his employer defrauded and not have the moral courage to declare it. I don't like to see a man after a full week's work want an advance at the beginning of the next. And, lastly, I don't like to see a printer use the tail of an old shirt to cover a tympan, to save buying a shilling parchment.—[London Typographic Advertiser.

"Oh dear!" exclaimed Henriette, throwing herself into the rocking chair, "I'll not go to that postoffice again to be looked out of countenance by all those men on the sidewalk. It's so provoking. What can I do, Sarah Jane, to stop those awful men from staring me so in the face?" "Do as I do," replied Sarah, with a sly look, "show your ankles."

THERE are four things that look very awkward in a woman, viz: to hear her undertake to whistle; to throw a stone at a hog; to smoke a cigar, and to climb over a garden fence.

Greenbacks! Greenbacks!

We receive Greenbacks for subscriptions to the California Farmer, and allow the ruling premium on Gold!

IT is a well known fact to all conversant with newspaper publishers, that since the war commenced the cost of publishing a paper has very greatly increased, so much so as to stop hundreds of papers, over the United States. Yet it has been our pride not to add cost to our *subscribers*, but to relieve them although we have made sacrifices of thousands to carry out our principles, and do what we esteemed our duty to uphold the credit of our country both by precept and example. From the first we announced that we would receive Treasury Notes at par for *Subscriptions to the Farmer*. But the notes were rejected, here, as currency and many of our subscribers have, in conformity with the custom, continued to pay us in gold; yet we have never refused greenbacks at their face value when sent us by subscribers, though it has subjected us to serious loss from our being obliged (from the rejection of the currency as mentioned), to pay gold in our disbursements. At the present cost of all articles, we could not do a paying business by receiving greenbacks at par, at our present rates. But to make the thing work equally for all our subscribers, as well as conform to what we think our duty, we propose to adopt the greenback basis, and raise our subscription price to $5 a year, payable in greenbacks.

As it is evident to us now that the people of California are determined to sustain the National Government and make Treasury Notes the medium of trade, generally, we announce as follows:

The price of subscription to the CALIFORNIA FARMER, hereafter, will be $5 a year, payable in U. S. Legal Tender notes; this being a safe and easy medium of transmission, by mail; and we will allow the ruling premium when gold is tendered in payment.

We also announce, to all who are indebted to us for *Subscriptions* to the CALIFORNIA FARMER, send along your *Greenbacks*. They will come to us with the glorious impress of our country's sovereignty, and every pecuniary sacrifice we may make we cheerfully lay upon the altar of that country whose faith stands pledged in these notes and whose integrity *we dare not question*.

We make this change in the terms of our subscription *not to advance the present cost* of our journal, but rather to make it cheaper to all, for at the *present nominal* value of the notes it will cost the subscriber but $3 75.

We do hope also that all to whom we have sent bills, all who are indebted to us, will now see how easy we make it for them to pay their dues. It must be remembered also that all who owe for this paper, a bill of six month's standing should, by the terms already heretofore announced, remit us $5, and g. b.'s to that amount will be very acceptable.

We shall now have the consciousness of having taken a true step to sustain the National Currency, and we shall know who will "go and do likewise."

We do hope that the friends of a good, sound National Currency will give us their aid and cooperate by sending us their names for the FARMER.

The Markets.

Wholesale Produce Report.

This represents the prices paid by the dealer to the producer.

Corrected weekly, by A. H. Todd & Co., corner of Clay and Drumm Streets.] Mar. 31.

Our remarks relative to our markets of last week apply favorably to this. Notwithstanding the copious showers of rain and the dispelled fears of famine, rain, and the brightening future prospects, there are some who think that prices must advance, and are unwilling to sell, prefering, they say, to hold, and if needs be, by and by, take a less price. This course has a tendency to cause the offerings on the market to be light and insufficient to supply present demand; the result being that prices have remained firm, and in some cases advances have been submitted to. We believe, however, that the advances cannot be sustained, and so soon as holders are ready to sell, that prices will be materially less than at present. Croakers are beginning to be less alarmed, and speculators have already, in some instances acknowledged that they in vested blindly and without posting themselves as to the quantity in the State.

Our exports are as follows: Ex the Dutch ship Cornelia for Hongkong 1185 bbls 1260 qr-sks Flour, and 40 bales Hay. Ex the Danish bark Denmark, for Victoria, 950 qr-sks Flour, 140 sks Wheat, 64 sks Beans. Ex the British bark Charlotte Andrews, for Sidney, 6752 sks Wheat, 4480 qr-sks Flour, etc.

Our receipts of Produce from around the Bay for the past week have been as follows: Wheat 9036 sks, Barley 5731 sks, Hay 361 bales, Oats 330 sks, Potatoes 884 sks, Beans 410 sks, Flour 6190 qr-sks, Salt 665 sks, Bran 930 sks, Wool 20 bales, Straw 66 bales.

Also, Coastwise: Potatoes 1044 sks, Oats 830 sks, Wheat 1641 sks, Hay 18 bales, Barley 210 sks, Beans 184 sks, Onions 128 sks, Flour 207 qr-sks, Wool 126 bales.

Apples 1@5c, A No. 1 6@8c ₱ lb. Dried Plums 15@20c ₱ lb. Dried Peaches 10@15c ₱ lb. Dried Nectarines 20@30c ₱ lb California Dried Figs 30@50c ₱ lb. Strawberries 75c@$1 25₱ lb. Lemons $6@$10 ₱box, retail 50@75c ₱doz. Oranges $2 50@$3 50₱100, do sweet $5 00@$6 00, do retail 50@$1 25 ₱ doz. Chestnuts 30@40c ₱ lb. Black Walnuts 15@20c ₱ lb.

Mr. G. W. Adams, Idle Wild, Brooklyn, has sent to market this week two lots of fine ripe Red Raspberries of about two pound each; they were grown in the open air, and look as fresh as those raised in June.

The Brother Jonathan arrived last evening with about 4000 boxes of Apples—those in fine order sold readily at high prices, say $3 00 to $3 50 per box; other lots $2 00 to $2 50.

BY CONTINENTAL TELEGRAPH.

DATES TO MARCH. 31.

A Madrid letter says the pirate Florida sailed from Funchal on the 26th ult. The St. Louis was in port, but being a sailing vessel could do nothing.

The rebels claim to have 50,000 men at Dalton and vicinity. They say that Longstreet has gone into Kentucky with 26,000 men. An order is published by Johnston restricting all officers, even a Major-General, to but one horse owing to the scarcity of forage. All the heavy artillery is being removed from Kingston to Dalton.

Gen. Grant arrived from the Army of the Potomac and spent the remainder of the day with General Halleck and Secretary Stanton. He returned next day.

Governor Bramlette, of Kentucky had an interview with the President relative to the enrollment of slaves. No conclusion has been reached in the premises.

Lieutenant General Grant arrived from the front yesterday and was in consultation with the President, Secretary Stanton and General Halleck last night. He has returned to the front and established his headquarters at Culpeper.

The rebels left Paducah at 3 o'clock on Saturday afternoon, going in the direction of Columbus. The Federal loss in the fight is reported as 25 killed and 46 wounded. The rebel loss was 300 killed and 1,000 wounded. The rebel General A. P. Thompson was killed.

A Fort Smith dispatch announces that the Army of the Frontier was in motion, its supposed destination being Northern Texas.

The steamer America, from Bremen, via Southampton the 16th, has arrived.

The pirate Florida put into Madeira on the 4th. Twenty tons of coal, provisions, etc., were allowed her, and she was ordered off. Two hundred and fifty persons were drowned by the bursting of the Sheffield reservoir.

The Ways and Means Committee have decided not to tax any article on hand that had paid the regular imposed tax.

General Grant intends to place all general officers on duty at once.

Duke Maximilian is visiting Queen Victoria.

The testimony of General Hancock, before the Committee on the Conduct of the War, in relation to the battle of Gettysburg, is to this effect: That on the morning of the first of July, General Meade directed him to proceed to the front and assume the command of the 1st, 3rd and the 11th Corps. Upon arriving at Gettysburg, he found that the 1st and 11th Corps had been driven back, and were in considerable confusion. He relieved General Howard, and proceeded to form a line on which an engagement might be fought; this being in accordance with General Meade's instructions. He was engaged in forming this line when the 3d Corps came up and a position was assigned it. He then, by order of General Meade, had the remaining divisions of the army brought up. The line thus selected was the one on which the three days battle was fought. Gen. Hancock commanded the left and centre. On the third day, when Longstreet was repulsed in his desperate charge upon our lines, General Meade had nothing to do with the selection of the line of battle, and trusted entirely to General Hancock's judgment.

Advices from Richmond state that rebel plans have been formed for the reclamation of Tennessee and Kentucky. Jeff. Davis believes that Richmond is almost impregnable, and the great bulk of the Confederate forces will be concentrated at the West, when they intend recapturing Chattanooga, to reach Ohio, and again close the Mississippi river.

Owen Lovejoy is dead; his funeral took place, March 30th, from Brooklyn, N. Y.

GRAIN HARVESTERS.—Grain-growers, now look to your Harvesters; there will be a good crop; see that you have your Mowers, Reapers, and Harvesters. Look to our columns for Machinery for grain-growers. The best in the world can be had of our importers, Treadwell & Co., Hawley & Co., and Arthur & Low. Look to it in season. Long rains, good rains, will enhance the value of Reapers and Mowers. You can buy cheap now; strike quick, and buy cheap.

RICH TEA-SETS, VASES, ETC.—Some of the most superb Tea and Coffee sets we have ever seen, are now being opened at Haynes & Lawton's Crockery Warehouse. The beautiful blending of the colors of blue and gold, crimson and guld, green and gold, in their chaste designs, gives harmony and beautify, that is most gratifying to the eye, and adds materially to the flavor of the beverage.

THOSE NEW LAMPS.—Reader have you seen those new and beautiful lamps received by Stanford Brothers? To the student, the professional man, all who read, sew, or use a lamp, we say, by all means, go and provide a lamp, and the fluid that will not only be clear and brilliant but protect and preserve the eyes.

GARDEN CUTLERY.—New and fine garden tools, just received from Europe, for sale at Moore's Seed Store California wistr set.

Jebb's Patent Churn.—We invite those who want a churn to call at the FARMER office and see the best churn ever made. One that gives them butter from cream in five minutes, or butter from new milk in ten to fifteen minutes. Seeing is believing, and the trials furnish facts that are not to be gainsayed. Patent rights for counties for sale, from which a fortune can be made. Single churns can be purchased also.

A Fine, House, Orchard and Vineyard

NEAR SACRAMENTO—FOR SALE.

A FINE HOUSE AND OUTBUILDings, and 30 acres of Land in the highest state of cultivation, with good Orchard and Vineyard, in full bearing. The Gardens are fenced in the very best manner, and having new cisterns of water for garden, stock, and house The Fruit from this place commands the very highest price.

The place will be sold on easy terms: a long time to pay the most of the money, and interest only 7 per cent per annum A smart business manager can make the payments off the place every year. Inquire of Editor Farmer. 15

FOR SALE, TO LEASE, ETC.

A Fine Ranch
IN MENDOCINO COUNTY.

A FINE GRAIN AND STOCK RANCH of 800 acres under fence, in Mendocino County, will be offered at a bargain if applied for soon. Together with this is a Stock Ranch of some thousand acres of mountain land which goes with this Ranch, being Uncle Sam's land.

The Ranch is about 80 miles from Petaluma and on the great mill road to the Navarro, Albion, and Mendico & Noye's mills.

The location is pleasant, having the Redwood Hills for a back ground, with a fine valley tract—one hundred and sixty acres valley land, mostly under cultivation—yielding fine Barley, Oats, Wheat, Hay, Corn, etc. The crop of Hay is fine.

This Farm will sustain a herd of 300 Cattle, and is a grand Ranch for raising Stock, Horses, Mules, or Hogs, and a good place to raise Poultry. There is an orchard of two acres of bearing Trees. Vegetables grow well.

There is on the place a fine two-story frame Building, in which was put 30,000 feet of lumber, also Granary, Smokehouse, and Barn. The vicinity to the Redwoods gives an opportunity to improve, as Lumber is cheap and Timber handy.

There are, at present, good Tools, Implements, Harvesters, Plows, etc, on the place; also some furniture. The House has been used as a Hotel and Store, and is also the Stage House. Hay, Grain, and Produce can always be sold at good prices.

There is also a herd of 100 head of Stock which will be sold at a bargain.

This is a rare chance, and worthy the attention of those who wish a good Home, a good Farm, and a profitable business. Prices reasonable. For particulars inquire of Editor Farmer. 21-1

A Fine Ranch in Contra Costa County.

A FINE RANCH IN THIS COUNTY IS NOW offered for sale at a Bargain, if applied for soon, as it will be sold at a price worthy special attention.

The Farm contains 208 acres; 70 acres of this are fenced—the balance is well and heavy timbered. This Farm will cut 2000 cords of wood, enough to pay for the Ranch.

It is an excellent Hay and Grain Ranch and the products sell well and at good prices on the spot, this being the head of navigation and near market: 8 miles from Martinez and 4 1-2 miles from Pacheco.

The Title is good and possession given immediately The Buildings are common, but the Land is No 1. For Price and Terms inquire of the Editor of this paper who will give all particulars.

Farms for Sale!

THAT VALUABLE TRACT OF LAND IN SONOma County, lying between Sonoma and Petaluma Creeks, and bounded on the south by the San Pablo Bay, known as the property of G. P Swift, Esq., containing fourteen thousand acres of land, is offered for sale in Lots or Farms to suit purchasers.

Most of this tract of land is suitable for cultivation, and has soil of the best quality. It is accessible to market, being adjacent both to the Sonoma and Lakeville landings—is well watered, has an unexceptionable climate, and is not surpassed in any respect by any tract of the same size in the State.

No better opportunity, it is believed, will ever be offered for the purchase of desirable farms at a low price and upon easy terms.

There is a very large amount of fencing on the tract, the entire body of land being enclosed.

The Petaluma Boat touches daily, each way, at the Lakeville landing, which is about a mile from the nearest point

In addition to the regular Steamer landing places, there are numerous suitable landing places along the entire water front of the tract.

The Sonoma Embarcadero is at one side, thus furnishing a convenient access to the San Francisco market at all seasons.

Persons desiring to purchase farms of any required size may apply to the undersigned, at the office of Haight & Pierson, 622 Clay street, San Francisco, or at the store of Mr. Paulo, Sonoma. WILLIAM BIHLER. 8

Fine Farms for Sale.

YOU WHO WANT GOOD FARMS CAN SECURE them by applying to the Editor of the Farmer. The following can now be had.

FOUR VERY FINE FARMS in the splendid San Joaquin District, within a few miles of Stockton, all very productive.

ONE FARM about 20 miles from Stockton—valuable.

ONE FARM capable of great improvement and valuable, in Contra Costa County, near Pacheco.

A GOOD RANCH in Santa Cruz County—a good bargain.

A FINE FARM AND VINEYARD in the region of Mt. Diablo—can be made valuable.

Several STOCK RANCHES in various parts of the State, from $1,500 to $25,000; in all these, good and permanent settlers can find bargains. Address by letter, or in person, for particulars to Col. Warren, Editor of the Farmer. 21

PATENT RIGHTS FOR SALE.

THE FOLLOWING PATENT RIGHTS OF NEW AND valuable inventions (of which we have models to show their value) are now offered for the States of California and Oregon, and Utah and Washington Territories.

NO. 1. THE MECHANIC'S SPIRIT LEVEL.

Patented September 13, 1859.

This implement will be of great value to Contractors and Builders, being one of the most valuable inventions yet out. Builders will do well to examine the model.

NO. 2. IMPROVED CLOTHES REEL AND BAR,

Patented January, 3, 1860.

This valuable domestic piece of furniture can be used in the Laundry, the Kitchen, the Nursery, or Chamber, and can be made plain or ornamental; standing in the same relation as a piece of important furniture as does Wheeler & Wilson's Sewing Machines, neat when used and ornamental when not in use.

NO. 3. A CORN CULTIVATOR.

With this implement the soil is first thoroughly plowed and deeply pulverized, and on the return it smoothly and perfectly hills up and harrows the ground between the rows. A very new and valuable implement.

NO. 4. A MUSKETO BAR.

This will be much wanted in California. It is simple in its contrivance, perfect in its working, and can be affixed very cheap to all styles of bedsteads. Hotels, public houses and private families will find it a useful invention.

NO. 5. HYDE'S PATENT POST-DRIVER.

A most excellent labor and money-saving machine, for which we offer rights.

NO. 6. SEED-SOWER.

This is a new invention, and one of great importance to all who sow grain, or any garden seeds. The working model can be seen at the Farmer's Reading-room.

Holding the rights to all these new inventions, we invite the public to call and see the models. All persons who may be desirous to purchase either County, City, Town, or Individual Rights, can do so on application to

COL. WARREN, Editor Farmer.

SEED, PLANTS, ETC.

FRESH SEEDS.

IMPORTED FROM THE MOST RELIABLE Seedsmen in the Eastern States and from Europe. For sale by

W. R. STRONG,
15-tapl 206 J street, Sacramento.

New Native Apples.

WE INVITE THE ATTENTION OF PLANTERS of California to our collection of

NEW

Native Apples,

Of which we have a remarkably fine and thrifty stock, embracing a large variety obtained from all parts of the South and West. It undoubtedly contains many varieties which will prove eminently suited to the soil and climate of California. Catalogues can be obtained at the office of the California Farmer.

☞ PACKING done in the best manner and shipments from New York, Philadelphia, or Baltimore.

EDWD. J. EVANS & CO,
6 YORK, Pennsylvania.

GOD MADE MAN, AND MAN MADE MONEY
God made Bees, and Bees made Honey;
Men and Money, and Honey and Bees,
There are spurious kinds of all these.
But if you want pure California Honey,
Come to Washington Market with your Money,
In all shapes you'll get it if you call,
At HOWARD & KNELLER'S HONEY STALL.
'Tis said, some folks their Honey mix,
But it is always pure at 70.
Now when your friends to market you bring,
Be sure and come to the Eastern Wing.

The White Willow.

San Francisco, April 5th, 1864.

Editor California Farmer:

I saw in your valuable paper, a few weeks since, an article on the *White Willow*, and also I have noticed considerable said in the American Agriculturist about this species. Can you inform me if there is any of the *true* White Willow in this State; and what is your opinion of its value for hedges on tule land? We want something for a hedge that will not overrun the ground with shoots, and that will grow to some size for timber.

Yours, B. J. H.

[We do not know where this variety is grown, at present; it was cultivated some years ago; if any one grows it, now, we would be glad to hear from them. It must be excellent for hedges on tule lands, and for the information of our readers, we will give the history of the Willow in our next paper. The Am. Agriculturist, in 1863, was down on the willow speculation.

News from Grass Valley.

Grass Valley, April 5th, 1864.

Editor California Farmer:

What a delightful winter we have had—grain and hay crop, ice, frost, etc. What other country could produce such a one? Up here it was splendid—working in my shirt sleeves every day, and birds singing and chirping around me, yet not one in a thousand satisfied. Rain! rain! was the cry. Well, rain has come, and some already wish it would hold up a *little*. Our first rain was March 17th and 18th. We had fine warm weather until the 27th, since which it has rained seven days, and through four nights. It is clear to-day, but the wind blows boisterously from the south, and looks like more.

FROST, ICE, ETC.

On last Saturday morning, March 26, the ice froze about half an inch in thickness. It has killed the greater part of peaches and plumbs, all the pears, and even some apples—those kinds which blossom as early as the Belle Flower, Red Jane, etc. The drought had not affected the grain when the rain came, as we sow late in this county so as to avoid heavy frosts, which throws the grain out of the ground. Grain and grass look remarkably well now.

LARGE HAY CROP, SUGAR-CANE FEED.

I think we will have the *largest hay crop we have had for years*. My sorghum did very well last year. I plant it for feed. Cattle are very fond of it, green or cured. Last year I drilled it and cultivated it like corn. This year I mean to sow broadcast, and cut when small for hay.

Respectfully yours, Grass Valley.

California Wool in the New York Market.—The New York Tribune of the 6th ult., referring to operations in the wool market says: "The greatest feature of this week, however, was the offering of 2,342 bales California, and 1,185 do, Cape by auction on Thursday, which drew together a large attendance but the bulk of the wools were of inferior quality and not much sought after, unless at rates below the views of holders; and hence, 840 bales of the former and 459 of the latter were withdrawn, although the trade generally considered that the wools sold brought every mill they were worth, because the offering as a general thing was very undesirable, being composed of heavy, burry qualities. If this were not the case, then all the buyers in attendance erred in their judgment but it is more than probable the error was on the part of the owners in not disposing of the whole quantity."

Wool-growers, look to the quality and packing of your wool. Your reputation is at stake and your *pocket* suffers.

On the 1st inst., a disastrous snow-slide occurred in Mill Creek Canon, as Thomas Pierce, Edmund Ellsworth, Jr, Frederick Crompton, John Bowen and Robert Spurgeon were on their way up its side. Bowen caught a limb of a tree and escaped; Crompton was behind, out of its reach. The other three were swept off by the rush of snow. Ellsworth escaped with slight injury, Pierce was killed, and the other has not been found. The snow is so deep that his body cannot be recovered before the snow melts.

The Fence Act.

We give, below, the new Fence Act, approved by the Governor, March 15th, 1864. This Law applies only to a portion of the State, however, we give it for the benefit of those counties where it does apply.

An Act for the better Protection of the Agricultural Interests in certain Counties of this State, and the more effectual Prevention of the Trespassing of Animals upon Private Property.

[Approved March 15, 1864.]

The People of the State of California, represented in Senate and Assembly, do enact as follows:

Section 1. Any owner or occupant of any land or possessory claim finding any horse, mare, mule, jack, jenny, or horned cattle, or any number of such animals, upon such land or possessory claim doing damage, whether the same be inclosed by a lawful fence or not, may take up and safely keep such animals at the expense of the owner for ten days.

Sec. 2. When the owner or owners of such above described animals are known, they shall be forthwith notified, if residing in or near the township, of the detention, and the reason thereof; otherwise, written notices containing a description of the animals, including their marks and brands, and stating the cause of detention, shall immediately be posted conspicuously in at least two of the most public places in the township. At the expiration of ten days, if the animals have not been applied for, or sooner if they have been applied for, and the parties cannot agree upon the amount of damages and compensation the taker up, when the damages and compensation claimed shall be less than three hundred dollars, shall make a complaint to a Justice of the Peace of the township, setting forth the facts, and stating the amount he claims against said animals.

Sec. 3. When the owner is known, and is within the jurisdiction of the Court, the suit shall be against the owner; in all other cases, the suit shall be against the property *in rem*. When against the owner, the summons shall be served and returned as in other actions; when against the property, it shall be returnable not less than ten days after the posting, as herein after provided. The service of the summons shall be made by the officer by posting a copy of the summons conspicuously on the outside of the outer door of the Court-room of the Justice issuing the same, not less than ten days before the return day thereof; and the return of the officer certifying such posting shall be evidence of a sufficient service thereof. If judgment be in favor of the plaintiff, the property may be levied upon and sold, as other personal property seized on execution, the Constable giving a bill of sale to the purchasers, describing the animal or animals sold, the price paid therefor, and stating that it or they were seized and sold by authority of this Act. Any overplus of the proceeds of such sale, after satisfying the judgment, costs, and accruing costs, shall be paid by the Justice to the owner of the property, if demanded within three months from the date of sale; if not demanded within that time, it shall be paid into the Treasury of the county for School purposes.

Sec. 4. It shall be the duty of any Constable, except City Constables, at the request of the person or persons damaged, to seize and take possession of any animal named in the first section of this Act, and for all services performed in taking possession of and keeping such animal or animals, he shall be entitled to the same fees and charges as are allowed therefor by this Act. When any animal seized under this Act shall be brought to or placed in the custody of the Constable of the township wherein the seizure was made, it shall be his duty to receive and keep it until disposed of as herein provided; and in such case he shall be entitled to fees for seizing, and also to the compensation for taking care of and keeping said animal that the person damaged would be entitled to. The provisions of section four of this Act shall not apply to Solano County.

Sec. 5. When any animal seized under this Act is believed to be worth forty dollars or more, the Justice shall, in addition to the notice of sale hereinbefore provided for, publish, at least ten days before the sale, in a newspaper of the county, if one is published therein, a notice of the proposed sale, with a description of the animal, the cost of which shall be allowed, in addition to the fees and charges hereinbefore allowed and if the notice be so made, this sum shall be paid whether the animal be redeemed or sold.

Sec. 6. Any owner of any animal which shall have been seized under the provisions of this Act may, at any time previous to the sale, demand and shall be entitled to the possession of such animal upon making satisfactory proof of ownership and paying the fees, charges, and damages; and after the sale, if the animal be considered of a value equal to forty dollars or more, may at any time within three months redeem said animal, by producing satisfactory proof of his right thereto, and paying the purchaser the amount of the purchase money, together with the necessary expenses incurred by said purchaser in keeping said animals.

Sec. 7. The Justice shall keep a book which shall be open to public inspection, and make a record therein of all sales made by his order under this Act, a description of the animals sold, the price paid, the name of the purchaser, amount of surplus money, if any, arising from each sale; and if such surplus money shall be received by any owner of any animal, he shall receipt for it upon the margin opposite such record. The Justice shall, without fee, give this book over to his successor in office, and also any surplus money in his hands, arising from any sale made by authority of this Act, and a receipt of his successor shall be a legal discharge of the retiring Justice for all such sums so paid.

Sec. 8. This Act shall apply only to the Counties of Sacramento, Solano, Marin, Butte, Yolo; and, further *provided*, that the portion of Sacramento County lying south of the Cosumnes River shall be excepted from the provisions of this Act; *provided*, this Act shall not apply to that portion of Sacramento County laying north of the American River and east of the Marysville Road.

Three feet of snow fell on the summit and 20 inches at Strawberry Valley, during the late storm.

Letters from an Old Californian at the East.

NUMBER FOURTEEN

New York, March 6th, 1864.

Talk about Books and Reading.

Editor California Farmer:

Sickness, while it has housed me, has forced me to find amusement in new books. Of course, enthusiastic as I am about country life, and country pursuits, the books which record the experience of amateur farmers are always eagerly sought after. Ike Marvel, whose charming "Reveries of a Bachelor" is doubtless well known to your readers, has recently published a book in which he describes how he found, worked, and made self-sustaining, a small estate near Norwich, Conn., I can cheerfully recommend it to every country gentleman. I used to talk with the accomplished principal of the Benicia Public School, about the charm of a life in the Islands of the South Pacific, but "In the Tropics" proves to me that even in the West Indies, in St. Domingo, a man can, or rather could, have lead a most fascinating existence. The author of "St. Leger" says: "In the Tropics," is the record of a young man who for a number of years was a clerk in a large mercantile establishment in this city. Finding that without friends or capital it was nearly, or, as it seemed to him, quite impossible ever to accomplish anything on his own account, and that he was becoming daily more unfitted for any other occupation; warned, too, by the misfortunes of an elder brother, he resolved to quit the city, while health and vigor still remained to him, and seek a home elsewhere. He gives his reasons for deciding to go to Santa Domingo, and the volume is the history of his first twelve months experience in that island. Writes the young settler: "The most manly workers I have seen in this country are white men. Under the warm sun of the tropics white working men and machinery will yet open the grandest field of civilization ever realized."

The Musical World.

Turning from books and music, I am carried away, in company with the musical world, with "Faust." Whenever it is performed at the Academy of Music the house is crowded from pit to dome, and there is an amusing, although an undignified scramble, for places near the Box Office. The boys in the streets whistle with infinite gusto the Soldiers' Chorus. Macbeth is an utter failure in New York, although it succeeded in Boston. I am glad to see Zech so persevering in demanding justice. His pianos would take a first premium any where. There is a great rivalry here between Steinway and Obickering. Steinway holds possession of the Academy of Music, but Chickering has the indorsement of Gottschalk. The Steinway Brothers have recently completed a magnificent marble warehouse on Fourteenth Street, which is certainly one of the most elegant buildings in New York.

The Currency Question.

I am much interested in the discussion of the Currency Question in your paper. In answer to the assertion of the Bulletin that the working classes of the East are injured by the currency; that they find it difficult to live, let me copy the following:

"The condition of our savings banks is, perhaps, as good an index as any, of the prosperity of the working classes. The report of the savings banks in this State, for the year past, shows a healthful advance in the amount of deposits, and makes plain the fact that, though we are engaged in a great war—which has already convulsed society in the States where slavery depressed the free laborer and robbed him of his rights and his proper share in the industry of the community—here, where every workman is free, and where capitalists are not allowed to bring slave-labor in competition with free, no such convulsion has taken place.

"There are seventy-one savings banks in the State; these had last year 347,184 depositors, and this year 400,194. The deposits made in 1862 amounted to over $39,000,000; in 1863 to over $54,000,000. Depositors withdrew during 1862 nearly $29,000,000; during 1863 over $40,000,000. They received in 1862, $4,167,005 interest on deposits; in 1863, $5,074,759; and of these sums of interest, $3,079,302 in 1862, and $3,760,524 in 1863 were undrawn, and of course credited to the accounts of depositors. At the close of 1863 the savings banks in this State contained deposits to the vast amount of $93,786,384. These are the savings of men and women who earn their bread by the labor of their hands. They show the prosperous condition of the workmen and workwomen of the free states. Take out of the account the half million of slave-owners in the southern states, and not all the freemen of that half of the Union have in any year laid by as much as the workmen of free New York."

Let me ask the writer of the money articles in the Bulletin, what would have been the result of taking a million of men from the workshops and farms, directly, even had specie payments *not* been suspended?

Military Matters.

I witnessed, yesterday, the reception of two veteran regiments, and their review by General Burnside. Broadway was crowded to excess, and the march of the war-worn troops was certainly greeted by a large portion of the people with great enthusiasm. The sullen silence of some of the spectators was made conspicuously offensive by the contrast. In relation to the voting of the soldiers, the Herald says:

"Shall they be allowed to fight will be the next question. A circular of a sub-committee of the Union Central Committee appears in the papers notifying voters that on the 8th of March current the above question is to be decided in this city by ballot. It was decided on earth by Grant's victories at Fort Donelson, Shiloh, Vicksburg, Chattanooga, and above the clouds by his victory on the crest of Lookout Mountain. Shall soldiers vote? Certainly."

What a splendid type of a soldier is Burnside? A head taller than the men surrounding him, and with a face beaming with the brightest sunshine of intelligence he brought to mind the description of Junot, that every school-boy knows by heart.

Talking about soldiers reminds me that one of the largest crowds I have ever seen, assembled in Union Square to witness the presentation of a stand of colors to the First Colored Regiment, raised in New York. What a significant change in public sentiment? Strange, and sad to say, the bitterest enemies of the black race in this city are to be found among the Irish; a people who, if any, ought to have the keenest sympathies with the down-trodden and oppressed. Would that every true Irishman would read what O'Connell has said about the unfortunate negroes. As the Colored regiment marched down Broadway their full ranks and their martial bearing won for them a hearty and continued applause, particularly from the women, who crowded every window. The men, here, exhibit their appreciation by clapping their hands. You cannot imagine what a singular effect it produces.

Volunteering is very brisk and the new recruits are a fine class of men; and wonderful to relate the statistics of the past three years proves that the additional number of deaths caused by the war, with all its fearful loss of life, is only ten per cent. My authority for this statement is Dr. Bellows, who ought to know.

Old Acquaintances.

I meet with lots of San Franciscans on Broadway; I need hardly say that Californians are very clannish and a slight acquaintance, even, is an excuse for a warm recognition when we happen to meet in the crowd of Broadway. I am told that an unusual number of "Old Californians" will visit the east this summer. In one day I had the pleasure of meeting Capt. Frisbie, Mr. Bidleman, Judge Baldwin, Mr. Farwell, Mr. Horn, Mr. Hardie, Mr. Tobin, and a number of others, not so well known. I see Dr. Anderson, occasionally; he is looking very well, but I regret to learn that his wife is in bad health. On the Park, Frank Baker, A. A. Selover, Mr. Sherwood, and occasionally C. K. Garrison make a "splurge" with their fancy horses.

The Sanitary Fair.

For the benefit of your readers I will copy a description of one of the most successful entertainments of the Brooklyn Sanitary Fair, which by the way will net over a quarter of a million of dollars:

One of the most successful and profitable adjuncts of the Fair has been the New England Kitchen. It was established to promote plain living, high thinking, a consumption of pork and beans, and a revival of the spirit of '76. To increase the sale of their pumpkin pies and other delicacies, they have had several apple-paring and quilting frolics. As a natural result of such festive gatherings, two susceptible hearts were smitten with the tender passion, and they resolved to form a life-long alliance on the scene of their early love. Last evening was the time appointed for the interesting ceremony to take place. A limited number of the general public were invited to be present, at the moderate charge of three dollars each. The kitchen was appropriately fixed up for the occasion. On the left side of the fire-place was a small platform. It was railed off and overshadowed by the Stars and Stripes, and under its folds the happy couple were to be made man and wife. The bride and bridegroom, together with a large circle of friends and acquaintances, had come from away "deown East."

They were all attired in the costumes of the last century. Among the *dramatis personæ* we noticed Widow Soiffles, Hezekiah Lumkins, Prudence Billings, Amiondab Dunham, Cyrus Bradford, Deborah Edwards, Mrs. Deacon Green, Elvira Simmins, Grandma Downing, Dr. Calomel, Squire Brown, Grandma Adams, Ruth Jenkins, Peggy Murray and a number of others equally distinguished. The ladies' dresses were principally remarkable for length of age and shortness of waist. They were of all fabrics—yellow, time-stained muslin, heavy brocaded silks, and coarse, strong calicoes. Mob caps, immaculately clean, and back combs in a forward state of development and high state of carving, were much affected as ornaments for the head. The universal absence of hoops was another noticeable feature, and the appearance of the ladies made us think that the fashion in the days of our grandmother might have been with great propriety designated the meal-sack style.

Shorts, buckles, powder and ruffles were revived in the gentlemen's dresses. They were resplendent in silk coats, ruffled shirts, powdered wigs, velvet tights and white stockings. Their attire did not impress us with the same idea of antiquity as did that of the ladies. We have often seen something very similar on the person of the happy possessor of a pair of splendid calves while he was clutching with desperate energy to a strap at the back of a carriage. Ike Downing—the only remaining son of the Widow Downing—cut a great dash in a suit borrowed especially for the occasion. The coat and smalls were of deep China silk, the vest (which reached half way to the knees) was of crimson silk, and all ornamented with heavy silver lace. The suit formerly belonged to Benedict Arnold.

Shortly after eight o'clock the bridal procession formed, and Dr. Singer, with the majority of the guests, marched to the platform and to the appropriate tune of "Invitation," sang the hymn commencing—

Come, my beloved, haste away,
Cut short the hours of thy delay.

The hint was promptly taken by the parties interested, and Dr. Jedediah Poundtext, the officiating clergyman, led the way to the platform. He was followed by Jonathan Simpkins, the bridegroom, accompanied by Josiah Watkins as groomsman, Miss Mehetable Jones, the young and lovely bride, attired in a low-necked robe of white satin, "of a walking length and a striding width," was then led forward by her parents, Jehosaphat and Patience Jones; they were accompanied by Miss Jerusha Skinner as bridesmaid. The party, when placed, resembled a collection of wax figures. The idea was, however, speedily dissipated when Dr. Poundtext (some one at our back whispered that he looked remarkably like Rev. Theodore L. Cuyler), began in the most approved and ancient fashion to perform the ceremony which was to unite in the holy bonds of matrimony Jonathan Simpkins, of Marblehead, with Mehetable Jones, of Swansea, both of ye ancient colony of Massachusetts. The ceremony was very impressive, and several times brought down the house. His exhortations were very fine, that to Mehetable particularly so. We are sorry that our space will not permit us to give in full his remarks to her on the subject of Jonathan's shirt buttons. They were very instructive and deserve a wide circulation. The ceremony was brought to a conclusion amid the tears of the bride's parents and the laughter of everybody else by Jonathan saluting his bride in due and ancient form—on the lips. The same ceremony, we believe, was very generally gone through with by all hands. We could not get near enough to see in consequence of the crowd, but at short intervals we heard loud smacks, followed by a peal of laughter. The kissing being over, Dr. Singer and his choir again delighted the audience, and expressed the feelings of the happy pair by singing to the appropriate tune of "Content," the hymn commencing—

The Lord my shepherd is,
I shall be well supplied;
Since he is mine and I am his,
What can I want beside, &c.

Silence being restored, Dr. Poundtext, in a loud voice and with a very impressive manner, announced his willingness to perform the same ceremony for any other couples who felt disposed to avail themselves of the opportunity. No one accepted the invitation, so the Reverend gentleman picked up his gloves and led the way to the refreshment table. After the appetites of the happy pair and the wedding guests had been somewhat appeased the general public were invited to step up and take something. A number of American citizens of African descent handed round pieces of pound-cake, pumpkin-pie, squash-pie, coffee, and cider. The benches were shortly afterwards put away, and the order to clear the Kitchen promptly obeyed. Dancing, after the fashion of "ye ancient times," was then indulged in, and, we believe, kept up with spirit until closing time arrived. The wedding was a merry one, may it result happily. It is likely to effect a great change in Brooklyn, as a number of unmarried ladies of a certain age are desirous of making the New England Kitchen a permanent institution. They intend to have apple-pearing and quilting frolics every week, and then who knows what may happen?

The United States Sanitary Commission has been so enthusiastically eulogized by the returning regiments that it has aroused all classes in its behalf, and those who held back, because they could not see where the money went to, are now satisfied. It is most gratifying to Californians to see the enthusiasm which lights up the face of the returned soldier as he gratefully speaks of the generosity of California.

In Memoriam.

The news of the death of the Rev. T. Starr King has pained me very much; every loyal Californian knows how much we are indebted to him. His unselfish patriotism, his peerless eloquence, and his wonderful modesty, gave him a power over the minds of men, that he turned to good account. I fear his loss will be irreparable, and his death, therefore, is rightfully considered a great public calamity. In all the Unitarian Churches his death has been spoken of with the profoundest regret; I attended service at Dr. Bellows' church, and in expectation of a funeral discourse, in memory of the lamented dead, a large number of strangers were present, and an unusual number of Californians. The whole service was particularly affecting, and when the Pastor's voice, in speaking of his "dear brother," was choked and almost inaudible, hardly a dry eye could be seen, and most of the ladies, near me, sobbed outright. There was an attempt at an eulogy; it was a brother attempting to speak of a brother, but the simplicity of the discourse, full of affection, and bearing witness to the love and honor which the Pastor felt for his friend, was full of pathos. His picture of the desolate flock, this morning assembled in the Church on Geary street, every Californian bitterly felt.

The obituary notices of all the principal papers, are very interesting; but as they will, doubtless, be copied by the California daily papers, I will not trouble you with them. It is enough to say, that the death of T. Starr King will be mourned in every city and town in the North. M. A. S.

Turpentine Works.—The Oroville Union speaks of the enterprise of W. G. Jones, who has extensive turpentine works at Dogtown, Butte county. He has erected a splendid distillery and is giving constant employment to about fifty men; and will make this new branch of industry a rich source of profit to himself and employees, if not prevented by the *unpitchy* act of the present Legislature. The law as amended, we suppose, is not now "unpitchy."

The Magnolia.

BY B. B. HUNNEWELL, ESQ., WELLESLEY.

For many years past, on the appearance of each number of your Magazine, I have been unable to resist reading and admiring the exceedingly happy and appropriate motto prefixed to it, "Je voudrais echauffer tout Punivers de mon gout pour les jardins;" a sentiment which every lover of Horticulture must acknowledge and appreciate; and it is under this influence that I am now prompted to offer your readers a few remarks on the cultivation of the Magnolia, though it is a tree without the advantage of recent introduction, and I am well aware I can say nothing more than to repeat what has been so frequently urged by you, on many occasions, in favor of the great claims of this beautiful class of trees to the attention of every one who wishes to ornament his grounds and render them attractive. With young planters, however, continually coming forward, and perhaps I may add with the older ones, in whom the taste for country life may have become suddenly developed by the acquisition of a fortune in these war times, information must always be acceptable, and if we would "warm up the enthusiasm of the whole world," and produce such results as we hear of in England we can only do so at the expense even of frequent repetition. Of course it is not to be expected that, with our limited and divided means, anything of such magnitudes we see in England can be accomplished in this country; but, on the other hand, it is equally true we do not always avail ourselves of the resources at our own doors, to the extent their great merits entitle them to. And then, whilst we criticise our English friends for their interested construction of International Law, could we not, with profit to ourselves, imitate them in the example they offer us of a more liberal application of our means to the embellishment of our country estates and to the encouragement of horticultural pursuits, thereby improving the public taste, which, it must be acknowledged, is much inclined to sanction extravagance in large expenditures for show and entertainments affording a few hours' gratification, whilst it is too apt to consider as money buried in the earth and thrown away, the trifling sum expended in planting a tree, which may become an object of beauty for a century and cause a man's memory to be cherished and revered by his descendants and kindred.

By the publication just made of the Book of the Royal Horticultural Society London, which has been produced in the most exquisite manner, and embellished with numerous photographs and illustrations on wood, and will be found especially interesting to those connected with our own horticultural societies, it will be seen that the late Prince Albert accepted the office of President of that Society, not as a mere complimentary sinecure, but with the full and avowed intention of personally performing its duties, which he did most faithfully, enabling the Society through his great influence and exertions, to attain the highest state of success and prosperity. To give an idea of the extent of their operations I may add, that it appears up to 1857, they had expended the sum of £250,000 stg., and since then, in connection with the Commissioners of the Great International Exhibition, a further sum of £100,000, in building a conservatory and a highly decorated Italian arcade, and in laying out a garden of 20 acres at Kensington Gore. Of the former sum, £20,000 have been applied in prizes for the encouragement of horticulture; £13,000 for the mere cost of procuring seeds and plants, of which over one-and-a-half millions have been distributed; and, as is well known, every part of the world has been explored at an enormous expense, by the eminent agents of the Society, producing results which have effected the appearance of all England, so that a day's ride cannot now be taken where the landscape is not beautified by some of the introductions of the Horticultural Society.

Although there may be many persons who are ignorant of the different kinds of trees, and many more who cannot distinguish the different varieties of the same tree, yet, it is a fact, there is a peculiar charm in a fine collection of judiciously planted trees which no one can be insensible to, even if unable to fully comprehend the reason. All trees are objects of beauty, especially when standing alone and growing vigorously in a good rich soil, with plenty of space to throw out their branches without injury from man or beast; yet it cannot be denied that some possess decided advantages over others, and are more appropriate and effective in certain locations. It will be generally admitted I suppose, that of all our ornamental trees the Magnolia is one of the most striking we have, attracting the attention of the most indifferent with its magnificent foliage and flowers, and producing a tropical effect possessed by no other hardy tree that I am acquainted with; and yet it is very seldom we see it in this section of the country. It is probably in some measure owing to the impression that the tree is not quite hardy which is altogether a mistake, as several of the varieties will grow in the most exposed places; and all, with the exception of the Grandiflora, can be made to thrive in sheltered locations. The Macrophylla, which has the largest leaf and flower, is of the latter class, and yet requires no other protection than that afforded by other trees, if transplanted when quite small. But who that has a spark of enthusiasm in his character, or the least pretension of a zealous horticulturist, would not consider himself amply repaid for any little extra care and attention bestowed in growing a tree with leaves three feet long, and beautiful white fragrant flowers 6 or 8 inches in diameter, and which no one can pass by without an expression of wonder and admiration? Then there is the Acuminata, which will grow in any situation no matter how much exposed, with foliage and blossoms not so large, but still of great size when the tree is young, and planted in a suitable soil, attaining the height of fifty to sixty feet and making one of the finest lawn trees we possess. The Cordata, also, makes a remarkably fine lawn tree, growing to a large size and resembling the Acuminata somewhat, but the flowers are not so showy, being smaller, of a greenish yellow. Several winters ago I moved one that was fifteen feet high more than ten miles with a frozen ball of earth, without losing even a twig, and it is now one of the most beautiful trees on my place. The Auriculata and Tripetela do not attain the same size as the others, but are rapid growers, and thrive best when protected by other trees in moist sheltered valleys, where there is a good depth of leaf-mold and decayed vegetable matter, and where their splendid foliage will not suffer from high winds. The borders in which Rhododendrons are planted are well adapted for them, and they harmonize admirably with that delightful shrub. The latter part of the season they have also large conical fruit-vessels, containing the seeds, which turn a rose color in the autumn and are hardly less ornamental than the blossoms. Besides these, I have the Maxima and Triumphans, also the Thompsoniana and Glauca. The latter is a large-sized shrub, and is more commonly seen in this vicinity, and is remarkable for the very great fragrance of its blossoms.

Independent of these numerous native varieties we have a long list of Chinese, which, although of an entirely different character, are none the less desirable and deserving of general cultivation, especially by those who reside in the country during the winter or go there quite early in the season, as they blossom near Boston the latter part of April or first ten days of May. They only attain a medium size, and are remarkable for their blossoms, which appear before the foliage in the most wonderful profusion, numbering, though quite large, several thousand on a small tree, and presenting the most gorgeous appearance imaginable, particularly when planted in masses with an evergreen back ground. There are several kinds, among which the Soulangeana, with large white and purple flowers, is perfectly hardy and probably the most desirable for general planting in New England. In most seasons it blossoms a second time in September, but then only to a small extent. I have the Norbertiana, Conspicua and Purpurea doing finely, though in a somewhat sheltered situation, but I have not thus far had very satisfactory success with the gracilis or obovata, which are more or less injured every winter. The conspicua, as is well known, flourishes to perfection in Philadelphia, where they have numerous fine large specimens, and the sight of one of them, when in full blossom, will well repay a visit to that favored city, to say nothing of its many other attractions. Leroy of Angers has lately sent out a new variety called Magnolia Lennei, said to be also hardy, but the present winter is my first experience with it.—[Hovey's Magazine, Feb. 1864.

The Gutta Percha Tree.

This tree called the Isonandra Gutta, which furnishes the gutta-percha, is a native of the Indian Archipelago and the adjacent lands. A few years since, this substance, now of such widely extended use, was totally unknown in Europe, for, though from time immemorial the Malays employed it for making the handles of their hatchets and cresses, it was only in the year 1843 that Mr. Montgomery, an English surgeon, having casually become acquainted with its valuable properties, sent an account of it, with samples, to the Royal Society, for which he received its gold medal. The fame of the new article spread rapidly throughout the world; science and speculation seized upon it with equal eagerness; it was immediately analyzed, studied, and tried in every possible way, so that it is now as well known and as extensively used as if it had been in our possession for centuries. The Isonandra Gutta is a large high tree, with a dense crown of rather small, dark-green leaves, and a round smooth trunk. The white blossoms change into a sweet fruit, containing an oily substance fit for culinary use. The wood is soft, spongy, and contains longitudinal cavities filled with brown strips of gutta-percha. The original method of the Malays for collecting the resin, consisted in felling the tree, which was then placed in a slanting position, so as to enable the exuding fluid to be collected in banana leaves. This barbarous proceeding, which, from the enormous demand that suddenly arose for the gutta, would soon have brought the rapidly rising trade to a suicidal end, fortunately became known before it was too late, and the resin is now gathered in the same manner as caoutchouc, by making incisions in the bark with a chopping knife, collecting the thin, white, milky fluid exuding in large vessels, and allowing it to evaporate in the sun or over a fire. The solid residuum, which is the gutta-percha of commerce, is finally softened in hot water, and pressed into the form of slabs, or flat pieces, generally a foot broad, a foot and a half long, and three inches thick. Gutta-percha has many properties in common with caoutchouc, being completely soluble in water, tenacious but not elastic, and an extremely bad conductor of calorric and electricity. The uses of gutta-percha, as is well known, are manifold. It serves, among other purposes, for the insulation of telegraphic wires in submarine cables; and also for water-pipes; for vessels for the reception of alkaline or acid liquids, which would corrode metal or wood; for surgical implements, for boxes, baskets, combs, and a variety of other articles.

NEW RULES FOR THE BAROMETER.—Negretti and Zambra, the celebrated London meteorological instrument makers, give the following rules for observing the barometer. Sir John Herschell some years since published an elaborate essay on this instrument, but it is not so simple or intelligible as this:

A RISING BAROMETER.

A rapid rise indicates unsettled weather.

A gradual rise indicates settled weather.

A rise with dry air and cold increasing in summer indicates wind from northward; and if rain has fallen better weather is to be expected.

A rise with moist air and low temperature indicates wind and rain from northward.

A rise with a southerly wind indicates fine weather.

A STEADY BAROMETER.

With dry air and a seasonable temperature, indicates a continuance of very fine weather.

A FALLING BAROMETER.

A rapid fall indicates stormy weather.

A rapid fall with westerly wind indicates stormy weather from northward.

A fall with a northerly wind indicates storm, with rain and hail in summer, and snow in winter.

A fall with increased moisture in the air and the heat increasing indicates wind and rain from southward.

A fall with dry air and cold increasing in winter indicates snow.

A fall after very calm and warm weather indicates rain, with squally weather.

"Beautiful weather," as the gentleman said when he chanced to get a tender piece of mutton on his plate one day at dinner.

MINERALOGY.

[Continued from California Farmer of April 1st, 1864.

Sand.—Clay.

The loose or soft material of the surface of the earth consists of sand, clay, gravel, or stones, and what we call in general terms, soil or earth. These materials are either in layers or irregular beds. Most clay beds, and many of gravel, when cut through vertically, show indications of horizontal layers, a result of deposition, or distribution, by water.

In geological language, these stratified deposits are often classed with rocks, as they graduate into true rocks, and differ only in the amount of cementing material.

The ordinary constituents of earth are quartz, feldspar or clay, oxyd of iron and lime; but these vary with the source from whence they are derived. When the rock that has afforded the soil is granite, mica slate, or the allied rocks, mica is usually present, as well as feldspar and quartz; so a quartzose rock will furnish siliceous gravel; a magnesian, will give magnesia to the soil; calcareous, lime; trap, the ingredient of decomposed feldspar or hornblende. The material will be coarse or gravelly, or fine earthy, according to the nature of the rock, or the condition under which it is worn down, or its subsequent distribution by flowing waters. Besides the prominent constituents mentioned, there are small proportions of phosphates, nitrates, chlorids, etc., together with the results of vegetable decomposition; and these comparatively rare ingredients are of great importance to growing vegetation. The pebbles of a soil are commonly siliceous, as this kind resists wear most effectually.

Sand is usually pulverized quartz, with some feldspar. *Clay* is a plastic earth, consisting mainly of alumia one-third part, and silica (quartz) two-thirds. It owes its plasticity to the alumina, and ceases to be called clay when the proportion of silica is too great for plasticity. It is afforded by the decomposition of feldspar and all argillaceous rocks. Oxyd of iron, carbonate of lime, and magnesia are often present in clays.

Sand for glass manufacture should be pure silica, free from a taint of iron. This purity is apparent in the clearness of the grains, under a lens, or their white color. The sand of Cheshire and Lanesboro', in Massachusetts, is a beautiful material.

In the *manufacture of glass*, the object is to form a trasparent fusible compound, and not an opaque infusible one as in pottery. This result is secured by heating together to fusion, silica (quartz sand or flint powder) and the alkali potash or soda. The ingredients combine and produce a silicate of potash or soda—in other words, glass.

Besides these ingredients, lime or oxyd of lead are added for glass of different kinds. A small proportion of lime increases the density, hardness, and luster of glass, producing a specific gravity between 2 5 and 2 6; while with lead a still denser material is formed—called *crystal* or *flint* glass—whose specific gravity is from 3 to 3·6.

From 7 to 20 parts of lime are added for 100 of silica, and 25 to 50 of calcined sulphate or carbonate of soda; salt (chlorid of sodium) may also be employed. A good colorless glass has been found by analysis to consist of silica 76·0, potash 13·6, and lime 10·4 parts, in a hundred. For coarse bottle-glass, wood-ashes and coarse sea-weed soda, called *kelp*, or else pearlashes, are used along with siliceous sand and broken glass. For a hard glass, the proportion of alkali is small.

The best English crystal glass analyzed by Berthier, afforded 59 parts of Silica, 9 of potash, 28 of oxyd of lead, and 1·4 of oxyd of manganese. Crown glass contains, in general, less alkali than crystal glass, and superior in hardness. The alkali, moreover, in England, is soda instead of potash. *Plate glass* also contains soda, and this soda (the carbonate) is prepared with great care. The proportions are 7 parts of sand, 1 quicklime, 2½ of dry carbonate of soda, besides cullet or broken plate.

The materials are first well pounded and sifted, and mixed into a fine paste; they are then heated together in pots made of a pure refractory clay, until fusion has taken place and the material has settled. The glass is afterwards worked by blowing, or molded, into the various forms it has in market; and it is finally *annealed*—or in other words, is very slowly cooled—to render it tough. A little oxyd of manganese is usually employed to correct the green color which glass is apt to derive from any oxyd of iron present. But if the manganese is in excess, it gives a violet tinge to it.

The following chemical distribution of glasses has been proposed:

Soluble glass. A simple silicate of potash or soda, or of both of these alkalies.

Bohemian or crown glass. Silicate of potash and lime.

Common window and mirror glass. Silicate of soda and lime; sometimes also of potash.

Bottle glass. Silicate of soda, lime, alumina, and iron.

Ordinary crystal glass. Silicate of potash and lead.

Flint glass. Silicate of potash and lead; more lead than in the preceding.

Strass. Silicate of potash and lead—still more lead.

Enamel. Silicate and stannate, or antimoniate of potash or soda and lead.

Glass was manufactured by the Phœnicians, and the later Egyptians. According to Pliny and Strabo, the glass works of Sidon and Alexandria were famous in their times, and produced beautiful articles. The Romans employed glass to some extent in their windows, and remains of this glass are found in Herculaneum. Window glass manufacture was first commenced in England in 1557.

Sand for casting is a fine siliceous sand, containing a little clay to make it adhere somewhat and retain the forms into which it may be molded. It must be quite free from lime.

Tripoli is a fine grained earthy deposit, having a dry, harsh feel and a white or grayish color. It contains 80 per cent of silica, mostly derived from the casts of animalcules. It is valuable as a polishing material.

Marl. Marl is a clay containing carbonate of lime. The material is valuable as manure. The term is also improperly applied to any clayey earth used in fertilizing land. The green sand in New Jersey is sometimes called marl.

Fuller's earth is a white, grayish, or greenish-white earth, having a soapy feel, which was formerly used for removing oil or grease from woolen cloth. It falls to pieces in water, and forms a paste which is not plastic. A variety consists of silica 44·0, alumina 23·1, lime, 4·1, magnesia 2·0, protoxyd of iron 2·0 Gr=2·45.

Lithomarge is a compact clay of a fine smooth texture, and very sectile. Its colors are white, grayish, bluish-white, or ocher-yellow, with a shining streak. Gr=2 4—2·5. The *tuesite* of Thompson, a white Lithomarge from the banks of the Tweed, is said to make good slate pencils.

Clay for bricks is the most ordinary kind; it should have slight plasticity when moistened, and a fine even character without pebbles. It ordinarily contains some hydrated oxyd of iron, which when heated turns red by the escape of the water in its composition, which reduces it to the red oxyd of iron, and gives the usual red color to the brick. It also frequently contains lime; but much lime is injurious, as it renders the brick fusible. A clay is extensively employed at Milwaukie, in Wisconsin, which contains no iron, and produces a very handsome cream-colored brick. About 9,000,000 of this kind of brick were made at that place in 1847.

In *making bricks*, the clay is first well worked by the treading of cattle or by machinery: after this, it is molded in molds of the requisite size (9¾ inches, by 4¾ and 2¾), and then taken out and then taken out and laid on the ground. A good workman will make by hand 5,000 in a day, and the best 10,000. After drying till stiff enough to bear handling, the bricks are trimmed off with a knife when requiring it, and piled up in long walls for farther drying. They are then made into a kiln by piling them in an open manner (so that the flame and heated draft may have passage among them), and leaving places beneath for her fires. The heat is continued 48 hours or more.

The best brick are pressed in molds. They have a smooth, hard surface. Near Baltimore, Md., bricks are thus made by a machine, worked by a single horse, which will mold 30,000 bricks in 12 hours; the bricks are dry enough when first taken from the mold for immediate burning.

Burnt bricks were not used in England before the eleventh century, when they were employed in the construction of the abbey of St. Albans. But they date historically as far back as the city of Babylon. Unburnt bricks have also been used in all ages. Those of Egyptian and Babylonish times were made of worked clay mixed with chopped straw to prevent it falling to pieces. The *adobes* of Peru are large sun-baked bricks or blocks of clay; and in that dry climate they are very durable.

Clay for Fire-bricks should contain no lime, magnesia or iron, as its value depends on its being very refractory. There is a large manufactory in the United States, at Baltimore, from the tertiary clays of eastern Maryland. In England a slate-clay from the coal series is employed.

FAST TIME.—One of the Pioneer stage coaches lately made the trip from Virginia City to Placerville in 11½ hours.

CALIFORNIA MARBLE WORKS.

John Grant. P. J. Devine.

Grant & Devine,

Sutter street, bet. Montgomery and Sansome,

OFFER FOR SALE

MANTLES, GRAVE-STONES,

MONUMENTS, TOMBS,

TABLE-TOPS, GRATES, TILES,

And every description of Marble Work.

Sculpture, Carving, Lettering,

And all kinds of ORNAMENTAL WORK will receive special attention.

Grant & Devine are constantly in receipt, from their quarries in Tuolumne County, of the finest and purest Marble, which they manufacture into the above. They respectfully solicit the patronage of persons requiring any articles in their line.

MARBLE sold by WHOLESALE and RETAIL, in the slab and block.

GRANT & DEVINE,

20-13 Sutter street, between Montgomery and Sansome.

NEW AGRICULTURAL INVENTION.

Sower for all Kinds of Grains.

A NEW SEED SOWER of large capability is now offered for sale—the Right of Manufacture and Sale of it for the State of California, or for Counties.

The Machine can be made with

Three, Five, or Seven Tubes,

and arranged to sow any kind of grains at any given distance, and to sow a greater or less quantity, to seed thick or sparce, as may be desired.

By the construction of this Machine it can be made to sow on level ground or on ridges, and every variety of seed, from the smallest kind to Beans, Peas, Grain, Corn, etc.

THE SIMPLICITY,

as well as the accuracy, with which this Machine works, is wonderful. Every farmer can regulate it to suit every purpose and plan.

The Evenness and Precision

with which it sows the seed without wasting it, will secure great benefit to the farmer, as it makes a great saving of seed—enough in a short time to pay for the Machine.

These Machines can be made expressly for the sowing of COTTON,

HIGHLAND RICE,

TOBACCO,

SUGAR-CANE,

and all the new crops, of which this State will, ere long, become famous.

For all particulars of the Machine, call at Farmer Reading Rooms, where the Machine can be seen, and where the price and terms of the Patent Right can be ascertained.

Old Number 110,

Between Sansome and Montgomery streets,

SAN FRANCISCO, CAL.

THE UNDERSIGNED HAS ESTABLISHED SUCH correspondence and business in Europe as to enable him to secure from the very best source—the most celebrated growers—their choicest seeds grown, of which he will always be in receipt, and to endless variety, imported directly from France and England, from well known and responsible houses; some of the most prominent of which named in our catalogues.

It has been the experience of our best gardeners and growers, and all others who plant seed, that seeds raised in California are not fully reliable and cannot be for a series of year, until more capital, experience and scientific knowledge shall be given to the business.

HAS FOR SALE

Alfalfa or Chile Clover; Hungarian Grass;
Kentucky Blue-grass; Orchard Grass;
Red-top Grass; Sainfoin Grass;
English Rye-grass, Timothy Grass;
Red Clover; White Dutch Clover;
Crimson Clover, Lucerne, &c. &c. &c.

With many entire new varieties of Grass Seeds and prepared Lawn Grasses never before offered.

EVERY VARIETY OF

BEET, CABBAGE, CARROT, RADISH, TURNIP, CUCUMBER, MELONS, LETTUCE, ONIONS, TOMATO, EARLY AND LATE PEAS, BEANS, &c., &c., &c.

Tobacco Seed.

HAVANA, VIRGINIA, CONNECTICUT SEED-LEAF, AND MARYLAND TOBACCO SEED.

COTTON SEED.

Guano from Johnston's Island.

FLOWER SEEDS (300 Varieties)

BULBS;

LILIES, Amaryllis, Narcissus, TULIPS, Anemones, Tuberoses, Gladiolus, HYACINTHS, Ranunculus, Peony-roots, Iris,

and in endless variety, imported direct from France and GERMANY.

From his long experience in the Seed Business (over thirteen years), and his very extensive stock of goods appertaining to an establishment of this kind, he is confident of his ability to satisfy his patrons.

THE STORY OF A NECKTIE.

Two stages were crowded, and it was very dark on the morning that I left Virginia City, Nevada Territory, and the long and tedious passage to California, was anything but agreeable to me. Daylight, however, soon peeped through the window-panes, and I observed that a gentleman who sat directly opposite had his eyes riveted on me, and the singular earnestness of his searching glance, together with the trembling quiver of his lips, caused me to feel somewhat uneasy, and suspicions of foul play, and perhaps murder, crowded my imagination, and overwhelmed me with fear.

Murder and robbery had been committed in the Territory. Stages had been robbed of their treasure, and travelers had been murdered by the "Knights of the road." Was my stage companion one of this class—and might not a majority of the passengers be his confederates? Such a thought passed my brain and held me spell-bound to the mystery. We had proceeded at a rapid speed over the road for three hours, and during the whole time, the strange person had not turned his eyes from me. The coach now stopped at the station for changing animals, and I felt somewhat relieved from my terrible situation. I should have certainly refused to ride further in that stage, had there been a public house kept on the premises. On learning to the contrary, I sought the driver, and implored for an outside seat, offering to pay double fare for such a privilege. None of the passengers would yield their seat however, and I was forced to resume the same position as before. "All aboard!" shouted the driver, and again we started over the road at a break-neck speed. I now thought of a plan to evade the scrutiny of the stranger, and took from my pocket a newspaper, which I held before my face, but I could not read. The horrifying truth of how utterly I was in his power continued to increase, as occasionally I would glance slyly at him from the side of my paper, and find him still persistently gazing upon me.

"Would you be so kind as to change places with me, Sir," I asked of a person who occupied the same seat with myself.

"Certainly, Sir," replied the person thus addressed, and in a moment he was at my side.

Quenchless horror now seized me; I would have uttered a cry, but it froze upon my lips. I would have jumped from the coach, but death from a broken neck stared me in the face. Visions of cold steel flitted before me—my paper rattled in the trembling grasp which held it, and I dared not lift my eyes!

"Pardon me, my friend," said the person now at my side, "I have a favor to ask of you."

The gentle manner in which he spoke, instantly relieved me from the stupidity to which I had fallen.

"With pleasure, Sir," I half stammered, half answered, "I am at your service, Sir."

He continued: "I am deeply interested in the necktie which you wear; it reminds me of circumstances, connected with the past ten years of my life."

The mystery was solved; I had made a fool of myself by imagining every thing that was bad in a person who only admired my necktie, and I must acknowledge I was ashamed of myself.

"Indeed," I rejoined, "I do not know of any peculiar attraction attached to it."

"No, only that I had one exactly like it some years ago, the possession of which caused me to be convicted and sentenced to death for the crime of murder," he resumed.

"Possible," I exclaimed, "and you escaped."

"Yes, and I would like very much to relate the whole story to you, but it would be a tedious undertaking at this time, and beside, I intend that it shall be published some time hence, as a curious coincidence in the episodes of life."

Capital, I thought, and here is a chance of a sensation story.

"But can you not appoint some time and place where it would be convenient for you to write the story," I urged.

"Yes, on one condition."

"Name it."

"That you will sell me that necktie, and I will pay you more than it cost you."

I took the article from my neck and placed it in his hand.

"Now, what did it cost?" he asked, drawing a handful of coin from his pocket.

"Oh, never mind; you can procure another for me when we arrive at our destination," I returned.

"Very well; my name is ——. I reside at Virginia City, and when you return, call at the Gould and Curry mill, and I will relate to you a case of circumstantial evidence which mirrors the dark chapters of my life."

* * * * * *

On my return to Virginia City I lost no time in seeking my friend, and he conducted me to a neat and tasty cottage, where on entering I was introduced to his wife, who received me with great kindness and extended to me the hospitalities of her home.

"Now," said my friend, drawing his chair close to the fire, "I will tell you the story which I promised you."

"Some twelve years ago it was my misfortune to become an orphan, and being without any near relatives, I was forced out into the world to seek a livelihood among strangers. I was nineteen at the time of my parents' death, and we had lived in the city of Boston for a number of years. Knowing it would be useless for me to find steady employment in a large commercial city, I packed all the worldly goods I possessed into a bundle, and swinging the same on my back started for the villages of western Massachusetts, determining to seek a situation on a farm. I traveled for three days, and on the fourth I reached the village of ——, in Berkshire county, and hired out for ten dollars per month. The person who hired me we will call Farmer Watson, and his farm was the most extensive in those parts, situated half a mile from the village.

"Besides myself there were some eight others employed, and among them a young man about my age, called Harry. Harry was apparently a clever sort of a chap, and we soon became great friends, so much so that we were most constantly together.

"We went to the village each Saturday night and as Harry had worked for Watson nearly a year, of course he was acquainted with all the pretty girls in the village. Now there is no young man of good sense but that will love a beautiful girl, and Harry thinking he had good sense, loved Mabel Story, for she was the very ideal of his fancy.

"The course of true love never runs smooth," say many, and could be well applied to Harry's case

We went together to see Mabel, but the green monster which has brought many hearts to grief, disturbed Harry so much that he left me master of the field. From this time he began to grow cold and sullen toward me, and harsh words and sometimes blows passed between us.

The father of Mabel, learning the cause, forbade Harry from visiting his house. Saturday night came again, and just as I was about parting for the village, one of the men called me aside and stated that Harry had threatened in his presence to interfere with my weekly visits to the house of Story, and intimated that there would be trouble on the road that night. I had no fears of Harry's idle threats, however, for I felt that I was a match for him under any circumstances.

Nothing unusual occurred to my knowledge on that night, and on the next morning I started to return at an early hour, having remained over night in the village. I had reached a bridge which spanned the creek a short distance from the village, when I discovered something lying in the road near by, and picking it up discovered it to be a very fine necktie, which I surmised some one had just lost the evening before. Having promised Mabel to return in time for church, and thinking that perhaps it would be a good plan to wear the necktie in order that the owner might be found to reclaim it, I placed it about my neck.

On leaving the house for the village again, I was met at the door by Farmer Watson, who immediately questioned me in regard to the tie, saying that it belonged to Harry. I took it off in a moment, not desiring to wear anything which belonged to him, and replaced my own.

Proceeding to the village, Mabel and myself had hardly seated ourselves in the little brown church, when we were started by a loud shuffling of feet near the entrance, and turning quickly, round I saw the Constable of the village hurrying down the aisle, and looking directly to where I sat. In an instant I was seized by the collar of my coat and dragged from my seat, I had no time to resist such an uncalled for proceeding, and it would have been in vain for me to attempt resistance, as the Sheriff and others were there to assist the Constable. Before I had time to ask the meaning of all this, I was conveyed to the jail, and the door was closed on me. I was a prisoner, incarcerated in a felon's dungeon! What could it mean—what had I done to deserve such treatment? Surely there must be some mistake?

Thus I thought, and wept and hoped—yes, I wept like a child, and hoped for mercy in innocence. It was dark, very dark, in that lone and dreary cell, as hour by hour I listened for returning footsteps.

It must have been night when I was suddenly startled by a soft sweet voice, calling me by name from the outside. I knew the voice, it was Mabel's. She had come to console me in my misery and bid me not despair. I felt my way to the massive iron door and begged of her to reveal the mystery.

"Hush!" she replied; "all will be right—Harry Pierce has been murdered and thrown into the creek, and you are suspected as the murderer, but I know that you are innocent."

"Blessed assurance! sweet Mabel!" I exclaimed in one breath, "as God is my judge, *I am innocent!*" but she had gone.

The mystery thus revealed, I was shocked; the thought of my being branded as a murderer crazed my burning brain. I, the poor orphan, with no friend on earth to vindicate my innocence. Oh, I cannot recount or clothe in language the agony which I endured on that terrible and sleepless night. To others, the morning sun rose and shone the same as ever—to me, there was no sunshine; all, all, seemed dark and forebodiag.

During the day, I was conducted from the prison for the purpose of being examined Harry Pierce had disappeared on Saturday night, and though rigid search had been made for him, he could nowhere be found. Farmer Watson was sure he wore the necktie found in my possession, and traces of blood were visible on the bridge, it therefore became evident he had been murdered and his body thrown into the creek. We were enemies, and the evidence was considered circumstantial. I was convicted and sentenced to be executed. Liberty is sweet, and death under any other circumstances, is preferable to the gallows, and so I thought as I was being conveyed back to jail, after receiving sentence. With one bound I broke the grasp which held me and ran for my life! I took the road for Watson's house amid the cries and shouts of my pursuers.

I flew like wind, and never looked back until I reached the gate. Fortune favored me, heaven inspired me! At the gate stood the farmer's horse ready saddled! I bounced on to the animal, and setting him to his work of traveling as he had never done before, I reached the town of ——, at day-break, next morning.

The train for Boston departed in a short time, and I reached that city safe, and felt somewhat relieved. I knew I must be cautious, and therefore sought a part of the city where I was not known.

After a long study as to what course I should then pursue, I determined to secrete myself on some vessel and depart for California. I picked up a paper to ascertain what ship would depart first, and my attention was attracted by a notice, in large type, which read something like this:

"FIVE HUNDRED DOLLARS REWARD!

Escaped from the county of Berkshire on the 10th inst., a convicted murderer, by the name of ——, about twenty years of age, light complexion and dark hair. Had on, when he left, black cloth coat, light pants and brown felt hat. Whoever will arrest said person and deliver him to any officer of the law, shall receive the above reward. Signed by the sheriff."

I looked around me to see if anybody was looking at me, and being satisfied on that point, I found that a ship was advertised to leave on that day.

I soon reached the wharf by going through back streets and secluded alleys, and going aboard slyly, entered the forecastle, where I stowed myself away among the sailor's luggage. I was not discovered until the ship was well out at sea, and only then by sea-sickness, which forced me out.

I was treated rather roughly at first, but on promising to do my share of the work on the voyage, I was soon considered as good as any sailor on the ship. After a passage of four months we entered the Golden Gate, and as soon as my feet touched the shore, I offered up my prayer of thanks to Him who holds the destiny of man in the hollow of His hand.

I was in a strange land but I felt in my heart of hearts that I was a freeman? The clear blue sky once more bent in beauty over me, and the dark clouds of adversity had passed away.

I will not tire your patience by relating all that afterwards occurred. Industry brought its reward, and I prospered in that Golden Land. Three years since I came to this Territory and invested my capital in its silver mines, whose mineral wealth has astonished the world. It was just one year ago that I met a stranger, late at night, who asked me for the price of a night's lodging. The man was roughly clad, and I had no reason to doubt that he was actually in want; therefore I did not hesitate for a moment to place in his hand a gold coin.

"Thank you," he exclaimed; "but sir," he continued, as I turned to resume my way "will you be so kind as to give me your name?"

"Oh, never mind my name: only consider it a gift from a friend to the unfortunate," I answered.

"But I must know your name," resumed the stranger, in an emphatic tone.

"Then it is ——."

"Did you ever live in Berkshire county, Massachusetts?" he half affirmed, half asked, at the same time stepping nearer to me and gazing wildly into my face. I had no time to reply, for in an instant he threw his arms around me and ejaculated, in a stifled voice, *"Do you not know me—I, Harry Pierce,—I, who would have you hung—who would murder you on the gallows for a fancied wrong wrought by jealously? Oh! thank God, we have met again. Tell me; oh, say that I am forgiven!"*

It appeared he had recognized me—not only by name—for he saw the scar over by left eye, which he had caused some ten years before, with a fence-picket, during a scuffle. If I was proud of my success for ten years, I was prouder at that moment to know that Harry Pierce lived, and that I could return to my native State with his living testimony to vindicate the honor of my manhood, and wipe away forever the stain of murder which the people of Berkshire county had so cruely fastened on my name.

And I did return. Harry Pierce was with me. The village had not changed much; still, many of those we knew before had passed to a better land. Mabel Story was still there, and she was living a single life, though many and many had been the hearts which worshiped at her shrine. The story of how Harry had dropped his necktie in the road and strewn the bridge with blood was soon told and all parties were forgiven.

I then purchased a comfortable farm for Harry, adjoining Farmer Watson's, and Mabel Story and myself were married, when I returned to this Territory, and shall make it my future home.

The necktie which I received from you is of the same figure and pattern as the one which came so near costing me my life, and I shall endeavor to keep it as a reminiscence of other days.—[G. Era.

The Slaves of Prejudice.

DEATH HORRED OF HIS PAST.—There are queer people in the world; people with the most absurd, unreasonable, and indefensible prejudices. For example, we have met with individuals who had a morbid antipathy to anything that was extensively advertised, no matter what might be its actual claims to the confidence of the public. These eccentrics looked with especial disfavor on advertised medicines. They could not see, for example, in Dr. HOLLOWAY'S magnificent system of advertising, covering, as it does, all the mediums of publicity which the world affords, anything but a gigantic scheme of mere speculation. True, they could not gainsay the testimony pouring in spontaneously from the highest sources, in favor of his incomparable Pills and Ointment, but still they shook their heads and muttered "humbug." Of course there is no possibility of arguing with men who won't reason. The best way is to let them alone. Fortunately such specimens of stupidity are "few and far between," in this enlightened era. The general feeling is, that if a thing in itself is excellent, its virtues should be proclaimed to the four winds of heaven for the benefit of mankind. Hence, the proclamations made by Dr. HOLLOWAY, through the entire newspaper press of the world, of the properties and operations of his remedies, meets with the cordial approval of thinking men. The value of the preparations as specifics for the various internal and external complaints peculiar to different climates, or common to the world at large, is conceded not only by the masses, but by governments, men of science, and candid observers in of walk of life. Can such remedies be too widely known? Impossible!—[Cin. Dollar Columbian

Opinions of Professors of Music on Jacob Zech's Pianos.

SAN FRANCISCO, December 29, 1863.

JACOB ZECH, ESQ:

Dear Sir: We, the undersigned, musicians of the City of San Francisco, do hereby give our unbiased opinion as to the workmanship, purity, power, and brilliancy of tone, and perfectness and durability of action, of the Grand Piano manufactured and exhibited by you. We have no hesitation in pronouncing them far superior to any piano, ever placed before us for inspection. At the late exhibition of the State Agricultural Society, the Committee saw fit to denounce your instrument and award the first prize for an inferior *square piano*, which we pronounce a great injustice to you, and we do hereby give our names, and warrant your pianos to be superior to any in the State. With the greatest esteem, and the most fervent desire for your success, and a wish that the people of California may give you justice, and not be controlled by money or the opinion of any body of men who are not qualified to judge of the merits of a Piano.

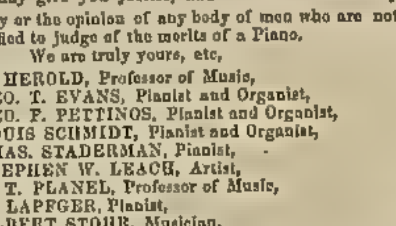
We are truly yours, etc,

R. HEROLD, Professor of Music,
GEO. T. EVANS, Pianist and Organist,
GEO. F. PETTINOS, Pianist and Organist,
LOUIS SCHMIDT, Pianist and Organist,
CHAS. STADERMAN, Pianist,
STEPHEN W. LEACH, Artist,
L. T. PLANEL, Professor of Music,
A. LAPFGER, Pianist,
ALBERT STOHR, Musician,
JOSEPH B. SCHMITZ, Musician,
EMILE TOUSSIN, Pianist,
CHAS. SCHULTZ, Pianist and Organist,
J. D. KNELL, Pianist, and Organist at Cathedral,
H. HOLZHAUER, Pianist,
WM. CROOKER, Pianist.

Letter to Jacob Zech.

[The following notice of my Pianos was received by me from the gentlemen named, professors of music at Sacramento, and approving, in very flattering terms, my instrument.—J. ZECH.]

Your Grand Piano was an excellent and beautiful instrument, full and rich and tone, in with all the excellencies that are desired in a Grand Piano.



Your Square Piano was one of extraordinary excellence, and beyond question the best on exhibition, having a full and powerful tone, yet, with that soft and delicate expression so desirable to an artistic ear. We feel gratified to know of your success in this art, and hope your efforts will be duly appreciated.

Wishing you all success, we are your friends,

CHARLES WINTER, Pianist,
CHAS. STADDERMAN, Pianist.
CHRISTIAN STATFIELD, Pianist,
GEORGE GREINER, Piano Maker.

Combined Machines,

WITH ALL POSSIBLE IMPROVEMENTS.

EIGHT HUNDRED sold, and in use on this coast, with increased demand every year, thus PROVING their great SUPERIORITY over all the numerous kinds for sale in this market.

J. D. Arthur & Son,

Corner of Davis and Washington streets.

23m San Francisco.

BUCKEYE MOWER.

To Farmers:

WE, WITH GREAT CONFIDENCE OFFER THE BUCKEYE MACHINE, for this reason: knowing it to be Superior to any MOWER for sale, and that it will sustain the reputation it has made for the past THREE YEARS in surpassing any other Mower in the following respects:

Being better Made; much Stronger and more Durable; will Run lighter, Cut much closer with greater ease to the team, and no side draught

We can bring twenty Farmers to say the Buckeye is SUPERIOR to any Mower, to one who can be found prejudiced against it.

The BUCKEYE MOWERS are of two sizes, cutting 4 feet, and 4 feet 8 inches.

The "Buckeye" as a Reaper.

The important advantages which belong to the BUCKEYE as a Mower are retained in the REAPER, and can be used either as a Mower or Reaper by attaching the Platform and Reel

Though importing largely of them, we have been unable, for two years, to supply the demand.

They are better adapted to the wants of California Farmers than any Combined Machine for sale. It will adapt itself to every surface of ground, will run lighter and deliver its grain easier and better than any other Reaper. The Reaper's seat is directly over the axle of the Machine, instead of being on the Platform where it adds greatly to the draught.

We are

SOLE AGENTS

IN SAN FRANCISCO AND MARYSVILLE

FOR THE

HORACE WATERS, Ag't,
No. 481 Broadway, N. Y

THE DAY SCHOOL BELL.

40,000 copies issued. A new Singing Book for Schools and Seminaries, called the Day-School Bell, is now ready. It contains about 300 choice songs, rounds, duets, trios, quartets, and choruses, many of them written expressly for this work, besides 32 pages of the Elements of Music, which are easy and progressive.

Among the large number of beautiful pieces may be found, "Uncle Sam's School," "Don't you hear the children coming," "Always look on the sunny side," "The little lass," and "Little Lad," "Oh, if I were a little bird," "Bird of beauty," "Pretty pair tree," "Anvil Chorus," "Meet me by the running brook," etc. It is compiled by Horace Waters, author of "Sabbath School Bell," Nos. 1 and 2, which have had the enormous sales of 625,000 copies. Prices—paper covers, 25 cents, $20 per 100; bound 30 cents, $25 per 100; cloth bound, embossed gilt, 40 cents, $35 per 100. 25 copies furnished at the 100 price. Mailed at the retail price.

SABBATH SCHOOL BELL, NO. 1,

contains 144 pages, and nearly 200 tunes and hymns, and is the most popular S. S. Book ever issued. Among the most popular pieces are "Kind Words," "Eden Above," "Christian Hero," "Beautiful Zion," "I ought to love my Mother," "The Angels told me so," "In the Light," "Rest for the Weary," etc. Prices—paper covers, 20 cents each, $15 per 100; bound 25 cents, $20 per 100; clothbound, embossed gilt, 30 cents, $25 per 100.

SABBATH SCHOOL BELL, NO. 2,

Is an entire new work of 192 pages, and nearly two hundred and twenty-five tunes and hymns. One million of these Bells have been issued and are now ringing through this and other countries. Among the many choice pieces may be found, "Shall we meet beyond the River?" "There is a Beautiful World," "Sorrow shall come again no more," "Don't you hear the Angels coming?" "Thou, God, seest me," "Sabbath Bells chime on," etc. Prices of Bell No. 2, are same as Bell No. 1. Both numbers can be obtained in one volume, price, bound copy, 40 cents, $35 per 100; cloth bound, embossed gilt, 50 cents, $45 per 100. 25 copies furnished at the 100 prices. Mailed at the retail price.

WATER'S CHORAL HARP.

A new Sunday School Book of 160 pages of beautiful hymns and tunes. It contains many gems, such as "Shall we know each other there?" "Suffer little children to come unto me," "The Beautiful Shore," "Oh, 'tis glorious," "Leave me with my mother," "He leadeth me beside still waters," etc. Price, papers covers, 20 cents; $15 per 100. Bound, 25 cents, $20 per 100. Cloth bound, embossed gilt 35 cents, $30 per 100. Mailed at the retail price. It is edited by HORACE WATERS, author of "Sunday School Bells," Nos 1 and 2, which have had the enormous sale of over 800,000 copies.

Just published by HORACE WATERS,
No. 481 Broadway, New York.

THE NEW PATRIOTIC SONG BOOK

contains 96 pages of songs, duets, and choruses, both sacred and secular, including 14 pages of prayers for sick and dying soldiers, and soldiers' Scripture Manual. It is well suited for social singing, as well as Sabbath worship. Among the many beautiful pieces may be found, "Where liberty dwells is my country," "The Christian Hero," "Three cheers for our Banner," "Come sing to me of Heaven," Columbia, the Gem of the Ocean," "Freeman's Gathering," "Columbia's Ring forever," "Marching Along," etc Prices—paper covers, cents, $10 per 100. Mailed at retail prices.

THE HARP OF FREEDOM

contains 32 pages of songs, duets, and choruses for Freedom. Among the choice pieces we would name, "Fair Freedom's morn," "O let my people go," "Over the mountain," "They worked me all the day," etc Price 5 cents single, 50 cents per dozen, $3 per 100; postage 1 cent each.

RUTH: A SACRED CANTATA

contains 126 pages. Words by Rev. Sidney Dyer, music by Prof. Cull. This is an excellent book for concerts for the young. Prices—paper covers, 20 cents, $15 per 100; bound 25 cents, $20 per 100.

THE REVIVAL MUSIC BOOK

contains 73 pages of tunes and hymns, designed for revival, prayer, and conference meetings. Price in paper covers single copies 10 cents, $8 per 100. Mailed at the retail price

THE ATHENÆUM COLLECTION

contains 512 pages of tunes and hymns, new and old of the choicest kinds, for church, Sunday school, revival, missionary, temperance, prayer, and conference, and all kinds of sacred and social meetings. The music in this book has life and animation in it, like "Shining Shore," "Rest for the Weary," "Shall we know each other there?" "Shall we meet beyond the River?" "There is a Beautiful World," "Kind Words," "Sweet Hour of Prayer," "There is a Land of Love," "Suffer little children to come unto me," "God save the Nation," etc. Prices—single copies, bound, 35 cents, $35 per 100; cloth bound, embossed gilt, 75 cents, $65 per 100 Mailed at the retail price.

HORACE WATERS, Ag't
481 Broadway, New York,
Publisher of the above Books.

For Sale by

ALLEN & SPIER,

8 *SAN FRANCISCO*

The California Farmer.

SAN FRANCISCO:

FRIDAY .....APRIL 8, 1864

☞ Those who receive a number of the FARMER with this paragraph marked, may understand that it is sent to them or their examination, hoping it will meet their approval and induce them to subscribe, and ask their neighbors to do so.

Postmasters and others, who may receive the paper, will oblige us by soliciting subscriptions, or putting it in the hands of those that will. Subscriptions may commence at any time.

Send for Sample Papers and get up a club. Address, PUBLISHER CALIFORNIA FARMER, San Francisco.

THE CALIFORNIA FARMER READING-ROOM AND MUSEUM OF NATURAL HISTORY.

320 Clay street—Marble Building—Up Stairs.

The Farmer's Headquarters.

The Editorial Rooms and Museum of the FARMER OFFICE are always open, and an attendant ready to make a visit instructive to those who take an interest in the productions of our State. Samples of all productions: grains, grasses, fruits, models, inventions, minerals, and specimens in Natural History innumerable, are constantly being added.

Farmer's Reading-room.

Farmers and Mechanics, from the country, who visit San Francisco, should visit the Free Reading-room and Museum, at the FARMER OFFICE. Members of the Press, and Strangers, are particularly invited to avail themselves of these rooms. Newspapers from every State to which we have access by mails, as well as Foreign Newspapers, Periodicals, and Magazines, are upon file and on the tables for use; a Good Library of hundreds of volumes, with works illustrative of Agriculture, Horticulture, and Floriculture, works for reference upon all Sciences, with a Cabinet of Minerals, Coins, and Curiosities of interest to the Naturalist, to which we invite all.

Immigration Office.

New comers to California can always obtain all needed information about Lands, Farms, etc, at the Farmer's Reading room, 320 Clay street. Most cheerfully we bid all welcome to our Sanctum.

Send along your Greenbacks,

Don't be afraid to send along your Greenbacks. These we TAKE AT PAR in payment for all back dues to the FARMER for subscription. So send them along, now is the time. This is a better speculation than mining stocks, for it is so pleasant to read a newspaper when one knows he has paid for it, the digestion is better and a man feels happy, and, if happy, then he feels rich. So pay prompt and you will "strike a lucky lead."

Transactions of Agricultural Societies.

WE would ask of those Societies in the Atlantic States and Europe, to whom we send our Journal, to send us the transactions of their several Socities, so that we may give the benefit of their perusal to visitors, from the several States, who are callers at our Reading-rooms. By this means we can lay before them the progress of Agriculture in their former homes, and thus advance the interest of both Atlantic and Pacific States.

Will our Subscribers?

WILL our Subscribers, without further notice, be so kind as to remit their dues to this office. Send us U. S. Treasury Notes. We TAKE THEM AT PAR for all dues on account of Subscriptions to the FARMER. Surely this liberal offer should induce all to remit. This is paying our Subscribers a handsome commission for remitting their dues, and saves us the trouble and cost of collecting.

New Comers.—Homesteads.

THOSE New Comers to our State can always be sure to find valuable Homesteads, already highly improved, and for sale on favorable terms, by applying at our Office. New Comers who want important positions, as Superintendents of Farms, Millers, etc, can always be informed of favorable chances.

Change of Publishers.

THE undersigned having sold his interest in the FARMER to Messrs. Warren & Co., retires from the same, for a new field of labor, in a new enterprise. In leaving the associations of ten and a-half years, where he has been harmoniously connected with many friends, he would most cordially commend all his friends to the old Pioneer FARMER, as worthy their kindest and most liberal support. J. K. PHILLIPS.

The undersigned having purchased of J. K. Phillips his interest in the FARMER, it will hereafter be published under the name and firm of

WARREN & Co.

SAN FRANCISCO, March 24th, 1864.

TO READERS AND CORRESPONDENTS.

THE story of the "Necktie" we publish from the Golden Era, as being an admirable story to show how easy it is to jeopardize the life and happiness of human beings, when such wretches as Harry Pierce plot to ruin others. Falsehood, perjury, and murder, are the means such creatures resort to, and our courts reveal such every week of the year. Let all wretches like Harry Pierce read the story of the "Necktie," and may the buckle upon their own necktie be tightened before they succeed in more plans for the ruin of others.

"Looker on" has sent us a communication of considerable interest, under the head of the *Perused Trio*: Accepted for next week.

The letter of our excellent N. Y. correspondent, M. A. S., will be read with interest. His memoriam of Starr King is very excellent.

All letters of business for the FARMER, should hereafter be addressed to Warren & Co., Publishers, and all matters, editorial, to Col. Warren, Editor.

GOOD NEWS FROM BUTTE COUNTY.—We had a pleasant call from General John Bidwell, of Chico, Butte county, one of the earliest of our pioneers, dating years before '40. Gen. B. reports copious rains, crops greatly benefitted, wheat looks well, hopeful, will be a fair crop. Hay is short in that region, other vegetation looks well and promises well. General Bidwell is one of our best farmers. His farm is a model farm, only the best implements are used, and with the best workmen. The work is always done at the right time, and well done. The result is, always good crops, and of the best kind. Flour sells now at Chico at $8, this is for extra, made at Gen. B's mills.

THANKS TO THOSE SUBSCRIBERS, who have recently been so kind as not only to remit to us promptly, but to send new names of their friends. We appreciate such acts of kindness, and shall not only strive to merit them, but to show our gratitude to such friends—however, the generous minded are always paid within themselves for the good they do.

The Change.

By the card of our many years' friend and co-laborer in the FARMER—J. K. Phillips, Esq.—it will be seen that he retires from this journal to new scenes of labor. Ten and a half years is almost a lifetime; it is so in California; and rarely is it that men ever remain so long associated. We believe no similar instance can be found in a newspaper office on this coast, and when we remember that for this long time the whole period has been one of kind feelings, courtesies, and good will, it gives a value to the tie worth more than wealth.

To our many years' friend, who goes to other duties and labors, we can only say, may a kind Providence smile, and blessings many and big make your future bright and happy. May "big lumps" be scattered in your path, till it is all *of a golden hue.*

Triumph of the Central Pacific Railroad.

THE noble deed is done, and the Pacific Railroad Bill just passed in our Legislature is a proof that the people of California have resolved to build that great highway. The crowning work of our Legislators (as we have said in another part of this journal) was in the passage of this Bill and the grateful remembrance of Gen. John A. Sutter—both acts of noble legislation; the one to open up the rich resources of our State and reveal its treasures—the other to dispense them upon worthy objects—both the happy deeds of wise legislation. What a rebuke to those hireling presses that have been harping for long months against one of the most feasible, most politic, most beneficial undertakings that has ever been conceived to benefit our State!

Well may the people rejoice at this triumph for internal improvements, for there is not a farmer, mechanic, manufacturer, or any of the laboring classes that will not, for the next ten years, receive more for his produce, his skill, and his daily labor by the passage of this Railroad Bill; and while we cheerfully accord to our excellent Governor all praise for the manly and consistent course he has pursued relative to all bills laid before him, we must dissent from him in the expression given with his approval of the Bill—that the Act is repealable by any future Legislature. We cannot see how it is possible for any succeeding Legislature to repeal *bonds* or *coupons* when once issued. If this bill becomes a law, as it certainly does the moment Gov. Low's signature is affixed, then the aid to the road is granted; these bonds or the State's indorsement of bonds with interest-coupons are issued; the President and Directors of the Road, receiving them, dispose of them for money to use in building the road. How then is it possible for any succeeding Legislature to repeal, take back, and call in bonds that may have passed through two or ten different hands for value received? Nothing but repudiation by succeeding Legislatures can prevent the State finally assuming them, for how should they repeal, repudiate, or recal them before our Legislature shall again meet? and before that occurs—two years hence—these bonds, or a portion of them, will have been converted into money, the money expended upon the iron track, in cars and engines, and these bonds in third parties' hands—the good to the Railroad will have been done—and for this we shall all rejoice.

There is, however, a most gratifying feature in this great aid by our State, which in the excitement of party feeling has been lost sight of, but which is a matter of vital moment to every taxpayer. The large grant or aid of our State bonds or credit to this work, is merely an *investment* to bring back a large return. Let careful mathematicians estimate this loan of the State's credit—no other cost to the State save her *credit*—make an estimate of the rapid increase of lands, improvements, etc, and this very amount loaned by the State, then estimate the increased taxable property which this loan gives to our State Treasury, and it will be found that this increase alone will pay the debt, and more too; the State is a gainer in dollars and cents by this act, should she pay every dollar of the bonds. We think those newspapers and capitalists that have waged such a war against the Pacific Railroad, have shown themselves very short-sighted.

Again: if ever a city was blind to its own interest, or if citizens were ever direlect in duty to themselves, then San Francisco deserves this censure for permitting any man or set of men, or any other influences to be brought to bear to hinder them from fulfilling the *pledge* made by the people of this county, who voted to aid this great enterprise.

But the darkness is past. Light, ho! is the watchword now, and we think that President Standford and those members of the Board of Directors, C. P. Huntington and others, to whose untiring zeal and energy the work has been steadily progressing amid innumerable difficulties, must feel exceedingly happy to find all doubts and dangers removed, and their acts and labors so fully approved by the Legislature and indorsed by the Chief Magistrate. For ourselves, we do rejoice in such a triumph, and rejoice, too, that by no word or act of this journal have we ever been direlect in our duties or faltered to aid this good work to the utmost of our influence and ability. Now that all danger is past, let *our Farmers* take hold of this work, secure stock while they may, for not many months can pass before this stock will be sought for by Europeans as the safest and best paying Railroad stock in the world.

AGRICULTURAL COLLEGE.—An act has been passed by our Legislature, establishing an agricultural college. Napa proposes to raise $20,000 to purchase a farm, provided it shall be established in Napa. The "Napa Reporter" says this is the first and only offer of aid yet made in the construction of this institution. We trust those who have charge of an institution which is destined to work so great a good for our State will not be located or established hastily—$20,000 or $100,000, is nothing as a fund for a college of this kind. A farm of 5000 acres, and a fund of $250,000 should be the capital for this State. We shall present a plan hereafter.

The Crowning Acts of the Legislature.

"Republics are not Ungrateful."

Two acts of the closing session of the Legislature of California must always be a source of pride and pleasure to those whose hearts and votes perfected the work. We mean the generous and timely benefaction to the noble Pioneer General Sutter, and the prompt aid to the Great Pacific Railroad.

If there are any two acts that deserve to stand out in bold relief upon our statute book, above all others of the session, these two acts will be thus emblazoned, and worthily so, too.

The crowning act of the session of 1864 gave to General John A. Sutter the handsome sum of $3000 a year, for five years—$15,000. Nobly done! Although, if we could have had our wish, it should have been $15,000 per annum. But we rejoice at this result, and we rejoice, too, to announce that the vote of our Senate was *unanimous.* All honor to them! The Assembly had but five dissenting votes.

This act of the Legislature of 1864 shows that the time has come when General Sutter will feel that he has good and true friends.

Governor Low promptly approved the Bill—nobly done! When the telegraphic wires conveyed to us this cheering news, we felt the blood move quicker in our veins, an intense feeling of joy and thankfulness, that this veteran pioneer was at last made to feel he had friends—true friends. May our right hand be palsied when it fails to guide our pen to speak words of cheer in defense of this good man. This act of justice, though tardy, is only what this journal has urged, and almost single handed, for the last ten years; yet we rejoice in soul at this consummation.

How gratifying it must be to those Senators and Assemblymen to feel that they have added to the comfort and happiness of this early pioneer and his noble wife in their declining years. Would we could forget that there was any man in our Assembly that could withhold *this* just reward to one who has done so much for our State.

This award goes to his heirs in case of his decease before the expiration of the five years; but God grant that he may live to enjoy, not only this benefaction, but a largely increased one in coming years.

"The Desert shall Blossom as the Rose."

A knowledge of the qualities of the sands upon our waste lands, and upon our great deserts, even, and the experiments which must result from internal improvements, connected with great highways made along the waste places, are fast bringing about the fulfillment of the prophecies in the sacred volume: "Fountains shall spring up in the desert, and the waste places shall be made the highway of our God." The following facts verify these truths in other parts of the world; why not the same results occur on *our* waste places:

"In the Great African desert of Sahara, in 1860, five Artesian wells had been opened, around which vegetation thrives luxuriantly. Thirty thousand palm trees and 1000 fruit trees were planted, and two thriving villages established. At the depth of little over a hundred feet, an underground river or lake was struck, and from two of them live fish have been thrown up, showing that there is a large body of water underneath."

Some two years since there was some effort made to form a company to bore Artesian wells along the route over the plains. It can be done; it *will* be done; and leagues of our waste sandy plains in coming years shall, as the prophet says, "bloom and blossom as the rose." And the prophet says more: "And the parched ground shall become a pool, and the thirsty land springs of water; and there shall be grass with reeds and rushes." These things must come true, for the mouth of the Lord hath spoken it by his prophets.

Our New Crop of Wool.

We clip the following from the Stockton Independent upon the subject of the new crop of wool. The advice of that paper, to "hold on and not sell at present," is correct. Our wool-growers, however, have always, or generally, thrown their clip into market to realize at once, and take these means for the improvement of their business generally, and this is the reason why wool-growers are more flush of money than farmers. There are times, however, when, like the present, there are causes at work which must inevitably increase the value of wool, the advice of the Independent is sound. There is, however, another way in which wool-growers can realize upon their wool immediately, and at the same time secure to themselves all the advantages of this anticipated rise in price.

Let them ship their own wool on their own account, let them have it sorted and packed in the best manner, and ship it east where the best price can be had. To this end we would by all means, recommend them to consult with Messrs. W. T. Coleman & Co, a house whose long standing and great facilities will enable them to make the most liberal advances upon wool, and with whom they can do business with the fullest confidence that they will realize every farthing, and the highest rates the eastern market affords.

The following are the remarks of the Independent which we are glad to note:

The Spring clip of wool has commenced to arrive. Lots from Calaveras were on the wharf, awaiting shipment. The Eastern quotations of all grades of wool are now higher than ever, and the duty which is expected to result from the consideration of the wool question by the House Committee of Ways and Means, to whom it has been referred by resolution, will raise the price of domestic wool still higher. This duty is not to take effect until after the first of July next, and so the wool-producers of this State will lose nothing by holding on to their clip until that time. They should be in no hurry to sell just now, though there is no doubt speculators will advise differently.

THE MECHANICS FAIR.—There is every prospect of a very successful Fair this autumn, by the Mechanic's Institute of this city. The plan will soon be made known.

Our Divorce Courts.

THE very darkest feature of California's history, has been the wretchedness of the social system, as admitted by the readiness with which our Courts treat the marital law. It is a cheering thought that the time has come, when a Judge has taken a stand in defense of that most sacred of all human ties; that which bind human hearts and establish the "Altars of Home." Judge Sawyer utters the following "Home Truths:"

The cause should be grave and weighty which dissolves the marriage contract, and the best interests of society demand that the Courts strictly construe the statue which permits it. The marriage Union should be looked upon as one of sacredness and stability; such indeed it is, however it may by some be regarded. It is not to be broken up upon every fancied grievance, nor dissolved for slight or frivolous cause.

It is to be regretted that these truths were not heralded years ago. It would have saved much ruin and shame, which has already resulted from the base plottings and chicanery of "women adventurers," and scheming "Attorney's," and their cohorts of evil doers. To every observer of this subject, to those who have taken the time and pains to go behind the scenes and see the "wire workers," there has been seen as dark a shade of human character, as the world ever revealed. Shakspeare says:

"Marriage is a matter of more worth,
Than to be dealt with by Attorneyships."

And yet, who is there that knows the fearful ruin that has been hurled upon our social life, that does not know that it is by that most detestable of all crimes, false counsel of false and depraved Attorneys, that are *paid in advance* for their fees, that the wholesale system of divorces were first instituted on our golden shore. Could the curtain be raised that now shields many of the cases ready for the same category of wretchedness and misery, there would be shown such attorneyship as Pluto, in his dark regions, never dreamed of.

Thanks to Judge Sawyer, that he has thrown himself into the van of the battle to stay the tide of corruption, and save our homes. And though such an action on his part may seriously and sadly affect *some* who would be free, yet, in Heaven's name, let those be *few* ready and willing to suffer and die, if need be, like the bold heroes at the battle of Marathon, or in the Pass of Thermopylæ, if by so doing they can stay the tide of ruin now hovering over the "Homes of California." Could the vail be lifted, and the vile means that have been, and are being, adopted in our State to destroy the sacredness of the marital tie, stand out before the gaze of this community; could those parties and associations of harmonists, spiritualists, and free lovers, with their counsellors and paid attorneys, and their free thinkers, free lovers, and their professors of different creeds, whether of A. B., A. M., H. B., or M. D's.—could these all be held up to private gaze, the burning of Sodom and Gomorrah would not be a greater punishment than should fall upon those who have been, and are now, striving by Falsehood, Slander, and Perjury, to ruin all that is worth living for in this world. God be praised that Judge Sawyer has taken his stand—we say amen! amen!!

He Lives Again!

THE good never die—their memory and their deeds are imperishable. There has been much said, recently, upon the life and character of Rev. T. Starr King. That life and character has been exemplified best by his deeds, which are engraved upon the hearts of thousands that mourn his sudden exit.

He has left us—yet he *lives!*—lives in the deepest affections of all who love noble deeds, and we find every effort made to keep his memory green by perpetuating through the aid of *art* the familiar face of one so dear to all.

Among the best efforts put forth, we should say the best effort of all, is that of P. J. Devine, Esq., the artist, who has just finished a *Bust* of this Patriot and Christian. Mr. Devine is an artist of no ordinary skill; his work in years past prove this, yet until now, he has never received from the public any just notice or any encouragement. Mr. Devine executed the only perfect bust of Broderick, of Weller, of Clay. That of Senator Broderick reflects the very highest honor on Mr. Devine for the true artistic skill with which he finished that work—yet how poorly was he repaid—and thus artist's labor and genius languishes here, talent wanes out its life-blood because the *body goes hungry* for want of that *food* which is needed to sustain life. Mr. Devine has now given his whole mind and spirit to complete a bust of Rev. T. Starr King. It is not needed that we should praise it as a perfect work—those who will soon see it, will with one voice say with us—

"He lives again!"

We have for many years looked with interest most intense upon the labors of this artist. We have known how he has often felt discouraged and sad as he saw his efforts lightly esteemed and his labor poorly rewarded; but we have always, as we spoke a kindly word, felt that the *time would come* when his talent would be appreciated and his labors rewarded.

That time has come! In the present effort he has put forth he has been completely successful, and from the features of the still clay there will come forth to the beholder that *look*, that *smile*, that wonderful and indescribable something in the face of Starr King, that demands and receives the homage of the heart. As we stood before this piece of cold white statuary this morning, as we scanned each feature, and the varied forms and lineaments of that striking face, and mourned his early departure from us, we could almost imagine we heard his spirit say—

"We live in *deeds*, not years, in thoughts not breaths,
In feelings, not in figures on the dial.
We should count time by heart-throbs. He lives most
Who thinks most; feels the noblest, *acts the best.*"

And thus Mr. Devine has by this most admirable and perfect likeness of Starr King, made him to "live again," for those who love him. We think this last best effort of this artist, must as a matter of right, place him before the public as an artist, worthy of the very highest encouragement, that which we trust he will now receive. A little time, only, and the public will pass their decision upon his work.

Our State Prosperous—Heavy Rains in the Country.

From all portions of our State we have authentic testimony of abundant rains and a most cheering prospect of the coming crops. As a general estimate, we should give the prospect to be a full two-thirds yield of our Grain crops throughout the State. In some places there will be excellent crops, in others two-thirds; some places only one-half, and a few sections a slim crop; but the average will be a *two-thirds crop.*

The crop of Hay over the entire State will average about a two-thirds crop, some portions over others a good crop. Considerable grain will be cut for hay—thus a two-third harvest.

The crop of all kinds of Fruits will be large—very large—we think one of the most abundant seasons we have ever had; garden and farm produce of all kinds most abundant. Great pasturage will be had, as the April showers have given a common vigor to all the varied vegetable crops that were just starting into growth.

If ever a people under heaven had cause for gratitude and thankfulness to Heaven, it is the people of California; rich in all the mineral treasures of the earth, rich in the most favorable climate of our whole Union, rich in fruitful hills and valleys, rich in bright skies, rich in fragrant flowers, rich in the genius and enterprise of a people unsurpassed for intelligence and wealth, rich in noble and generous spirits in every cause of human progress, and rich in their love of country and fidelity to our glorious Union. It is with such blessings flowing in upon us as a people, abundantly as the copious showers of rain have fallen, that we can say with great truth—our STATE is PROSPEROUS.

A New Agricultural Enterprise.

CAPT. C. M. Weber, of this city, a man of unbounded liberality of spirit and energy of character, has undertaken a new agricultural enterprise calculated to add immensely to the value of the land on which he is operating, by bringing it into the highest state of productiveness. At great labor and expense, he has already constructed canals, whereby the whole of the Calaveras river can be, at any time, diverted from its natural channel and spread over almost the entire surface of that portion of his estate laying north of the river and east of the Cherokee Lane. His plan is when verdure and trees require it, to irrigate on a scale of greater extent than has ever probably before been attempted in the country. The work is by no means superficial and temporary, but is designed to last "as long as wood grows and water runs." Having accurately ascertained that there was a gradual fall in the land westward of as much as 35 feet in a distance of seven miles the work of cutting canals was at once commenced, and the main one, along the northern boundary of his land, completed so as to carry the water of the river so that it could be distributed over the fields on the 31st ult. There is probably many as a thousand acres of as fine rich land as the country affords, subject to the benefits arising from this extensive plan of irrigation—land belonging to Capt. Weber—and there is infinitely more extent adjoining, the owners of which might reap benefit by making arrangements to appropriate the spare water, or the whole at times when convenient to all parties concerned. The water is diverted from its natural channel at a point about a mile and a half east of Cherokee Lane, and substantial flood-gates, both in the river bed and across the head of the canal, so that the course of the water can be changed at will and in a minute. From this point for a distance of two miles more, westward, the channel of the Calaveras is heretofore been so poorly defined that Capt. Weber found it necessary to cut a new channel altogether, in order, not only to accelerate the running of the water, but likewise to serve as a means of facilitating drainage of the lower land bordering upon the verges of the stream. As the work is now arranged, the land can be either overflowed or drained as the one or the other may be required, and the whole operation is an enterprise calculated to enhance the value of property and therefore deserves encomium In a profitable point of view the result of a single season is a matter of no consideration whatever in an enterprise of this kind, the chief object being to lay a foundation firm and solid, so that practical energy and agricultural philosophy will combine in thoroughly testing the capacity of the soil by a series of experiments sensibly conceived and not measured fructify prematurely, but rather with a view to permanancy and future perfection. The principle steps for perfection in agricultural and horticultural attainment, has been well taken by Capt. Weber, who, from close observation and experience sufficiently well understands the philosophy of growth to anticipate the wants of plants on poor soil in dry seasons. Ornament and profit are to be considered—in fact the great object in view is a "model farm," embracing vineyard, garden and all the necessary apendages to make them complete. Foreign gardeners, who thoroughly understand their business, will be employed when the proper time comes, to plant an extensive vineyard, and cultivate the ground in the most approved style, and every shade of green and size of foliage from the broad-leaved catalpa to the glossy pomegranate, to ornament the ground. There is no visionary in the belief that, in a few years, the land on the borders of the Calaveras will vie in beauty with the banks of North River, New York, Brooklyn, Massachusetts or the celebrated Park residence of the Duke of Portland, one of the finest places in Great Britain.

The Stockton Independent gives an account of the above new enterprise, and favors the same. We have no doubt that great good will finally result from it, as it will induce settlers upon what may now be waste land—yet, after a season or two of irrigation, the true principle of cultivation will be the reliable thing. There can be no doubt but the dyking and cutting deep canals will do good, for it will drain as well as irrigate, and one experiment will lead to another; all of which will lead to a high state of cultivation, the only theory that is abiding.

GOOD PRICES FOR APPLES.—The sale of the cargo of apples by the Brother Jonathan, nearly 4,000 boxes, at Broadway Wharf, yesterday, was largely attended, and the biddings spirited. The fruit was mostly in capital condition, and brought readily, in lots from $2 50 to $3 per box.

FARMS, AND FARM LANDS TO LEASE.—We call the attention of all who wish Farming Land to the liberal offer made by the proprietors of the Great Antelope Ranch, near Red Bluff. This is an extraordinary opening, and every opportunity is offered to advance the interest of those who lease land of the proprietors. Persons in want of such land should look to the advertisement.

The Opposition Line of Steamers.

Several of the yeomanry of the old States, who have come here to purchase farms and become citizens of our golden land, have called at our "Reading Room," to report to us the condition of things on the "other side," crops, currency, etc. These new comers were passengers in the "People's Line," and from them we learn that they were highly satisfied with the conveniences, food, treatment, etc. Two of our informers tell us that they have been here in former years, and they know the condition of "Ocean Steamers." They aver, also, that the "People's Line" has as many comforts and accomodations as any line of steamers that ever crossed the two oceans for the Pacific slope. Passengers have called on us, and written to us, who were on the America, who speak of Capt. Morton and his officers, as all that could be desired from passengers in their efforts to make the voyage comfortable and pleasant. Passengers, too, on the Moses Taylor, on her last trip, Feb. 24th, speak in high terms of Capt. Blethen and his officers, and all join in commending these steamers as great aids in advancing the people's interests. These new comers, too, say that were it not for the "People's Line," the People of the other States could not come here in such numbers, for the price of passage always advances in price when the "Opposition Line" is not up, and thus retards imigration. Passengers in particular, that have recently arrived, are agents, looking for homesteads for many more imigrants that wait their reports back home, and all these new comers will take passage in the "People's Line," they having been written to to that effect by those who come on in this line. From these facts it is evident that amid all the excitement, *pro* and *con*, about ocean steamers, the "People's Line" is gaining favor every trip, and the great mass of the people are determined to patronize them.

The "Moses Taylor," since her last arrival, has been greatly improved by extensive repairs, newly painted, newly furnitured, carpeted, etc., with many other conveniences and comforts for the passengers, so as to make this steamer one of the most commodious and elegant on the coast. The ability, skill, and gentlemanly courtesy of Capt. Blethen is unanimously admitted, and with every additional comfort of an abundant supply of the best of provisions, the "Moses Taylor," thus newly arranged, is ready for a speedy and pleasant trip on the 23d inst. And to the I. K. Roberts, Esq., the agent, who has won, by his energy and courtesy, the people's good will, our State is indebted for a continued accession of new comers, and a *low price of passage*. Most certainly, for the people's sake, and the development of our State, we wish success to the People's Line.

The Great Shakspearian Anniversary.—The Third *Centenual* Anniversary of the immortal Shakspearian Birth Day occurs on the 23d of April. It has been suggested that our theaters should make an effort to mark that occasion by such dramatic effect as would be an honor to his memory. Such an event would be well timed, but should it take place, it is to be hoped that an extraordinary effort may be put forth to bring forward such pieces, and to have them so cast, that the performance, as a whole, should be an ovation of talent and acting as would, in reality, be an honor to Shakspear's memory. We do not know what could be done, as we are not much of a visitor of the dramatic places, never having seen the inside of the Eureka but once, and no other save the Metropolitan and Maguire's. Yet, we should hope that there might be, at least, at the last named places, such performances, and with such a role as would be in keeping with the occasion, which really demand notice from those who "tread the stage," as the Dramatic personnle of the great author of the Drama.

DIED.

In San Mateo County, March 31st, Albert B. Fifield, a native of New Hampshire, aged 43 years and 3 months.

New Hampshire papers will please copy.

NOTICE.

THE undersigned has disposed of all interest in the CALIFORNIA FARMER, and his connection with the publication of the same ceases with this date. Messrs. WARREN & CO., who will continue the publication, he hopes will retain the favors of friends and patrons. J. K. PHILLIPS.

San Francisco, March 23, 1864.

Wanted.—Improved Property.

A GENTLEMAN WANTS A HOUSE AND LOT IN the

CITY, OR OAKLAND,

Or a small improved Farm, containing from 20 to 100 acres of land, within the influence of the sea-coast, and of easy access to the city; for which he offers to exchange

First-class Improved Lots in New York,

Within three miles of Wall-street Ferry, accessible by steam and horse cars; or will exchange

First-class Reese-River Mining Stock.

For further particulars inquire of the Editor of the California Farmer 10-tf

Splendid Windmill for Sale.

ONE OF DR. FRANK JOHNSON'S SELF-REGULating Windmills is offered at a low price, if called for immediately. This is a good 12-foot mill, 3-horse power, of the very best make and model, and finished in the most workmanlike manner. For particulars inquire of the Editor of California Farmer. 10

A Lady Teacher.

A LADY TEACHER OF EMINENT ABILITY AND qualifications, one who fully understands the great responsibility of the position, wishes a situation in some Seminary, or School, where she can have a responsible trust. The Lady has long been employed as a Teacher, and can bring the most ample testimony of ability and qualifications. A note addressed to A. B. L, care of Editor of Farmer, will be promptly attended to. 10

Hubbard Squash.

WE HAVE RECEIVED ANOTHER SMALL INVOICE of the true "Hubbard Squash Seed," from the Atlantic States.

This is the BEST Squash in the world. It is a hard shell, and the only way to cook it is to saw the shell in halves and bake in the oven, then serve on the table in the shell. The flavor of the Squash is better than the best Sweet Potato, and for pies has never had an equal.

Send for Sale at this Office.

Weather Report.—Of the weather, in Sacramento, in the month of March, 1864, Dr. Logan, Secretary of the Board of Health, thus remarks: "Although the rain for the month has proved short of the average in this immediate locality—nevertheless, taking the whole agricultural region of the State into consideration, a supply fully sufficient for the growing crops has been received, just as we predicted in our remarks last month. The Spring rains are for the most part partial and eccentric; still, sooner, or later, their distribution becomes general. In some parts of the State they have lately been very copious, and, although less so in other places, falling continuously and slowly as they did, cannot fail to prove of incalculable benefit. We have not yet reached that point in meteorological science as to be able to fix any of the features of climate as constant quantities, and to assign to them numerical measures, but we can in the case of rain distribution determine the average result or regular quantity for any given month with mathematical accuracy. This we find to be for April 1·792 inches. So that we may safely calculate upon this additional supply more or less the coming month." In conclusion, the report states that the late damp and chilly weather has proved particularly obnoxious to the infantile portion of our community laboring upder disease—nearly half the number of deaths occurring under ten years of age. The total mortality, however, does not exceed the average for the season.

Perished from Cold.—A man named Daniel Hafer, formerly of Grizzly Flat, died at Hamilton's Station, near the Summit, March 26th, in consequence of exposure. He had been working at O. Mill's browery, and was sent to the Summit to drive a team to the brewery. It was thought he was in liquor and laid out all night. He became chilled and frozen, and when found was nearly dead.

Places of Deposit.—It is stated that Postmaster Perkins proposes to arrange suitable boxes in *two* or more distant parts of the city, where persons can deposit letters, this will be a great convenience and will no doubt be fully appreciated by our citizens." Only *two!* was it only those *two* boxes that finished Parker?

A CARD.

☞IN ORDER TO PREVENT ANY MISAPPREhension arising from the fact that the prosecutions instituted against me, in the Police Court, were dismissed on the ground that the time within which indictments could lawfully be found had elapsed, I desire to state that in the month of February, William R. Garrison and others endeavored to obtain indictments against me on the charge subsequently made in the Police Court; that after a full examination of all the evidence produced on the part of the prosecution and without hearing my witnesses, the Grand Jury refused to find any bill against me—the time in which the indictment could be lawfully brought had not then expired. Garrison, foiled in his efforts in that quarter, then instituted the Police Court prosecutions. On the second of March I was called to answer before that tribunal, and the case was, by agreement of Court, continued to another day. On the adjourned day it was further continued, at the request of Garrison's counsel, to the 25th of March. In the meantime, I was advised by my counsel that it was useless to go to the expense of summoning witnesses from a distance to establish my innocence, when, in their opinion, the Court would of its own motion dismiss the case for want of jurisdiction as soon as the first witness for the prosecution should have been examined. To save expense to both parties, it was then agreed by the counsel for Garrison and myself that the matter should be argued on the 25th, and that if the Court did not then dismiss the complaints, another day should be fixed for hearing the testimony. Upon my counsel stating his first point, and before argument, the counsel for the prosecution admitted that the prosecution could not be maintained, and they were accordingly dismissed. Whenever the merits of my Wide West transactions with Garrison shall be investigated, and the civil suit pending between us shall be heard, I shall be prepared to show that the charges so industriously circulated against me are false, and that nothing whatever in my transactions with him or with others have been otherwise than perfectly fair and honorable on my part.

9 1m J. W. TUCKER.

A CARD.

YEARS HAVE ELAPSED SINCE THE Subscribers first invited public attention to the peculiar properties of their Patent Axle-grease. At first their invention made but slow progress, but thanks to the liberal and appreciative spirit of a large portion of the teamsters and coach proprietors of California, the demand for their manufacture has gradually increased, and notwithstanding the many spurious imitations which from time to time have been introduced from the Eastern States to compete with their article, the H & L AXLE-GREASE has now acquired an unrivaled reputation, extending throughout the length and breadth of California, Oregon, and the neighboring Territories.

The subscribers return their grateful acknowledgments to a discerning public, who have so largely patronized them in all their enterprises which they are now happy to say, are beginning to be justly appreciated as belonging to our California industry.

The supply of material from the East having, in consequence of the war, been cut off, the subscribers turned their attention to the substitution of Coal-oil as a basis to their manufacture, but after applying every means suggested by the modern application of the science of chemistry, they were reluctantly compelled to the conclusion, that however fit Coal-oil might be for illuminating purposes, and for which it stands unequaled, it was not at all adapted to make a permanently satisfactory Axle-grease. In this dilemma the subscribers turned their views to the native produce of California, believing that large quantities of natural resin might be collected from the noble pine trees of her boundless forests.

Having invited attention to this subject, they have, with steady progressive steps, advanced this interest, until, at the present time, they have established a manufactory of Rosin and Turpentine at Forbestown, from which considerable quantities of both articles are daily manufactured, of such a quality as to find a ready market at fair prices.

It is hoped that increased efforts may continue to be put forth, and new discoveries made, so that California may soon be independent of all foreign supply, for we believe our lofty mountains and our mighty pine forests, will yet give us that supply. The subscribers are now receiving native resin in sufficient quantities to be able to sell their celebrated AXLE-GREASE at a LOWER PRICE than any of the spurious Coal-oil variaties, which may hereafter be imported.

HUCKS & LAMBERT,
Manufacturing Chemists,
21-8 Natoma and Minna streets, San Francisco.

Photographs of Stark King.—Numerous specimens of artistic skill are before the public, in the form of photographs, engravings, *card de visite* &c., of this truly eminent Divine, this good and great man. To a kind and noble friend we are indebted for the large size engraving, drawn by Nagle, and incased in a rich frame. As this gift lays before us in our study, we can, as we look upon that speaking face, almost imagine we hear his musical voice and see his uplifted arm, which, when raised, gave such an expression to his whole countenance as to make the heart feel his stirring words. We shall cherish the gift, and gratefully remember the giver. His picture we esteem an inestimable gift, reminding us always of "The Eloquent One," so well described by Amelie Welby:

"There's a charm in delivery, a magic art
That thrills like a kiss, from the lip to the heart:
'Tis the glance—the expression—the well chosen word,
By whose magic the depths of the spirit are stirred.

The smile—the mute gesture—the soul-stirring pause—
The eye's sweet expression, that melts while it awes,
The lip's soft persuasion—it's musical tone:
Oh! such were the charms of the eloquent one."

It is estimated that not less than six thousand families, thirty thousand persons from Southern and Southwestern States, have taken refuge in New York city till the war is over.

Street Railroads.—In the suits (58 in number against the Omnibus R. R. Co.) for overcharge of fare, Judge Cowles decided in favor of the Railroads on Saturday. This is a high old decision and will be highly beneficial to the R. R. Co., as it virtualy increases their profits 25 per cent.

Complimentary Vote of Thanks of the Passengers on board the Steamship America.

WE, THE UNDERSIGNED, PASSENGERS on the Steam Ship America, tender our thanks to Capt. Morton, and the other Officers of the Steamer, for the Comforts we have enjoyed during our passage from San Francisco to Panama, and particularly for the neatness and good order on the Boat, and for the sumptuous fare, and kind attention we have received. While expressing our entire satisfaction with the Boat and its management, we heartily commend it to the attention and patronage of the public.

Farmers and Immigrants.

LAND FOR SALE OR TO RENT.

THE ANTELOPE RANCH,

(FORMERLY JOB F. DYE'S) on the East side of the Sacramento River, embraces many very superior Farms of

100 to 500 Acres each; also Vineyards, Gardens and Orchards,

above all overflows, Fenced, having Dwellings, Barns, etc., and throughout the year, large running streams, and irrigating ditches.

The soil is from 3 to 10 feet deep, very rich, and adapted to Wheat, Barley, Oats, Tobacco, Chinese Sugar-Cane Fruits, etc.

The best market in the State is at Red Bluff, two miles above; at Tehama, three miles below the Ranch, and on the Ranch itself, for consumption in the northern portion of the State, Oregon, and the Humboldt Mines. The new Wagon Road from Red Bluff to the Humboldt Mines is within three miles of this Ranch.

Good Farmers (with families preferred) can hire these farms at low rates, or conduct them on shares, with privilege of purchase. Cash loans will be made, if desired, to assist in cultivating or holding crops, and every facility will be given.

Mowers, Headers, Threshers, etc, are on the Ranch—"The Antelope Flour Mill," of large capacity, and high reputation, is on the Ranch, owned by the same proprietors.

☞ The "Job Dye Farm," of 250 acres—with Orchard, Vineyard, and Garden, with irrigating water, large Adobe House, and numerous out buildings—will be rented to a satisfactory tenant.

Apply to GEO. CHAMPLIN, Red Bluff P. O, or on the Ranch, or to

Home Miscellany.

LITTLE ALICE.

[We gladly welcome our new correspondent, "Korah," to our columns. The tender and loving *Mother* speaks in every stanza, as mothers only can speak. Although Korah's first communication to our journal is thus in plaintive notes, yet there is much of "The Beautiful," in it. We hope to hear from her often in strains various as the hues of life are varied, with bright thoughts as well as sad ones.]

The angel of death was hovering nigh,
Waiting to garner her last low sigh;
But a pitying angel with shining wing,
Ope'd the portal of heaven, and her spirit passed in.

Gently we laid her down to rest,
Her white hands folded upon her breast;
Her golden hair we gathered now,
In shining rings, on her pure white brow.

Under the green grass my darling lies,
My dear little Alice, with soft blue eyes;
Soft blue eyes and sunny hair,
O my dear little girl was passing fair.

Gone to be an angel-child,
Gone to sleep under the flowers wild,
Under the lilies and violets blue,
And daisies and yellow buttercups too.

There the little birds gather to sing,
In the early sunny days of Spring;
There my footsteps often stray,
There I kneel in sorrow, to weep and pray;

To pray for a spirit undefiled,
To pray that I soon may meet my child,
In that better land—that blessed place,
Where we shall meet Him face to face.

Methinks I feel the soft caress,
Of those dear little lips, to my bosom pressed,
While softly she murmurs, "Mother dear!
Oh! Mother, I'm waiting for you here!

"Mother, dear Mother, I'm waiting for thee,
On the *other* side of that dark, dark sea;
But fear not, Mother, though death be thy guide,
For all is bright on this other side."

O may my Angel Baby's be
The first little voice to welcome me
In that "Better Land," the land of the blest,
Where the pure in heart shall be at rest.

KORAH SYLVESTER.

March 25th, 1864.

THE PLANTING OF THE APPLE-TREE.

BY WM. CULLEN BRYANT.

Come, let us plant the apple-tree!
Cleave the tough greensward with the spade;
Wide let its hollow bed be made;
There gently lay the roots, and there
Sift the dark mould with kindly care,
And press it o'er them tenderly,
As round the sleeping infant's feet,
We softly fold the cradle-sheet:
So plant we the apple-tree.

What plant we in the apple-tree?
Buds, which the breath of summer days
Shall lengthen into leafy sprays;
Boughs, where the thrush with crimson breast
Shall haunt and sing and hide her nest.
We plant upon the sunny lea
A shadow for the noontide hour,
A shelter from the summer shower,
When we plant the apple-tree.

What plant we in the apple-tree?
Sweets for a hundred flowery springs,
To load the May-wind's restless wings,
When, from the orchard-row, he pours
Its fragrance through our open doors;
A world of blossoms for the bee;
Flower's for the sick girl's silent room;
For the glad infant sprigs of bloom,
We plant with the apple-tree.

What plant we in the apple-tree?
Fruits that shall swell in sunny June,
And redden in the August noon,
And drop, as gentle airs come by
That fan the blue September sky;
While children, wild with noisy glee,
Shall scent their fragrance as they pass,
And search for them the tufted grass
At the foot of the apple-tree.

And when above this apple-tree
The winter stars are quivering bright,
And winds go howling through the night,
Girls whose young eyes overflow with mirth,
Shall peel its fruit by cottage-hearth,
And guests in prouder homes shall see,
Heaped with the orange and the grape,
As fair as they in tint and shape,
The fruit of the apple-tree.

The fruitage of this apple-tree
Winds and our flag of stripe and star
Shall bear to coasts that lie afar,
Where men shall wonder at the view,
And ask in what fair groves they grew;
And they who roam beyond the sea
Shall look and think of childhood's day,
And long hours passed in summer play
In the shade of the apple-tree.

Each year shall give this apple-tree
A broader flush of roseate bloom,
A deeper mass of verdurous gloom,
And loosen when the frost-clouds lower,
The crisp brown leaves in thicker shower;
The years shall come and pass, but we
Shall hear no longer, where we lie,
The summer's songs, the autumn's sigh,
In the boughs of the apple-tree.

And time shall waste this apple-tree.
Oh, when its aged branches throw
Thin shadows on the sward below
Shall fraud and force and iron will
Oppress the weak and helpless still?
What shall the task of mercy be,
Amid the toils, the strifes, the tears
Of those who live when length of years
Is wasting this apple-tree?

"Who planted this old apple-tree?"
The children of that distant day
Thus to some aged man shall say;
And, gazing on its mossy stem,
The gray-haired man shall answer them:
"A poet of the land was he,
Born in the rude, but good old times;
'Tis said he made some quaint old rhymes
On planting the apple-tree."

[Atlantic Monthly, of January, 1864.

CLEANING TINWARE.—Acids should never be employed to clean tinware, because they attack the metal and remove it from the iron of which it forms a thin coat. We refer to articles made of tin plate, which consists of iron covered with tin. Rub the article first with rotten-stone and sweet-oil the same as recommended for brass, then finish with whitening and a piece of soft leather. Articles made wholly of tin should be cleaned in the same manner. In a dry atmosphere polished tinware will remain bright for a long time, but they soon become tarnished in moist air.

Men versus Women.

"Topsy Turvy," a very witty, pleasant, and good writer in the Sunday Mercury, sends forth, in the last number of that journal, the following very pungent truths, and such as would be to the advantage of every portion of God's earth if put in practice, and were it done it would certainly turn this State "Topsy Turvy" in adopting a new and better system of action. We give most of the article. She writes like sensible woman:

Every body is discussing this important topic now-a-days, and I should like to air a few of my opinions. They have been packed away so long I'm afraid they will get musty. Meanwhile I want you to understand that I only think for myself. Do not pretend to express the views of womankind in general, for I don't know any more about them than I do about Greek. * * *

But I was going to tell what I think about the men. It is hard to find a real, genuine specimen—for all who wear the habiliments are not men any more than all crinolinedom are women. But when you do find one, he is *splendid*. That's Topsy's private opinion.

The true Heaven-commissioned Lords of Creation—why, woman in her best estate is no more to be compared to them than a farthing rush to the noonday sun. From how sublime a hight they can look down on femininity, the highest and brightest though it be! Godlike in his own strength, how he smiles at our vanities, pities our frailties, and humors our weaknesses; and that, too, with sympathetic kindness, without sarcasm or sensuality.

Won't I allow my hero any faults?

O, yes, just enough to make him human. But I being a woman, and loving him, can't see them.

Why is it that women worry, and struggle, and strive for what they call their Rights? What are their rights any way? To preach and lecture, and vote, and make fools of themselves in high places generally? To brawl and clamor for something, she knows not what, till she so unsexes herself that she is neither one thing nor the other? Let them have such rights who want them; I have no desire.

And after all, it is only a pretence. A forced activity to still the hungry voice within their souls that cries for Love. Debarred by their unfeminine traits, from any reasonable hope of being sought after, they think to climb the battlements and storm the fortress.

My amiable darlings, this can't be done. He can come down to you, but you cannot reach his level unless he raises you. I know you are shocked that I should have the audacity to say it. But look for once deep down in your own souls, clear aside all the rubbish of conventionalism, prejudice, and cant—what do you see written there as the one chief and paramount desire of your being?

You will not answer, for you dread the truth. I, who love the truth, will answer for you.

To be gathered closely to a faithful bosom, by a strong arm that will shield you from the rough points of life.

You needn't be ashamed of it. It is your destiny, decreed by Heaven, and it is your privilege to fulfill it. Only I think you go to work the wrong way.

Now, if I should ever marry—and as the other old maid said, "I suppose it's what we've all got to come to"—I wouldn't *have* a man that I could twist around my finger. The idea of promising to love, honor, and obey a man who would say: "Wifey, dear, don't you think we had better call the baby, Aurelia? That is, if you prefer it, you know." I'd want my lord and master to say: "Topsy, darling"—you see I want he should love me—"I think we'll call her Betsey Jane. It's not a very pretty name, but it's my mother's, and would please her so much." And although Aurelia might be my favorite, and Betsey Jane my pet aversion, I should be proud to obey.

When my master comes, I shall bow my head before him as did the maidens of old before the Rabbi. And then I shall worship him the rest of my natural life as abjectly as ever a Hindoo worshiped Juggernaut. *But he'll have to be a pretty smart man, I can tell you.*

A Distressing Malady.

THE following which we find in the columns of an English journal, accurately delineates the effects of a mental malady which, if left uncured, will blight the peace of any household or society wherein the victim remains. If any reader here recognizes his own portrait, let him at once resolve reform: "Peevish people are always unjust, always exacting, always dissatisfied. They claim everything of others, yet receive their best efforts with petulance and disdain. Such men complain, too, of being ill-treated by their fellows. Ill-treated! The mildness of an angel and the patience of a saint could not treat these sour-tempered people in a manner that would satisfy them. The habit of peevishness grows upon a person until it renders him wholly incapable of conferring any happiness upon others. It distorts the imagination, and disorders the mind, so that truth cannot be distinguished from falsehood, or friendship from enmity. It is one great source of envy and discontent, poisoning the fountain of life and scattering ruin and desolation on every side. Those who occupy their minds about anything serviceable to those around them are seldom peevish; it is only those who feed a disordered fancy with self-generated fiction that become misanthropic or grumblers. Then incessant fault-finding arises, which is as annoying as it is unjust. Did peevish people know, or could they feel, the effect of their reproaches on others, those reproaches would never be made. But the possessor of a peevish turn of mind thinks of nothing but himself. For others he cares nothing; while he claims the greatest deference for himself, he will not defer to others in the slightest degree."

OUR FEET.—Women are not more hardy than men. They walk on the same damp cold earth. Their shoes must be as thick and warm. Calf or kip skin is best for the cold season. The sole should be half an inch thick; in addition there should be a quarter of an inch of rubber. The rubber sole I have used for years; I would not part with it for a thousand dollars. It keeps out the damp, prevents slipping, and wears five times as long as leather of the same cost. For women's boots it is invaluable. But rubber shoes should be discarded. They retain the perspiration, make the feet tender, and give susceptibility to cold. Stand on one foot, and mark around the outspread toes. Have your soles exactly the same width. Your corns will leave you. The narrow sole is the cause of most of our corns. A careful study of the anatomy of the foot and the influence of a narrow sole will satisfy every inquirer. The heel should be broad and long. Wear thick woolen stockings. Change them every day. Before retiring dip the feet in cold water. Rub them hard. Hold the bottoms to the fire till they burn.—[Dr. Lewis.
